SUDAN

A PERFECT WINTER RESORT

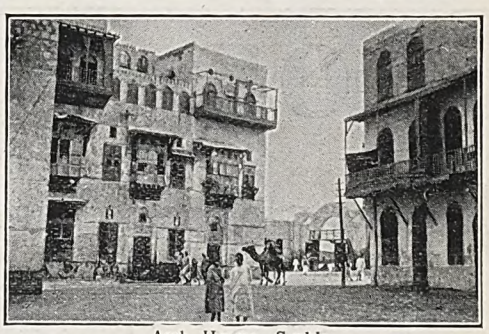
KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Service between Cairo and Khartoum.



Arab Houses, Suakin.

Notes of the Week.

Coalition Difficulties in Egypt.

It would be more surprising if there were not difficulties in the maintenance of the Coalition Government in Egypt at the present moment than that they should come to the surface from time to time. With the satisfactory adjustment of each crisis the cause of constitutionalism and political experience in the country benefits, and for this reason the difficulties may prove blessings in disguise. They can generally be attributed to excess of zeal on the part of followers who believe that their worth to the Party to which they belong will be gauged by the uncompromising manner in which they push to the forefront the Party's tenets or interests. Yet the essence of a Coalition Government is that there should be to some extent a truce to party extremism and that by common consent matters on which there is a perfectly legitimate difference of opinion should be kept as far as possible in the background. Within the last few weeks a number of incidents have arisen to stir the fervour of the two elements in the Egyptian Coalition and they have reacted on the harmony of the Cabinet. Hopes are now entertained that the worst phase has been passed and that Sarwat Pasha may continue to be able to lead a Government that responds to the immediate needs of the country. The crux of the situation is still to be found in Anglo-Egyptian relations. Behind every episode can be traced the difference in outlook as to the proper handling of this problem. The self-denying ordinance of silence imposed on the country before the next stage is reached after the conversations in London is trying the tempers of those who find self-control the hardest of political virtues and do not reckon a spirit of compromise among the attributes of leadership. In the meantime the leaders themselves are loyally abiding by their mutual understanding, and provided that their example can be followed by all those associated with them in the Government a certain amount of effervescing outside may serve as a useful safety-valve. It should not be difficult for the rank and file of Egyptian political parties to distinguish between aims and the methods adopted to reach those aims. That the London conversations should have proceeded smoothly and led to an understanding between the two parties up to a certain point does not imply that either abandoned any definite aim or principle; but that they discovered by an exchange of views that the difference between the respective aims was not in any case as great as seemed probable at one time, and that there might be a long road to be traversed harmoniously together before it could be definitely established that there was any actual clash between the respective aims.

Balkan Relations.

The visit of M. Michalakopoulos, Greek Foreign Minister, to Rome inevitably gave rise to anticipations and reports of an alliance between Italy and Greece. Such a pact would have been in keeping with Italy's present policy in the Balkans and would at once have been interpreted in Yugoslavia as a further strengthening of the ring fence that Italy is credited with being engaged in constructing round the Kingdom of Serbs, Croats and Slovenes. Greece, however, would not appear to have been willing at this particular juncture to fall in with Italy's Balkan schemes, but prefers to use an Italian *rapprochement* as a lever in her negotiations with Yugoslavia over outstanding questions. These tactics are only natural. A close pact with Italy that left things as they are in regard to the Dodecanese would not be popular in Greece; on the other hand, M. Michalakopoulos can be relied upon to have reminded Signor Mussolini that the surest way to Greece's good will would be by means of an improvement in the status of the Greek population of the Dodecanese, if there are sound reasons against the surrender of the islands to Greece. In the meantime both countries are engaged in improving their relations with other countries. Between Greece and Bulgaria there are no acute difficulties, but a friendly conference would find a number of questions of which the settlement would place the correct relations between the two countries on a more cordial basis. One of these questions is that of railway communication between Petritch and Demirhissar; the construction of the connecting line has been agreed upon in principle and Bulgaria is said to have begun operations on her side of the frontier. A comprehensive agreement on this point would pave the way for a general economic understanding between the two neighbours. Italy for her part would seem to have taken the first step towards disarming the misgivings which the Turkish Government has long held in regard to Italian designs. A newspaper which is credited with close relations with Signor Mus-

685823

Digitized by Google

solini has thought it worth while to protest the cordial friendship felt by Italy for the Turkish Republic and to deny any intention on Italy's part to threaten the integrity of Asia Minor. Whether a single assurance of this nature is sufficient to change the whole trend of Turkish policy remains to be seen; but it is a fact that Turkey would benefit by harbouring less suspicion of European designs in general on her territory. Even if she set about assuring herself that her fears lack any substantial basis for at least ten years, she would obtain a valuable respite from military burdens and be able to devote more time and money to economic development. Few countries, it would be thought, would be unwilling to give Turkey a peace guarantee for ten years, conditional only on freedom from anti-foreign bias in Turkish legislation and administrative acts.

Yugoslav Foreign Policy.

A debate in the Skupshtina on the Estimates of the Ministry for Foreign Affairs has provided the Yugoslav Foreign Minister with an opportunity of referring to Balkan relations from Yugoslavia's point of view. Dr. Marinkovitch's remarks were for the most part of a negative character; he did not find any cause for alarm either in the Greek Foreign Minister's visit to Rome or in the *rapprochement* between Greece and Bulgaria. Yugoslavia herself, he added, desired a *rapprochement* with Bulgaria and did not aim at occupying a preponderant position in the Balkans. The occasion may not have called for any more definite pronouncement on Dr. Marinkovitch's part, but the fact remains that the other Balkan States, certainly Greece and Bulgaria, do pay a tacit tribute to Yugoslavia's numerical superiority by looking to her for a definitely constructive move in establishing on a permanent footing the principle of the Balkans for the Balkan peoples. Dr. Marinkovitch spoke of defending that principle, but the principle is not yet sufficiently in existence to enable it to be defended. It has to be brought out of the realm of theory by a definite drawing together of the Balkan States, when there will be something concrete to be defended. Until this is done, the difficulties put in the way of a Balkan federation are liable to increase for all the lip homage paid to *rapprochements*.

Trouble in Kurdistan?

It looks as if King Faisal of Iraq may have returned to his State to find trouble at both ends of it. News of repeated Wahhabi raids on the southern borders still continues to pour into Baghdad; and now it is stated that trouble may arise in the North, in Southern Kurdistan. Shaikh Simko of the Shikkak, whose too long life has been the source of trouble to more than one Government, is said to be behaving roughly in the Rowanduz district. With thirty followers he is said to be defying the Government and practising highway robbery. There is little of the Robin Hood about this particular Kurd, and it may be that if, as is reported, he joins hands with Shaikh Ahmed of Barzan (of the Diwana or Mad People), these two chieftains will enjoy a spell of sport that is becoming increasingly rare in Iraq. So far there is no suggestion that Simko is acting as the agent of any foreign force, and if it is solely for his own end that he is playing, there seems little reason to anticipate serious trouble. How the end of Simko, which, incidentally has been reported many times, even in serious historical works, will come about it is impossible to tell. It appears that he is unwilling to share a like fate with Shaikh Mahmoud of Sulaimani, who, it will be remembered, stood out for a long time against the Baghdad Government's proposals for reconciliation, but in the end was won over to reason. Simko does not, of course, represent any Kurdish interest as against Arab interest; he is simply and solely an old-fashioned Middle Eastern bandit. He has fought against practically everybody in the Middle East, Turks, Persians, Russians, Armenians and Iraqis, and is notorious in addition for having murdered in cold blood the Assyrian Patriarch, Mar Shimun.

The Pan-Asiatic League.

In a similar way to that in which the first Pan-Asiatic Conference, held at Nagasaki in August, 1926, was virtually ignored in the British Press, the second Conference, held at Shanghai, last November, is apparently regarded as of little consequence. This neglect in the main is probably justifiable, on the grounds that talk of Asiatic unity as against the West is in present conditions quite idle; but the whole conception underlying the principles of the League is by no means unworthy of notice. Primarily, of course, this League is the work of Far Eastern men, and it may be that the differences existing between Japanese and Chinese have prevented Western observers so far from taking the thing very seriously. However that may be, this Shanghai Conference was attended by "representatives" from China, Japan, Turkey, Ceylon, Afghanistan, Formosa and Arabia. Very definitely, therefore, it is not only the Far East which is concerned in this matter. What actually happened at Shanghai is not known, there being no European nor American reporters present, but it is stated, in an article in the *Manchester Guardian* of December 22, that it was decided to hold the next session, in 1928, at Kabul, and that the Conference passed a series of resolutions recommending Asiatic missions to Europe, Africa, America, and Australia to convert the (white) natives of these Continents, and the starting of a weekly newspaper, preferably in English, or a page each in Chinese, Japanese, Urdu, Hindi, Persian, Turkish, Arabic and English. Even from this short summary of the Shanghai Conference, it is sufficiently obvious that the protagonists in the struggle foreshadowed would be Russia and Great Britain. But the whole antithesis implied in this conception is a false one. The "East," whatever one may mean by that phrase, is not implacably opposed to the "West," but, having for so long forgotten its own civilisations, seeks to recreate them on the basis of being Westernised. It is Bolshevist Russia which is seeking to turn this not unnatural process into an inevitably anti-Western direction. In any case, before attempting to realise a victory against the "West," the League will have to realise its own first Article, which runs:—

> The Pan-Asiatic League is founded in order to bring about a permanent peace based on equality and justice and to safeguard the perfect liberty and well-being of humanity by abolishing all distinctions of class, race, and religion.

When that has been accomplished in Asia, it may be found that it has also been accomplished as between Asia and the rest of the world, and that the League's *raison d'être* has, therefore, been destroyed.

PERSIA, BAHRAIN, AND BRITAIN.

The intelligence that reaches the daily Press from Persia is so scanty and, too frequently, so unreliable, that the ordinary man may, perhaps, be excused ignorance on one aspect of Britain's extensive interests in the East, namely her relations with Persia. Yet he may have been uneasy in his ignorance when he read, last week, that the Persian Government had protested to the British Government and to the League of Nations over the question of suzerainty over Bahrain, that group of islands in the Persian Gulf which can occasionally be seen from the Arabian mainland, though never, of course, from the Persian side, and over which, in the seventeenth and eighteenth centuries Persia did exercise an influence which may not yet have entirely disappeared from the character of the inhabitants. Yet the ordinary intelligent man, though he may have rubbed his eyes in perplexity at the historical sense of the Persian Government, will inevitably have wondered why the Teheran Administration, which, as he knows has not gone out of its way to consult British susceptibilities in questions like the the ratification of the Imperial Airways agreement, the repayment of debts, the captivity of the Shaikh of Muhammarah, and so on, should have chosen this rather sensational way of airing what surely must be an academic rather than a practical grievance. In other words, the question which he must have asked is why the Persian Government should have found, in the apparently inoffensive stipulation in the recently-concluded Anglo-Hijazi Treaty that King Ibn Saoud should keep the peace with the Shaikh of Bahrain, an opportunity for a fresh anti-British ebullience. It is an interesting inquiry, and care and patience should be exercised in an endeavour to find an answer. It is obviously not sufficient to ascribe Bolshevist urging to this protest against the Anglo-Hijazi Treaty, if only for the reason that Persia has made at least eight or nine similar protests before, including some three or four during the last twenty years. We must, therefore, look more deeply. But let us first clarify this particular question of Bahrain.

Persia, which lost the right of administering Bahrain towards the end of the eighteenth century, has consistently refused to accept the present status of the islands. Great Britain, on the other hand, practically ever since she took a vital and constant interest in the good administration of the Persian Gulf, has treated the islands as an independent Amirate, in Treaty relations with the Government of India. For over a hundred years the Khalifah family in Bahrain have been in Treaty relations with the Government in India, and in 1869 the ruling Shaikh was helped by the British in his revolt against the Turks to assert his independence. In 1880 he signed an agreement, similar to that between Great Britain and the Shaikh of Oman, by which he promised to accept no help from any foreign Power and to alienate no part of his land except to the British. Persia, as is pointed out in the letter to the League of Nations, protested against these agreements, although whether the Earl of Clarendon's letter in 1869 which is referred to by the Persian Government (and which has never been published) really substantiates their claim, would seem, to say the least, to be doubtful. It is, in fact, quite impossible for an unprejudiced person, with all the available facts at his disposal, to treat this pretension of Persia very seriously; half the map of the world might be changed if Persia's premise were to be well founded in international law. For Persia to disregard a patent lapse of right is idle. The Teheran Government may endeavour to regard Bahrain residents in Persia as Persian subjects; it may even take the trouble of issuing local passports to subjects travelling in Bahrain, just as it issues passports for travellers between the various Persian ports, but all this in no wise affects the real status of Bahrain. So far as we are aware, there has never been the slightest indication on the part of the very mixed population of the Bahrain Islands of a desire for subjugation to the Government of the Shah; on the contrary, although the Khalifah family may from time to time display characteristics which it may tax the ingenuity of the British Resident in the Gulf or the Agent in Manama to overcome, the present system of governance may be said on the whole to work very well. It would scarcely be possible for Great Britain, with the best will in the world, to permit so retrograde a step as the retrocession of Bahrain to Persia; not even the Shiah pearl-divers would wish to be administered from Teheran, much less the Sunni majority of the inhabitants.

A further Persian protest on the subject of Bahrain is not calculated to cause any worry or inconvenience to Great Britain; but it is a matter for regret, if it affords any satisfaction to Persia. As far as the League of Nations is concerned, the status of Bahrain, it would be thought, will be regarded as part only of the whole, that whole being the question of the Persian Gulf. Even if Persia could show that conditions in the Gulf as an international highway would be better, if Great Britain divested herself of her responsibilities in that sphere and left all Gulf matters to the Persian Government, it is not easy to see on what principles the League of Nations would raise the question or base any change in the present situation. On the other hand, if Persia, stirring to-day with national aspirations after two centuries of lethargy and effeteness, feels the necessity of asserting herself in practical and legitimate directions, she can always count on a helping hand from Great Britain, when she cares to set about the business in a suitable way. Notes after the manner of the Bahrain protest, even if designed as a *tu quoque* to such a Note as is now known to have been received shortly before by Persia from the British Government, cannot further Persian interests; whereas it is conceivable that a friendly conference covering all the points at issue between the two countries—and there must be a score of them—might discover a wide field for mutual adjustments, which would at once place Anglo-Persian relations on a more satisfactory footing. It is obvious that, when two States have a variety of issues between them, opportunities will frequently present themselves for thrust and counter-thrust; but, as in the case of fencers standing yards apart, no progress will be made. Persia, we can well believe, is earnest in her anxiety to escape from any suggestion of being in leading-strings; but she is wrong in attributing to Great Britain the desire to maintain any such relationship with the Persians as is not compatible with their real interests. Friendly discussion, there can be little doubt, would discover a variety of directions, overlooked at present by the Persians, in which they would find occasion to enhance their own self-respect and to advance the building-up of the country by their own efforts, provided that they would renounce the policy of pin-pricks and petty obstruction, which may cause annoyance to Great Britain but are a very insignificant factor in the scheme of the British Empire.

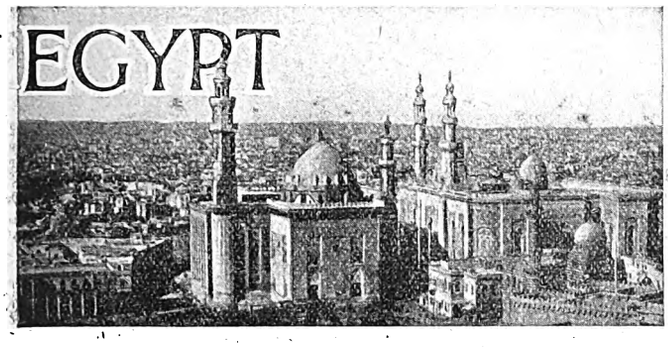
The Near and Middle East*

From Our Own Correspondents.



Cairo, December 17.

The Infant Welfare Bazaar.

The Infant Welfare Bazaar at the Residency, the object of which was explained in this correspondence three weeks ago, has proved a phenomenal success. Without taking into account the Grand Tombola, for which several thousand tickets have already been sold, the receipts from donations and sales far exceed anything the organisers ever anticipated would be the result of the Bazaar.

The response from the public has indeed been extraordinary. All communities, all classes and all political and religious circles have vied with one another in their efforts to contribute in one form or another to the enterprise. The scene on the first day beggared description, so great was the crowd of all sorts and conditions, so eager were they all to spend money, and so difficult was it for the stall holders to deal with these insistent visitors. To a very large extent the stalls were stripped of all they had and hurried visits had to be paid to local shops to pick up articles for re-stocking the stalls for the second day. The donations have been remarkably generous: King Fuad gave £E.500, and his gracious Queen £E.200, and many gifts of £E.100 have been received, while one Egyptian came forward with an offer of £E.1,000 on condition that his name was not revealed! Needless to say, his condition was accepted.

Egyptians of every class are loud in their appreciation of the solicitude for the welfare of their children, which Lady Lloyd has shown in this matter. The Editor of one of the leading papers put the general view very well, when, on my thanking him for the manner in which he had backed the Bazaar, he said: "On the contrary; it is to her Ladyship that the thanks of Egypt are due for taking up a cause which we should ourselves long ago have furthered." I am not exaggerating when I say that by the intensely human appeal, which she addressed to the Femina Club, and the delightfully graceful speech in French she made to welcome the King when he visited the Residency to open the Bazaar, Lady Lloyd struck home to the hearts of the Egyptians, and, while full recognition should be given to all who have helped her, there is no gainsaying the fact that the success of the enterprise has been entirely due to her remarkable power of organisation and to her tact and persuasiveness.

Aziz Izzet Pasha.

It is with sincere regret that one has learned of the definite resignation of Aziz Izzet Pasha, Egyptian Minister in London. Every year Izzet Pasha has presented a request to the Egyptian Government for permission to retire from a position which seriously affects his own health and that of his wife, and every year he has ceded to the urgent request of both his King and his Government to allow his patriotic feelings to overcome his own personal desires and continue a little longer the sacrifice he has been making. At last he has prevailed, and the reason is that the main object of his surrender every year to the insistence of his Government has now been achieved. In the first place, he was anxious that relations between Great Britain and his country should be placed on a permanently friendly basis. Secondly, he wanted to see his Sovereign as the honoured guest of the British Court and of the British nation. And, thirdly, his great desire was that a pact of friendship should be made between the two countries. The first two portions have been splendidly achieved. While the irresistible Ziwar Pasha had a great deal to do with the re-establishment of friendly relations after the murder of the Sirdar, there is not the slightest doubt that it was the patient work and sympathetic personality of the Minister in London which paved the way, just as the spadework in regard to the wonderful reception of King Fuad, a tribute to that personality, was all done by his representative at the Court of St. James's. Egypt owes an enormous debt to Aziz Izzet Pasha, and if, as everyone hopes, the Treaty of which the broad lines were laid down last summer in London is signed, the success will be largely due to the self-sacrifice and *savoir-faire* of the man who was Egyptian representative in London during the early and difficult years of Egypt's new political status.

King Faisal.

King Faisal made a short stay in Cairo on his way back to Iraq. On this occasion he was received with royal honours, the Palace sending the Chief Aide-de-Camp down to greet him on arrival at Alexandria, and the High Commissioner, the Prime Minister and the Grand Chamberlain meeting him at Cairo Station. King Faisal was accommodated at the Semiramis Hotel and during his stay was the guest at a luncheon at the Palace and a dinner at the Residency. He left by air for Amman, where he will make a brief stop to see his brother.

Charity to Alexandria.

Alexandria this past week has had its full share of charity entertainment. The first event was the Bazaar in aid of the funds of the Y.W.C.A., which is organised annually by Alexandria ladies and was held as usual this year at the San Stefano Casino. Lady Lloyd again went

down from Cairo specially to open the Bazaar. It proved an unqualified success and should augment considerably the funds of the very commendable object for which it was got up. The other event was the British Benevolent Fund Ball at Claridge's Hotel. This fund does much good work among the sailors and other classes which drift into a seaport like Alexandria, and the annual ball is one of the events for which the entire British community in Alexandria turns up in force, not only because it is a good social engagement, but also because everyone so thoroughly approves of the object and does his or her best to support it. Last year the High Commissioner and Lady Lloyd came down specially from Cairo. This year, unfortunately, only the High Commissioner could come, as Lady Lloyd had the Welfare Bazaar on in Cairo, and, although she had projected making the heroic effort of rushing down after the first day to attend the ball and then returning next morning in time to be at the second day of the Bazaar, more prudent counsels prevailed, and she had to abandon the idea. The ball was a splendid success and everyone enjoyed themselves thoroughly.

Locusts and the Air

The Egyptian Government has accepted the offer of the British Government to place the Air Force at its disposal in connexion with the campaign against the locust invasion, which it is feared will take place early next year. Already the usual forerunners of such invasions have made their appearance in various parts of Upper Egypt and the Ministry of Agriculture is taking the precaution of preparing to deal with this menace to agriculture. The idea is to spray the areas infected with some poisonous solution from the air, and the discussions that are now going on between the civil authorities and the R.A.F. are directed not merely at securing the most efficient co-operation between the land and air, but also at preventing as much as possible mishaps, which may arise as much from the spraying as from the necessity of flying low in order to attain the maximum efficiency.

The Nationality Law.

Sir Ronald Storrs is staying at the Residency as the guest of Lord and Lady Lloyd. Sir Ronald, who was accorded a very warm reception by the Cypriot communities in Port Said, Zagazig and here, has come for a short holiday, as he has not had any leave since he took up his appointment over a year ago, and cannot get home to England before next summer. It is currently said, though no confirmation can be obtained, that during his stay he will discuss with the Egyptian Government and the local Cypriot committees the vexed question of the new Nationality Law, which the Egyptian Government proposes to promulgate. Under this Law all former Ottoman subjects who were born in the Ottoman Empire become Egyptian subjects, unless they opt for the nationality of the country under which their birthplace or that of their fathers has now come as the result of the War. In the event of their so opting they must leave Egypt within six months of the exercise of that option. This provision of compulsory departure from the country where they have settled has not unnaturally aroused considerable consternation amongst the communities, especially the Cypriot, who made representations to the British Government. The latter had in the meanwhile accepted the application of this clause. On the other hand, the other countries affected have not accepted it and the Law has not yet been promulgated in consequence. A new and favourable factor has come into the situation in that the Egyptian Parliament, to which the draft was submitted, objected to the clause entailing leaving within six months of option on the ground that there was nothing to prevent others of the same source of origin but fully qualified foreign subjects from coming to Egypt to take the place of those displaced under the Law, and it was obviously to the advantage of Egypt that the former, who had valuable relations with the country and were actively contributing to its economic welfare should remain in preference to new element which might not be so advantageous. There is, therefore, every possibility that the offending clause in the nationality law will be cut out on the initiative of the Egyptians themselves, and it is to be hoped that a decision will be taken on the matter without further delay, as the suspense is doing much harm.

Cairo, December 24.

The Future of Alexandria.

For some time there has been a great deal of talk of the need to defend the interests of Alexandria and bring its attractions to the attention of the large number of visitors, who annually land on its shores, but rarely if ever stay longer than is necessary to catch a train to Cairo. This necessity, combined with the danger to the dignity of Egypt's second commercial capital entailed by the proposals to move the Mixed Court of Appeal to Cairo, and to transfer to the Capital the head office of the Post Office and certain other administrations, which since their foundation have always been at the port, seems at last to have aroused, if not the City fathers, at any rate the leading residents, and at a meeting this week at the Sultan Hussein Club under the chairmanship of Amin Yehia Pasha, always in the van when the welfare of Alexandria is in question, a Union for the defence of the interests and the development of the City of Alexandria was formally created. The principal object of the Union is to deal with all questions touching the interests of the City by securing for it the greatness and importance which it can claim owing to its position in the eastern basin of the Mediterranean. It will exercise its influence and direct its activities by binding the inhabitants of the City more closely together, by creating community of ideas and interests among them, and by studying all questions relating to the City and its port; it will hold periodical meetings and conferences and will make representations to the competent authorities. A very representative committee was elected under the chairmanship of Amin Yehia Pasha. The move is worthy of every encouragement, particularly as, in the words of the President, all their work will be done in a spirit of concord, without hostility towards anyone, while facilitating the task of the authorities; and everyone will wish the enterprise every success, more especially as whatever success it attains cannot fail to reflect itself on the rest of the country and the community.

The New Customs Regime.

The experts engaged by the Egyptian Government, M. Lamontaigne, Canadian Trade Commissioner in Brussels, and M. Petit, who has been responsible for the Customs régime in France, have now embarked on their task of elaborating a new Customs tariff for application in 1930, when the last commercial treaty, that with Italy, falls in. The definite proposals before the Egyptian Government, and on which it will have to take a decision very soon in order that the experts may have clear terms of reference are, in the first place, the substitution, in the case of most commodities, of specific tariffs for the present general *ad valorem* one; and, secondly, the introduction of maxima and minima tariffs, the former for application to countries which have no commercial conventions with Egypt, and the latter for application to the products of local industries, which it is desired to protect and to serve

Digitized by Google

as the lowest concession, which could be held out to countries enjoying most-favoured-nation conditions. In addition it is proposed to remove the export duty on products of Egyptian agriculture and industry, to remove the import duty or impose a very low rate on raw material and implements required for local industries or for agricultural purposes, and generally to apply a policy of protection of Egyptian agriculture and Egyptian industries. The elaboration of the new tariff is going to be a very delicate and difficult affair, and the Egyptian Government is well advised to have started so long ahead to make its arrangements so as to ensure that the new régime, as far as any régime can give satisfaction, will meet with general approval.

Irrigation Projects.

Progress is being made with the various projects which the Irrigation Department has in hand. Work in full earnest has been started at Nag Hamadi on the barrage which Sir John Jackson and Co. have contracted to erect there. All the houses and dwellings have been erected, and piles have been driven in one section of the river where excavation work will start forthwith. The barrage is to be erected within three years. As regards the other project, *viz.*, the heightening of the Asswan Dam, which is proposed as an alternative to the erection of a dam at Gebel Aulia, on the White Nile, the survey has for all practical purposes been completed, and the detailed project should be ready for examination early in the New Year by the International Commission, which it is proposed to appoint to report on the practicability and feasibility of the scheme. I understand that an important firm of Consulting Engineers who have considerable experience of Nile work in general, and of the Asswan Dam in particular, have already submitted a scheme for the heightening, which they declare to be perfectly safe and a sound proposition.

The Egyptian Government has acquired the palace belonging to Mohamed Izzet Pasha at El Insha and that belonging to Prince Kamal Eddine Hussein close to the Kasr El Nil Bridge for the Ministry of Foreign Affairs and the President of the Council respectively. This gives effect to the suggestion which I made in my correspondence two months ago, when I pointed out how undignified it was for the Prime Minister to have no official place where he could receive or entertain the Diplomatic Corps or important foreign visitors, and suggested that, as so much had been spent on Legations abroad, Egypt might well devote a sum of money to a matter with which her dignity is so closely bound up.

French Comedy.

Mme. Madeleine Soria and M. Lucien Rosenberg this week concluded the season of French Comedy with which they have been delighting us at the Royal Opera House. Before their departure Count Guido Visconti di Madrone gave a little reception at the Continental-Savoy in their honour to enable their admirers to give expression to the pleasure with which they had followed their performances and their hopes that they will return among us in the near future. French Comedy has now been followed by Grand Opera, for which Count di Madrone has brought what is considered to be a really first rate troupe from Italy. The season opened with "Aida," given in excellent style and so affording good promise of what is to follow. It is not improbable that Verdi's masterpiece, written specially and first performed on the occasion of the opening of the Suez Canal, will be given later on in the season at the Pyramids, where a similar venture proved such a success in 1912.

The Cypriot Community.

Sir Ronald Storrs returned to Cyprus on Wednesday, after spending ten days as the guest of the High Commissioner and Lady Lloyd at the Residency. During his stay he was in touch with the Cypriot community, who, before his departure, offered him a *thé d'honneur* at the Continental-Savoy Hotel, where speeches of goodwill and confidence in the Governor and the British Government were delivered. Sir Ronald, in his reply of thanks, referred to the efforts that are now being made to rescue the Island from the stagnation into which it had fallen, and mentioned that among the projects very near his heart was the establishment of an industrial home where the younger members of the population afflicted with blindness could be taught to earn a livelihood, and that he was trying to raise the necessary money for this object. So far nothing has been published with regard to the position of the local Cypriots under the new Egyptian Nationality Law which it is popularly believed Sir Ronald Storrs came to discuss with the local authorities.

Al Kashaf's "Scoop."

It is not often that the Press secures an advance copy of an important document like an international treaty, and *Al Kashaf*, the new Wafdist organ, is heartily to be congratulated on the "scoop" which it secured this week when it published the text of the Iraq Treaty forty-eight hours before its promulgation in London and Baghdad.

THE HIJAZ.

Jidda, December 20.

After Four Months.

A four months' absence from Jidda under present conditions leaves a large gap in the record of the progress of modern Arabia, which your Correspondent can hope to fill up only gradually, in the course of this and subsequent epistles. Any attempt to bridge the gulf in a single letter would demand a whole week's space of THE NEAR EAST and would perhaps make serious inroads into that of AND INDIA. Such selfishness is not to be thought of, and I mention the matter only to point the measure of the transformation that has overaken Arabia. A few years ago a few months' or even a few years' absence would have produced little but a small crop of semi-humorous anecdotes to be recorded, but under

modern conditions there is a veritable rain of news and developments with which it is indeed hard to cope. The more so seeing that the ordinary channels of information seem to have become blocked, since your own Correspondent appeared upon the scene some months ago. Your readers must console themselves with the reflection that sometimes "truth is stranger than fiction," but, if they want the fanciful stories which they have learned to associate with the romantic name of Arabia, let them turn away from your columns to the telegrams and paragraphs of the Basra and Jerusalem correspondents of some of our leading dailies.

Some of them made an abortive attempt during the official "silly season" to rouse the interest of their readers wtih horrid tales of the attempted assassination of the ruler of the Dual Monarchy of Arabia by a curious combination of his best friends and nearest relations. King Ibn Saoud has no intention of succumbing to fairy tales of that kind, and the latest news of him, received by me direct from Riyadh, which the messenger left at the beginning of December, indicates that His Majesty is in the enjoyment of the very best of health. That does not prevent him from feeling somewhat puzzled at the unanimous and hasty outcry of most of the British Press (including THE NEAR EAST AND INDIA, I regret to say) over the necessarily one-sided Iraq reports of what has now gained considerable notoriety as the Baswa or Busaiya incident. In your issue of November 24 you give King Ibn Saoud credit for having hitherto steered clear of false moves, and it is surely premature to accuse him of a lapse from grace until the full story of the Busaiya incident is told and reviewed in its proper perspective. A leading article on the subject in the *Umm al Qura* of December 17 may help to supply the necessary corrective to the many exaggerated versions of the incident which have been allowed to gain currency in England. The story goes back to the winter of 1922, when, under the terms of Section 3 of the Protocol of Uqair, Sir Percy Cox, acting for Iraq and Great Britain, and Ibn Saoud agreed as follows:—"The two Governments agree each of its own part not to use the waterings and wells lying in the neighbourhood of the frontier for any military purpose, *such as the erection of forts and the posting of troops thereon.*"

Since then Ibn Saoud has had requests from the tribes on his side of the frontier for permission to build villages for agricultural purposes (like the many *Ikhwan* villages of the interior) at Lina, Hafar al Batin, Khudhaira and other places at varying distances from the frontier. In all these cases he has refused permission to build in compliance with the responsibilities accepted by him in the Protocol above referred to. The Iraq Government does not seem to have taken so literal a view of its own liabilities under the Protocol, and would seem to have been unquestionably in the wrong in starting the building of a fort at Busaiya. To represent the place as being in the Nasiriya district is entirely wrong. As everyone knows who knows the area at all, Busaiya is a genuine desert watering on the Iraq side of the boundary (but not 75 miles within it as suggested) clearly subject to the Protocol prohibition against buildings of a military character, as much as Ansab or Lina. In undertaking the building of the post the Iraq Government was merely trailing its coat for the Wahhabis to tread on. King Ibn Saoud lodged a protest against its action in due time and warned all concerned of its probable results. His warning was disregarded and the Iraq Government seeks to saddle him with responsibility for what has befallen. The proposition is quite absurd, and no-one regrets more sincerely than King Ibn Saoud the unfortunate consequences of the Iraq Government's deliberate disregard of his warning.

Motor Traffic and Road Making.

It is satisfactory to find that there is every prospect of an enormous increase of motor transport in connexion with the pilgrimage of 1928. The number of motor-cars which have arrived since the completion of the last pilgrimage and those on definite order for delivery in the near future are estimated to give a 100 per cent. increase on cars then in the country. It will not be long before the Hijaz tops its first thousand cars. And all this is spite of an entire absence of roads—but this defect is now being remedied and work is being actively pushed on on the first metalled road of Hijaz history. This road follows roughly the line of the old pilgrim route between Jidda and Mecca and is being built under the supervision of Sulaiman Shafiq Pasha, one of the most prominent of the Turkish exiles resident in the Hijaz. He was formerly Minister for War under the old régime, and, therefore, no *persona grata* to that of Mustapha Kemal. He now finds, however, an ample field for his energies in pushing on the construction of a road which will not be the least of the boons conferred by the Wahhabi monarch on the pilgrims of the Muslim world. A single steam roller—its fellow is expected shortly—stands ready for its work and looks in the meanwhile as outlandish as a camel would feel in London. Other accessories to road-building are also on their way, and there is every sign of progress in the Hijaz. Incidentally, the completion of certain works on the Yanbu-Madina road has within the last few weeks opened up that line of communication to the motor-car.

This Year's Pilgrimage.

The pilgrim season may be considered as having already begun as several ships from India and the Dutch East Indies have deposited small batches of pilgrims at this port. The total probably does not exceed a thousand, but the first swallows are always the most remarkable. It seems but yesterday that the streets of Jidda were swarming with myriads of their like. This year the Government has taken time by the forelock in respect of health matters, and succeeded during the recess period, with the help of the Dutch Government, in securing the services of a bacteriologist of great experience both in the East and in the West Indies. It is probably no exaggeration to say that Dr. Van der Hoog is the first medical man of distinction to undertake work in this country. He is trebly welcome for that reason and the Hijaz Government is to be congratulated on having engaged his services. I understand he has made considerable progress already in teaching the mysteries of bacillo-culture to eager students and in laying up stores of various vaccines against the time of need, in spite of

a single and somewhat characteristic *contretemps*. He had had the brilliant idea of sending his first cultures in a thermos flask to be preserved in one of the cells of the local ice-machine. The German engineer in charge of the machine had had the still more brilliant idea of converting the flask into ice. In this he only partially succeeded, whereupon he flung the flask—cracked under the ice pressure!—on to his rubbish heap. And there it was found next day by the enraged bacteriologist who sought frantically for a calf to inoculate with the thawing remnants of his first hatch. And so delighted was he at the due development of small-pox in the calf that he forgot to pursue his just complaint against the remiss engineer.

Residents and Visitors.

Dr. Van der Hoog is by no means the only newcomer to the ranks of European society in this country, which must now number nearly, if not quite, fifty persons. Most of those who have been away for their summer holidays are now back—the British Agent and Consul arrived only to-day—and we are nearly up to full strength, excluding a number of temporary visitors who are here for various reasons awaiting boats to take them away. There has indeed been quite an epidemic of unauthorised incursions into the Hijaz recently and it may not be out of place to mention here that all persons desirous of visiting this country must be provided with visas obtainable, subject to the Hijaz Government's previous sanction, from the Government's agents at Cairo, Suez and other places. Any European entering or trying to enter the country without such visa is liable to be suspected of ulterior designs—and sometimes such suspicions are not altogether out of place.

The first case was of two American missionaries, who apparently entered the Hijaz for no other purpose than to convert the inhabitants of this country to Christianity. They started from the Maan district and were ultimately held up at Dhuba or Wajh and sent thence by *sanbuk* to Jidda where they have been detained in mild custody pending arrival of a boat to take them away. They have naturally been deprived of the cargo of Bibles and tracts by which they were accompanied. The authorities in Trans-Jordan should surely take better steps to avoid such results of the hospitality extended by them to American missionaries.

A second case related to quite a serious commercial venture emanating from the Soviet territory and materialising here in the shape of a merchantman with a large cargo of flour, sugar and other goods. The merchants of Jidda formed a ring to boycott this apparently insincere attempt at trade with Arabia and matters culminated in the discovery that the six gentlemen accompanying the cargo in various capacities had all omitted the perfectly simple formality of securing a Hijaz visa or permit. This was the more strange seeing that one of the individuals in question was M. Belkin, formerly interpreter and Secretary at the Bolshevist Agency here, while two others came apparently to be doctor and clerk respectively in the same office. After much pother it was ultimately arranged that the doctor and clerk should be allowed to remain, while the remainder departed at once leaving their bags behind them. The sugar and flour and other goods still remain unsold in face of the local boycott, but it is expected that some arrangement will be made in due course.

The third group of visitors was from Germany—a full-fledged scientific expedition headed by a German anthropologist, who is accompanied by a lady and another scientist. Its advent here, apparently with full equipment and with every expectation of beginning the long trail across Arabia *via* Riyadh within a day or two of landing, appears to have been due to a strange misunderstanding on the part of the German Minister at Cairo or the Berlin Foreign Office. Coming without visas they were, as a mattter of courtesy, allowed to land, but only on the condition that they should leave by the next boat. The Hijaz Government at any rate had never encouraged anyone at any stage to suppose that permission would be accorded for the proposed expedition.

TRANS-JORDAN.

Amman, Undated.

Rains and the Moon.

The rains have been very late in coming this year, and in consequence the *fellahin* are somewhat alarmed about their crops, as the country depends entirely on its own resources for wheat, which is also the main export. A less serious cause of alarm occurred on December 8, when a total eclipse of the moon took place. The eclipse began at a quarter past six and it was nearly three hours before the moon was again wholly visible. Most of the inhabitants of Amman, according to their custom on such occasions, enlivened the time by beating tin cans, firing revolvers, and shouting, in order to drive away the whale, which they believed to be devouring the moon. As they invariably succeed in their efforts the superstition is likely to be long lived.

A Sharifian Gathering.

On December 14 King Faisal of Iraq arrived by aeroplane, en route from England to Iraq, and spent the night with his brother, the Amir Abdullah. The Amir gave a dinner party in honour of the King, to which all the Ministers, heads of Departments, and some local notables were invited. Though Faisal is King of Iraq, Abdullah is officially styled Prince of Trans-Jordan. His country is an independent Princedom, under a British Mandate, which is administered by a British Resident, and his staff.

The State of Trans-Jordan.

It is intended to have as few Englishmen as possible in Trans-Jordan service, but in the present youthful state of

the Government a certain number are necessary to help in the organisation of the various Departments. The country is governed by an Executive Council, under the Amir, assisted by two British Advisers, those of Finance and Justice. The Arab Legion, or Police, are commanded and partly officered by Englishmen, the only other executive offices filled by them being the Directorship of Customs, Survey, and Antiquities. According to a new arrangement, by which Trans-Jordan is entirely distinct from Palestine, Field-Marshal Lord Plumer is no longer High Commissioner of Palestine and Trans-Jordan, but holds the office separately for each country.

The Towns of Amman.

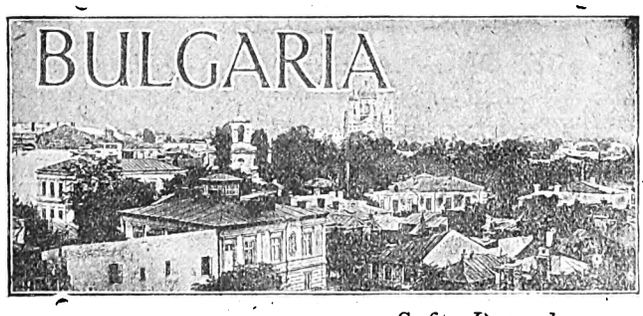
The Amir's capital which, two years ago was a mere village of mud huts, is becoming a town of some pretensions. At present Amman extends, like a starfish, up several wadis, the central street running parallel to the stream Zerka (the ancient brook Jabbok). In addition to the fact that the most easily obtained water is that of the stream, into which runs the sewage of the town, a position at the bottom of a cup of hills is not healthy. It is hoped that these conditions will be improved, as the new town is in process of being built on one of the hills to the west of the existing site, and, when the Rutenberg scheme for carrying water to the summit has been brought into operation the old town will probably be deserted, in which event the health of the inhabitants must inevitably improve.

An English Church at Amman.

The question of the building of an English church in Amman has been arousing interest for some time. A site was acquired, but, owing to the new town planning, has become unsuitable, and will probably be sold. One of the difficulties to be met is that while some of the community live in the town, at least as many live nearly three miles away, in the vicinity of the railway station, and the needs of both parties must be considered; nor does the fact that the Royal Air Force, whose camp is also near the station, are ministered to regularly by an Army Chaplain, seem sufficient reason to deprive their civilian neighbours of equal rights with the inhabitants of Amman proper.

The Frontier Force.

Lieutenant-Colonel Bewsher and the Officers of the Frontier Force were At Home on December 7 on the occasion of the annual presentation of a cup to the best turned-out section. The Headquarters of the Frontier Force are now at Zerka, where a permanent camp is being built.



Sofia, December 21.

The Opposition and the Government.

The wave of opposition which I recorded in my last letters, and which is becoming more and more pronounced, has culminated these last few days into a veritable attack on the Government.

It was easy to foresee this attack in view of the recent manifestations of misunderstandings within the Government party of the Democratic Entente, especially after the recent deliberations of the other parties which met in congress or in council to examine the difficulties of the situation and to determine the possible means of overcoming them. All these meetings, although held with different points of view, arrived at analogous conclusions, recorded in political resolutions, the most important and most characteristic of which is indisputably that of the Democrats, a Party which, under the leadership of M. Alexander Malinoff, has always occupied a central position and has known how to play the rôle of see-saw between the Government and the Opposition.

The Democrats' Resolution.

The Democrats in their resolution declare that (1) The present Sobranye, being the outcome of elections which were accompanied by moral and physical violence and carried out on an exceedingly unjust system, does not represent the true will of the people, or an effective connecting link between the political forces existing in the country; (2) Deprived of a firm popular backing, having sustained a series of setbacks and committed irreparable mistakes, the Government of the Democratic Entente is powerless to accomplish the big tasks of public administration. It is its duty, consequently, to resign; (3) The freedom of the citizens and of collective autonomous bodies is not always assured. Public funds are squandered on Party objects. Arbitrariness and corruption threaten to bring down the moral and legal foundations of the State; (4) The economic and financial condition of the country is strained. The population is impoverished and is no longer in a position to support the expenses of a State Budget which always shows big deficits; (4) The policy of carelessness and waste which has been followed up to the present has forced the State and national economy of the country to the indispensable necessity of a public loan. But the embarrassments experienced at Geneva prove that the Government has not acted in this business with all the necessary earnestness. The loan must be concluded without impinging on the sovereignty of the State and the economic independence of the country; (6) The foreign policy of Bulgaria is a policy of peace, and of the establishment of good relations with its neighbours, of gaining the confidence and support of the Great Powers, as well as one of defence of the rights conceded to it by the Peace Treaties, and the reduction of the burdens which these same Treaties impose on it. Now, in pursuing this policy, the Democratic Entente proves its weakness and pusillanimity. For instance, the question of minorities still remains; and the Government continues to pay no heed to the question of reparations in spite of additional charges for the new loans which will involve the Budget more and more in debt—a Budget which is already very heavy; (7) The internal crisis is spreading. The country is confronted with perils which may become insurmountable, and a way out is beyond the capacity of one political party alone. For this reason the creative forces of the country must regard it as their supreme patriotic duty to unite their efforts in order to dispose, as quickly as possible, of the general crisis by the constitution of a new Government, stronger and possessing greater authority than the present one.

After having registered these important declarations, the Democratic Party instructed its central office to take the initiative in the work of uniting the parties of order and progress with a view to facilitating the formation of a new Cabinet, whose task would be the definitive pacification of the country and its economic and financial improvement, the creation of loyal and good relations with her neighbours, and relations of trust and sympathy with the Great Powers, as well as the realisation of the rights and the reduction of the burdens agreed upon by Bulgaria.

The King and the Parties.

This programme, launched after the set-back to the loan at Geneva, and being shared by all the Opposition Parties, the latter were able, on the occasion of the reply to the Speech from the Throne, which occurred a few days

THE PERSIA SOCIETY.

ago at the Palace and which gave rise to a consultation with the Parliamentary leaders, to put their case before King Boris, to whom all the political leaders insisted on a ministerial change, which they considered an indisputable necessity.

The King naturally received with discreet reserve the attack from the Opposition, to which the President of the Sobranye, M. Tsankoff, predecessor and personal adversary of M. Liaptcheff in the Democratic Entente, has indirectly contributed by his hostile attitude to the Government in power and by the propaganda which he carried on, even with the head of the State, in favour of the formation of a stronger Cabinet, that is to say, one less conciliatory with the Agrarians and with the Left parties in general. This propaganda has borne fruit at the recent Congress of the Young Democratic Entente. M. Liaptcheff, who went to greet the delegates to the Congress in the name of the Government, received a rather cold, if not somewhat hostile reception. It is known, however, that this will not injure the personal position of M. Liaptcheff and that—whatever happens—even if the King were to decide upon a Coalition or a National Union Cabinet, he (M. Liaptcheff) would again preside over the new ministerial combination.

CYPRUS.

Nicosia, December 6.

The Kyrenia District.

The office of District Commissioner will be abolished at the end of the month when Mr. McDonald retires. A Local Commandant of Police will thenceforth act as Assistant to the Commissioner of Nicosia. This has caused the greatest dissatisfaction to the people of Kyrenia, who are loudly protesting to the Government, and expressing their discontent.

The Visit of Sig. Mario Lago.

During the recent return visit of the Italian Governor of Rhodes and the Dodecanese to Sir Ronald Storrs, the Greek community took up an entirely unfriendly attitude. The Holy Synod has now expressed its full approval of the lead taken by the Greek Archbishop in the matter—one in which both the Church and the people's representatives were in agreement.

The Forests.

The agitation against the protective policy and regulations, which are in force, is maintained, and is supported by the Greek Press, notwithstanding a late pronouncement by the Governor. The most erroneous views are held and published. It seems desirable that these should be met and disposed of, and it would perhaps be well if the Forest Department were to bring home to villagers, especially to those near the forests, by lectures and leaflets, the true situation, and the grounds for strict forest laws, which are so necessary in the interests of the island in general.

According to an Athens message M. Venizelos, in reply to a question, states that he is determined to refuse candidature for the Presidency of the Greek Republic, the position being incompatible wih his function of protagonist in former political controversies.

NEWS IN BRIEF.

King Fuad was present, on January 1 at the opening of a new Conservatoire, which is to be established for the encouragement of music among Egyptians, and the training of Egyptian singers and musicians.

As the surveyors have reported that the cost of the proposed Semnan-Bandar-i-Gaz sector on the Teheran-Asterabad railway would be prohibitive, *The Times* states an attempt will be made to find an easier way through the Elburz Mountains into Mazanderan by way of Firuzkuh.

An air liner of Imperial Airways was forced, on December 29, to descend in the desert about 200 miles west of Baghdad. It was eventually discovered by an Imperial Airways pilot fifty miles south of the usual track. The aeroplane, which ran short of petrol, was, when discovered, surrounded by friendly Arabs. With the help of some of the other machine's petrol, the stranded aeroplane reached Rutbah, where the passengers and mails were transferred and brought on to Baghdad.

The King of Afghanistan left Cairo on December 29 for Luxor for a day's visit. His Majesty accepted the invitation of the municipality of Alexandria, and left Cairo on January 3 for Alexandria, whence he sails for Europe to-day (Thursday). Before leaving, King Amanullah, attended by his Minister for Foreign Affairs and staff, was entertained at dinner on January 1 in the Residency, Cairo, by the British High Commissioner and Lady Lloyd. Among the guests were Mr. Henderson, Air Vice-Marshal Webb-Bowen, and some of the senior British officials in the service of the Egyptian Government.

Captain Vere Henry Fergusson, O.B.E., who was killed by natives in the Sudan on or about December 14, was born on July 25, 1891, the son of Colonel W. S. Fergusson, of His Majesty's Bodyguard. He entered Wellington College (Beresford Dormitory) in January, 1905. In June, 1916, he joined the Equatorial Battalion of the Egyptian Army. In the Palestine Campaign of February to March, 1918, he served on the Headquarters Staff, and against the Alia Dinkars in 1919, receiving the medal and clasp, and for the Great War, mention in dispatches, O.B.E., 1914-15 Star and two medals. He was transferred from the Egyptian Army to the Civil Department of the Sudan Government in 1920, and was appointed District Commissioner in the Bahr-el-Ghazel. He was the first officer to penetrate the Nuer country and start a native administration.

THE WEEK AT HOME

London, Tuesday Morning.

Personal and General.

The reappearance of this feature in THE NEAR EAST AND INDIA is due primarily to the exigent voice of the Editor, who, moved by the generous observations of numerous readers, particularly overseas readers, has so manipulated the space at his command—the restrictions of which inhibited the inclusion of "The Week at Home" last year—as to arrange for my return. He insists that readers used to find some amusement or entertainment, though I can hardly think instruction, in the paragraphs which until the end of 1926 I was privileged to contribute to this journal. And so, forbearing readers, once more

sit mihi fas audita loqui!

I can only plead, in extenuation of this my rehabilitation, that it is really your fault. It is you yourselves who have dragged me out from that natural cave of modesty in which I successfully hid last year, and have re-set me about the task which is extremely well-known in London journalism, of conveying London's news, that is, in a form which implies at once ubiquity and omniscience. But, quite frankly, I can but make my own solitary observations, though attempting to follow in the footsteps of Virgil's hero:—

erranti, passimque oculos per cuncta ferenti.

I will do my best, but perhaps I may be allowed to remind you that, unlike most London "Letters" or "Diaries," or "Correspondence," or "Notes," my columns are the product of my proper (or other) self, not the combined effort of several experts. Let all the blame, therefore, be poured personally on me, and not impersonally upon an anonymous syndicate.

The Trend of the Times.

And that reminds me. Having wheezed this verbose *apologia* off my uneasy chest, I will proceed, the veil of modesty having been rent and the mantle of infallibility assumed, to tell you what I think was the most important development in England's life last year. Months and months ago I mentioned the trend in England towards trustification, but in 1927 this indecent phase was more marked than ever. The word "trust" (or, rather "fusion," or "merger," which is thought to sound less sinister) is now in the mouth of every other person as the solution of the country's woes. Combines are now all around us, and fresh groups or amalgamations—call them what you will—are daily in contemplation.

Some of what are called the "astutest" minds in industry and finance (they are generally the most soulless and least cultured and traditional minds) favour this cry of "Trustify everything!" from Coal to Newspapers. Coal, for instance, is still weeping tears over its internal organisation, nor is it consoled, except for a few exceptions, and these exceptions should be very carefully noted, by the chorus outside the industry of "Combine, combine!"; and only the other day one of the very few remaining daily papers which were independent, the *Daily Telegraph*, passed over to a large group whose sole apparent interest in journalism is a financial one. . . Perhaps I might have headed this paragraph, "The Trend of the Telegraph." Going, going, almost gone are all the papers which used to lend variety and vitality to public opinion.

Now a good deal of lip service is paid to such developments as these; talk is indulged of their being necessary, desirable, or inevitable. For myself, who am neither American nor a State Socialist, I do not believe a word of it. When England is urged to organise itself as if the purse were more than personality, when individuality is assimilated and flattened, when the privileges of privacy are violated and the vices of publicity are flaunted in the name of virtue, it is time, I say, to get back to our bearings. It is time to tell these monopolists, fusionists, sensationalists, that we do not like them in the least, that the soul of England, which we intend to conserve, is in its variety, and that to decrease in this wholesale fashion the number of Englishmen who serve their own masters is to return, for the benefit of the few, to the conditions of a Servile State.

In the Grip of Winter.

But this is an appalling way in which to start a letter from Home at the time of the New Year; and, indeed, I do not know why I began in this doleful way. Before my Waterman seized on the unwilling sheet, I thought, of course, of the Weather—the most unoriginal thing that I could think of—of the ecclesiastical schism, or scission, in the Church of England, of the might and the plight and the night or the fight of the Conservative, Labour and Liberal parties, of the Milne-Moore correspondence in *The Times*, and of many other exciting things: and then I came back to the Weather.

From Christmas Day to over the New Year the snow has lasted; nor is the unmistakable sign of its going, which has just appeared, an unmixed consolation. Villages have been completely isolated; some have even had to be fed by aeroplane. Motor-cars, trains, vehicles of all kinds have been buried or halted; green foods have been unprocurable in many places; and for days thousands of people have had to live on condensed milk. There never was a time like it; at least not in the lives of the living. Some folk, of course, there are who always remember something that exceeds the present, but their recollections are being rather disrespectfully treated.

To the children this Winter season has been one long delight and romance, but to most other folk it has brought, in addition to sport and fun, considerable inconvenience and even danger. Yet is not all this just what the present generation have been asking for? An old fashioned Christmas, indeed! And when it came, we did not greatly care for it. We grumbled at the burst pipes or the lack of water, at the failure of the telephone and of the electric light, at the non-delivery of letters and of papers and of coal. And particularly, if we were responsible rate-payers, we grumbled at having beautifully cleared our paths and frontages of snow, subsequently to find them recovered with snow. "All's to do again." Isn't there a little of the "Shrophire Lad" about most of us?

Mr. Snowden and the I.L.P.

In a previous paragraph I have hinted at the support given by State Socialists to the movement for amalgamation. Of these perhaps the most prominent is Mr. Philip Snowden, who has just resigned from the Independent Labour Party, on the ground that the I.L.P. should "merge itself into the larger life" of the Labour Party.

Now, I hold no brief for the I.L.P., which is known to the man in the street mainly, if not solely, on account of its pacifist activities during the Great War. But on theoretical grounds it is very easy to sympathise with the individualism manifested by the I.L.P. in its reply to Mr. Snowden's resignation. Why should it go for a ride with the tiger?

The Press has treated this move by Mr. Snowden with extraordinary solemnity. It is not important, however. There are those who see reconciliation and collaboration as between Socialists of the Snowden type and the Liberal party, and this severance by the Labour Chancellor of the Exchequer from the friends of his youth is being hopefully interpreted by the opportunist Liberals. There are, admittedly, a certain number of Liberals who would not mind being credited with intentions of Nationalisation if office were by that means to be attained; they may include a prominent Liberal who has both vocal and tangible means of attempting to realise his desires. But the Liberals as a body would not, I think, have truck with State Socialism as a universal solution, even though they might favour some measure of it in regard to Coal and Land.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

January 5, 1928 (New Style).
December 23, 1927 (Old Style).
Rajab 12, 1346 A.H. of the Muslim Calendar.
Tebet 12, 5688, of the Jewish Calendar.

Sir Dorabji and Lady Tata arrived in England on December 30 in the White Star liner Majestic from New York.

Major and Mrs. John Foster have left England for India for three months.

Colonel Sir George Harvey left London on December 30 in the Cathay for Port Said.

M. Cafandaris, Greek Minister for Finance, arrived in London on December 29 from Paris, and is staying at the Ritz Hotel.

Viscountess Ridley, accompanied by her father, Sir Edwin Lutyens, left London on December 29 by special train to join the Ranchi at Marseilles on her way to Bombay.

The Gaekwar of Baroda and the Maharanee of Baroda joined the P. and O. s.s. Ranchi at Marseilles on December 29 on their return to India.

The Turkish Ambassador, who recently left town to spend the Christmas holidays with Madame Ferid Bey at Mentone, is expected to return about January 7.

The Right Hon. Sir Laming Worthington-Evans, Secretary for War, and Lady Worthington-Evans are expected to arrive in town about the end of February on their return from India.

Major-General Sir Robert and Lady Cassels, Lieut.-Colonel Sir Francis Humphrys, and Professor J. W. Stephen were passengers from Bombay in the P. and O. s.s. Rajputana, which arrived on December 29 at Marseilles.

Among those who left London on December 29 by the P. and O. special train to join the s.s. Ranchi at Marseilles were the Right Hon. Ian and Mrs. Macpherson and Mr. Samuel Samuel, M.P., for Port Said; Lord and Lady Farrer, Viscountess Ridley, and Sir Leslie Scott for Bombay. Sir Hugh Bell, Bt., joined the Ranchi at Marseilles.

THE NEW YEAR HONOURS.

The following awards, taken from the list of New Year Honours, will be of particular interest to our readers:—

BARONS.

Lugard, the Right Hon. Sir Frederick John Dealtry, G.C.M.G., C.B., D.S.O., former Governor-General of Nigeria, British Member of Permanent Mandates Commission of the League of Nations since 1922.

Strickland, Sir Gerald, G.C.M.G., M.P., Prime Minister of Malta.

COLONIAL OFFICE LIST.

C.M.G.

Jardine, Robert Frier, Esq., O.B.E., Administrative Inspector, Ministry of the Interior, Iraq.

FOREIGN OFFICE LIST.

C.M.G.

Archibald, Major Robert George, M.D., D.S.O., Director of the Wellcome Tropical Research Laboratories, Khartoum.

Keown-Boyd, Alexander William, Esq., C.B.E., Director-General of the European Department of the Ministry of the Interior, Cairo.

The chief cashier at the Yugoslav Ministry of the Interior has been sentenced to 23 years' imprisonment on a charge of having stolen 1,600,000 dinars (about £6,400).

NEWS IN BRIEF.

Following upon a sudden thaw last week there was a great jam of floating ice on the Danube between Bratislava and Komarom, with danger of a serious flood. The Czechoslovak and Hungarian Governments negotiated with a view to having the ice jam broken up by artillery fire or aerial bombs.

According to the newspapers, the Roumanian Court has now endorsed the deed of division of the estate of the late King Ferdinand, signed on December 2. The Queen of Yugoslavia and Prince Carol are represented by power of attorney, and the Council of Regency signed for the young King Michael.

The late King's estate is valued at 387,476,714 lei (about £500,000), divided among five beneficiaries, who each receive 76,095,342 lei (about £96,000), with the exception of Princess Ileana, who receives 5,000,000 lei (about £6,300) in addition, in consideration of the sum of money given to the other children of the late King on their marriage. King Michael also receives the Castle of Pelesh at Sinaia and certain pieces of furniture from the Royal Palace in Bucharest.

At the service in the Belgrade Cathedral on December 26 the Patriarch Dimitri administered the Sacrament of the Holy Communion, according to the Orthodox Rite, to several members of the British and American colonies in Belgrade. This was regarded there as being a notable advance in the reunion movement between the Protestant and Orthodox Churches which has been going on since the War.

The Yugoslav Minister in Paris, on the instructions of King Alexander of Yugoslavia, on December 26 laid a wreath on the coffin of the late M. Sazonoff, former Russian Foreign Minister, who died at Nice on December 24. M. Voukitchevitch, Yugoslav Prime Minister, and M. Marinkovitch, Foreign Minister, sent messages of condolence to the family of M. Sazonoff, who throughout his career was a great friend of Serbia.

Engineer-Commander A. W. Reader, whose last duty was on the staff of the Rear-Admiral at Malta, for the ships and vessels under the latter's orders, and for the training of the Malta R.N.R. stokers, succeeds Engineer-Commander J. C. Talbot, O.B.E., as engineer manager at Rosyth Dockyard. During the War he saw service in Egyptian and Red Sea waters, being engineer officer of the flagship Grafton and at the R.N. Depôt, Port Said.

On December 26, near Boz Borun, in the Sea of Marmara, two Turkish steamers, Marmara (1,078 tons) and Sevinji (591 tons), came into collision. There was a dense fog at the time and although both ships were sounding their sirens the Marmara struck the Sevinji amidships. The latter sank in half-an-hour and eighty-five of the passengers and crew are stated to have been drowned, including two lady teachers. The Marmara was on her way from Mudania to Constantinople and the Sevinji from Constantinople to Mudania.

Dr. David George Hogarth, D.Litt., C.M.G., of St. Giles, Oxford, President of the Royal Geographical Society, Keeper of the Ashmolean Museum since 1909, during the War director of the Arab Bureau, an explorer in Asia Minor, Syria, Cyprus, Greece, and Egypt, and author of numerous works on the Near East, who died on November 6, aged 65, left estate of the gross value of £6,790, with net personalty £6,575.

According to a Teheran message only the safes and books were saved when the premises of the Perso-Russian Bank in the Lalezar were burned on November 28. The insurance policy with the Alliance Assurance Company had been allowed to lapse, and the inadequacy of the means of dealing with the fire has been the subject of much animadversion in the Persian Majliss.

According to *The Times*, an agreement has been reached between the Soviet and Persian Governments for co-operation in the air post service between the two countries. The agreement will come into force after the settlement of the clauses still under discussion at the International Aerial Conference at The Hague in January. The Persian Government is also in negotiation with the German firm of Junkers for the establishment of an air line on the route Teheran-Bushire-Mohammerah.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks	ADEN	HAMBURG
and Purfleet	ALGIERS	HAVRE
AVONMOUTH	ANTWERP	KARACHI
GRANGEMOUTH	BERGEN	MADRAS
HULL	BOMBAY	MARSEILLE
JARROW (Tyne)	BORDEAUX	MELBOURNE
LEITH	CALCUTTA	MOMBASA
LIVERPOOL	CAPE TOWN	ORAN
MANCHESTER	COLOMBO	OSLO
SOUTHAMPTON	COPENHAGEN	PORT SAID
SUNDERLAND	DONGES(Loire)	RANGOON
SWANSEA	DUNKIRK	SYDNEY
	DURBAN	TRIESTE

Other Stations are in course of erection.

THE POLITICAL SITUATION IN 1928.

The advent of the new year finds Indian opinion on the Statutory Commission apparently drifting into a chaotic state, as was indeed to be expected. The divisions and dissensions between the various races, religions, communities and parties are daily becoming more and more pronounced. It is true that a complete boycott of the Commission is still demanded in the loudest tones. But, judging by the latest Indian newspapers, and by the telegrams, there is no longer at the back of the demand that measure of unanimity which at first seemed to be there. Muslim opinion is hopelessly divided so far as can be seen. Punjab Muhammadans—there are ten million Muhammadans in the Punjab as compared with seven and a half million Hindus—are opposed to the policy of boycott; and we are inclined to think that there is a strong Muhammadan feeling to the same effect in other provinces. But the All-India Muslim League has split on the question, and is unable, so far, to agree on a common course of action. Those much discussed people the Depressed Classes, or "Untouchables" have expressed satisfaction at the constitution of the Commission, because they believe that they will get fairer treatment from Europeans than from their high caste brethren. Even among the educated class in Bengal, boycott is not, we gather, quite so popular as it was at first. For we notice that Sir Provas Chunder Mitter, who is a Liberal in politics, and who has been lately appointed a Bengal Minister, has refrained from stating his views on the boycott question. And he has publicly recommended the Legislative Assembly to take up what he describes as Lord Birkenhead's challenge and to frame a democratic constitution for India. Mr. Bipin Chunder Pal, although he favours a boycott, would restrict his non-co-operation to the Commission. He has urged strongly that it would be unwise for the Indians not to work the existing constitution while the Commission is sitting. For, as he says, "national autonomy is a delusion and a snare without a properly organised nation." It is a pity that this advice was not given to and accepted by the Swarajists seven or eight years ago. India might then have been to-day much further advanced than she actually is on the road to the organisation that Mr. Pal has in mind. Lastly, we imagine that Lord Sinha's strongly expressed disagreement with the boycott will have much weight with Liberals notwithstanding Sir Tej Bahadur Sapru's denunciation of the British Government at the recent Liberal Federation meeting.

In this medley of conflicting opinions it is satisfactory to see that the Europeans in India know their own mind. Their attitude was defined by the European Association at a meeting held in Calcutta towards the end of November. Twelve months ago the Association recommended the appointment of an exclusively British Commission; and its members are justified in now recording their satisfaction at the adoption of their idea. But as Sir Hubert Carr pointed out at the Calcutta meeting they did not anticipate the angry outburst which the announcement of the appointment has evoked, although they knew of course that a section of Indian opinion was against them. He added that their support of the Commission was not due to hatred of the land where they spent most of their lives; nor was it based on contempt for Indian opinion. But they were convinced that the best work for India could not be done in a mixed Commission where the blighting influence of communalism could not be got away from. This view seems to us to be eminently sound, and we think that Sir Hubert Carr did well to put it on record. No possible selection of Indian members could have satisfied Indian opinion. For the tension beween the two great communities is now such that in whatever proportion their nominees had been appointed there would have been trouble. And the insistent demands for representation which would have been made by all classes could only have ended in the appointment of a monster Commission which could never have arrived at any practical conclusions. In fact, as the Governor of Bengal pointed out at the St. Andrew's Day Dinner at Calcutta, the inclusion of Indians would almost certainly have fore-doomed the Commission to failure. Sir Stanley Jackson appealed to his Province to realise the accomplished fact and, by making the most of the opportunities offered, to prove the possession of real political wisdom and a sense of responsibility. This appeal was well-timed and we hope that it did not fall on altogether stony ground. But as the Governor admitted, there has been in Bengal a deliberate effort to prevent a fair trial being given to the Reforms scheme. Bengal is the province where experience of the working of the scheme has been least happy, and where non-co-operation has been most successfully practised. And one would have thought that the province would now be anxious to demonstrate to the Commission the points where the reformed system of government is at fault and to suggest remedies. But, as Sir Stanley Jackson said, this seems to be the last thing that it is proposed to do.

It is not to Bengal only that his advice is well-timed. We hope that all Indian politicians of whatever province who favour a boycott will take it to heart. Those who were most clamant before the Reforms era for the introduction into the Provincial Governments of the principle of responsibility flatly refused to have anything to do with those Governments as soon as the principle was introduced. They condemned the new system as impossible, unworkable, and full of faults. Now an independent and impartial Parliamentary Committee has been appointed to examine the system, and to find out wherein it is unworkable and what its faults and defects are. And forthwith a boycott is declared, and those who complain most of the Reforms scheme refuse even to discuss it with the Commission. We cannot believe that so absurd an attitude can be persisted in by the saner elements in the political life of India. And the present chaotic state of opinion to which we have already referred is, we think, evidence that on reflection the futility of a boycott is being slowly realised. The appointment of the Commission is not the act of the Government only; for with remarkable unanimity both Houses of Parliament have approved of it. That there was never any idea of insulting India or the

Digitized by Google

Indians has been established beyond question. On the contrary it is now clear that the opportunities offered for Indian co-operation and collaboration are more generous and more complete than any Indian thought to be possible. For upwards of two years elected members of the Assembly and of the Provincial Legislatures will be enabled to sit in conference with the Commissioners, and to discuss India's future constitution with them. And even after the Commission has reported still further opportunities of influencing Parliament will be open to Indians. But all these advantages are to be thrown away for the sake of an imaginary insult. This is what is seriously proposed by those who support the policy of boycott. Non-co-operation in respect of the Reforms has achieved nothing of any service to India; and non-co-operation in respect of the Commission will have an equally fruitless result if it is persisted in.

CURRENT TOPICS.

The Indian Honours List.

The list of New Year Honours presents few striking features so far as India is concerned, and contains the usual admixture of well-deserved, conventional and somewhat surprising awards, with, also, as usual, a few conspicuous omissions. Among the Knighthoods, Sir Jehangir Coyajee served with distinction on the Indian Fiscal Commission and, more recently, as a member of the Royal Commission on Indian Finance and Currency, and his honour is the reward of able and disinterested public service of a very high order. Other Calcutta recipients whose awards will occasion general satisfaction within their wide circle of friends in both communities may be mentioned Mr. Justice Cuming and Sir Brojendra Mitter, while the somewhat belated recognition of the valuable services rendered to the State and the community in general by the popular Agent of the M. and S.M. Railway and by Sir Edwin Pascoe has a more than merely provincial significance. At first sight the allocation of no less than four out of the ten knighthoods conferred to Bombay suggests that the Government of India is desirous of making up to the residents of the western capital for its somewhat step-fatherly treatment of the Presidency in recent years. But if Bombay for once has been especially well-favoured in that respect there is no gainsaying the claims of the individuals concerned to the distinction. In their several spheres of activity—and they range from the judicial branch of the I.C.S. to the missionary field—Mr. Justice Crump, Sir Byramjee Jeejeebhoy, Sir Shapurji Billimoria, and Sir William Wanless have long played a leading part in the public life of the Western Presidency. With, moreover, two out of six new appointments made to the Order of the Star of India, Bombay may indeed count itself fortunate but here again, while the work of a member of the Executive Council, and particularly one in charge of the Finance portfolio, is very different from that for which one of the most popular and capable Military Secretaries has again received official recognition, the zeal, ability and tact of Sir Chunilal Mehta and Major Vaux are such as amply to justify the departure from precedent marked by their creation K.C.S.I. and C.S.I. respectively. Sir B. N. Mitra has spent the whole of his service in the Finance Department of the Government of India, and if for reasons which, we have no doubt, he was the first to appreciate it has been judged expedient to choose somebody with more practical experience of international finance as Sir Basil Blackett's successor, the senior Indian Member of the Viceroy's Executive Council has further evidence of the high esteem in which his long and distinguished service is held by the administration in both countries—a verdict which will be cordially endorsed by all who have come into contact with the Member for Industries and Labour.

Indian Hides and Skins.

We mentioned recently, in this column, a proposal that an export cess should be levied on all raw hides and skins exported from India. For some years past an export duty has been imposed on Indian hides and skins, and it has given the greatest dissatisfaction to the trade, especially as regards hides. India has certainly no monopoly of hides in the world's markets; and the duty could not be, therefore, other than a burden, more particularly as the bulk of the Indian production is not of high quality. We understand that the duty is now to be abolished, but that the Government of India have suggested that a small cess should be charged. This cess would be, of course, at a rate so low that it could not possibly have any effect on the trade. It would be collected by the Customs Department, and its proceeds would be expended, by a specially appointed Committee, for the general benefit of the trade. At the moment matters have not got beyond a preliminary proposal for the appointment of a small *ad hoc* Committee to report on the various points involved, *e.g.*, the rate at which the cess is to be charged, the constitution, functions and duties of the administrative Committee, the objects to which the proceeds of the cess are to be devoted, and so on. We gather that this preliminary Committee will be appointed at an early date, and we have no doubt that it will give full consideration to the question of the objects of the cess.

The improvement of the methods of flaying and preserving raw hides, and the prevention of adulteration are matters of great importance. But in regard to them it has to be remembered that the vendors of raw hides to exporters benefit personally by any improvement in method. And if this incentive has not brought about tangible results it may be questioned whether measures undertaken at the cost of the cess would be more successful. But on the other hand it may be that the best methods of flaying and curing, etc., and the advantages resulting from their adoption, are not so well known as they ought to be. If this is so, a little well-directed instruction might yield useful results. Other objects which have been named are the marketing and grading of hides and skins, and the supply of tanstuffs. But we agree with the Calcutta Hides and Skins Shippers' Association that these matters have been on a commercial basis for many years, and that they are, therefore, hardly suitable objects. The Association takes the view that the money could not be better spent than on an organised attempt to improve the condition of Indian cattle by preventing and fighting diseases, insect pests, etc. We agree that this would be a most suitable object to which to devote the funds, as any improvement in the condition of Indian cattle would be of advantage not to the hides trade only but to the country generally.

Mr. George Bancroft Lambert has been appointed a Member of the Executive Council of the United Provinces of Agra and Oudh in succession to Sir Samuel Perry O'Donnell.

It is officially announced that the Government of India have made an offer to the Maharaja of Bharatpur to appoint a Commission to inquire into financial and administrative conditions in Bharatpur State, and have requested the Maharaja to give them his answer within a specified period. A later Delhi message states that the Maharaja of Bharatpur, who had accepted the offer of the Government of India, has now cancelled his acceptance, but has expressed his readiness to cnocur in any measures the Viceroy may consider necessary for the rehabilitation of the State.

A Madras mesage states that the Indian National Congress has adopted a resolution protesting, among other things, against the Feetham Report on local government in Kenya and the appointment of the Commission on East African federation without the inclusion of an Indian representative. The Feetham Report recommended European majorities on local bodies.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 15.

The King and Queen of Afghanistan.

The passage of their Majesties, King Amanullah and the Queen of Afghanistan, from Chamna to Quetta, and from Quetta to Karachi, on their way to Egypt and Europe, has added another to the many existing links between their mountain kingdom and India, and has been followed with eager interest by those privileged to be eye-witnesses, and with hardly less interest by those of us who could only follow their Majesties' progress from afar. The King, whose smartness everyone commented on, made a speech at Karachi, plunging at once *in medias res*. His Majesty spoke in Persian, which was translated into Urdu by a member of his suite, saying that "in his country there was no distinction like that between Hindus and Mussalmans." All were one, all were brothers, and he advised Indian communities to act on the same lines, for progress was impossible where communal and religious disputes were the order of the day. Such disputes, his Majesty said, "were staying the progress of countries all over the world," and in most cases they were engendered by dissatisfied religious leaders who found their power slipping from them. He advised the Indian communities to have done with such religious fanatics, and work and live together in a spirit of amity.

The Queen was entertained at a purdah party by the leading ladies of all the communities of Karachi. She caused no little sensation by coming dressed in the latest Paris fashion, a fact that excited a great deal of discussion among the Indian ladies present. She wore a dark green embroidered afternoon frock and picture hat to match. A queen is a queen; that is, all men owe her allegiance. In London the Queen of Afghanistan will presumably attend not only purdah parties.

The Royal Commission.

The Aga Khan, who is now in India, has made two pronouncements on the subject of the Royal Commission on the Reforms. The second was in a sense much weaker than the first, if not even opposed to it; but, as it wore somewhat the air of the words of a man who, having the day before said what he wanted to say, was minded to put off this late-comer with the answer that would get rid of him soonest, it may be disregarded. The first pronouncement was emphatic. The Aga Khan expressed the gravest apprehensions of the consequences of the boycott, and warned, not only his co-religionists, but the whole country, that the boycott movement was not only foredoomed to failure, but that the voice of the reactionaries would prevail with the Royal Commission to the exclusion of the Liberals and the Extremists, and the country's cause would go by default.

"My sole object at present," he said, "is to try to unite all the conflicting elements in the community. At present there are several policies in the air. My object is not to join any faction, but to try to bring about a union of the various schools of thought that have arisen in the country."

The better part of His Highness's statement was this: "We ought to be warned that, if we expect the Labour Party, when it comes into power, to view things in the light in which we want them to do, that is, to obstruct the Commission, we will be very much disappointed. You do not know the British mind. It will never yield to threats of obstruction. In this characteristic attitude the Conservatives, the Liberals, and the Labourites are all alike. You cannot expect anything from the Labour Party, if you boycott the Commission now." It will be noticed that the pronoun there changes from "we" to "you." One suspects that the pronoun was "you" throughout, and that the statement has been badly reported. One cannot think of the Aga Khan identifying himself with any party in India who should wish the British Labour Party to obstruct the Commission.

The next most interesting particular to communicate on the subject of the Commission is that leading Bengal Muslims have issued a carefully worded manifesto against the boycott policy. It is too long to quote in full, but this extract may be given:—"We consider that the strongest objection that might have been urged against the Statutory Commission as now constituted, consisting entirely of Members of Parliament, has to a great extent been removed by the assurances of His Excellency the Viceroy and the Secretary of State for India to associate members of the Central and Provincial Legislatures at various stages of the work of the Commission and to afford them opportunities of co-operation and collaboration in preparing the case for India to be laid before Parliament."

There has been, of course, some repetition, and even from the mouths of leaders, of the determination to boycott the Commission; but less and less attention is obviously due to it; for no boycott that had not all the main parties behind it could possibly succeed. That there will be strong parties in favour of co-operation is now assured. The decision of Mr. V. J. Patel not to resign the Presidentship of the Legislative Assembly, which was announced yesterday, may be taken as a straw showing which way the wind is blowing.

The Viceroy.

All those who have suffered from malaria in India, and from the drastic course of quinine-taking that the doctors make one go through, will sympathise with the Viceroy as the latest victim to the scourge. Usually the Viceroy is so well protected, that he escapes. Lord Irwin, whose sense of duty takes him everywhere, that he may see things with his own eyes, must be more difficult to protect than other Viceroys have been. Men have noticed that, where earth has recently been dug up, there is an added risk of infection, and Lord Irwin, in his recent tours in the canal areas of the Punjab, has been where much earth has been turned over. But one bite from a diseased mosquito, while a man is seated in a railway carriage at a wayside station, may sow the seeds of malaria in him.

Owing to the Viceroy's illness, it fell to the Governor of Bombay to receive the King and Queen of Afghanistan on their arrival at Bombay yesterday. The Royal progress from the Apollo Bunder to Government House made a Roman holiday for Bombay, and the spectacle is not likely soon to be forgotten.

The Bengal Ministry.

Votes of no-confidence in the Bengal Ministers for the Transferred Department were tabled by Mr. Sen Gupta, the Swarajist leader, but they were not moved, though up to the last it was thought that they would be. The Swarajists' calculations regarding some of the followers of the ex-Minister, Mr. Ghuznavi, and some of the members of the Union Party, proved "unsubstantial dreams." The time of the Council that was to be occupied in moving and debating the votes of no-confidence was turned to better account in debating the Meston Settlement and a proposal for securing the proceeds of the export duty on jute for Bengal. The Finance Member made the most important speech of the debate. He warned the Council not to commit itself to the exact method by which the revision of the Meston Settlement should be effected, nor to the manner in which the increased revenue should be spent. The Bengal Government appear to favour Bengal's receiving a larger share of the Income Tax collections. The general impression gathered is that the Government do look forward with some confidence to a larger revenue in the near future, but would not be too hasty in earmarking it for expenditure. "In most cases," said Mr. Marr, "it is unsound finance to earmark any portion of the general revenue for any particular purpose."

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 17.

The desire of the Aga Khan to unite Muslim opinion on the question of Royal Commission on Indian Reforms would not seem to have been realised. His Highness was besieged by the usual swarm of Press representatives on landing, and despite his protestations of an inadequate grasp of the political suitation in the country, the *Times of India* published what is claimed to be a personal interview in which His Highness was stated to have said that he was opposed to the boycott of the Commission which he believed was fatal to the interests of the country. The same evening the *Indian Daily Mail* published an interview with the Aga Khan, which claimed that the *Times of India's* version was incorrect and that His Highness had denounced it as "misleading and even mischievous." His Highness subsequently declared in a signed letter to the *Times of India* that he could never have used such words, and as a matter of fact there were other people present during the interview and general conversation referring to various topics was going on. It is quite possible that a misunderstanding might have arisen. The *Times of India* charged the *Indian Daily Mail* with deliberate perversion of facts. The *Indian Daily Mail*, replying editorially, expressed surprise at the Aga Khan's repudiation of the four words while adhering to the rest of the interview published in its columns. One fact emerges clearly out of this otherwise fruitless controversy: that if His Highness, as the *Times of India* originally maintained, had "determined to unite and lead the whole community—a lead which is destined to drive the last nail into the coffin of the boycott movement," he has after reflection decided, as he told the *Indian Daily Mail* representative, to abide by the majority decision of the Muslim League. Recriminations apart, that is where the controversy leaves us.

Mr. Jinnah's Final Appeal.

Close on the heels of this episode, Mr. Jinnah has issued a final appeal to his Muslim brethren to close up their ranks and declare once for all for a boycott. He writes: "Whether you take the broad principle of national self-respect or the petty and short-sighted consideration of self-interest, Mussalmans cannot stand to gain by accepting the present Commission. They will only go down to history as disloyal to their country at a critical juncture of its political development, justly accused by the other communities of having played false not only to them but also to their own motherland. I am confident that my community will not adopt any such course or go astray, however much interested persons may press them to do so." This is the last pronouncement of importance on the Reforms question and a profound silence has prevailed since, not because Mr. Jinnah's recalcitrant following are pondering deeply over his final exhortation, but because the stage has been set for a greater hero—King Amanullah of Afghanistan, the mystery monarch of the East.

The King Arrives.

The first city in this Presidency that King Amanullah visited was Karachi and a splendid reception was accorded him. Three flights of R.A.F. planes, a Guard of Honour formed by the Sherwood Foresters and representatives of the Government of India, the Army, the Navy and the Air Force formed a brilliant array as picturesque as any Eastern monarch could desire. But what must have transcended even this awe inspiring grandeur was the spontaneous reception accorded by the people who had assembled in large numbers to welcome him. That His Majesty was struck by this aspect of the reception is evident by the cordial and frank manner in which he responded to the addresses of that were presented to him. To all the citizens of Karacni, Hindus, Mussalmans and Parsis, he expressed his gratitude for the cordial welcome and fraternal greetings. Without beating about the bush the King went straight to the burning question of the day—the communal question. He warned Muslims against the Mullahs who, he declared, divided the people without doing them any good. They were out to serve their selfish and personal ends. He urged all Indians to work for the uplift of their country. He advised them to remain as brothers in a hapy co-operative spirit. While the King was thus engaged the Queen was the guest of honour at a garden party given by the Ladies' Association of Karachi. The Queen observes *purdah*, i.e., remains veiled, but is dressed in the latest of Paris fashions. Aged about thirty she rides and shoots well. On board the Manela, which conveyed their Majesties to Bombay, the Queen discarded her veil and often appeared on deck accompanied by the King or the young Prince. His Majecty too made himself quite at home and took part in the deck games with the greatest enthusiasm. The tour round the world which their Majesties have undertaken has, indeed, begun very auspiciously.

The Viceroy's Illness.

The preparations for the reception of the Royal visitors in Bombay were marred by an unfortunate incident—the sudden illness of the Viceroy. His Excellency declared open the first All-India Scout Jamboree held in this country on Sunday last. On the following day he was entertained at a magnificent banquet by the Millowners' Association of Bombay. That very night he had a touch of fever and all the engagements for Tuesday had to be cancelled, the most important, the opening of the Tansa Waterworks, being performed by Lady Irwin. The disappointment was very great, indeed, when it was announced that His Excellency would not be able to receive His Majesty the King of Afghanistan at the Gateway of India, on Wednesday. It has since been announced that Lord Irwin has been advised to return to Delhi immediately.

Reception in Bombay.

King Amanullah's visit to Bombay was occasion for the most enthusiastic demonstrations in the city, which was gaily decorated. Muslims assembled in large numbers and cheered His Majesty most lustily. The Pathans who had gathered in full strength to welcome their monarch were carried off their feet to the extent of breaking the police cordon, and the King responded readily to the overwhelming reception. Wherever the King went, he advised his Muslim brethren to live in peace with their Hindu neighbours and not to give ear to the mischievous propaganda of *mullahs*. An amusing address was the one presented by the Pathan community, who have for some time been the terror of the city. Numerous crimes in the city have been traced to the Pathan, particularly murders of the most gruesome kind and consequently no Pathan can go about the city at night without a special pass. Despite his criminal propensities, the Pathan is at a loss to know why the police persist in harassing him. An appeal was, therefore, made to His Majesty to use his influence to remove this inconvenient restriction. King Amanullah was equal to the occasion and advised his Pathan admirers to cease their nocturnal activities and on that condition promised to speak to the police authorities.

The King's Adventure.

On Thursday morning, the King surprised Bombay by slipping out unnoticed from Government House without an escort. He visited the Muslim parts of the town and it was only some time later that his absence from Government House was noticed and the Police Commissioner was asked to accompany His Majesty through the city. Today King Amanullah leaves Bombay for a protracted tour in Europe.

THE PROBLEM OF THE INDIAN STATES.

By Sir P. S. Sivaswami Aiyar.

The problem of the relations of British India with the Indian States is one of those which have been pointed out as requiring a considered solution before we can aspire to the status of the self-governing dominions. It is undoubtedly one of great complexity and difficulty and is one of the most interesting, if not the most interesting, of the problems which we shall have seriously to face. From the point of view of the British Indian advocates for reform, the problem is not one of immediate urgency. The demands that have been so far made for a transfer of responsibility in the Central Government to popular control do not include the management of political and foreign affairs. It is safe to predict that no such transfer will take place at the next revision of the constitution and that it is likely to take another decade before any such transfer will take place.

But though the problem can afford to wait for some time from our point of view, it has evidently been seriously stirring the minds of the Indian Princes. They seem to have been greatly perturbed by the prospect of responsibility in the Central Government of British India and they have been pressing for an examination by a Royal Commission or other expert body of their position under the existing constitution and for the protection of their rights and privileges against encroachment by a responsible government in British India. They have also been asking for the provision of some machinery by means of which they can be brought into a closer association with the Government of India and they may have some voice in the determination of questions of an All-India character likely to affect their own interests. Within the last few days we have seen it announced that the Government of India intend to appoint an expert committee for the purpose of investigating the relations between the Government of India and the Indian States. It is therefore necessary that the people of British India should also address themselves to this problem without loss of time so that no decision may be taken which will affect or prejudice the interests of British India. I approach this problem with due diffidence and a full sense of responsibility in dealing with a subject of such gravity and complexity.

. . . . . .

There are two classes of questions which arise out of the relations between the Indian States and the British Government. One class relates to matters which may be called the domestic or personal concerns of the states or their rulers. Another class relates to matters of common concern between British India and the Indian States in which the states may be indirectly affected by action taken by the Government or the Legislature of British India. What precise schemes or proposals have been put forward by the Princes, we have no definite means of knowing. We can only make a conjecture from the discussions in the press and especially the press in the Indian States.

Before discussion the various devices which have been put forward in different quarters for dealing with the two classes of questions referred to, it is desirable to form a clear idea of the existing position of the Indian States and their present relations to the paramount power. The Indian States are about 600 in number and their area and population are about 1-3 and 1-4 respectively of that of the whole of India. They comprise states of varying degrees of internal sovereignty descending from the premier state of Hyderabad to the petty principalities of Kathiawar. They include states with which the Government entered into treaties as allies on a footing of equality. They include states which owe their status, if not existence, to sanads granted by the paramount power. They include also the petty states of Kathiawar, the rulers of which do not possess even full powers of administration of justice and some of which are said to be only 50 acres in extent. There are also many diversities in the social and economic conditions of these states varying degrees of administrative efficiency, educational progress and political development. As pointed out in the Montagu Chelmsford Report, they are in all stages of development, patriarchal feudal, or more advanced, while in a few states are found the beginnings of representative institutions. The characteristic features of all of them, however, including the most advanced are the personal rule of the Princes and their control over legislation and the administration of justice.

There are also certain other features which are common to all the Indian States. They have all parted with their external sovereignty. The paramount power exercises exclusive control over the relations of the states not merely with foreign powers but also with states in India. They are all required to co-operate in the task of resisting foreign aggression and maintaining internal order. Whether the duty of co-operation in matters of defence could in accordance with the treaties and arrangements be legally imposed upon a few of the more important states like Hyderabad or Indore, may admit of considerable doubt. In many of the treaties which have been entered into by the British Government with the states, there is an obligation not to interfere with their rights of internal sovereignty. But, owing to a variety of causes owing to the changes of conditions brought about in the course of time by the necessity for the adaptation of the old relations to new circumstances and by the process of logical deductions from the treaties and interpretation thereof a tradition has been established of interfering in the internal affairs of the states in certain classes of cases. Whether such interference is right or wrong in many a particular instance, the policy has become well established and it cannot be said that the interference is not justifiable in certain classes of cases in the interests of the subjects of the States or of the country at large. It was observed by Lord Chelmsford:

"There is no doubt that with the growth of new conditions and the unification of India under the British power, political doctrines have constantly developed. In the case of extra-territorial jurisdiction, railway and telegraph construction, limitation of armaments, coinage, currency and opium policy and the administration of cantonments—to give some of the more salient instances—the relations between the states and the Home Government have changed. The change however has come about

in the interests of India as a whole. We cannot deny, however, that the treaty position has been affected and that a body of usages, in some cases arbitrary but always benevolent, has come into being."

Though the Princes contend with considerable force of logic that their treaties should be enforced in the letter and not in the light of subsequent practice, precedent or usage, it is too late in the day to go back upon the relations which have been now established and revert to the conditions existing at the time of the treaties. The relations now established between the paramount power and the protected states have been laid down clearly and authoritatively by Lord Reading in his final reply to the ruler of the Hyderabad State. The principles laid down by Lord Reading must command general approval with the exception of the corollary "that no succession to a musnud is valid unless it is recognised by the King Emperor." That in cases of disputed succession the British Government is the arbiter must be conceded. The principles laid down are:—

1. The sovereignty of the British Crown is supreme in India and therefore no ruler of an Indian State can justifiably claim to negotiate with the British Government on an equal footing. The supremacy is not based only upon treaties and engagements but exists independently of them and quite apart from its prerogative in matters relating to foreign powers and policies.

2. It is the right and duty of the British Government while scrupulously respecting all treaties and engagements with the Indian States to preserve peace and good order throughout India.

The corollaries from this principle are:—

(a) No succession to the musnud is valid unless it is recognised by the King Emperor and the British Government is the only arbiter in cases of disputed succession.

(b) The right of the British Government to intervene in the internal affairs of Indian States though it is not exercised without grave reason. The internal and external security of the ruling princes is due to the protecting power of the British Government and where the Imperial interests are concerned or the general welfare of the people of a state is seriously and grievously affected by the action of its Government, the paramount power has the ultimate responsibility of taking remedial action if necessary.

(To be continued.)

THE NEW YEAR HONOURS.

The following selection from the list of New Year Honours is likely to be of particular interest to Indian readers of THE NEAR EAST AND INDIA:—

BARONET.

Major-General Sir Richard Havelock Charles, G.C.V.O., K.C.S.I., M.D.

KNIGHTS.

Saw Hke, C.I.E.—Sawbwa of Hsipaw, Burma.

Mr. Justice Louis Charles Crump.—Puisne Judge of the High Court of Judicature, Bombay.

Mr. Justice Arthur Herbert Cuming.—Puisne Judge of the High Court of Judicature, Calcutta.

Albert Ashley Biggs.—Agent, Madras and Southern Mahratta Railway.

Brojendra Lal Mitter.—Advocate-General, Bengal.

Edwin Hall Pascoe.—Director, Geological Survey of India.

Byramjee Jeejeebhoy.—Sheriff of Bombay.

Jehangir Coovrejee Coyajee.—Professor of Political Economy and Philosophy in the Presidency College at Calcutta, lately Member of the Royal Commission on Indian Finance and Currency.

Shapurji Bomanji Billimoria, M.B.E., J.P.—Lately Member of the Bombay Back Bay Committee.

Dr. William James Wanless.—American Presbyterian Mission Hospital, Miraj, Bombay.

ORDER OF THE STAR OF INDIA.

K.C.S.I.

Sir Bhupendra Nath Mitra, K.C.I.E., C.B.E., Member of the Governor-General's Executive Council.

Sir Samuel Perry O'Donnell, K.C.I.E., C.S.I., Indian Civil Service, Member of the Executive Council of the Governor of the United Provinces.

Sir Chunilal Vijbhukhandas Mehta, Member of the Executive Council of the Governor of Bombay.

C.S.I.

Charles Cunningham Watson, C.I.E., Indian Civil Service, Political Secretary to the Government of India.

Lieutenant-Colonel Terence Humphrey Keyes, C.M.G., C.I.E., Political Department.

Robert John Sherwood Dodd, Inspector-General of Police, United Provinces.

Major Henry George Vaux, C.I.E., M.V.O., Military Secretary to the Governor of Bombay.

ORDER OF THE INDIAN EMPIRE.

K.C.I.E.

His Highness Maharaja Vishvante Singh Bahadur, Maharaja of Chhatarpur.

Norman Edward Marjoribanks, C.S.I., C.I.E., Indian Civil Service, Member of the Executive Council of the Governor of Madras.

Sir Edward Grimwood Mears, Chief Justice of the High Court of Judicature, Allahabad.

C.I.E.

Andrew Gourlay Clow, Indian Civil Service, Officiating Secretary to the Government of India in the Department of Industries and Labour.

William David Russell Prentice, Indian Civil Service, Chief Secretary to the Government of Bengal.

Alan Hubert Lloyd, Indian Civil Service, Member of the Central Board of Revenue.

Arthur Terence Stowell, Acting Agent, North-Western Railway.

Hyde Clarendon Gowan, Indian Civil Service, Chief Secretary to Government, Central Provinces.

Colonel (Temporary Colonel-on-the-Staff) Cecil Charles Palmer, C.B.E., Deputy Master-General of Supply and Director of Artillery, Army Headquarters.

James Hezlett, Indian Civil Service, Officiating Commissioner, Surma Valley and Hill Divisions, Assam.

George Townsend Boag, Indian Civil Service, Secretary to Government, Finance Department, Madras.

Charles William Aldis Turner, Esq., Indian Civil Service, Secretary to the Government of Bombay in the General, Educational, and Marine Departments.

Lieutenant-Colonel Cuthbert Lindsay Dunn, Indian Civil Service, Director of Public Health, United Provinces.

Arthur Ralph Astbury, Chief Engineer, Public Works Department, Punjab.

John Nesbitt Gordon Johnson, Indian Civil Service, Deputy Commissioner of Delhi.

Major Claude Ernest Torin Erskine, D.S.O., M.C., Indian Army.

Major Richard Outram Chamier, Private Secretary to the Governor of the United Provinces.

Edward Henry Berthoud, O.B.E., Indian Civil Service, Commissioner of Excise and Salt, and Inspector-General of Registration, Bihar and Orissa.

Ralph Albert Horton, Superintendent of Police, United Provinces.

Walchand Fardunji Mulla, Advocate, Bombay High Court.

George Morgan, Member of the Legislative Council, Bengal.

Rai Bahadur Mahendra Chandra Mitra, Vakil, Bengal.

Rao Bahadur Raja Hari Singh, of Mahajan, of Bikaner, Rajputana.

Kheng Beng Cheng.

Frederick William Thomas, lately Librarian, India Office, London.

ORDER OF THE BATH.

G.C.B. (Military).

General Sir Havelock Hudson, K.C.B., K.C.I.E., retired pay, late Indian Army, Colonel the Northamptonshire Regiment.

General Sir Alexander Stanhope Cobbe, V.C., K.C.B., K.C.S.I., D.S.O., Indian Army, Colonel the South Wales Borderers, General Officer Commanding-in-Chief, Northern Command, India.

K.C.B. (Military).

Lieutenant-General Sir Louis Ridley Vaughan, K.B.E., C.B., D.S.O., Unemployed List, Indian Army.

C.B. (Military).

Colonel (temporary Colonel Commandant) Frederick William Henry Walshe, C.M.G., D.S.O., A.D.C., Colonel-Commandant, Royal Artillery, Eastern and Western Commands, India.

Colonel Walter Mansel Parker, C.M.G., D.S.O., Deputy Director of Transport, Army Headquarters, India.

Colonel (temporary Colonel Commandant) Patrick Barclay Sangster, C.M.G., D.S.O., Indian Army, Brigade Commander, 9th (Jhansi) Infantry Brigade, India.

Colonel (temporary Colonel Commandant) Edward Currie Alexander, C.I.E., D.S.O., Indian Army, Brigade Commander, 4th (Quetta) Infantry Brigade, India.

Colonel (temporary Colonel Commandant) Richard Gardiner, D.S.O., Indian Army, Deputy Director of Movements and Quartering, Army Headquarters, India.

Air Commodore Hugh Caswall Tremenheere Dowding, C.M.G., Royal Air Force.

ROYAL VICTORIAN ORDER.

K.C.V.O.

Colonel Clive Wigram, C.B., C.S.I., C.V.O.

Lieutenant-Colonel Arthur D'Arcy Gordon Bannerman, C.I.E., C.V.O.

Commercial and Financial Section.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

New Year Honours.

Possibly because in recent Honours Lists business men have had their full meed of recognition the present list is of much less interest than usual to the commercial community, and as usual awards for the promotion of British business interests in the Near and Middle East are conspicuous by their absence. Among the honours of special interest are the knighthoods awarded to Mr. F. C. Bowring, Lord Mayor of Liverpool 1925-27, and an advisory director of Barclays Bank, and to Mr. David McCowan, D.L., of William Ewing and Co, insurance brokers, of Glasgow, and a director of the Burmah Oil Co., Ltd., the Anchor Line (Henderson Brothers), Ltd., and other companies. Then in the Indian list mention must be made of the knighthoods conferred on Mr. A. A. Biggs, agent of the Madras and Southern Mahratta Railway, and on Mr. E. H. Pascoe, director of the Geological Survey of India.

The Greek Loan.

Negotiations are now in progress in London in regard to the Greek Loan which has been authorised by the League of Nations, and the amount of whcih, it is understood, will now be no more than £7,500,000 instead of £9,000,000 owing to the loan which Greece has recently obtained from America on very favourable terms. The point on which the negotiations turn is naturally the question of the terms on which the loan can be raised, and the fact that Greece has been successful in obtaining financial assistance at a relatively low rate from America will naturally not be without its influence. It may certainly be assumed that Greece will not be content to accept worse terms than those of the last Refugee Loan, and in view of developments during the past year she may indeed hope somewhat to improve upon them. Assuming that the negotiations flow smoothly, and there is reason to suppose that they will, it is by no means clear how much of the loan will be issued in London, for Italy has expressed a desire to participate in the issue, and part of the loan will probably be issued in Rome, while America is also interested in the question.

The Exchanges in 1927.

The broad tendency of the exchanges in 1927 has been towards stabilisation, and marked fluctuations have been far less frequent than in the previous twelve months. In the Near Eastern group of exchanges the Greek rate at 366½ ended the year with a substantial improvement, the rate a year ago having been 385½. In the intervening period the rate has been as good as 354. It may be said briefly that the drachma quotations have reflected the steady improvement in Greek conditions under the present Government. One of the purposes of the projected loan (to which I have referred above) is, it may be recalled, for the stabilisation of the currency. At what figure that much-to-be-desired operation will be effected must remain to be seen. A year ago the Roumanian exchange stood at 920, and while the leu has fluctuated very considerably during the year, it has not depreciated below 935, and at the end of the year it was 790, at which it, of course, shows a substantial improvement. During the year it actually touched 695, but this was a temporary and exceptional movement, and the rate subsequently declined to a figure round about that at which it now stands. It speaks much for the growing stability of conditions in Roumania that the rate of the leu was not greatly affected by the death of the King. Of course it is almost superfluous to say that the present rate is but a travesty of a reflection of the country's actual potentialities, but, as readers of THE NEAR EAST AND INDIA are aware, the task of reconstruction with which Roumania has been confronted has been very great, and the inadequacy of the transport position which still prevails has retarded the country's recovery, while Roumania's chief asset, her oilfields, is for the moment handicapped by the low prices of oil products. A feature of the year, which has had its effect on the exchange, has been the policy of the Government to reduce the taxes and charges which have hindered trade development. Much still remains to be done in this direction, and the results which have already attended the steps taken to this end have shown clearly how justified the continuance of the policy of freeing trade from restrictions is. The Yugoslav exchange has been extremely stable during the year. From 275 at the beginning it has closed at 276¼, and the extreme ranges of its fluctuations have been between 274 and 277½, but the apparent stability in this case is rather misleading. The last Yugoslav harvest, as already noted in these columns, was extremely poor, and the consequence has been that the dinar has lacked the necessary support that can only be derived from the volume of exports. The Bulgarian exchange has been particularly stable, ranging between 665 and 680, and standing at the end of the year at 677½ as against 678½. Viewed generally as a mirror of internal conditions, the Near East exchanges, if by no means altogether satisfactory, show that during the year in several of the countries there has been a very real advance, and that there is solid ground for the expectation that the present year, given conditions permitting peaceful progress, will see a further marked advance in reconstruction.

Yugoslavia's Export Trade.

I referred above to the poor harvest of Yugoslavia and its effect on the export trade. A few figures may be given to show the extent to which the country's trade has been affected. For the first nine months of last year the exports amounted to 3,252,806 tons of the value of 4,603,346,720 dinars as compared with 3,666,207 tons of the value of 5,508,568,209 dinars for the same period of 1926. There was thus a decline in the volume of exports of 413,401 tons and in their value of 977,221,489 dinars. This decline was due entirely to the comparative failure of the harvest, and if the export of certain other commodities had not developed, the effect of the cereal

shortage would be much more apparent. The exports of wheat for the period amounted to no more than 52,336 tons as compared with 204,424 tons for 1926, the respective values in millions of dinars being 159 and 594.2. Then the exports of maize totalled 196,008 tons of the value of 333.7 million dinars as against 750,968 tons of the value of 1,114.7 million dinars. Further, the exports of wheat flour at 10,331 tons of the value of 49 million dinars were less than half what they were in the corresponding period of 1926. On the other hand, there was a marked expansion in the exports of wood in various forms and of cattle, and this development helped to a very considerable extent to counterbalance the effect of the cereal shortage. It is only necessary in this connexion to mention two items. The exports of oak railway sleepers totalled 1,570,447 tons of the value of 73.7 million dinars as against 692,602 tons of the value of 39.2 million dinars. Then the exports of live pigs totalled 392,285 of the value of 345.2 million dinars as against 161,793 of the value of 192.9 million dinars. The statistics viewed as a whole bring out two facts—Yugoslavia's dependence on the land and the serious effects of a bad harvest. These factors apply, of course, in a greater or lesser degree to every country in the Near East.

Cotton in the Southern Sudan.

As is well known, the development of cotton-growing in the Southern Sudan is of vital importance if the Sudan is to be of the fullest utility in helping to make the Empire independent of cotton from external sources. Unfortunately, as I have had occasion to point out before, the expansion of cotton growing in this region is a matter of peculiar difficulty owing to the various problems which have to be solved. In the current issue of the *Empire Cotton Growing Review* there is an interesting article by Mr. R. Hewison, describing the various difficulties with which the authorities have been faced in the Southern Sudan and the means adopted to overcome them. The problems are both economic and agricultural. The chief economic problem is the question of price, and Mr. Hewison points out that the local price depends largely on the facilities it has been possible to provide for ginning and transport. Three ginneries were completed in the 1926-27 season, one in Mongalla Province and two in the Nuba Mountains Province, but it was found that at any rate in Mongalla Province a large central ginnery would not meet requirements, so it has been decided to experiment with three separate installations in smaller districts. As regards transport, a large extension of roads is in progress and in Mongalla Province the Sudan Government have increased the number of their lorries to deal with the cotton. Then in the northern districts of the Nuba Mountains Province efforts are being made to develop camel transport. In Bahr-el-Ghazal and the Upper Nile Province cotton growing is mainly confined at present to regions served by river transport. The agricultural problems are, of course, the supply of good seed of a suitable variety, the improvements of methods of cultivation, and the control of insect pests and plant diseases. The progress so far made in cotton growing in the regions in question may be gauged from the fact that the crop for the present season is estimated at 10,000 bales as against 4,800 for 19 26-271 and 3,500 for 1926-26.

COMPANY NOTES AND REPORTS.

SUDAN CONSTRUCTION AND EQUIPMENT.

The report of the Sudan Construction and Equipment Company for the year ended October 31, 1927, states that at the harbour works at Port Sudan the erection of the new coal transporters is now practically complete, with the exception of minor work such as lighting arrangements, etc., which is now in progress. The submarine cable laid for the purpose of transmitting power from the power-house on the east side of the harbour to the South Town has been completed and tested with transporters. The construction of two new coal quays at Port Sudan, South Town (Quarantine Island), has been completed, and other ancillary works, for example, final levelling up, construction of sidings, etc., are in hand. It is anticipated that both quays and transporters will be ready for public service by the end of January, 1928. Work in connexion with the extension of the main quays has progressed during the year, and it is hoped that the extension will be completed by July, 1928.

NEW COMPANY.

The Oriental Mining Corporation, Ltd., has been registered as a public company with a nominal capital of £157,500 in 150,000 8 per cent. cumulative preferred shares of £1 each and 150,000 deferred shares of 1s. each. The objects are to acquire and hold shares, stocks and securities issued by any company, constituted in Turkey, having for its objects the acquisition of mines and metalliferous land in Turkey and elsewhere in Asia Minor, producing chromite ore and other mineral substances of all kinds, and the exploration, working, development, and turning to account the same; to carry on business as bankers, brokers, capitalists and financiers, crushers, quarriers, and manipulators of ore, metal, and mineral substances, etc. The first directors are: E. Merigeault, 86, Rue du Ranelagh, Paris, engineer; A. Chastel, 2, Rue Guynemer, Paris, engineer; P. Heidelbeg, 30, Boulevard Maillot, Neuilly-sur-Seine, banker; H. Macaux, 67, Avenue Niel, Paris, engineer; and L. Mathieu-Biord, 9, Quay d'Orsay, Paris, engineer. The registered office is at 36-37, King Street, E.C.2.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, January 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, January 10).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, January 11).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, January 14); s.s. Dumana for Bombay and Karachi (London, January 28).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 7, Swansea January 10); s.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, January 14).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 11).

P. and O. Line.—S.s. Rajputana for Bombay (London, January 20); s.s. Perim for Colombo, Madras, and Calcutta (London, January 21).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, January 10); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, January 14).

Ellerman and Papayanni Lines.—S.s. Mardinian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 7); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 14); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 21); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Ancona, Venice*, Trieste, and Fiume* (Liverpool January 21, Swansea January 26); s.s. Bavarian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 28). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London January 3.

In the short week after Christmas business was naturally on a somewhat restricted scale in the Stock Markets and some of the recently popular industrial sections suffered a slight reaction. The Home railway group, however, brightened and gilt-edged stocks were steady. On Wednesday the lists were opened for the issue of the new British Government 5 per cent. Treasury Bonds, the announcement of which was made just before Christmas. The issue is being made primarily with the object of meeting maturities of National War Bonds which fall due for repayment in September next. Holders of these bonds are offered rights of conversion into the new Treasury Bonds on favourable terms, but cash subscriptions were also invited at a price of 101. As the new bonds have a currency of five to seven years and give a yield similar to that obtainable on Five per cent. War Loan the issue met with a favourable response, the list for cash applications being only open for two days. The effect of this announcement was to strengthen the prices of existing British Government Stocks, the market being favourably impressed with the terms offered. The year closed with the Markets in a cheerful mood looking forward to continued strength in the early days of the New Year.

Imperial Chemical Industries.

Imperial Chemical Industries, already one of Britain's giant industrial undertakings, is not to rest on its laurels. The directors have obtained power to increase the company's preference capital as may be deemed expedient from time to time. It is explained that they have under consideration the acquisition of additional undertakings and that the operations will call for either an exchange of shares or a cash consideration. The combine, formed a year ago to amalgamate leading firms in the chemical industry, has an authorised capital of £65,000,000, the balance unissued being £6,580,000. Last October an interim (maiden) dividend of 3 per cent. was paid on the ordinary shares for 1927. Speaking this week, Sir Alfred Mond said that, having practically completed the first year's working, he thought they had every reason to be satisfied with the results which they had so far obtained. The price of the ordinary shares indicates a considerable degree of confidence in the future, but doubtless this will ultimately be justified. The firms forming the combine mostly occupied strong positions, and it is clear that the undertaking is working under most capable leadership. Many investors, however, may consider that the ordinary and deferred shares discount the future too liberally, but for those an excellent investment is provided by the company's 7 per cent. cumulative preference shares, returning approximately £5 10s. per cent.

Bank Dividends for 1927.

In the course of a week or two the British banks will be announcing their final dividends for 1927. It is quite possible that profits will be on a somewhat higher level than a year ago, but there are no outward indications that dividends will be increased. The banks' chief source of revenue is their advances, which, if we except the last month or two, have been maintained at a high level throughout the year, while there can be no question that the circumstances in which the advances have been made have been more favourable this year than in 1926. The fall in Bank Rate in April from 5 per cent. to 4½ per cent. will not materially affect the banks' revenue arising from this source. Moreover, the banks' relations with the Money Market have not substantially altered during the year, for every effort has been made to make the 4½ per cent. Bank rate effective in the highest degree. The upward tendency of the quotations of gilt-edged stocks has assisted the banks, since they have reduced their investments. It is thus posible that they have made a profit; at least they will not have to make provision for depreciation. At present bank shares somewhat liberally discount the future, but in view of the exceptional strength of the banks, apart from the possibility of an expansion in the banking habit, this confidence will probably be rewarded sooner or later.

French Railway Bonds.

Italy having returned to the gold standard, hopes are entertained that France will not very much longer delay similar action. Such a move will, of course, greatly strengthen France's economic position. In these circumstances, interest attaches to the sterling bonds issued by the French railways. During the past year there has been steady buying of these securities, with the result that present prices are well above the lowest levels touched this year. Even at current prices, however, the returns given by the bonds are not without attractions for investors seeking a well-secured foreign stock giving a reasonable yield. The security of the bonds is excellent, since in effect they are guaranteed by the French Government, while they are also secured upon the Joint Fund of all the large French railway systems. Moreover, last year the leading French railways returned the most satisfactory results for some years past, though it is true that the present year's is likely to be somewhat less favourable. All the bonds bear interest at the rate of 6 per cent. The Midi Railway Company's bonds, finally redeemable 1960, return £6 11s. per cent. A yield of £6 6s. per cent. is given by the Nord Company's bonds, finally redeemable 1950. The Paris, Lyons and Mediterranean Company's bonds, finally redeemable 1958, return £6 5s. per cent.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

Excellent Passenger Accommodation.
Wireless Telegraphy.

ORIENTAL AFRICAN SERVICE

Passenger and Freight Service from

HONG KONG, BANGKOK, SINGAPORE & MAURITIUS
To SOUTH AFRICAN PORTS.

Excellent Passenger Accommodation.
Wireless Telegraphy.

Information for Freight and Passage may be obtained from the following:—

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.

The four R.A.F. Supermarine Southampton flying boats which left Plymouth on October 17 for India, Australia, and the Far East arrived at Cochin, Southern India, from Mangalore on December 29. During their brief stay at Mangalore thousands of people came into the town to view the flying boats.

Concurrently with the arrival of the cruiser Emerald, Captain H. G. C. Franklin, in the Persian Gulf, three of the four small craft stationed there are being refitted. The Crocus, Commander J. G. Bower, D.S.O., is in hand at Bombay. The Lupin, Commander H. F. Curry, D.S.C., and Cyclamen, Commander C. R. E. W. Perryman, D.S.C., are refitting at Colombo, and will be completed on January 6 and at the end of February respectively. The yacht Triad, ship of the Senior Officer of the Division, was last reported at Basra.

Near East Markets

THE DRIED FRUIT MARKET IN 1927.

Messrs. J. C. Houghton and Co., of Liverpool, in their annual report state :—

Currants.

The year closes with an exceedingly firm undertone in the market. In reviewing the past season's trade, the chief feature which influenced the course of events and assisted in the raising of values, was the steady appreciation in the Greek market. This certainly acted as an antidote to the pessimism created by unfavourable economic conditions in England. The large number of unemployed demanded on the part of traders long credits in the country, and made for difficulty in the collection of accounts. These factors resulted in buyers pursuing a hand to mouth policy, purchasing only for immediate requirements. During the first six months of the year trade was of a dragging nature, with slightly reduced rates ruling for the lower qualities, while Vostizza growths were neglected and difficult to sell. On the eve of shipment of new fruit, and under the influence of satisfactory crop news relating to excellence and quality of the harvest, anxiety was manifested on the part of holders to dispose of their remaining stocks, and prices declined. Sales comprised :—Amalias and Patras, 42s. to 43s. ; Vostizza, 43s. to 48s. The one outstanding feature of trading throughout the year has been the gradual and persistent decline in value of the better grades of Vostizza, closing quotations registering only a few shillings between the best class of Vostizza and the Pyrgos growth.

The new season was inaugurated by the arrival of the s.s. Gerano, and a striking and very welcome development was witnessed in the remarkable change which came over the market, consequent (as previously referred to), on the strength of the Greek market. This state of affairs continued right up to the close of the year. September and October were two active months; November saw a natural reaction from the activity experienced during the two previous months; December was extremely quiet, and only relieved from dullness by cables reporting the continued strength and activity of Continental buying in Greece; otherwise business was slow. Closing values :—Pyrgos, 50s. to 50s. 6d. ; Amalias and Patras, 51s. to 52s. ; Zante, 51s. to 52s. ; Gulf, 54s. to 59s. to 64s. ; Vostizza Smalls, 54s. to 58s.

Sultanas.

Smyrna.—Although it could not be said that any great briskness prevailed during January, a fair amount of business resulted in the lower and medium qualities, prices ranging from 63s. to 65s. for fair, 66s. to 68s. for good, and 70s. to 75s. for fine. February saw general steadiness, but trade did not broaden as was hoped for. Dullness continued during March and sales were of a retail character, ordinary to medium 60s. to 63s., good to fine 65s. to 75s. In April holders were displaying signs of dissatisfaction owing to the long period of inactivity, and as there appeared no sign of life on the resumption of trade after Easter, great pressure was exerted to make sales, and prices showed a downward trend, reductions of 4s. to 8s. being made; sales were 60s. to 75s. A weaker tendency was seen during May, ordinary selling at 56s., good 60s. to 63s., fine 70s. Influenced by crop reports the months of June witnessed a persistent shrinkage, with forced selling, prices registering a decline of many shillings, transactions being at 48s. to 50s. ordinary, 53s. to 56s. good, fine 60s. to 70s. This state of affairs continued, notwithstanding reports of damage consequent on extreme heat experienced in Smyrna. The small remaining stocks were cleared at : good 51s. to 53s., fine 60s. to 70s. Overland samples coming to hand in August gave evidence of the crop deterioration, and with the market bare, holders raised their quotations for forward sales, as high as 42s. c.i.f. being asked for good average, but buyers did not respond. The out-turn of the s.s. Cypria and Lesbian cargoes were very disappointing, showing that quality had been seriously affected, the fruit being small and lacking in colour. Sales were : dark 49s. to 50, good coloury 60s. to 70s. Later arrivals in October fully confirmed the damage to the Smyrna crop, and coloury fruit was readily picked up. November presented no material change and prices receded, owing to arrivals comprising a large proportion of rain-damaged and lower grade qualities. Purchases on a c.i.f. basis were not giving satisfaction, and in many instances recourse was had to arbitration. Business to the end of the year was most disappointing, and total sales were out of all proportion to what was expected at the season of the year.

Greeks continued a dragging sale during the early months of the year, prices being 63s. 6d. to 77s. 6d., fine 84s. As time advanced a weaker tendency developed in sympathy with other growths, and sales were 60s. to 66s. ordinary to good, 70s. to 77s. for fine qualities. During July the fall in prices of Smyrnas affected Greeks and business was reported at 52s. to 55s., fine 70s. A few parcels of new fruit arrived in September, ordinary quality realising 57s. 6d. to 60s. Further supplies came to hand in November, and sales were 58s. to 60s., with 80s. to 92s. 6d. for choice. Shipments were the smallest known for years, only about 12,000 packages arriving against 53,605 in 1926.

Figs.

Some New Crop Genuines were sold in June at 22s. to 23s. c.i.f., September shipment. A fair amount of business was put through in skeleton figs afloat quay terms, at 54s. to 80s. large boxes layers, 67s. 6d. to 71s. small boxes, and 100s. to 120s. Locoums. Reports of damage to the crop by heavy rains caused prices to advance considerably on arrival of steamers, and progress was made in large boxes 60s. to 87s. 6d., small boxes 76s. to 81s., packets 62s. 6d. to 70s., Locoums 102s. 6d. to 130s., pulled 50s. to 52s. 6d., bags genuines 36s. to 37s. October brought increased shipments, market developing a duller tendency, but with holders firm, sales were transacted at practically unchanged rates, Layers large boxes 60s. to 85s., few choicest up to 100s., small boxes 72s. 6d. to 85s., Locoums 105s. to 140s., genuine bags 36s. to 37s. Demand fell away during November and it was difficult to make progress without concessions of a tempting nature. Sales were Layers large boxes 60s. to 65s., few choicest 75s., small boxes 60s. to 70s., Locoums 85s. to 90s. Genuine bags were neglected, quality of late arrivals showing a great falling off (many rain-damaged). Spot sales were : sound, 35s. to 37s. ; rain-damaged, 33s. December saw holders pressing sales, and prices crumbled away. Latest rates were : Layers large boxes 48s. to 57s. 6d, small boxes 47s. 6d. to 55s., Locoums 65s. to 70s., genuines sound 32s. to 36s., rain-damaged 28s. to 31s.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza Sulina, Tulcea, Galatz, and Braila.
For Freight and other Particulars, apply:
JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester.
and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

The production of Hamilton's Concession (Roumania) for the week ended December 23 was 610 tons (4,270 barrels).

Motors and Motoring.

By G. B. B.

Writing in the West Country, with 12 foot snowdrifts all around me and icebound roads between each drift, I have been struck with the extensive use of chains which is being made by the people who, living in this wild moorland, presumably are used to these weather conditions. Chains on wheels, I should have thought, were quite a rarity now-a-days, but evidently that is not the case. Certainly the foresight displayed has been justified here, at any rate, for nothing else would have enabled the lorries and farm motor vehicles to negotiate, with comparative ease, these Dartmoor gradients during the weather we have just experienced.

H.P. Tax in Egypt.

The decision of the Egyptian Government to impose a horse power tax on all cars in use may have a deterrent effect on the use of motor vehicles in the country. Hitherto Alexandria was the only town in Egypt where cars were subject to a tax, based on rated horse power. Presumably the need for more revenue has caused the authorities to explore other avenues in which money might be raised and the increasing use of cars has attracted their attention. At present there are about 1,500 cars in Alexandria alone, and it will be interesting to see what effect the new taxation has upon the imports of motor vehicles into Egypt.

Whilst on the subject of taxation it may be mentioned that there has been a good deal of talk of late regarding the desirability of abandoning the horse power tax in this country and of returning either to the petrol tax or to a flat rate method of car taxation, but the editor of the *Light Car* says that just how certain British manufacturers would view a change of this sort is a matter for speculation. Small four-cylinder engines fitted in comparatively roomy four seater chassis owe their existence largely to the horse power rating, and designers, of late years, have made a very close study of the problems which they present. These engines have proved an entire success but the fickle-fancied section of the public might be tempted to desert the "small four" for something larger so long as tax consideration had not to be taken into account. At the moment any alteration in the method of taxation is very much in the air, and manufacturers of small four-cylinder engines are undisturbed and are going on steadily with the programmes they have laid for the coming season.

The Modern Gear-Box.

The modern gear-box is really a fine piece of engineering work. The editor of the paper referred to above points out that an unfortunate aspect of the attention which is being given to "fool proof" gear-boxes of various kinds is that the improvement of gear-change mechanism of the conventional pattern is not receiving the attention it deserves. Too many designers appear to feel that, pending the introduction of a gear-box that allows anyone to make silent changes under all conditions, it is wiser to concentrate upon providing a really good top gear performance than to seek ways and means for simplifying the control of our old friend the "crash" gear-box and thus provide the motoring world with as good a compromise as possible, until the ideal of automatically varying ratios has been attained. In this connexion, says this authority, it should be pointed out that a silent, easily engaged, long wearing third or middle gear is easily obtained by making it of the helical constant mesh; engaged-by-dog-clutch type.

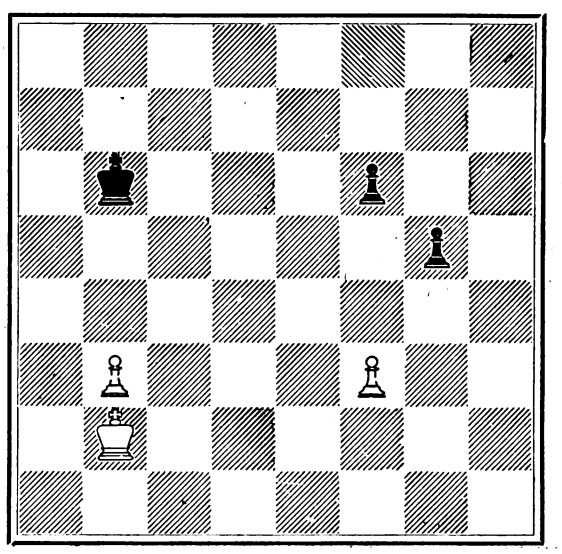
There is one light car on the market which has a four-speed gear-box with third gear so arranged, and all the critics are loud in its praises. Why cannot we have more such gear-boxes? They allow the driver to obtain the best from an engine, and they are conducive to economy both in fuel consumption and repair bills. Manufacturers who are seeking a first-rate selling point might turn their attentions to a constant mesh principle with material benefit both to their balance sheets and to the satisfaction which their customers obtain from their cars.

CHESS.

By "CARO-KANN."

I give this week another end-game by way of a change from the positions in actual games which I have given frequently of late.

The second half of the winter season may be said to have begun with the annual meeting at Hastings, which is proving each year a greater attraction to chess players. The principal tournament, so far as it has gone, has been in favour of the foreign masters, and it looks as if once again they will occupy the leading positions. The encouraging feature of this tournament and others which have been held recently, however, from the British point of view, is the growing frequency of the victories secured by our players over their foreign opponents, and it looks as if before long our representatives will be more than holding their own in the leading competitions.



White to play. What result?

The point has not infrequently been raised whether there is not too much chess in the year now, and it is certainly a fact that the growing demand on players, particularly in respect of league, county, and other matches, to say nothing of the numerous congresses, is not without its effect on the annual competitions of the various clubs. There is hardly a Saturday now without some leading event, often two or three. It is equally a fact, however, that there are players who cannot have too much of the game, and chess is actually becoming such an arduous pursuit that it is now difficult to hold one's own without constant and assiduous practice.

Ex-King Ferdinand of Bulgaria sailed on December 31 from Bremen in the Sierra Morena on a pleasure trip to Rio de Janeiro and Buenos Aires.

THE SUDAN IN 1926.

(Continued from page 828.)

The policy of encouraging imports of grain by the public has thoroughly justified the measures taken. Prices in the north and east are being kept at a reasonable level by the imports of Egyptian, Arabian and Indian dura, which amounts to a steady monthly total of about 1,500 tons.

The period for the free import and cheap rail freight for grain has been extended to September 30, 1927. Small local reserves of grain have been established in centres where shortage is anticipated with a view to steadying prices. No issues for relief have yet been found necessary, and so far as can be forseen at present the reserves held by the Government will be sufficient to meet any eventuality until the extent of the next rains are known. Given good rains, a large grain crop may be confidently anticipated. The recent experience of two consecutive years of scarcity and high prices will ensure that the maximum area available will be put under food crops.

It may be noted that in previous periods of grain shortage the imports of grain were as follows:—1914 27,345 tons; 1919, 11,419 tons.

The failure of the rains during the last two years has made a clean sweep of the rain-grown cotton in the central districts and has deprived the native of a useful cash crop, while the fall in the price of cotton has reduced it to a figure which is very near to an unremunerative level. It is still possible, however, even at present prices, to grow considerable areas of cotton in the Southern Sudan. Cultivation is being maintained and in some areas increased. In the import trade the fall in the price of cotton goods has depreciated merchants' stocks. The flood crop of cotton in the Tokar district of Red Sea Province in 1925-26 was a very poor one, the flooded area being very small. The Kassala crop in the Gash Delta was also disappointing.

There has also been a serious drop in the price of gum arabic, one of the chief exports of the country, valued in 1923 at over £E1 million. Prices at El Obeid for this season have been about 60 P.T. per kantar, as compared with 90 P.T. a year ago and 105 P.T. and 106 P.T. in 1925 and 1924. In spite of the low price, more gum was exported in 1926 than in any previous year, and arrivals this season are greater than ever. This activity in gum collection is no doubt largely due to the need of cash to pay the high prices demanded for dura and dukhn. Nomadic tribes have had to put up with smaller sales of camels, cattle and sheep for export, and throughout the northern districts there has been a considerable loss of animals owing to the drought.

These facts are sufficient to show that the Sudan has received a hard buffeting in 1926, though the effect of this is not readily apparent from the trade figures. If, however, the value of cotton and cotton-seed exports is left out of account, the value of the rest of the export trade of the country shows a decrease from £E2,035,307 in 1925 to £E1,773,851 in 1926, a fall of £E261,456, or 12.8 per cent. If the value of imported dura, £E212,053, is added to this decrease in the export trade of the country, other than cotton, the total debit of some £E473,500 may be said to have absorbed a good deal of the profits made on cotton.

Effects of the Gezira Scheme.

There is some doubt as to what the native tenant in the Gezira has done with the proceeds of his cotton sales. The value he has received for cotton has not reflected itself as visibly or as quickly in its effect on general trade as was expected. There is little doubt, however, that but for the proceeds from the Gezira cotton, imports would have made a worse showing than they have done.

For instance, in one item alone, sugar, consumption in Blue Nile Province has increased from 2,096 tons in 1925 to 3,453 tons in 1926. Sales of sugar throw a considerable light on the situation. The consumption of sugar in the whole of the Sudan in 1926 was 20,340 tons, as compared with 15,439 in 1925, and the sum spent by the population was about £E1,124,401, as against £E1,055,928 in 1925, an increase of £E68,473. If the Blue Nile Province consumption is eliminated it will be found that sales in the rest of the Sudan increased from 13,343 to 16,887 tons, and that the sum spent on sugar by the people increased from approximately £E907,112 to £E924,127.

Though, possibly, when dura is expensive, people eat sugar as a partial substitute for grain, it remains, nevertheless, an interesting fact that in spite of the hard times last year the people increased their consumption of sugar by 31.7 per cent., and spent more on it than in 1925, when conditions were much easier.

The material progress of the people is hard to measure statistically. No conclusions based on consumption per head of the population are of any value, as statistics of the number of inhabitants of the Sudan are mostly guess-work. Also, conditions of life in the central and northern parts of the country differ profoundly from those prevailing in the pagan and negroid regions of the south. It is impossible, moreover, to estimate the rate of increase in the population of a country which has emerged in less than thirty years from a state of barbarism, pestilence, and internecine fighting into one of settled and peaceful conditions.

Outward signs of progress are visible almost everywhere and there has undoubtedly been a widespread rise in the standard of living. Compared with twenty years ago the Sudan spends about ten times as much on sugar, thirteen times as much on tea and coffee, and five times as much on cotton goods. As only about half the population, or probably less, have more than a trifling interest in these imports, it may be said that the increase in consumption is substantial.

In the same period exports have increased ten-fold in value from £E449,329 to £E4,876,236.

These developments are, of course, mainly confined to the settled Arab population of the northern part of the country, and there remains the problem as to the economic future of the nomadic tribes of the north and the vast areas of the Southern Sudan with their large though scattered and primitive negroid population.

It would be out of place in this note to discuss the ethical side of this problem. It is enough to point out that the pursuance of a *laisser-aller* policy and to leave these people in their pristine conditions, attractive as it is in some respects, is impossible in practice. As the country progresses so many points of contact are set up between these backward peoples and civilisation that the joint issue of moral and material welfare and the question of the extension of the ancient methods by modern forces inevitably present themselves.

In the south the economic problem is by no means new, but of late it has been gathering greater importance, chiefly, perhaps, owing to the ubiquity of the motor car and the extension of motor roads, which are partly the cause and partly the effect of the first deliberate attempt to encourage the cultivation of rain-grown (American) cotton in southern areas. This movement was greatly encouraged by the high prices at which cotton was selling when the campaign begun.

The recent fall in value of cotton has made it necessary to recast estimates as to the rate of progress, but even at its present low price it will pay for cultivation in many parts of the south and constitutes an important nucleus of development in areas where a few years ago the people had no means of earning any money. Ginneries for cotton are being provided by Government in promising areas to enable the cost of transport to be reduced, and the question of reduced railway and steamer rates is under examination.

Grain Production.

The fall in the price of cotton has coincided with the great rise in the price of food grains (dura), and this has again brought to the front the need for minimising the severity of the effect, on prices and supply, of the periodical failure of the rains. The ultimate solution undoubtedly lies in developing the production of grain in regions where rainfall is more copious and reliable than it is in the present areas of supply, and there is reason to believe that in course of time Nuba Mountains Province and the Upper Nile

Province can play a much greater part in supplying the Northern Sudan with grain.

Under the influence of high prices these provinces have recently put large quantities of grain on to the northern markets. This line of grain development can be pursued without any undue encroachment on cotton growing, provided the latter is confined to reasonable dimensions. In fact, the two policies should be complementary. Other crops should also be susceptible of increase in the southern districts, especially coffee, sesame and ground nuts.

The chief question on which all these southern developments turn is transport in one shape or another. It presents many difficulties except in districts within a limited range of the river, but a consistent campaign for the increase of grain cultivation in suitable areas should lead in time to results of value not only to the immediate districts concerned, but to much of the rest of the Sudan as well. This matter, together with the improvement of roads, provision of markets, seed supply, storage accommodation, is under careful consideration. A good start has already been made. For instance, during the last three years road development in the southern provinces has increased at a great pace. Thousands of miles of road have been opened to motor traffic in the dry weather.

It is to be noted that the imports of motor cars, motor cycles and accessories (excluding tyres) into the Sudan during the past three years have increased as follows:—Value in 1924, £E45,356; value in 1925, £E83,923; value in 1926, £E93,694. There are at present about 1,300 motor cars (including lorries) in use in the Sudan.

Condition of the Nomadic Tribes.

The main money-earning occupation of the nomadic people is the camel-carrying trade. Subsidiary to this, though very important, in the sale of cattle and sheep, both for the home market and for export, and also, in the eastern Sudan, the sale of camels for export for slaughter in Upper Egypt. The home market for sheep is capable of expansion, and is, in fact, increasing considerably as the native standard of living in the Central and Northern Sudan improves, but the export market for cattle, sheep, and camels is not likely to grow very rapidly. For both camels and sheep there has latterly been a considerable decrease in demand.

As regards the carrying trade, it was found, in the Western Sudan, that railway extension, so far from reducing, increased the demand for camels for transport and the camel still easily beats the motor lorry for cheapness. In that part of the country the great extension of the gum trade and the demand for cattle on the Egyptian market have tided the camel owner through a difficult period of transition. The Government has expended large sums in Kordofan Province for the provision of wells for the assistance of transport, whether for camels or for cattle.

In the Eastern Sudan it remains to be seen how the continuation of the railway from Kassala to Gedaref, and eventually to Makwar, will affect the carrying trade hitherto done by camels. In the meantime a promising beginning has been made in Kassala Province (and in other provinces also) in the digging out of old wells and watering places, which, besides easing the difficulty as to pasturage, will enable people to grow an increasing amount of grain for themselves and lighten the hardships attendant on such times of scarcity as the present.

In Kassala and Red Sea Provinces a revival in demand for dom nuts (vegetable ivory) has been a help to the Beja-speaking people. Exports last year were £E50,959 in value and in 1925 £E31,180. Railway transport now available by the Kassala line has enabled advantage to be taken of this improved demand. Local auctions of dom nuts have been successful and helpful.

Bahr-el-Ghazal.

The Governor again reports steady progress in this remote and undeveloped region, where the aim of the Administration is limited to the maintenance of order and justice with due regard paid to the conservation of the better elements of native custom. Every opportunity is being taken to build up the authority of the native leaders so as to enable them to take an active part in assisting the Government in its scheme for the welfare of their people. In this connexion a policy of devolution of power to native chiefs is being steadily followed. The chiefs' courts, which have been set up in various districts, are performing increasingly valuable functions, and appeals against their decisions are on the decrease.

The rains set in late, but fell opportunely for the grain crop, and the harvest promises well. The general condition of the people continues to improve. The sale of cotton is bringing money into certain areas, the use of coin is becoming more widespread, and clothes are more in evidence.

Berber.

The Governor reports that the rains in 1926, although inadequate for the raising of any food crops, were sufficient to relieve the grazing situation to an appreciable extent. The Nile flood was early and above normal, but the crops grown on the flooded areas were marred by a second rise in the river which took place at the beginning of September.

The estimated cotton yield constitutes a record for the province and experimental sales held at Shendi and Berber realised good prices. The price of grain rose considerably during the year, reaching its highest level in August. The temporary distress was relieved by the issue of grain loans to nomad Arabs and to the more needy of the sedentary population, and the price of grain has since shown a welcome decrease. The export trade in camels, cattle, and sheep, although brisk during the earlier part of the year, fell later owing to the lack of demand in Egypt.

Blue Nile Province.

The economic position of the province is extremely sound. Even in the outlying districts, where the rains have been bad for two years in succession and where the influence of the Gezira scheme is only indirectly felt, arrears of taxation are negligible.

The general improvement in the material well-being of the population is indicated by a very substantial increase in the quantity of sugar consumed during the period under review. There was an increase of currency in circulation between July, 1925, when cultivation on a large scale began under the Gezira scheme and the end of 1926, amounting to approximately £250,000. The building and timber trades have been particularly brisk and an improvement in housing is perhaps the most marked sign of the prosperity prevalent.

Dura prices have been high partly as a result of its scarcity, but more owing to the increased purchasing power of the people. It has been possible to limit the rise in price due to this latter cause by the introduction of imported dura, which has been sold by the Government in small quantities in order to keep control of the market.

Fung.

The Governor reports that owing to the uneven distribution of the rainfall the crops have varied a great deal in different parts of the province. On the whole, the amount of dura harvested came up to the level of previous years, but the rain-grown cotton crop was almost a total failure. Coupled with the recent fall in prices, this year's poor yield of cotton has tended to discourage its cultivation, and the cotton market at Singa has been closed. In addition to this, the yield of gum was below the average, and in consequence money is scarcer than it has been for some years.

Halfa.

The low Nile flood of 1925 had no appreciable ill effect on the agricultural and material welfare of the province, while the flood of 1926 was of good average height, reaching its highest point, 8.17 metres, at Wadi Halfa on September 14.

The date crop is the only means of making money open to the local agricultural population, since the other food crops grown are barely sufficient for their own needs. An abundant crop, estimated as being 30 per cent. above that of 1925 was realised, and, though the fruit was small, good prices were obtained. General trade was poor, a special decline being noticeable in the profits of traders working on the Shellal-Halfa reach.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

Wadi Halfa is becoming an improtant air station on the route between Cairo and Khartoum. Forty-seven aeroplanes landed on the aerodrome on twenty separate occasions during 1926. The flights included those of Sir Alan Cobham to the Cape and back and of the Royal Air Force from Cairo to Kano and from Cairo to the Cape.

Kassala.

Although the province suffered from the effects of a third bad rain year in succession, a Gash flood of unprecedented volume partly compensated for the drought. It is estimated that the dura harvest will slightly exceed that of last year. The rain cotton crop of 1925-26 amounted to nearly 8,000 kantars. The fall in price at Gedaref in July, however, discouraged cultivators and this year's yield is only 3,000 kantars. The gum output of 1925-26 reached the unprecedented figure of 60,000 kantars and this year's prospects are equally good. The entire administration of the gum forest is now in the hands of the natives themselves and this measure as well as the improved water facilities for the gum pickers is largely responsible for the continued success of this important industry. The Gash flood has been excellent and the cotton crop for 1926-27 is expected to be double that of last year.

The camel-owning section of the population benefited considerably from the sale of camels to Egypt; it is estimated that this trade brought some £E50,000 into the province during the year.

On the whole, therefore, the condition of the people is good, in spite of the poor rains, and it is only among the inhabitants of Kassala district itself that any serious want is likely to be felt before the next crop can be harvested.

The yearly recurrent anxiety regarding the Kassala dura supply will be greatly diminished on the completion of the railway extension from Kassala to Gedaref, which was begun in December, 1926.

Khartoum.

In spite of the abnormal fall in the price of cotton, the area under pump irrigation has again increased and there have now been installed twenty-nine pumps as against last year's total of twenty-seven. In view of the complete failure of the rains, the food crops grown on these irrigated lands have this year proved of special value. Part of the land settlement, for which application was made last year, has been carried out. Rain crops were a complete failure. The seluka crop failed to fulfil expectations. Flushings from the Sennar Dam caused a certain amount of damage, especially to melon crops, and the shaduf crops suffered from a sudden rise of the river in May, which submerged many cultivations. Present prospects are, however, more promising. Various issues of seed loans have again been made.

The high price of dura severely affected the town population. In consequence, certain quantities of dura were put on to the market by Government for sale to those certified as being in straitened circumstances. The effect of this action was the immediate creation of a feeling of security in the knowledge that the situation was being taken in hand by the Government, and that any attempts to raise the price of grain by the formation of a ring would be checked.

Trade has been stagnant throughout the year. The bad rains of 1926, coming after a previous year of depression and bringing in their train a high dura price, hit many firms hard. Stocks also depreciated owing to the fall in general values, especially in cotton goods. Merchants complain that there is an entire absence of "movement," but admit that good rains in 1927 would have an immediately exhilarating effect on all trade.

Kordofan.

Many motor roads have been improved, especially those leading southwards into the Nuba Mountains Province, with a consequent increase in motor traffic. The mails to Fasher and Talodi are now carried by car from El Obeid.

The deep-bore wells proved of great value in alleviating the water shortage caused by rain scarcity. Several new bores have been made in El Obeid during the year and a scheme for water installation has received financial support. Experiments have been conducted in the excavation and deepening of natural reservoirs in the hope of improving the surface water supply in El Obeid and elsewhere.

Mongalla.

Following on an average grain year in 1925 the unusually good rains of 1926 give excellent prospects except in the Didinga Hills. The estimated output of cotton shows a large increase on that of last year, and a ginnery is being erected at Torit to cope with the 1926-27 Latuka crop.

Efforts have been made to popularise the growing of coffee. One hundred kantars were brought in from the Acholi Hills and a quantity of seed has been issued.

Communications throughout the province are considerably improved. New roads have been constructed connecting Rejaf with the Latuka district and the Taposa country, and a steel bridge has been erected over the Kinnetti River.

During the period under review 127 and 153 travellers passed through the province going to and from the Belgian Congo and Kenya respectively. A temporary furnished rest-house with arrangements for food has been erected at Rejaf for their accommodation, and the question of erecting a proper hotel is under consideration.

Nuba Mountains.

The Governor reports that the crops on the whole have been above the average in the southern and western parts of the province, while in the east the poor rainfalls occasioned a certain scarcity. The rain-grown cotton crop in the districts of Talodi and Kadugli was good; in Dilling district it failed, despite plentiful rain.

Communications, especially motor roads, have been further improved. Permanent bridges have been completed over Khor Hamra and Khor Sungikai, and now only a bridge over Khor Habilla is required to complete an all-weather motor road from El Obeid to Dilling. Telegraphic communcation has been extended from El Obeid to Dilling and Kadugli, and a further extension to Talodi from Kadugli is shortly to be undertaken.

Red Sea.

Owing to an exceptionally poor flood in the Tokar Delta the 1925-26 cotton crop was a very light one. The prospects for 1926-27, however, are much improved, as the flood has averaged well and great care has been taken in thinning and weeding the crop. A plentiful supply of labour has been available at all times, and the increased eagerness of the nomadic population to grow their own grain crops, as noted last year, continues, despite the discouraging conditions occasioned by a scanty rainfall.

The province generally has experienced somewhat straitened circumstances owing to the poor Tokar flood of 1925 and to the lack of rain. This depression was naturally felt most severely at Tokar, since in Port Sudan there was never a lack of employment owing to the increase in the port trade and to the noticeable activity in building and other developments in the town.

The Governor calls attention to the beneficial effect of the famine relief works and of the import of Arabian and Indian grain, free of duty, in alleviating the distress in certain areas caused by the failure of the harvest.

Financially the year has been disappointing and the receipts show a deficit of £E20,000 on the estimates, due in great part to the failure of the cotton crop, which in normal years supplies a large part of the revenue.

Company Meeting.

LAND BANK OF EGYPT.

The Position in Egypt.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting at Alexandria on December 6 :—

In our report of last year we referred to the revival of mortgage business in Egypt, particularly as regards this company, a revival due to a great extent to the fact that, after having little by little acquired the lands that he cultivates over several years, the average landowner with a moderate holding, who constitutes the chief clientèle of the Land Bank, found himself faced with a temporary financial stringency owing to the lower prices for cotton, a stringency which compelled him to have recourse to loans.

But the position in Egypt has remained good; the reserves accumulated in the years of prosperity have enabled the country to pass through the difficult periods, and further, there exists in it to-day an animated financial market whose resources are important. We have had proof of that in the issue which we made last February. That issue of an amount of £E500,000 was entirely covered before the public subscription which was to have been negotiated through the medium of the Comptoir National d'Escompte de Paris, which we take this opportunity of thanking for its valuable help. Bearing interest at 5 per cent., it was floated at a rate of 96¼, and its success has shown once again the trust that the Egyptian investor places in the Land Bank and the considerable means that he has at his disposal.

Thanks to this receipt of new money, our business has continued to develop according to the prudent methods laid down in our statutes. The total amount of our mortgage investments stands at £E4,396,284.511 as against £E4,002,073.765 last year; it includes £E85,053.021 due by third party purchasers of land expropriated. On the other hand, our debt to bondholders, calculated at par, stands at £E2,849,873.182, largely guaranteed on mortgage. The new transactions carried out in 1926-27 comprise 29 sales and 312 new loans of a total of £E936,412.308.

The price of cotton having been less remunerative for the landowner during a great part of the past season, our arrears have risen from £E387,190.213 to £E470,715.568. Of this total £E194,593.575 relates to arrears properly so called and £E276,121.993 applies to the current year.

The year now in progress has begun under more favourable conditions, and the substantial receipts of annual payments which have been realised so far show that the position from this point of view has improved, and it will continue to improve to a very appreciable extent. The liquidation of our land has been carried out normally; the account has fallen from £E77,879.728 to £E51,412.581.

The amortisations and contingency funds which we submit to you total £E28,184.303; they include commissions on mortgage loans, movable and immovable property, cost of land improvement, the provision of 10 per cent. on the annual payments to be recovered, and the exceptional legal expenses of the year. Further, we propose to devote to the amortisation at the proper time of the expenses of our 5 per cent. bonds a sum of £E10,623.209, arising from the special profits realised by the financial transactions of the purchase of the 3½ per cent. bonds. Our statutory reserve will be increased this year by £E17,923.356.

The various accounts for eventualities being thus provided for, the net profit for distribution will be £E200,547.533; it was £E200,107.143 in 1925-26. Your Board, in view of these results, feel able to propose the same distribution of dividend as last year, which will be carried out in the manner conforming to the resolution of the meeting of 1924. After the statutory deduction of 5 per cent. for the ordinary shares, each of the categories having right will receive 5 per cent. on the amount carried to their credit, sums diminished by the amortisations already carried out in the three previous years. The dividends and ordinary percentages of the year will be then paid. These two factors united will give to each of the ordinary shares an amount of 14s., and to the founders' shares £7 12s. The amortisation of one-fortieth applied as before to the capital returned from our mortgage loans, permits a further allocation to the ordinary shares of 1s. 6d., and of £1 2s. to the founders' shares. The total amount received will thus stand at 15s. 6d. for the ordinary shares and £8 14s. for the founders' shares. We do not doubt that these prudent proposals will obtain your complete assent.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, deferred interests, etc., have been £E398,539.177. The service of the bonds, general expenses, fiscal taxes paid or due to the French Government, and various amortisations we propose to you, which stand at £E38,807.512, absorb a total sum of £E197,991.644. The profits to be distributed amount to £E200,547.533. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E153,016.283. On that balance there has to be deducted, in conformity with the decisions of the general meeting of December 2, 1924, the interest at 5 per cent. on £E850,270.898, profits carried forward on the 4 per cent. bonds. The interest falls to the various categories as follows :—Reserve £E4,503.054, the directors £E3,843.758, ordinary shares £E23,916.713, founders' shares £E10,250.020, £E42,513.545, £E110,502.738. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £E11,050.273, and 10 per cent. goes to the board of directors £E11,050.273, £E22,100.546. Of the balance £E88,402.546, 70 per cent. to the ordinary shares, £E61,881.534, to which has to be added the amount brought forward from the year 1925-26 £E2,507.142. In addition the share accruing from interest on profits carried forward £E23,916.713, making £E88,305.389. We propose to you to give out of this sum to the 195,000 shares 9s. per share, £E85,556.250, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. per share. The carry forward of the shares will thus be £E2,749.139. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. per share. The 30 per cent. belonging to the founders' shares represents £E26,520.658. Further, their share of the interests arising on the profits carried forward £E10,250.020, to which has to be added the amount brought forward from the year 1925-26 £E974.482. We propose to distribute a dividend of £7 12s. on each founders' share, and to carry forward £E695.160.

The Resolutions.

The general meeting unanimously (1) approved the accounts and balance-sheet for the year ended September 30, 1927, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors and fixed the dividends as follows :—(A) A distribution of 14s. for each ordinary share : that distribution, in conformity with the decision of the general meeting of December 2, 1924, includes, besides the ordinary dividend of the year, interest at 5 per cent. on £E478,334.266, profits carried forward, realised on the 5 per cent. bonds. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay as a final settlement for the year 1926-27 9s. per share. (B) A distribution of £7 12s. on each founders' share : that distribution, in conformity with the decisions of the general meeting of December 2, 1924, includes, in addition to the ordinary dividend of the year, interest at 5 per cent. on £E205,000.400, profits carried forward, realised on the 4 per cent. bonds. It was resolved to carry forward £E2,749.139 for the ordinary shares and £E695.160 for the founders' shares. (3) By deduction on the capital recovered on mortgage loans, the meeting decided to amortise, up to one-fortieth, the profits carried forward realised on the 4 per cent. bonds, which will result in a supplementary distribution of 1s. 6d. for each ordinary share, with, on that fortieth, a carry forward of £E285.108, and of £1 2s. on each founders' share with a carry forward of £E209.241. (4) Re-elected MM. Ch. de Lasteyrie, S. Wellhoff, E. Cazalet, and S. E. Ahmed Ziwar Pasha, the retiring directors. (5) Nominated as auditors, MM. Georges Mazet, Franz Sofio. and Henri Pougin.

The traffic receipts of the South Indian Railway Company for the week ended December 3 amounted to Rs.11,88,557, making the total from April 1 Rs.4,16,26,723. For the corresponding periods of the previous twelve months the totals were Rs.10,84,221 and Rs. 3,96,67,346.

EGYPTIAN GOVERNMENT.

TENDERS will be received up to noon on 25th February, 1928, at the Office of the Director-General of Reservoirs, Ministry of Public Works, Cairo, Egypt, for the excavation of approximately six and a half millions Cubic Metres of earthwork in the remodelling of the Fouadia Canal in Naghamadi District, Upper Egypt. Work is to be handed over by the 30th June, 1930.

Specification and Form of Tender may be consulted at the above-mentioned Office from January 1st onwards and purchased on payment of £5 per set.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 22 state:—

During the past week the futures market has not been quite so active, but the tone has been rather better. The week's summary of price movements is as follows:—January, 34.05 dollars, 0.63 dollars up; March, 34.40 dollars, 0.65 dollars up; May, 34.70 dollars, 0.70 dollars up; November, 35.10 dollars, 0.75 dollars up. Ashmouni: December, 26.80 dollars, 0.90 dollars up; February, 26.90 dollars, 0.88 dollars up; April, 27.07 dollars, 0.83 dollars up; June, 27.15 dollars, 0.71 dollars up; October, 26.40 dollars, 0.70 dollars up.

Sakel.—There is very little new to report this week. The slight rise in prices and the better tone prevailing in the market is, unfortunately, not due to any improvement in the trade demand or any real factor of importance but is merely the result of some buying by local speculators and Liverpool operators. The demand from abroad continues to be small and it is not likely that we shall see any improvement in any case until the Christmas and New Year holidays are out of the way. Reports from many of the consuming countries make very poor reading at present; from all sides one hears of a probable curtailment of production, which, if carried into effect, must naturally react on takings of raw cotton.

Uppers.—Also in this market the tone has been better and prices show a rise on the week. The American Ginners' Report, published on the 20th instant, shows 12,072,000 bales ginned to the 12th instant; this figure was looked upon as slightly bullish and our market shared in the better feeling which the publication of the report produced in New York. In this variety also, the demand from spinners has been only very moderate, and the export houses have more or less kept out of the market.

The week's receipts amount to 189,513 kantars, against exports 181,955 kantars; the stock in Alexandria stands at 3,170,897 kantars.

The official figures of arrivals and exports for the period ending September 1 to December 14 are as follows:—Arrivals: Sakellaridis, 1,311,746 kantars; Ashmouni and Zagora, 1,761,736 kantars; Pilion, 172,761 kantars; Various, 131,251 kantars; Scarto, 64,714 kantars; total, 3,442,209 kantars. Exports: Sakel, 854,952 kantars; Ashmouni, 1,057,976 kantars; Pilion, 81,513 kantars; Various, 64,851 kantars; total, 2,059,292 kantars.

Spot.—During the past week demand from abroad has fallen away still further and we have had a series of very poor markets. Sales for the week amount to about 11,150 bales, of which we estimate 4,450 bales Sakellaridis, 5,700 bales Ashmouni and Zagora, 800 bales Pilion and 200 bales other varieties. The spot situation is generally very dull with no new feature of interest to report. In spite of the poor demand, however, there is no pressure to sell, and cotton, except the high grades, is not easy to buy.

Sakellaridis.—A very poor business has been done, in which, however, all grades but the best have figured. Spot differences are unchanged.

Ashmouni and Zagora.—Have met with only a modest enquiry and only a poor business has resulted. All grades up to Good have been dealt in, but the grades over Good are entirely neglected. Spot differences are generally a little dearer.

Pilion.—A moderate business has been done. Spot differences are generally somewhat dearer.

Other Varieties.—A retail business has been done in White at last week's rates. Brown is neglected and no business is reported. In Nahda a fairly good business has been done, but there is not the same keen competition amongst buyers for such lots as are on offer.

Up-Country.—Business in spot cotton in the villages is very quiet, although some desirable lots have been recently sold at very full prices. A good number of new crop transactions are reported, a good proportion of which are for Nahda cotton. The demand for sowing seed has been fairly good during the week. From Upper Egypt we have this week received reports that, in certain districts, ploughing for new cotton has already started.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Mechanical Filters for Waterworks.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of filtering plant and accessories for the waterworks at Keneh, near Luxor. January 21. (D.O.T.)

Timber.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of timber of different kind, approximate cost £E3,500 to £E3,700. February 7.

Wire.—The Stores, Egyptian State Railways, Telegraphs and Telephones, Saptia, Cairo, invites tenders for the supply of 15 tons wire galvanised iron stay strand 7 wire No. 8 S.W.G. February 4.

Tractors.—The State Domains Administration is considering the possibility of purchasing a number of tractor ploughing sets and requests firms interested to apply to the Administration, Savoy House, for copies of the specification.

Clothing, Etc.—The Chief Inspector (Direction General, Customs Administration, Alexandria, invites tenders for the supply of:—(a) Clothing and equipment; (b) tarbushes with tassels; (c) boots for guards, required for the year 1928-1929. February 15.

Steam Engine, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of one steam engine and one centrifugal pump at Karnak temple. February 5.

Lord Inchcape has received a telegram from the King of Afghanistan thanking him for the arrangements made for himself and the Queen on board the P. and O. liner Rajputana, which conveyed their Majesties from Bombay to Port Said. His Majesty added:—"The Queen and myself will always remember the voyage in the Rajputana as one of the most pleasant experiences of our lives."

NEWS FROM ALL SOURCES.

A Turkish Chamber of Commerce is being established in Berlin.

Sir Thomas Sivewright Catto has been admited a partner of Morgan Grenfell and Co.

The directors of the Egyptian Salt and Soda Company have declared a dividend of 1s. 3d. per share, less tax, for the year ended August 31, 1927, payable January 9.

Wolves driven by hunger and the intense frost last week approached villages in Transylvania and committed serious ravages among the sheep flocks. Several peasants were reported missing, and remains of human beings were found. The body of one woman was found torn to pieces.

The Anglo-Turkish Mixed Arbitral Tribunal last week declared itself incompetent in the case of the claim of the Eastern Bank against the Turkish Government for £86,000 capital and interest said to have been lost owing to the action of the Turks in occupying the bank's Baghdad branch during the War. The hearing of the arguments for and against the Tribunal's competence began on November 1 in Constantinople.

According to the local Egyptian Press Mr. Howard Carter has found the fourth chamber of King Tutankhamen's tomb pillaged. A quantity of interesting objects, however, remain, including a beautifully ornamented wooden case for the funeral boat, a quantity of statuettes and votive figures, one solid gold image of King Tutankhamen, and a gold chain pendant attached to an effigy of the King's grandfather.

The Greek submarine Papanikolis, the first of those ordered from the French yards, arrived at the Piræus on December 29.

Herr Bötzke, the German banker, who is in Paris to study the financial and economic situation of the country, was introduced on his arrival in Teheran to the Prime Minister, Mehdigholi Khan Hadayat, the Mokhbar es Saltaneh, by the German Minister to Persia.

According to a message from Constantinople the new high-power wireless station at Angora will endeavour in a few days to get into wireless telephonic communication with London and Paris. Wireless communication between Angora and Vienna has already been established. The Turkish authorities have for the past two years been endeavouring to make Angora a wireless centre, in order that all commercial business from all parts of Turkey shall pass through it.

Mrs. Sema Belilios, of the King Edward Hotel, Victoria, Hong Kong, who died on November 28, 1926, left property in England valued at £943. Among other bequests she left:—One thousand rupees to the Margan David Synagogue, Calcutta; 25,000 rupees to the Talmud Torah (Teaching Houses) for housing, clothing, and educating poor Jewish children, Victoria. The residue of the property to the Jewish Synagogue in Jerusalem, the annual income to be applied for succouring the poor and needy and infirm in Jerusalem, and she desired the governing body of the Jewish Synagogue in Jerusalem to cause, for a period of one year after her death, prayers to be said in the sanctuary for the repose of her soul, and during such period a lamp to be burnt day and night before the Holy Table in the Synagogue.

Notes of the Week.

Iraq and the Wahhabis.

Affairs as between the raiding Najdi tribesmen and Iraq have now reached an international stage, and the consequences of the repeated violation by Wahhabis under Shaikh Faisal ud Dawish of treaties signed by Iraqi and Nadji representatives will have to be carefully watched, for they manifestly have very wide possibilities. In these circumstances it will be permissible to re-examine the origins of the dispute as between the Wahhabis and Iraq. In the middle of November a post at Busaiyah was raided and rased. The plea has been put forward by our Jidda correspondent, whose knowledge of Arabia is unquestioned, that in building a police post at Busaiyah, a watering-place in Iraq, the Iraq Government were directly contravening Article 3 of the Uqair Protocol (signed December, 1922), of the Treaty of Muhammarah (signed May, 1922), which refers to the two parties' agreeing not to build fortification on, or concentrate troops near, any watering in the vicinity of the border. Now it is recognised that there may be conceivably some dispute about places not usually marked on the map, but to call within such a neutral zone as is implied in Article 3 of the Uqair Protocol a place whose longitude is 46.10 East and whose latitude is 30.50 would surely be to stretch too far even the elasticity of the desert. However that may be, Busaiyah has been demolished, and Iraqi labourers have been massacred.

King Ibn Saoud v. Faisal ud Dawish?

If King Ibn Saoud had warned the Iraq Government of the consequences of building a post at Busaiyah, if no raids, either further within Iraq or nearer the frontier, had occurred, and if there had come from the Wahhabi kingdom a definite defence of Shaikh Mazid's original massacre, the position would have been more comprehensible. But the Mutair seem to be hopelessly indisciplined, indisciplined, that is, as subjects of a country, though we imagine their discipline as tribesmen to be only too exemplary. Poor and harmless shepherd tribes of Iraq have been raided; there have been raids as far distant as Rakhaimiyah (said to be 30 miles north of Busaiyah) and Birkat al Jumainah, on the Iraq-Najd frontier. Nor are the Mutair the only offenders, for the Ajman have raided the Sultanate of Kuwait. These misdeeds may or may not be the work of a mere handful of men, but in any case the Shaikhs of the tribes are responsible for them. It is an intolerable situation for Iraq that her subjects should, after the signing of the Muhammarah and Bahra Treaties, be liable to invasion of this kind. One can sympathise, therefore, with the Iraqis who have at once denounced the "perfidious Wahhabis" and criticised their own Government for apparent inaction. But indignation is not always allied to a critical faculty, and it may be that King Ibn Saoud wholly disapproves of these raids, and that the Cabinet of Jaafar Pasha has done all that can be done in the circumstances. It has been explained in Baghdad, indeed—perhaps mainly for domestic consumption—that a combined Anglo-Arab force is being sent on a punitive expedition against the Mutair, and also that it is Faisal ud Dawish, not his master, King Ibn Saoud, to whom punishment is to be meted out. The *clou* to the whole situation is the actual relationship existing between the ruler of the Wahhabis and the chief of the Mutair. In the interests of Arabia generally it were best that the King of the Hijaz and Najd should quickly humble the fanatical Mutair; otherwise tribal passions may be unloosed, and the whole system of Arabia be once more in the melting-pot.

The Fall of the Iraq Cabinet.

The non-ratification of the Anglo-Iraqi Treaty of 1927, and the resignation of Jaafar Pasha from the Premiership, whose burdens he has borne since November of 1926, will cause little surprise to those who have followed closely the history of the Anglo-Iraqi "negotiations" in London. Our Baghdad Correspondent has already reported the mixed reception which the defence of these "negotiations" received in the Majlis. Jaafar Pasha, like the loyal subject of his King that he has always shown himself to be, endeavoured stoutly to make the smaller appear the greater cause, but there can be little doubt that, although no definite reason has been given for the Prime Minister's resignation, it is mainly owing to popular disapproval in Iraq of the policy pursued and the achievements attained in London, which involved, of course, the abandonment of Jaafar Pasha's scheme of Conscription. There need be little fear, however, that with a Cabinet under the experienced Sir Abdul Muhsin as Saadun, the

Digitized by Google

outstanding problems still existing between Iraq and Great Britain will not proceed to an amicable solution.

France and Syria.

There is welcome evidence in the French Press that the conscience of the Mandatory Power for Syria is slowly awakening to the fact that there is very much to be desired in the present state of Syria. The debate which took place last month in the French Senate, and upon which we have already remarked, has served to draw public attention in France to the danger which, if nothing definite be done quickly for the Syrians, may break out again next spring. The press articles to which we have referred vary from superficial declamations that France should abandon her costly mandate, to serious and responsible utterances such as those contained in *Le Temps* of December 17 and 28 and January 7. In the second article the semi-official organ hits the nail on the head when it states that the most urgent question before France is that pertaining to frontiers in Syria. Should the existing States of the Lebanon, of the Alaouites, of Syria, and of the Jabal Druse, be permanently delimited or not? That, indeed, is the vital problem. We have never failed to urge that Syria, if it is to succeed, must be made into a unity, that these artificial frontiers within the mandated territory are both useless and harmful. *Le Temps* suggests that a plebiscite should be taken to judge the wishes of the various peoples of Syria, because the Sunnis, the Druses, the Alaouites and the Lebanese Christians may all think differently on this question of unity or separatism. That is true, but it is largely the Mandatory's fault that it is so. Last June, for instance, the official intention appeared to be "to preserve the present structure of the four States." But some time after that, Ahmed Nami Bey, head of the State of Damascus, publicly stated that "the noble Mandatory Power is pursuing unity, which is our ideal, and not separation, as is alleged by certain evilly-disposed persons." No wonder, then, that the distracted peoples of Syria do not know where they are; no wonder that the most fantastic rumours, none very friendly towards France, spread and thicken. When will M. Ponsot, the High Commissioner, make his definitive statement upon the future polity of France? Whether Syria is to be moulded upon the example of Iraq, which would be best in the long run and is certainly advocated by the more intelligent Arabs, or whether on the example of Switzerland, as *Le Temps* seems to suggest, something must be done, and done rapidly for the mandated area which has suffered so much since its detachment from the Ottoman Empire.

King Amanull ah.

King Amanullah's achievements in his own country during a reign of, even yet, less than eight years had marked him as an Eastern Monarch out of the ordinary, but in the progress of his grand tour his Majesty is revealing special characteristics and attainments which have hitherto remained unsuspected in Europe. He has come with the two-fold purpose of interpreting Afghanistan to the world and of making himself acquainted with that part of European civilisation which will bear transplantation to his Asiatic kingdom. The first revelation that he gave, if not of Afghanistan, at least of himself, was in his speech at Karachi, where he read Hindus and Mussalmans a lesson on brotherly love and warned them against the mollahs who, it would seem, are apt to be a thorn in his Majesty's flesh in his own country. Speech-making is clearly not the least of King Amanullah's accomplishments, and the readiness with which he avails himself of every opportunity will insure for him a cordial welcome wherever he appears, even though the authorities of that particular country are kept on tenterhooks. In Egypt the King proved to be well *au fait* with the politics of the country, and heartened his audience in the Legislative Assembly with a reference to Afghanistan's successful establishment of independence. This wide knowledge of contemporary history should stand the King in good stead in his delicate relations with the Soviet Government on the one hand and Great Britain on the other. Afghanistan is very near to Russia, and it must be difficult in Kabul to form a balanced judgment on the relative value in the world's scheme of things of two countries whose characteristics are respectively self-assertion and self-effacement. The wide scope of King Amanullah's tour will allow him little time to absorb all the impressions that will crowd in upon his alert mind; but it is to be hoped that his experiences will contribute to the advancement of Afghanistan and to the cause of peace in Central Asia.

The Albanian Tangle.

Reports of the economic situation in Albania are far from being rosy. The country deserves sympathy for the mean and unbusinesslike way in which it was treated when it received back its independence after the War, but was not given the wherewithal to enable it to stand on its own feet. Its subsequent history is well known. Ahmed Bey Zogu came into power with an empty exchequer. Help was offered him by Italy and he had no alternative to acceptance. There has been no Italian Cromer, however, to take charge of Albanian finances in the interests of the country itself. What has happened is that all the money that Albania or rather the President considers to be required is forthcoming from Italian sources, but without much regard to the Albanian capacity for repayment. At a distance, therefore, it would seem as if the President were hurrying the Republic down the slope of bankruptcy. It is true that Albania cannot progress without spending money; but in view of the exiguous resources of the small country it is essential that all expenditure should be carefully scrutinised and form part of a comprehensive scheme for the building up of Albanian prosperity within the limits entailed. The equivocal position of the Italian Society for the Economic Development of Albania (Svea), which operates under the auspices of the Italian Government but has not the authority nor the sense of responsibility of an official representative of the Government, does not help Albania. There ought to have been no question of a loan bearing interest which it was certain that the Albanian Government could not meet, so that the latter should be placed in the humiliating position of having to be relieved of the obligation to pay the first instalment of interest. A solution of Albania's financial difficulties does not readily present itself; but it is certain that the present arrangement flatters neither party. It makes Ahmed Bey Zogu an object of suspicion or worse to his compatriots, and it reflects little credit on Italy's interpretation of her responsibilities as a Great Power.

TURKEY'S LONG FURROW.

The Turkish Government has not had to wait long before an opportunity has been afforded it of giving the country signal proof of its determination to deal with abuses in public life. On the eve of the resignation of Ismet Pasha's last Cabinet, after the Ministers had been informed of the step that was to be taken, Ihsan Bey, Minister of Marine, signed a contract with a French company for repairs to the cruiser Yavouz, better known by its German name, Goeben. The suspicion attaching to this hurried action was enhanced by the fact that Ihsan Bey had been told by the Prime Minister four days previously that on the reconstruction of the Cabinet his Ministry would be abolished and naval affairs would be administered as a Department in the Ministry of National Defence; it was also discovered that the contract as signed embodied terms which the Cabinet had decided that it could not accept. The matter was brought before the Grand National Assembly by Ismet Pasha himself, and on his motion a parliamentary Commission of Inquiry was appointed to investigate the incident. Ihsan Bey, it is fair to point out, declared that he welcomed the inquiry. The affair is for the time being *sub judice*, but this does not prevent it from being eagerly canvassed in all its ramifications by the Turkish press, and in particular by one newspaper which enjoys the advantage of having its editor and proprietor chairman of the Comsion of Inquiry. From the latter organ the thoroughness of the inquiry, as far as the accused's actions are concerned, is to be gauged by the fact that publicity is given to the report that Ihsan Bey will be asked to explain how he came to spend last year "from twelve to twenty thousand Turkish pounds" on a diamond. These personal details, however, it is to be hoped, will not distract the attention of the Commission from the wider question involved in the recent history of the Yavouz. For nearly four years now the question of repairs to this cruiser has been before the Turkish authorities, and it is generally believed that, throughout this period the vessel, even if it has been in a condition to take the high seas under its own steam, has not been able to be considered an effective unit of the Turkish fleet. Ihsan Bey may or may not be in a position to show that he despaired of any final decision in regard to the Yavouz, if it were left to the Government, and that, as the condition of the vessel must deteriorate the longer it was left unrepaired, he determined to take the matter into his own hands in order to save this potentialy important asset of the Turkish navy. It would certainly be interesting if the Commission of Inquiry could reveal why straightforward tenders for the repair of the Yavouz submitted over three years ago were rejected by the Angora authorities and the ground thus prepared for incidents such as the one which it is now not in the interest of the Government to hush up.

There is, fortunately, no reason to doubt the genuineness of the Turkish Government's resolve to set its house in order. Even if it is not possible to go as far as some of its more fervent supporters who point out that not only is virtue the corner-stone of the Republic, but "the Republic is virtue itself," it is evident that the discovery has been made that the well-being and progress of the country can be threatened more seriously by shortcomings in the body politic at home than by alleged enemies abroad, who persistently refuse to show the least hostility towards the Republic. A strong tide of reform has set in in Turkey. The difference between the old and the new régime, it is pointed out, lies in the fact that the country is no longer divided into the two classes of Abdul Hamid's day, administrators and the administered, whose interests were held in large measure to clash. To-day there is no-one superior to the people, who form, so the doctrine runs, a united block indivisible, and the public services are the services of the nation itself. This is democracy in its finest conception, and if the arm of the Ghazi is long enough to have the doctrine applied in all grades of the bureaucracy, the Turkish people may be tempted to overlook his peculiar interpretation of democracy—*vox Ghazi vox populi*—and to associate the Republic with something more practical than the perfervid adulation of its founder which promised at first to be its chief, if not only, hall-mark. It is not without significance that the President has established a Literary Prize for which the subject is to be "Democracy and the Turkish Republic." Candidates will hardly need to go outside Mustapha Kemal Pasha's own speeches for the actual wording of their essays, and the prizeman, it may be supposed, will be he who most skilfully avoids reference to the subject of elections.

In its determination to stamp out corruption the Turkish Government is setting a noteworthy example to some of the countries of the Near East. The measure of its success will depend on the extent to which it can remove the main incentive to corruption. Black sheep there will always be among its officials, but the taking of bribes as an accepted characteristic of officialdom in most of its grades may be due as much to under-payment as to inherited vice. Simultaneously with the inquiry into Ihsan Bey's conduct the National Assembly has been called upon to investigate the defalcations of its cashier, who seems to have carried on a lucrative business as money-lender—with State funds—to Deputies and officials, until he was found out. A condition of things in the capital has been revealed which suggests that individual Turks are finding it as hard to make ends meet as the State itself. If they are inclined to attribute their trouble to the cost of living, the State will presumably plead the cost of defence. It is on this rock that the reform programme is most likely to founder. The official whose income is not sufficient to support his station in life will still be obliged to supplement it by other means, however great the lip service that he renders to the Government's campaign against corruption. Turkey would seem for the present to have reached the limit of her taxable capacity; yet withal the programme of reform is sadly restricted by lack of funds. Great play is being made of twenty-five million Turkish pounds being available for educational purposes. Yet the Budget provides only six or seven of these, and the balance is obtained on paper, to begin with—by giving the Minister control over local levies or grants. The one break with the past that has not been made is the reduction of expenditure on preparation for war, which is proving as much the bane of the Republic as it was that of Abdul Hamid's autocracy. A backward country cannot afford to devote forty per cent. of its revenue on so-called national defence, which to a large extent is conditioned by a policy of offence. The Prime Minister has had occasion to inveigh against the nefarious practice of smuggling, which he declared defrauded the Treasury of an amount equal to one quarter of the annual Budget. Here, too, is another link in the chain of cause and effect which hangs suspended from a national expenditure overweighted for unnecessary military purposes.

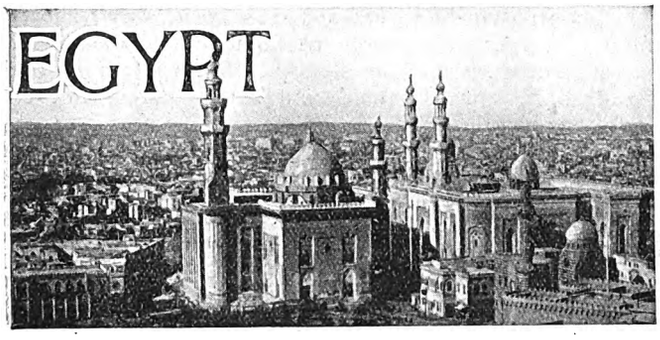
The Near and Middle East

From Our Own Correspondents.



Cairo, December 31.

The Political Situation.

Given the nature of the elements forming the Coalition and the very composition of those elements, it would have been too much to have expected the entente to continue for long without some friction either within one of the parties or between the parties themselves. As you will have learned from the cables, there has been disagreement within the Cabinet, owing to pressure on the part of the more ambitious members of the Wafd, while within the Liberal Party there has been dissension which, owing to the manner of its expression, produced somewhat serious tension between the two senior partners in the Coalition. Fortunately, Sarwat Pasha has been able, by reason of his influence and persuasive personality, to settle the differences between his Wafdist colleagues, and so maintain his Cabinet intact, and, although nothing definite will be known until the meeting of the Liberal Committee on Monday, at the time of writing there is every indication that the cause of dissension in the Liberal Party and the consequent tension between it and the Wafd will have been removed.

In spite of this reaffirmation of the Coalition the situation remains very uncertain and unstable, and there is no blinking the fact that the keen optimism of a month ago has given place to a very acute pessimism. The uncertainty of the situation as a result of the play of personal ambitions and animosities is particularly unfortunate at the present moment, when, with the eyes of the world fixed on Egypt, partly as a result of the presence of delegates from all parts at the Statistical Congress, partly owing to the tourist season, and partly owing to the question of the Mixed Tribunal reforms which the Egyptian Government has just raised with the Powers, Egypt should be showing national unity and a capacity for subordinating private to public interest, calculated to inspire the confidence without which it is exceedingly difficult to expect the European communities to agree to the reforms in the régime which the Egyptians want to see introduced.

The King of Afghanistan's Visit.

The visit of the King of Afghanistan has filled the week from the point of view both of social engagements and public interest. The press has been full of the movements of the Royal visitor, giving the minutest detail of everything that he has done or said, and since the outstanding trait of the Egyptian press is that it scrupulously publishes what the reading public wants, one can regard this as a sure indication of the interest taken in the first Moslem head of an independent State to pay an official visit to this country since Ismail Pasha entertained his Suzerain, the Sultan Abdel Aziz, some fifty years ago.

The news which reached here of King Amanullah's activities in India had not unnaturally caused the responsible people to regard with some anxiety his presence in this country at the present juncture, and every effort was made to render it impossible, or at any rate very difficult, for him to indulge in his hobby of speech-making. So far these efforts have succeeded and the visit has gone off very successfully. The protocol has been modelled on that in force at the Court of St. James, and there has not been a single hitch, in spite of the difficulty experienced in getting decisions out of the Royal visitor and his propensity for either upsetting arrangements at the last moment or arriving late at his destination. Indeed, those responsible for the arrangements are to be congratulated on the remarkable success which has attended the visit.

International Statistical Congress.

The seventeenth Statistical Congress, which was inaugurated last Thursday by King Fuad, is now in full swing. The delegates are loud in their praise of the work of the organising committee in regard both to the arrangements made for their accommodation and the care that has been taken to render their visit to Egypt as easy and instructive as possible. Incidentally, considerable surprise has been expressed by the experts at the organisation for the census which they have had the opportunity of inspecting. Those who should know about such things declare that, while in other leading countries similar machinery is in use, they have so far not met with such up-to-date methods as are in vogue here, and they are all the more surprised seeing that Egypt has not yet ranked amongst the leading countries in respect of such scientific matters.

English Education in Egypt.

Evidence that there is a demand in this country for education on English lines is forthcoming in the case of what is known as the English Mission College in the Faggala district of Cairo, to which the High Commissioner distributed the prizes on Christmas Eve. Although there is another flourishing institution of its kind in this city, the English School at Bulac, remarkable success has attended this College, which, although it was founded only three years ago with but twenty-two pupils and was regarded as a very risky venture, now has no less than three hundred pupils with a long waiting list.

THE LONDON & LANCASHIRE INSURANCE Co LTD

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

EGYPTIAN GOVERNMENT.

TENDERS will be received up to noon on 25th February, 1928, at the Office of the Director-General of Reservoirs, Ministry of Public Works, Cairo, Egypt, for the excavation of approximately six and a half millions Cubic Metres of earthwork in the remodelling of the Fouadia Canal in Naghamadi District, Upper Egypt. Work is to be handed over by the 30th June, 1930.

Specification and Form of Tender may be consulted at the above-mentioned Office from January 1st onwards and purchased on payment of £5 per set.

Digitized by Google

Lord Lloyd in his address expressed his pleasure at finding the College prove such a success, which was in great part due to the work of the Principal, the Rev. C. Martin, and of his wife, and said this success earned for the College the right to further support to enable it to extend its activities and so meet the demand for English education, of which the waiting list afforded proof. In the hope that others would give practical evidence of their interest in the school, the High Commissioner had decided to offer a scholarship of a year's free tuition, the winner to show proficiency in English literature.

Important Addition to Cairo Museum.

When King Fuad was in Brussels last summer the association known as the "Groupement des Relations Belgo-Egyptiennes," a name which sufficiently explains its purpose, conceived the graceful idea of presenting him with a fragment of a bas relief from the Temple of Deir El Bahari, which had long been in Belgium. King Fuad recently handed this piece of masonry over to the Cairo Museum as the best place for its exhibition and safe custody. By the greatest good luck it has turned out that this fragment fits on to other fragments of the same temple, which are in the Museum. In fact, it completes the figure of the deformed Princess of Punt, who, on the return of the expedition sent by Queen Hatshepsut to her country, is represented as coming before the latter with slaves laden with presents to do her homage. Thus a valuable addition has been made to some of the most famous reliefs still surviving from those times.

A Great Journalist.

The Egyptian Press has just suffered a severe loss in the death of Amin Bey El Rafey, editor of *Al Akhbar*, which took place this week after a long illness. Amin Bey had been for many years the editor of the organ of the Nationalist Party and had ably and courageously defended the ideas of Mustapha Pasha Kamel, the founder of that party. Although but a small element in the population agreed with the views he so tenaciously and so skilfully propounded in the columns of his paper, he had earned universal respect by the sincerity with which he wrote and the great moral courage, somewhat unusual in journalism in Egypt, which he persistently displayed.

THE HIJAZ.

Jidda, December 20.

The Silver Currency.

Among recent developments in the Hijaz not the least important is the new silver currency which is expected to be placed in circulation some time next month. The issue consists of Riyals (or Arabian dollars), half-Riyals and quarter-Riyals of exactly the same fineness and silver content as the Turkish Majidie and its corresponding parts, which they displace. It will be readily admitted that the coins to be issued are artistically in a different class from the recently issued hideous Palestine currency and from that of other neighbouring countries. The design of the Arabian Riyals is simple and effective—a combination of beautiful calligraphy with a value shield (cross swords on the obverse) supported by semi-recumbent palm-trees. The legend on the obverse reads: "King of the Hijaz and Najd and its Dependencies" in a semi-circle round a central medallion bearing the King's name in full: "Abdul Aziz ibn Abdul Rahman al-Saud." A further issue of nickel coins is also being made at the same time, and it is hoped that in time the whole of the small currency of the country will consist of coins bearing —not the image—but the superscription of His Majesty.

Death of Qasim Zainal.

Much sympathy is felt for the Governor of Jidda (and particularly for his aged brother, Hajji Zainal), owing to the sudden death, as the result of an operation performed at Constantinople, of one of the leading citizens of this town—Qasim Zainal. Formerly one of the Jidda deputies to the Turkish Parliament, Hajji Qasim was one of the leading merchants of Jidda and was, with perhaps only one exception, the most progressive and advanced of all its inhabitants. His early death is a great loss to Jidda society. Here he was universally esteemed by everyone and held in particularly high regard by every section of the European community. Always a fearless critic of the extraordinary vagaries of the old Sharifian régime, he was, with three or four others, condemned to death by a court-martial in 1924 on the ground of intelligence with the (Wahhabi) enemy. The Government of King Ali hesitated to execute a sentence so ridiculous—perhaps eighty per cent. of the citizens of Jidda were at the time sick to death of the old régime—and Qasim, not without a sense of humour, remembered that he had once acted as Consul for Belgium. The flag that had served on that occasion now served to protect him temporarily until his sentence—and that of his companions—was commuted to a free pardon! From that moment he seldom took any precaution to conceal his contempt for the existing order and his hope of a speedy Wahhabi victory. But since then his endeavour was ever to eschew politics, and the measure of his success must be gauged by the fact that, while he was always on terms of intimate friendship with the Fascist Consul of Italy and the Bolshevist Agent for the Soviet Republic, he steadily maintained the most cordial relations with the British Agency. He left Jidda—after nearly ten years of consecutive residence—only about a month before his death.

Shaikh Muhammad Tawil.

Curiously enough the exception referred to above, Shaikh Muhammad Tawil—the Director of Customs and *de facto* chief of staff, as it were, of the Sharifian *régime* under both Husain and Ali—arrived back at Jidda after a long period of absence almost at the same time as the news of Qasim's death. For many years the leading spirit of Jidda society and politics, his loyalty to the old *régime* resulted in his temporary eclipse—so far as public office was concerned—after the Wahhabi occupation. In the summer of 1926 he went to Egypt in connexion with

business, and he has now returned as Managing-Director of one of the larger motor transport organisations operating here. His great experience and acknowledged business acumen should ensure to him a large share in the now inevitable economic advance of his country. And who knows but that the future may have other tasks in store for him at least comparable with any that he ever shouldered before? One of the great assets of King Ibn Saoud is his capacity to conciliate those who have had the misfortune of finding themselves in opposition to him.

Consulates and Agencies.

The British Agency staff is now understood to be permanently increased by the addition of a Vice-Consul. This is a move in the right direction, for circumstances demand that the Agent should at all times be free for the constant work of a political and diplomatic character which now increasingly claims his attention. The next step should clearly be a rise in the status of the Agency to a Residency or Consulate-General.

The Italian Consul, M. Fares, has left Jidda on final retirement from the service—it is understood. In his place we welcome Commendator Cezzano, who already knows Jidda, where he has previously acted as Consul.

The Turkish and Soviet agencies are for the moment greatly depleted of personnel, the Turkish representative, Sulaiman Bey Shevket, having been called away to represent Adalia in the Angora Assembly. Amin Bey, the Egyptian Consul, is about to depart on leave or transfer after many long months of "sighing in Arabia." Elsewhere there is no apparent change to chronicle.

ROUMANIA.

Bucharest, December 29.

Political Uncertainty.

The political situation of Roumania, though outwardly tranquil, as usual, is still unsettled. It would be an exaggeration to liken it to a smouldering fire, as there is nothing fiery about it. Hence the indignant disappointment of the numerous American and other journalists who congregated in Bucharest some two or three weeks ago to await the outbreak of revolution or the developments of the outbreak which was reported to have taken place by the Bucharest correspondent of the *Daily Express*. The indignation of these men was most amusing, because the Roumanians were so dull as to refrain from any such violent action as would justify the exciting headlines expected from them by their editors. What is the use of a country which cannot raise a revolution for the benefit of the foreign Press? Roumania may have many faults, but a tendency to revolution, or violent action of any kind, is not one of them. As a nation they are too indolent, and too much of that semi-Eastern nature which may prefer, to attain its ends, slow intrigue to bold action.

The Oradea Mare Incident.

Against this argument may be instanced the recent outbreak of the students in Oradea Mare. But there youthful blood and hatred of the Jews more than compensated for the usual national characteristics. As a matter of fact, there was perhaps more excuse for the action of the students than is generally known. Not that the writer desires to justify their violence, which at the best was short-sighted and bad policy. But they may have had a good deal of provocation. It appears that the keeper of the best hotel in Oradea Mare refused to let a room in his establishment to a Roumanian of whatever rank. Such a position is obviously untenable, unless it can be defended by armed force, and this the hotel keeper is reported to have done, drawing a knife upon the students who pressed him for rooms.

All these anti-Jewish démonstrations are most regrettable, and appear to the writer far from creditable to the administration of the countries in which they are permitted to take place. Incidentally, they are utterly ineffective. All the "pogroms" in Russia never really diminished the total number of Jews in the country. What is required is an administration conducted on such straight and uncompromising lines that no room is left for the machinations of the more undesirable Jewish element.

In the case of Oradea Mare, of course, a third factor was the hostility of the Hungarians, which continues unabated, especially in these border towns, where a Hungarian population predominates. Here much responsibility must be laid at the door of the peace treaties and their apparent disregard of ethnographical conditions in these regions. However, it must be hoped that time will exercise its healing influence in this case.

CYPRUS.

Nicosia, December 27.

Cypriots and Egypt.

Since the return of Sir Ronald Storrs from Egypt, correspondents in that country have described at some length his interviews with members of the "Cypriot Brotherhood" and others, both at Cairo and Alexandria. They appear to have given great satisfaction. With regard to the question of nationality, which was placed in the forefront of subjects referred to, it seems clear that it must remain in suspense pending, it may be, some agreement as to a modification of the new Egyptian law, or its enforcement. The Governor appears to be doing all he can to bring about a satisfactory compromise. With regard to his efforts to promote in other ways the welfare of Cyprus (for which he was warmly thanked), he made a passing allusion to the fact that in some matters difficulties were created by the Cypriots themselves. Some surprise seems to have been caused by this. The Press appears to consider that the Governor's words can only point to the opposition of elected members of Council to certain items in the estimates for the coming year, as they are not aware of any other impediments to progress being caused by Cypriots, who, it is averred, are most anxious to co-operate in all Government measures which, in their opinion, aim at real progress.

Fanatical Outbreak at Limassol.

Although, during the years of British occupation, there has been a steady decrease of superstition in all parts of the island, especially, of course, in the towns, symptoms of it manifest themselves occasionally in various, but generally harmless, ways. At Limassol a number of

persons of the more ignorant class, have been led to ascribe the late earthquakes, and the present want of rain, to the adoption, in Cyprus, of the Gregorian Calendar (over which some branches of the Greek Church are still divided). On December 16 they assembled in hundreds, bearing ikons of St. Barbara and St. Nicolas. They proceeded to besiege the residence of the Bishop of Kitium (whose See includes the town and part of the district of Limassol), demanding that services should be held and intercession offered to the Saints mentioned. On December 18 they again gathered in thousands. It was insisted that services should be held by the Archbishop, and in accordance with the Old Calendar. The Prelate consented that prayers should be offered by his Exarchos, but firmly declined to agree to the other demand. Tumultuous scenes followed, the crowd going so far as to hurl stones at the Cathedral, and behave in other unseemly ways. The police had to intervene, using great discretion, but many hours passed before order could be restored. The Bishop has since issued a wisely worded address to the people of Limassol, with reference to the regrettable occurrence, the blame for which is due to misguided fanatics.

Dancing at Nicosia.

For some time past it has been rumoured that certain dancing saloons, or schools, have been conducted in a manner to cause grave complaints on the part of respectable inhabitants. The police and Municipality are now dealing with the alleged scandals. But some doubt seems to exist whether the repressive measures now being put in force are carried out with sufficient impartiality, or whether favour is not being shown to fashionable and more expensive establishments, in which the spectacles complained of are said to be quite as objectionable as those of lower-class houses. The complaints are receiving full attention.

Customs Returns.

For the quarter ended September 30 last the value of imports is given as £408,281 and that of exports as £424,687. But the latter includes the export of asbestos, £101,260, and of pyrites £44,538. If we leave out of account the export of minerals derived from what is a comparatively new source of wealth (of which the greater portion goes to foreigners, and not Cypriots), it will be seen that there is still a great need of a great increase of island products which find a market abroad.

General News.

The want of rain is serious. Prayers are being offered in many churches throughout the island.

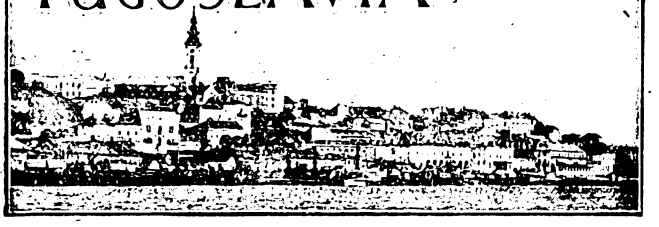
The Greek Archbishop despatched a telegram to M. Venizelos on December 15, his name festival (Eleftherios), with cordial congratulations on his work for the Hellenic nation.

A great increase in the number of tourists is expected in 1928, by vessels which will enable them to visit Famagusta, Larnaca, and Nicosia.

There has been a considerable number of motor-car accidents lately, involving loss of life and serious injuries.

Police raids have been made at the houses of two persons at Famagusta in which numerous objects of antiquity, including many of gold, were found and taken possession of by the police.

YUGOSLAVIA



Belgrade, January 5.

The Serbian Christmas Eve.

To-morrow is *Badnji dan,* the Serbian Christmas Eve, when the King's Guards ride out to the woods near Koshutnjak, cut a yule log with great ceremony and much firing of pistols and bring it back with much rejoicing to Belgrade, where the King receives it on the Palace steps, throws wheat and maize over the bearers of it, takes it himself into the Palace and places it on the great open fire. Later in the evening, in the Palace as in every other Serbian house, the mother will spread straw in the floor and scatter nuts and oranges among it, while the children follow her, chirping like chickens. These and many, many more customs will be kept up throughout the whole country, and especially in the villages where elaborate ceremonies will be performed in full detail.

Political Activity.

Despite the holiday preparations political life has been very intense here during the last few days. The internal situation has been enlivened by the firework displays in the Finance Committee by M. Svetizar Pribitchevitch and other Opposition members during the discussions of the budgets of the Ministries of Foreign Affairs and Interior.

M. Marinkovitch's Speech.

Opposition criticism of foreign policy took the form, in the main, of demands for closer friendship with Germany, the establishment of diplomatic relations with Soviet Russia, and greater activity in the Little Entente. M. Marinkovitch in reply pointed out that the importance of the Little Entente lay in the fact that it existed and that there was no need for it to follow a policy of adventure. With regard to relations with Germany, he stated that he was in favour of a policy of *rapprochement* with Germany and was working in that direction. If the change which had taken place in Germany since 1914 is maintained he felt sure that a close and lasting friendship between these two countries would develop. Speaking of Russia, M. Marinkovitch pointed out that since relations between the Soviet Government and Great Britain were not good at present, Yugoslavia might, by taking the initiative in the matter of the renewal of relations with Russia, impair the good relations at present existing between Great Britain and herself. Moreover, three years ago he had himself tried to bring about the renewal of relations with the Soviets. They had desired an exchange of commercial missions, but as the political aspect of the renewal of relations was more important to Yugoslavia than the commercial he has asked that diplomatic missions should be sent. However, since the Soviet Government does not acknowledge public international law as regards the activities of diplomatic agents he had asked that they should make a formal declaration accepting the rulings of

Digitized by Google

international law in their relations with Yugoslavia at least. The Soviet Government has not accepted these suggestions, and, he thought, therefore, that the present was certainly not the moment for Yugoslavia to take the initiative in the matter of the establishment of diplomatic relations; the next step lay with Russia.

Speaking of relations with Bulgaria, M. Marinkovitch insisted on the desire of Yugoslavia for friendly relations with her eastern neighbour and kinsman. He said that the sincerity of this desire was proved by the fact that recent activities of the Bulgarian *komitajis,* which would surely have provoked a rupture of relations at an earlier date, had entirely failed seriously to disturb those relations at present.

Croatian Peasant Party.

Interest in internal politics has now been diverted to Zagreb, where, their Christmas and New Year safely over, a part of the Croatian Peasant Party is reported to be giving vent to its dissatisfaction with the leadership of M. Stephen Raditch and has held meetings to organise a plan of campaign against him in the party. M. Raditch has also been conferring with other party leaders, and it is believed that M. Kezhman and his supporters will be expelled from the party. The reason for the dissatisfaction of a fairly considerable number of the members of the Croatian Peasant Party is believed to be the alliance with M. Pribitchevitch, one of their hereditary enemies, and the resulting diminution of the possibility of their entering the Government and becoming Ministers. In the meantime it would seem that the support for the attacks which M. Raditch and M. Pribitchevitcch are making on the present régime, which they call the "Serbian exploitation of the people of the provinces across the Sava," is growing owing to the dissatisfaction of the people of these provinces because of the high level of taxation and its heavier incidence on the provinces which formed part of the old Austro-Hungarian Empire. Once the tax laws are unified and this grievance is removed, there is no reason to believe that these people will continue to support M. Raditch and M. Pribitchevitch in their somewhat extreme attitude to the Belgrade Government—but if the grievance is allowed to remain it may hinder greatly the process of the full unification of the Serb, Croat, Slovene people.

General News.

The recent discovery by Austrian Customs officials of secret shipments of arms and munitions from Italy for Hungary has arouse strong feeling in Belgrade. There is no official comment as yet, but public opinion is inclined to believe this to be but one more mark of the resolve of Italy to injure Yugoslavia even at the risk of a new war. It is believed that the Little Entente will take strong measures to combat this new danger.

This month the Italo-Yugoslav Pact of Friendship concluded in 1924 must be renewed. The Italian Minister in Belgrade has visited the Ministry of Foreign Affairs several times recently—it is believed in connexion with the renewal of this Pact. While no statement on the matter can be elicited from official circles, it is reported from Rome that the Pact will be prolonged for at least six months.

While the Belgrade daily, *Politika,* reports from London that Dr. Bogdan Markovitch, Yugoslav Minister of Finance, has succeeded in concluding there a loan for twenty million pounds, no confirmation whatever of this report can be obtained from the Ministry of Finance in Belgrade.

CORRESPONDENCE.

THE ITALIAN LOAN TO ALBANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of December 29, the author of the articles on "A Visit to Macedonia and Old Serbia" gives currency to a statement which I have seen frequently repeated concerning the financial and economic relations between Italy and Albania, but which is not accurate. Your correspondent states, on the authority of a foreigner residing in Albania, that "the Italian loan (to Albania) has been almost entirely expended in buying uniforms, mountain guns and other military supplies. Perhaps ten per cent. has been expended on public works." As a matter of actual fact, the loan, which amounts to 50,000,000 gold francs, is destined almost entirely to public works of a productive nature, and is distributed as follows:—

Roads, 14,000,000 gold francs; bridges, 6,615,00 g.f.; railways, 2,500,000 g.f.; ports and jetties, 7,100,000 g.f.; buildings, 5,000,000 g.f.; drainage and canalisation works, 8,000,000 g.f.; agricultural improvements, 5,000,000 g.f.; sundry expenses, 1,985,000 g.f.

Moreover, as the loan is not to be spent all at once but spread over a period of years, the total sum was deposited in the Bank of Albania, a predominantly Italian concern, which pays an interest of 6½ per cent. on the sums not yet spent. The Albanian Government converted the sum at its disposal from gold francs into Italian lire, at a moment when the lira was very low, and as the lira has considerably improved since then, the sum to its credit increased to the equivalent of about 70,000,000 gold francs. At the present moment the Albanian Government has still about 290,000,000 lire, equal to about 60,000,000 g.f., to its credit, in spite of the sums already invested in productive undertakings, i.e., some 10,000,000 g.f. more than the original loan.—I am, etc., LUIGI VILLARI.

Dalmeny Court, Duke Street,
St. John's Square, S.W.1. January 1.

"THE POLICE JOURNAL."

Now that the first number of a new quarterly, the *Police Journal* (5s. net), has appeared, one wonders why such a periodical has been so long in coming. For if any institution, not only in the Empire but in lands over which British control may be but temporary, is one of which we may be proud, it is the Police Force. As it happens, two of the most interesting articles in the first issue, which is admirably prepared and published, concerns countries not within the British Empire, namely, Iraq and Palestine. Upon the first Sir Arnold Wilson writes with characteristic vigour and conviction; his is an article, incidentally, which is instructive upon many things other than the policing of Iraq. Mr. A. J. Kingsley Heath writes upon "The Palestine Police Force under the Mandate," an article which is replete with information and conveys very clearly the reason why security in the Holy Land is so good as it now is.

If subsequent numbers of the *Police Journal* maintain the standard set by this issue for January, it will certainly and deservedly attract a much wider public than the "Service" itself.

"THE ASIATIC REVIEW."

The January issue of the *Asiatic Review* contains, among many interesting articles, three contributed by the "Asian Circle." These are concerned with Afghanistan, Iraq, and Palestine. In a survey of the economic development of Iraq and Palestine, the views are put forward that a pipe-line from Iraq to the Mediterranean is unlikely until 3,000,000 tons of oil for a period of years is assured; that a pipe-line constructed by means of motor transport may be seen before a trans-desert railway, that agriculture, not oil-mining, is the hope of Iraq, that the British Government should not give an exclusive concession in regard to Dead Sea minerals, and that a railway from Haifa to Beyrout would be a better investment than a port at Haifa. This economic article is, in fact, a most important and stimulating one.

"THE MOSLEM WORLD."

Most of the articles in the January issue of the *Moslem World,* which, incidentally, begins its eighteenth volume, are primarily of missionary interest. Of more general interest are articles on "Moslem Women in Yugoslavia," by J. W. Wiles, and "Harut and Marut," by D. S. Margoliouth.

This excellent quarterly can be obtained in London at the Church House, Great Smith Street, Westminster, at two shillings a copy.

PERSONAL AND GENERAL

TO-DAY

January 12, 1928 (New Style).
December 30, 1927 (Old Style).
Rajab 19, 1345 A.H of the Muslim Calendar.
Tebet 19, 5688, of the Jewish Calendar.

Colonel James Stewart Forbes has returned to 23, Pont Street, from India.

Miss Annette Lefroy left Tilbury on January 6 in the s.s. Razmak for Port Said.

Sir Charles McLeod sailed from Tilbury on January 6 for Bombay in the s.s. Razmak.

The Egyptian Chargé d'Affaires, Sesostris Sidarouss Bey, returned to London on January 6 from The Hague.

The Earl of Ilchester left Marseilles on January 6 for India, and will be away until Easter.

Lord and Lady Glanely left London on January 6 for Port Said. They sailed from Tilbury in the P. and O. s.s. Razmak.

The Hon. Richard Bethell left London last week with Mr. Forbes Lankester to join the Otranto *en route* for Egypt.

M. Kafandaris, Greek Finance Minister, was received at the Foreign Office on January 6 by Sir Austen Chamberlain.

The Queen Dowager of Roumania, with her daughter, Princess Ileana, arrived in Belgrade on January 2 on a visit to the Queen of Yugoslavia.

Viscount and Viscountess Allenby arrived at Pretoria on January 5. They are staying at Government House as the guests of the Earl and Countess of Athlone.

Major Sir A. Boyd-Carpenter, M.P., left London on January 5 by the P. and O. special train to join the s.s. Macedonia at Marseilles for Port Said.

The Earl and Countess of Albemarle, who are in residence at Quidenham Park, Attleborough, will leave on January 20 for Egypt.

The Right Hon. Sir John Simon, K.C., M.P., who returned to London on January 9 from a brief holiday at Pontresina, will leave England for India next Thursday (January 19).

M. Titulescu, Roumanian Minister for Foreign Affairs, who has been ill for some weeks, left Bucharest on January 2 for St. Moritz. Before his departure he announced his intention of visiting Rome, Paris, and Berlin after completing his recovery in Switerland.

The suite attached to the King and Queen of Afghanistan on their visit to London will include Princess Nur-Ul-Siraj (sister of the King), Princess Bibi-Khurd (sister of the Queen), the Minister for Foreign Affairs, Sardar-I-Ali Muhammad Hassair Khan (A.D.C. to the King, who is a cousin of the King and husband of the King's sister), the Grand Chamberlain, the Speaker of the Afghan Parliament, the Governor of Kabul, and a large number of other officials. Among the non-official members is Prince Rahmatolla Khan, son of the King. When their Afghan Majesties arrive in London, they will proceed immediately to Buckingham Palace, where they will be the guests of the King and Queen during their official stay in London.

NEWS IN BRIEF.

Direct wireless communication has now been established between London and Constantinople.

The Turkish Government has signified its approval of the appointment of M. Pappas, Greek Minister at The Hague, to succeed M. Tsamados, who has been recalled, as Greek Minister in Turkey.

It is announced from Athens that the British Fleet will visit Greek waters from January 19 to 31, anchoring at Astakos, Volo, Corfu, Leucas, and Suda.

A contract was signed in Athens on January 7 prolonging the French Military Mission till October, 1929, but reducing the numbers from 16 to 10. The new chief replaces General Girard in June.

Invitations were issued from Cairo at the beginning of the year to the International Medical Congress, which King Fuad will inaugurate on December 15, the occasion of the centenary of the Qasr al Aini school of medicine and hospital.

The Lebanese Ministry has resigned, and the President of the Republic has, according to a Beyrout message, formed a new Cabinet composed of three instead of seven Ministers.

Among impending changes in current British Colonial postage stamps are included a new definitive £5 denomination for Cyprus, printed in black on yellow; 1d. and 1½d. Malta, in transposed colours; and new "postage due" labels for Palestine.

Mr. John Charles Paget, whose death occurred last week at the age of 82 in All Saints' Hospital, Finchley, was the founder many years ago of the Individualist Club. In 1912 he became Secretary of the Albania Committee. He wrote much for the Press on the Near East and also on architecture.

Ex-King Ferdinand, father of King Boris of Bulgaria, visited the relics of the Apostle St. James the Greater at Compostela on January 5. After being received by the Alcalde, Rector of the University, and the Commandant, he was entertained at luncheon by the Municipality before returning to Vigo on his way to South America.

The death occurred on January 5, at the Villa Riaumont, Mentone, of Princess Mediha Sultana, widow of Damad Ferid Pasha Bushati, the last but one of Turkey's Grand Viziers. The Princess was the daughter of Sultan Abdul Mejid, and sister or half-sister of the last three Ottoman Emperors. The body was embalmed the following day, and will be interred at Nice in the tomb where Damad Ferid Pasha, who died in February, 1924, at Cap d'Ail, is buried.

In recognition of his services in the Geneva discussions on the dispute between Roumania and Hungary, Count Albert Apponyi has been unanimously elected an honorary member of the Budapest Barristers' Association. This honour, says *The Times*, has only twice been conferred during the Association's 55 years' existence, the recipients in these cases being Louis Kossuth, leader of the Hungarian revolution, and Maurus Jokai, the Hungarian novelist.

The King of Afghanistan on January 2 visited various Egyptian industrial and technical schools in Cairo, and took luncheon at the Turkish Legation. In the evening he attended the Chamber, and listened to the debate. As a souvenir of his visit King Amanullah has presented to the Arab museum three muskets, two sabres, and a gold-mounted arquebus, all of 18th century Afghan manufacture. In Italy the King of Afghanistan has had a very busy time. He has already visited the Pantheon and the military school at Tor di Quinto at Rome. On January 9 he attended a State banquet, and to-day (Thursday) is to pay a visit to the Pope.

Distinctive postage stamps were issued in Egypt on the occasion of the International Statistical Congress which met in Cairo during the first week of the New Year. They bear a striking reproduction of the statue of Amenhotep III, famous as the builder of the Temple of Luxor and other monuments of Ancient Egypt. They come, says *The Times*, in denominations of 5 milliemes brown, 10m. red, and 15m. deep blue, finely executed in collogravure by the stamp printing department of the Survey of Egypt, and across the foot of the design runs the inscription, "Congrès Statistique Le Caire, 1927." These stamps were on sale from December 28, 1927, to January 6, 1928, only, so that they are already obsolete.

THE WEEK AT HOME

London, Tuesday Morning.

Gales and Floods.

It is no doubt good for us from time to time to be saved from our pride, but the way in which Nature last week demonstrated her superiority over all our man-made defences was severe in the extreme. I have already spoken of the frosts and the snow, which played havoc with the contrivances of civilisation. These were followed by such gales and floods as not only endangered but also destroyed the lives of people.

Those who live abroad may find it difficult to believe stories of walls being blown down on people, of trees being uprooted and felling omnibuses, of the Thames and other rivers bursting their banks and drowning people. For nothing like it has been known before, at least for two or three generations. These things, however, are the truth. I myself saw something of the Embankment disaster, and it was perfectly obvious, when moving about London last Saturday, that the threat of the Thames had profoundly affected the people. The loss of lives and the damage to the Tate Gallery were, of course, the most notable aspects of this flooding; in a manner which everybody could see, however, it was manifest in the stopping of the electric trains, of the tramcars along the Embankment, and so on. This made ordinary traffic terrifically congested: I forget how long it took me on Saturday to taxi from Charing Cross to Waterloo, because on Westminster Bridge there was so much to see and hear.

England *v.* New South Wales.

The result of the magnificent match at Twickenham last Saturday, between England and the Waratahs, was probably known to almost every intelligent Briton, in whatsoever part of the world, long before the Sabbath dawned. But if any game was a game to see, rather than to read or hear of, this was. Though it was not very great Rugby, it was a great struggle, possibly enhanced by the choral emotions of such a crowd as has never before been at Twickenham.

Myself, I think, quite definitely, that the Waratahs were unlucky to lose. They had the second half to themselves, except for one inspiring forward rush—easily the most thrilling thing of the match—by which England scored her last try; and even against the wind (which seemed rather to drop in the second half) in the first half they had their share of the game.

But it is possible, of course, to argue that England, having once secured a lead, deserved to retain it by the absolutely whole-hearted way in which she hung on to it; her defence was, indeed, of heroic constancy. For days to come there will be talk about it and about; yet the consensus of opinion will, I think, admit that England was lucky to win by so large a margin. In any case, the whole thirty players delighted everyone; Englsih pride in the Australians was both obvious and deep.

Coloured Scarves.

One of the minor sights of London just now is the amount of coloured scarves being worn by both men and girls. It has puzzled many people, for the reason that the owners of these red, black and white scarves do not commonly look as though they had earned them at school or college.

It is quite patent that large consignments of this extraordinary garment have been received from somewhere, and are being sold off cheap. One explanation that I have heard (it seems to me rather fantastic) is that the Monarchists of Germany, in anticipation of the return of the ex-Kaiser or of his son to the Throne, manufactured large stocks for the "patriots." But the expected revolution against the Presidency did not come off, and so the stocks remained on the contractors' hands.

But whatever the explanation, the popularity of this particular scarf must cause most moving passions within the breast of those who consider themselves primarily entitled to the three colours.

The Shakespeare Memorial Theatre.

One need be no feminist to acclaim the winning by Miss Elizabeth Scott, a grandniece of Sir Gilbert Scott, of the Shakespeare Memorial Theatre competition. Architecture is not a subject which has suffered many feminine invasions; yet that its hitherto secret conserves have now been broken into is far from being a matter of lamentation. The tragedy of female effort in most of the arts is that so good a beginning is made and then the whole endeavour is allowed to peter out. Imitation so seldom is succeeded by creation.

Miss Scott has an obviously exceptional talent, and deserves every congratulation. She has passed from the "associate" to the "fellow" stage. It may very well be that, when her design has been worked out in Cotswold stone at Stratford-on-Avon, it will be regarded as one of the features of twentieth century architecture.

Colds and Education.

This is the period of the educational conferences in England, so that for a few brief days everybody has been "talking Education." A far more important matter, however, is the fact that, after the funny weather which we have been having, everybody has a cold. That fact, however, has not made us feel the less sorry for ourselves, and we have been like the elephant similarly streaming:—

All I want is jab for tea
And lots of hubad sybpathy.

It happens that Mr. G. K. Chesterton was addressing the Nursery School Association last week while suffering from a cold. In the course of his address he got in one or two characteristic and eminently reasonable jabs at the centralisation of education, the absurd passion for standardisation, and so on, but also suggested that if we suffered permanently from colds our pronunciation would presumably become set. As in the "very beautiful poem written in the Victorian Era by a man with a cold in his head," which ran:—

And I shall dever bore behold
Those flowers we plucked at dood,
Our roabings in the gloabing tide,
Our gazings on the bood.

ALTER EGO.

The Cabinet of Jaafar Pasha al Askari resigned, according to information from Baghdad, on January 9, and King Faisal of Iraq has asked Abdul Muhsin Beg as Saadun to form a new Cabinet.

The Bristol Fighter biplane, with the Service Mail to Mosul, crashed on leaving Hinaidi Aerodrome on January 9. The pilot, E. R. Fisher, was killed, and his passenger, Lt. S. G. Haserick, was injured.

The Palestine Experiment

Achievement and Opportunity

For the last eighteen months very much of the "news" emanating from Palestine and discussions about Palestine have spoken of "crisis," "distress," and even "impending failure of the Zionist experiment." Excess of Jewish emigration over immigration, the virtual closing of Palestine to immigrants, unemployment and recourse to the "dole" system, not to mention natural misfortunes like earthquakes and droughts, have seemed to justify gloomy views and anticipations. Yet little more than a year ago, at the Imperial Conference in October, 1926, Mr. L. S. Amery was able to describe Palestine as "a prosperous, contented and progressive little country"; and at any time during the past three years or more Palestine can justify its claim to being "as peaceful a spot as can be found anywhere in the world."

It is purely a matter of perspective and proportion. In a protracted tramp there is always more complaint at the roughness of the track than thankfulness at there being any track at all. So it is merely human to dilate upon Palestine's surface troubles, discomforts and dissatisfactions and to take for granted the foundation of actual and solid and continuous achievement. It is only by recapturing the state of mind which prevailed in, say, 1920, and by contrasting political and material conditions then with what we find now, that we can begin to see in their true scale what seem to be setbacks at the moment.

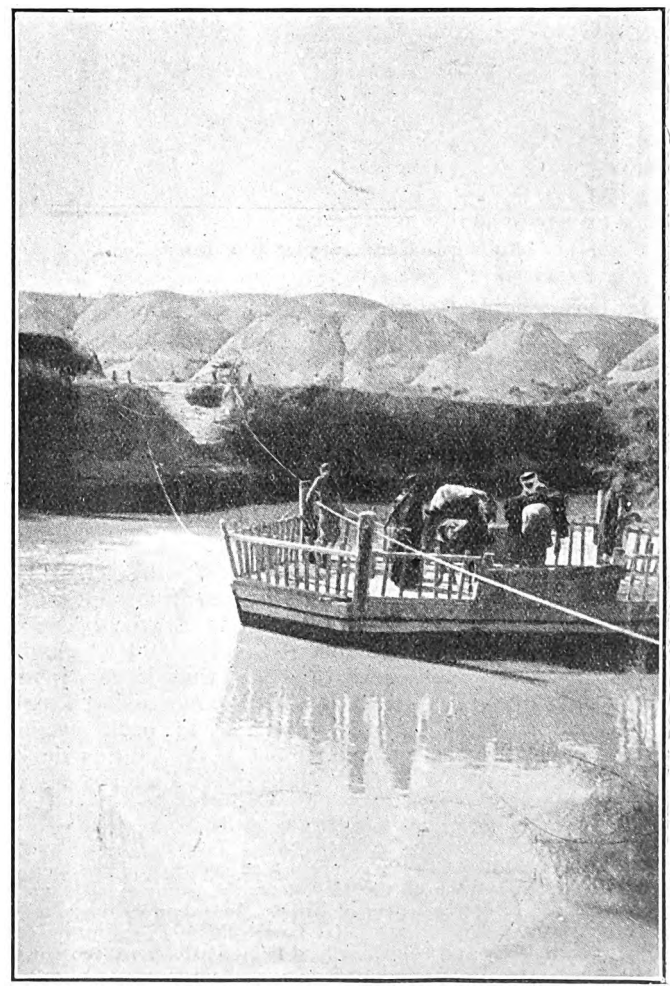
This applies (if we take the Zionist angle of vision) both to the circumstances created by the "secular" British Administration, and to the "sacred" achievements of the "Jewish National Home." When we consider the extreme delicacy of the Administration's problem of reconciling the two (seemingly) irreconcilable principles which make up the "Balfour Declaration," it is impossible not to admire the consummate success of the present High Commissioner and his Chief Secretary in, so to speak, neutralising and sterilising the political atmosphere: in eliminating, for all practical purposes, the septic elements in Jewish and Arabic claims, rivalries and grievances. These claims, rivalries and grievances still loom as large as (mostly larger than) life in the respective partisan statements of Arab and Jew; but they are now reduced to the level of a habit—the accepted idioms in a technical political vocabulary. The fact remains—and it is always capable of being checked by reference to the condition of seven years ago—that bitterness, arising from fear, between Arab and Jew, and the resentment of either towards the Administration, has ceased to be the dominant and characteristic element in the situation. This may be explained as the result of wearied disillusionment on the side of the complainants, but it may be equally well explained by the unwearied patience of officials in thinking always in terms of "Palestine" rather than in terms of "Arab" or of "Jew."

Turning to the "Jewish National Home" part of the picture, the fundamental alteration in conditions is that any idea that the Jews may ever have had of being given a neatly tied up, ready-made, reach-me-down "National Home" has been abandoned by them. The old frame of mind still appears now and again, notably in the constantly reiterated sentiment among the "Revisionist" elements, that Great Britain's sole right of remaining in Palestine and its charter from the League of Nations as Mandatary over Palestine, are conditional on its making Palestine the "Jewish National Home"; but every responsible Zionist is now fully aware that whatever "Home" there may be for him in Palestine must be one that the Jews have created themselves and paid for themselves. They are not to be given furnished lodgings and a latch-key, but something better: a genuine home which they themselves shall build up, brick by brick, and furnish and bedeck; and the bigger the home they build the greater the family they may instal . . . while Great Britains acts the part of policeman.

The process of building this home has gone on steadily and is going on steadily; it is progressing by its own momentum, regardless of temporary jolts which, inevitably, cause acute disappointment to the builder, but which, if the builder stands back a little, can without difficulty be seen to be valuable and necessary experience. It is the Jew himself who is largely to blame for reports that go abroad about his "failure"; he is overgifted with the nervous temperament which grossly exaggerates both his success and his lack of success.

If we look at the growth of the "National Home" as a whole, "failures" and "setbacks" included, the following facts stand out:—

(1) In 1922 the Jewish population of Palestine was 83,794. In September, 1926, it was 158,000. Since then emigration has been double the rate of immigration—approximately 7,000 emigrants to 3,500 immigrants. There are two significant sidelights: since 1924 more Jews have, annually, entered Palestine than have entered the United States, Argentine, or Canada; also, that Palestine is far from being a soft option for any Jewish emigrant type, as is proved by the fact that since 1921 17,000 Jews have preferred to leave Palestine. This latter "purgative" effect of the attempt to build something Jewish is not a thing to be despised: "selection" and "elimination" are strong arguments against the alleged artificiality of the Jewish effort in Palestine. A



A Ferry crossing the Jordan.

A map of Palestine will be found in the advertisement of the Palestine Railways on p. 48.

Digitized by Google

further point is that, whereas the Jews formed 11.1 per cent. of the population in 1922, they formed 17.6 per cent. in September, 1926—a larger proportion than in any other country.

(2) In 1922 Jews held 606,790 dunams out of a total area of 19,800,000 dunams.* The extent of Jewish-owned land is now estimated at 1,000,000 dunams. This constitutes 5 per cent. of all Palestinian land and 11.2 per cent. of the cultivated or cultivable land. The number of Jewish agricultural settlements is now 120 as against 80 in 1925. The serious weakness, however, in the Jewish settlement lies in this; that while Palestine is primarily an agricultural country, 81 per cent. of the Jewish population is concentrated in the towns.† How so obvious a blunder as this was permitted to grow to such dimensions remains a mystery to the Gentile outsider.

(3) Official Zionist activity is made possible by two funds: "The Jewish National Fund" (Keren Kayemeth Leisrael)—used exclusively for the purchase and preparation of land which becomes the inalienable property of the "Jewish National Home"; and the "Palestine Foundation Fund" (Keren Hayesod)—used for all other requirements. These funds grow larger year by year. Thus the "National Fund" was £E114,151 in 1923; £E167,665 in 1924; £E260,000 in 1925, and £E281,451 in 1926. The "Foundation Fund" receipts totalled £494,550 for the year ending March 31, 1926, and £649,300 for the following year. Exact information of the money poured into Palestine by private

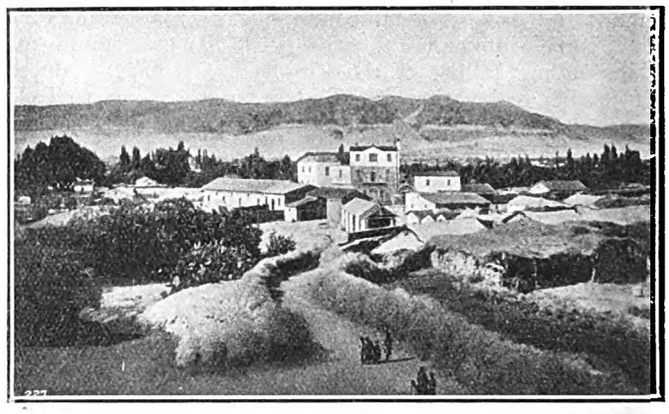
An Arab Gendarme at the Dead Sea.

Jewish organisations and individuals cannot be given. In the Zionist memorandum submitted to the Permanent Mandates Commission in June, 1926, it was estimated at five and a half million pounds, from the time of the British occupation until March, 1926, and the official expenditure during the same period at £4,386,000.

It follows that not less than eleven millions of Jewish money have been lavished on the tiny country of Palestine since the occupation in the attempt to build the National Home.

But Jewish population, land acquisition, and expenditure in Palestine spell opportunity rather than achievement. It is difficult to define what degree of success Zionism *ought* to have achieved in Palestine during the last eight years in order to claim that it had justified itself and made the most of its opportunities. The "Apocalyptically-minded Zionist" would, probably, insist on a Jewish majority owning most of the land as the only proof of Zionist success. But most Zionists are now satisfied with less. An unprecedented experiment must not complain if it encounters unanticipated obstacles.

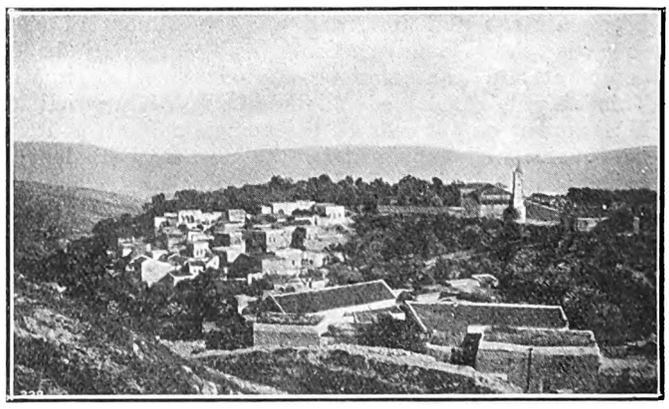
Perhaps the only form of Zionism which is accepted as politically feasible is that which seeks primarily to create a centre for the intensive cultivation of the "Jewish life"—to create a nucleus where Jews really are Jews, with all the qualities that should define a Jew in



JERICHO.

the nationalist sense—a centre to which the Jews, the world over, can turn in order to find a complete Jewish national life in being—Jewish life in city and field, Jewish thought, Jewish culture, Jewish education along severely nationalist lines, Jewish literature, language and history, Jewish art, Jewish science, and even Jewish religion—all these studied and cultivated in their purity and in their entirety by Jews and for Jews.

That is the experiment which we are now watching in Palestine. And the success or failure in the realisation of these ideas—*that* is the gauge of the success or failure of Zionism: numbers, unemployment, potash, railways, electricity, harbours, loans and such like, affect secondary issues only. The progress of this experiment must be slow, since the essence of it is Jewish self-education in the things which Jewry has forgotten, or has never known, or which it ought to forget. But progress there certainly is—the creation of a type of Jew who is something positive and not merely something different! The transformation clearly cannot be complete in less than a generation: but there is no question that the conditions are rapidly being developed (they have already been created) towards making the transformation natural and easy. A Hebrew civilisation is shaping anew under our eyes: it is compact, self-contained and culturally self-



SAFED

In the extreme North of Palestine. A centre of Jewish agricultural colonies. From the tower is obtained a view of the Hauran, Mt. Tabor, and the Sea of Galilee.

sufficing, although, for the present, it is a helpless dependent on Jewish sympathisers abroad. Perhaps it always will be; but that does not necessarily spell "failure," since a "centre" must imply a "circle"—if it is only a circle of financial supporters.

* There is, of course, no accurate land survey of Palestine. The present figure is that of the Government's estimate made in 1920 on the basis of the collection of Tithe. According to this, Palestine comprises the following areas: (1) Land cultivated, sown or planted, 5,450,000 dunams; (2) cultivable land lying waste, 3,350,000 dunams; (3) swamps, forests, pasture, 7,660,000; (4) unclassified, 3,340,000.

† The census of Jewish agriculture taken in April, 1927, gives the total of the Jewish rural population as 30,491, leaving an urban population (chiefly in Jerusalem and Tel-Aviv) of 128,000.

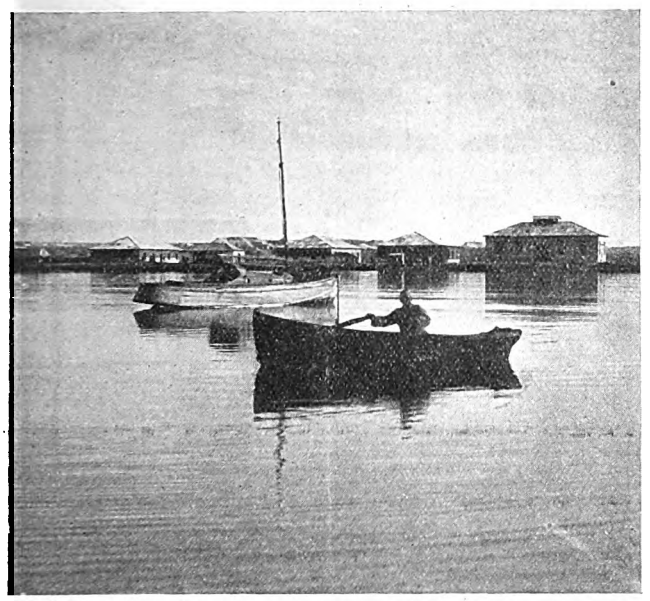
The Dead Sea Concession

Its History and Potentialities

Although from the earliest days Jerusalem has been supplied with table salt recovered from the Dead Sea, it is only within the present century that the problem of extracting potash and other mineral salts from its waters on a commercial scale has been seriously examined. The position of the sea, with its surface 1,300 feet below sea-level, the climatic conditions and considerations of transport introduce more or less formidable factors to be overcome, and are reasons for careful and thorough preliminary examination before any concession is taken up. The world's requirements of potash and other salts that the waters of the Dead Sea hold in solution in such prodigious quantities, however, provide a strong incentive for grappling with the problem of scientific exploitation.



THE NORTH-WEST CORNER OF THE DEAD SEA.
The buildings, which were erected by the Germans during the War, were in part destroyed by last year's earthquake.

The attention of the British Government was attracted to the question immediately after the military occupation of Palestine in 1918 by Major T. C. Tulloch, formerly Superintendent of the Original Research Department, Woolwich, and a chemical examination of the waters of the Dead Sea was made on the Government's instructions on the spot by Mr. Brock, head of the Geological Survey of Canada.

In the meantime an examination of the Dead Sea salts and of the manner of their extraction had been carried out on an elaborate scale by Mr. M. A. Novomeysky, a mining engineer and chemist, now a Palestinian subject. His interest in the problem had been stimulated when he first saw an analysis of the Dead Sea waters. Being engaged in the production of mineral salts by evaporation (sodium sulphate, magnesia and common salts) in another part of the world, Mr. Novomeysky realised the value of the minerals contained in the water of the Dead Sea and the possibility of its utilisation. In the year 1911 he visited Palestine, made a survey of the Dead Sea and carried with him water from the sea for analysis and experiments. From 1920, the time of his second arrival in Palestine, and up to the present time, the subject may be said to have engaged his whole attention. Small pans were constructed on the shore of the Dead Sea and experiments carried out uninterruptedly for a period of nearly three years. At a comparatively early stage in his investigations, Mr. Novomeysky satisfied himself that from a technical point of view there would be no insuperable difficulties in the way of extracting the salts from the Dead Sea on a large scale. Whether the proposition could be made a commercial success was a question calling for wider inquiry, and it was to this point that Mr. Novomeysky now directed his studies.

Chemical experts both in America and in England to whom M. Novomeysky's investigations and results were submitted, reported favourably upon his project. There is, indeed, reason to suppose that a strong American group set its heart in 1924 on securing the Dead Sea concession, and had carried the negotiations with the British Government so far that it considered the grant as good as already made. Eleventh-hour reflections convinced the Government of the advisability of keeping the exploitation of the wealth of the Dead Sea in British or Palestinian hands, and the negotiations with the powerful American group were "called off." On the other hand, there was a time when important chemical interests in Great Britain decided that a Dead Sea concession was not a practical proposition.

In 1923 the Palestine Government resolved to learn as much as it could of the feasibility of working the Dead Sea minerals for the benefit of the country. In that and the following year a series of reports was drawn up by its geological adviser bearing on the possible commercial utilisation of the brine for the manufacture of potash and other salts, and other reports were furnished by the Department of Health dealing with the question of malaria conditions in the Dead Sea area. The Geological Adviser estimated the quantities of salts in the Dead Sea at 43,000,000,000 metric tons, of which 2,000 million would be potassium chloride, 980 million magnesium bromide, 11,900 million sodium chloride (common salt), 22,000 million magnesium chloride, and 6,000 million calcium chloride. For practical purposes the supply of potash may be considered inexhaustible. It goes without saying, however, that these figures—"astronomical," as the Under-Secretary of State of the Colonies has termed them—bear no relation to any immediate project for the commercial winning of the salts. The Dead Sea brine lends itself to an easy process, or series of processes, of solar evaporation. The first component to be obtained by evaporation is common salt; after separation of common salt a concentrate known as carnallite (a compound consisting of potassium chloride and magnesium chloride—$K.Cl.\ Mg.Cl_2\ 6H_2O$), which is the main source of potash fertilisers in Germany and France, is obtained. After crystallisation of the carnallite—of which one-fifth part by weight will be potash—the mother liquor can still be utilised for the production of magnesium, calcium chloride and bromine. Dead Sea brine contains a negligible quantity of sulphates.

Further investigations were carried out in 1924 by an Experts' Committee appointed in London by the Secretary of State for the Colonies, under the Chairmanship of Sir Henry Lambert, Senior Crown Agent. Its conclusions were as follows:—

A. (1). That, from the technical standpoint, as distinguished from the commercial, no insuperable difficulties are likely to be met with in connexion with the extraction of potash from the Dead Sea in quantities of the order of 100,000 tons of potassium chloride per annum.

(2). That a product containing over 70 per cent. of potassium chloride can be obtained by natural evaporation.

(3). That practically unlimited quantities of common salt and magnesium chloride could be produced.

(4). That an adequate area of land is available for the evaporating tanks required for the production mentioned.

(5.) That the area, although at present unhealthy, could be rendered habitable by suitable precautions.

B. (1). That no reliable estimate can be formed at the present time with regard to the cost of construction of the evaporating pans, or in connexion with the cost of the operation of the process on a large scale.

(2). That, apart from working costs and capital charges, the cost of transport would absorb a considerable proportion of the market value of the potassium chloride, and would, to a large extent, render the great quantities of common salt and magnesium chloride unsaleable.

(3). That, in view not only of the ordinary fluctuations of the potash market, but also of the entirely unknown conditions of future production of potash in Europe and the demand for it in the markets of the world, the Committee is not in a position to forecast the commercial prospects of potash recovery from the Dead Sea.

(4). That, as long as the market for bromine remains relatively small and variable, it can probably be supplied adequately from other sources.

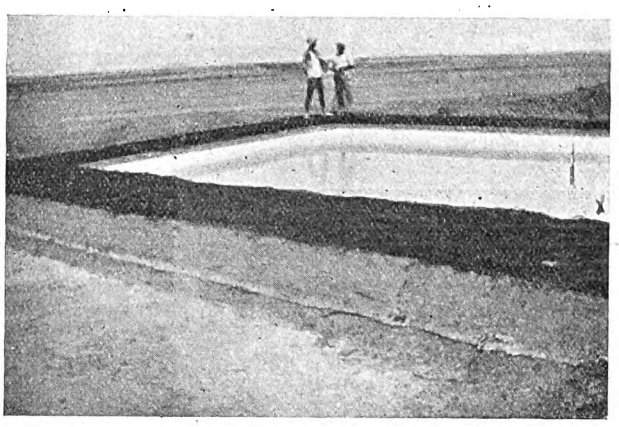
C. (1). That a large scale trial with evaporating pans covering several acres, together with excavation at different places in the available area, would form a necessary preliminary to an enterprise which, in any case, must be speculative.

With this somewhat frigid report before it the Palestine Government invited in May, 1925, applications for a concession for the recovery of minerals from the Dead Sea. Of the four applications received the Government decided that the one which showed the most practical acquaintance with the problem was that presented by Mr. Novomeysky and Major Tulloch, who joined hands in 1924. Before granting a concession, however, the British and the Palestine Government required to be satisfied on a number of points, and it is these that have been the subject of prolonged discussion between the applicants and the Crown Agents.

References in Parliament to the Concession reveal a certain anxiety lest the full benefit of the exploitation of the Dead Sea minerals should not be retained within the Empire and Mandated territories. There is no ground for this anxiety. The concession will be entirely British in Anglo-Palestinian hands, as both concessionaires are equally jealous of British interests in the matter. The Imperial Chemicals Company has been mentioned in connexion with the concession; but at this stage it is only known that they may become interested in it. The potential resources of the Dead Sea call for large capital for their full development, and the Imperial Chemicals Company would seem to be the obvious group to whom the concessionaires should turn; but, as the main product of the Dead Sea is to be potash, and in view of Germany's virtual monopoly at the present time of that commodity, it would be necessary to establish the fact that the association of any Company with the Dead Sea enterprise would have no connexion with German interests. The concessionaires, it may be taken for granted, are in a position to establish their *bona fides* in this respect.

As far as the mere extraction of salts from the Dead Sea is concerned, the outstanding features are the simplicity and relative cheapness of the process. It is in regard to the marketing of the finished products that the greater part of the initial expenditure will be incurred. In North Germany, as in Alsace, carnallite is mined and has to be raised from a depth of 400 metres in the former and of 650 metres in the latter. Moreover, the carnallite produced in North Germany contains only 16 per cent. of chloride of potassium, and its further conversion into 80 per cent. KCl. proceeds on factory lines, with all the attendant heavy outlay. A large percentage of this cost of the production of carnallite would not occur in the process of extraction at the Dead Sea by solar evaporation.

To facilitate the development of this industry, two main conditions are essential: (1) Means of communication between the Dead Sea and one of the Palestinian ports—Jaffa or Haifa; and (2) cheap fuel supply on the spot. As the Palestinian Government is unlikely to be willing to provide communication facilities out of State funds, any project for the production of potash will have to include in the estimates of expenditure provision for the creation of transport arrangements. In this connexion there are two possible solutions—a junction with Jerusalem, where there is railway connexion with Jaffa, or a line to Beisan, a station on the narrow-gauge railway from Haifa to Deraa. For the connexion with Jerusalem there is reason to suppose that an aerial rope-way will be found practicable, the cost of which should be about



An Experimental Pan showing the crystallisation of salt.

£100,000. To link up the northern shore of the Dead Sea with Beisan a narrow-gauge railway of about sixty miles would be necessary, and its cost may be estimated at half a million sterling.

For the solution of the fuel problem it is hoped that it will be possible to take advantage of a cheap material in the neighbourhood of the Dead Sea—the bituminous limestone, or oil shales, of Nebi-Musa.

The intention of the concessionaires, it is understood, is to develop the resources of the Dead Sea on a small scale in the first two to three years of exploitation. Even considerations of railway transport need not be taken into account at first, for it is believed that until the necessary experience has been gained in working the concession, road transport will meet all requirements.

The expectations of the unsuccessful applicants for the Dead Sea concession run on different lines. For them, as an American journal, acting as the mouthpiece of one, has expressed it, "twelve hundred billion dollars, a sum 30 times greater than the debt of Great Britain to the United States, is the cash value of the Dead Sea." And the project was pictured proportionately. "With the aid of steam shovels to scoop up at one time tons of crystalline salts, electric trains to convey bags of potash and soda to seaports, expensive troughs in which chemicals will be evaporated from mother liquors, and all the other paraphernalia associated with such big chemical centres as Strassfurt *(sic)*, Niagara Falls or Mannheim Palestine will be transformed from a primitive

pastoral and agricultural country into the seat of a rich and mighty chemical industry to which every civilised country will pay tribute." In the end Palestine and Transjordan are to be "virtually the only countries in the world free from taxation, with the exception of insignificant local levies, for the simple reason that every farm in the world would contribute its mite to them as the owners of the Dead Sea.' In this matter, however, as we have seen, the motto of the two countries, as of the concessionaires, is to be *Festina lente*. Fifteen years ago the annual world consumption of potassium (K_2O) amounted to 1,100,000 tons. The world's requirements have risen since then and reached the figure of 1,650,000 tons in 1926. The equivalent of potassium chloride, 80 per cent. purity, is 3,300,000 tons. At the outset the Dead Sea will do well to produce five per cent. of the total world consumption in 1913 or ten per cent. of the former exports of Germany, which used nearly half of its own production of potassium in the country itself. In relation to the present world production of potassium it will make only 3 per cent. This amount of one hundred thousand tons of eighty per cent. chloride of potassium, of a value of £750,000 at current prices, will supply the immediate needs of the countries nearest to Palestine and still leave fifty thousand tons for other markets. At the same time the output of common salt, the first derivative from the process of evaporation, would be about half a million tons, of which one-fifth could probably be disposed of in India and the Far East. Yet with a material reduction in the prices of all the salts to be derived from the Dead Sea there must follow a marked impetus to the consumption, which covers a whole gamut of important industries embracing fertilisers, gold mining, and the numerous branches of chemical manufacture, from gunpowder to dyeing and textile printing.

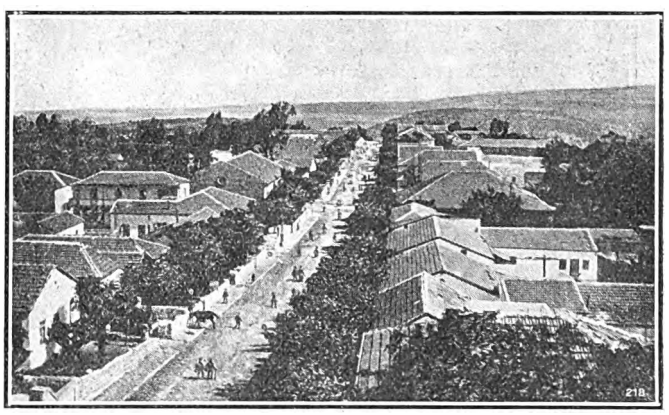
The Great Experiment in Palestine associated with the British Mandate and a Jewish "National Home" has every reason to be proud of having produced at this early stage of its history two prominent Palestinians, Mr. Rutenberg and Mr. Novomeysky, who by their scientific attainments and force of character are making very notable contributions to the advancement of Palestine's material progress.

Travel in Palestine

For those whose travel period is perforce confined within two definite dates it is almost inevitable that their programme should comprise as many places as possible, with their stay in each restricted to the minimum amount of time required for a glimpse of the better-known points of interest. In such an itinerary Palestine at the end, as it were, of the Mediterranean *cul-de-sac* can hardly hope to claim more than three or four days, and of the twenty thousand visitors who, it is estimated, reach its shores on board some fifty tourist ships in the course of a year, perhaps the majority would be better pleased, if they could count upon as many as three whole days in Palestine. In no country in the world are rush tactics more unsuitable for the traveller; for the hold that Palestine has on the Western mind consists not so much in what there is to see as in what there is to feel amid surroundings hallowed for all time. The saying is attributed to General Gordon that for a man to understand the world he should for a time leave the life of busy cities and think out his thoughts alone in the wilderness. The recipe may not be easy to adopt for the average person, but those who visit Palestine will miss much of its charm as well as its message if they cannot remove themselves from a crowd and allow the open spaces before them to determine the channels of their thoughts. Nature in her wildness is at her grandest; she inspires both awe and tranquillity of mind as one stands at the mouth of the Jordan, gazing over the still waters of the Dead Sea, the brown lifelessness of the mountains of Moab to the left, and on the right the tangled mass of the foothills of the wilderness of Judaea.

For the less fortunate tourist who has to be content to see what time and opportunity offer and is not unnaturally concerned with considerations of personal comfort and satisfactory organisation let it be said that he runs no risks in these respects in going to Palestine. If he does not hanker after the social amenities of the well-filled tourist ship, he has a variety of routes for him for reaching the country. He can go independently or "conducted," direct from Marseilles by Messageries Maritimes to Beyrout, or by many lines from the same port, or *via* Italy and/or Greece, to Egypt. There must be few who, outward or homeward bound, would undertake the journey to Palestine without visiting Egypt on the same trip. In one direction, therefore, or the other the traveller will avail himself of the Palestine Railways. Between Kantara on the Suez Canal and Jerusalem or Haifa there is a daily service both ways, by night outwards from Egypt, by day from Palestine.

For the purposes of a stay reckoned by hours in Palestine a brief general article, such as this, does not need to record the comparatively few objectives to which the tourist will be of necessity restricted. He will make straight for Jerusalem, and will be fortunate if he has



ZICHRON-JACOB

Jewish agricultural colony, on a spur of Mt. Carmel, founded in 1882.

time to include in his programme visits as far afield as Jericho, the Jordan and Dead Sea on the one hand and Bethlehem on the other. If his visit is in the spring, he will have a train-window view of some of the wealth in flowers of the Judaean Hills; to see the orange groves of the Jaffa neighbourhood he had better arrive earlier in the year. Jerusalem he must needs "do"—the word fits the deed—but should he be given to analytical thinking he will be happier in mind if he tries to absorb the "atmosphere" of his hallowed surroundings rather than if he seeks to identify the modern spot with his biblical knowledge. Tradition and the critical faculty make even uneasier bedfellows in Palestine than elsewhere.

Whatever else the mandated status of Palestine may have achieved or left undone, it has widened beyond all expectation the sphere of things interesting that Palestine has to show to the visitor. The old pilgrimage sites—Jerusalem, Jericho, Jordan, Jaffa, Bethlehem—still claim priority of attention; but the great improvement in the roads of the country—for which the British military occupation and subsequent Administration have been responsible—have revolutionised travel in the Holy Land, by throwing open the greater part of it to the motor car. From Jerusalem now radiate roads suitable for motoring to Jericho, to Hebron and Beersheba, to Ramleh and Jaffa, and to Nablus, Nazareth, and Tiberias; from the latter place to Safed, El Kuneitra and Damascus; from

An article on the Balfour Forest, which is to be planted in Palestine this year, appears on p. 61.

Digitized by Google

Nazareth to Haifa and thence to Tyre, Sidon, Beyrout and Tripoli. It is possible to motor, therefore, from Beersheba, if not actually to Dan, to a more northerly point still. The "grand tour" of Palestine is, consequently, an experience that can now be had comfortably and with dispatch. Under these conditions the wise traveller will not confine his attention only to places of historic interest; he will try to put himself in touch with the more immediate problems of the country to-day. Visits should be made to various Jewish centres—Tel Aviv, which has been described as "the first 100 per cent. Jewish city in the world" and is for this reason with its ups and down a microcosm of the Zionist movement; numerous agricultural colonies, both those which existed before the War and those which have sprung up since, whose fortunes from day to day or from season to season are unwisely held in some quarters to be an index of the success or failure of the Jewish National Home; various industrial enterprises, such as the Nesher Cement Factory at Tel-

JERUSALEM
By the Jaffa Gate: on the right the Tower of David.

Aviv, the Shemen Oil and Soap Factory at Haifa, numerous tobacco factories, not to mention the Electric Light and Power Stations, the forerunners of the big electric scheme associated with the name of Mr. P. Rutenberg, for which the Palestine Electric Corporation is responsible.

The more observant visitor will note the difference between the new Jewish population of Palestine and the old, and will be able to form an opinion of the progress already made in evolving a Jewish nation, whatever may be the verdict on the fulfilment or non-fulfilment of the early Zionist conception of a National Home. From the Jews he will turn to the Arabs, and if he has any knowledge of the East at all, he will be blind indeed if he cannot discover some of the effects wrought on this section of the population by contact with a superior Jewish civilisation. If he has no time to delve into their respective politics, so much the better. They are at best in a state of transition, and what is true to-day may not hold good to-morrow. The main consideration is that peace reigns; good will must necessarily be of slower growth.

Having come as far as Palestine, the more leisurely traveller will endeavour to include in his trip both Transjordan and Syria. An ambitious programme for the former will comprise visits to Amman, Jerash and Petra. Five hours by car will bring the traveller to Amman (Rabah Ammon of the Bible), where extensive ruins of Roman and later times will claim his attention. Chief among them are the Theatre, with eight columns still standing out of an original fifty, Baths and a small Odeum. From Amman he can proceed by the Hejaz Railway to Aneize, eleven hours by train, and thence on horseback in nine hours to Petra. This route, which has been improved by the construction of a road, has the advantage of being shorter than that *via* Maan, the better known starting point on the Railway, farther south. Petra, a metropolis of fifteen centuries ago, the existence of which was lost to the world until it was rediscovered by Burckhardt in the nineteenth century, has been described too often of recent years to call for a detailed account here. Suffice it to say that it would form a fitting climax to any tour in the East. Jerash, on the other hand, though lacking the wonderful setting of Petra, may claim to rival it in its classical interest. Professor Garstang* writes of it: "The classical city was laid out on a definite scheme. . . . The catalogue of visible monuments alone (of which twelve are described) can convey little impression of their supreme beauty from the point of view of classical art; and not only are the buildings themselves triumphs of architecture, but they are strikingly placed, so that each one meets the eye as a distinct feature, while from the distance they compose themselves readily into a single harmonious picture."

To reach Syria the traveller has the choice of three routes: by car from Jerusalem to Damascus; or, using the railway as far as Haifa, he can motor from there along the coast *via* Acre, Tyre and Sidon to Beyrout; or he can take a train from Haifa to Deraa, where he joins the Hejaz Railway for Damascus. The opening of the desert route for motor services, which during a large part of the Druse rebellion had to use the northern route *via* Palmyra and Hit, instead of the more direct line by way of Rutba Wells and Ramadi, has led to the improvement of accommodation at Palmyra, which has now become a regular item on the itinerary of the visitor to Syria.

From the necessarily brief summary of possible tours it will be seen that Palestine deserves a more generous allocation of the traveller's time than is usually allowed when his main objective is Egypt. The call of the latter cannot be challenged; but the comfort in which both Palestine and Iraq can now be visited serve to reinforce the claim that these two Mandated territories have on those who are accustomed to spend their winters abroad, and will, it is to be hoped, cause many of them to make these countries an alternative to, rather than an extension of, a stay in Egypt.

The Palestine Orange Trade

So closely associated with Palestine has the orange become in the public mind that it is extremely probable that if the word Palestine were given in a psycho-analytical examination the spontaneous answer would be Jaffa. It is a wonderful tribute to the qualities of the Jaffa orange that the word Jaffa should have come to be a synonym for the golden fruit. The unique features of the orange are its luscious flavour, its lack of pips, and its size and thick skin, and it would appear that it can be produced only in Palestine; at any rate the attempts made so far to grow the Jaffa elsewhere have not been successful, with the possible exception of Cyprus.

The rise to popularity of the Jaffa, it may be pointed out, is a comparatively recent development, for it was not until the season 1908-9 that there was a rapid increase in the value of the exports, the figures for that period being £190,460. From then until the outbreak of the War, with one slight setback, there was a steady development in the trade, and for 1913-14 the exports totalled 1,608,570 cases of the value of £305,330. The post-War period has been marked by the swift recovery of the trade, and for 1926 the exports totalled 1,887,510 cases of the value (f.o.b. Jaffa) of £566,493. At the present time, however, the trade, after enjoying several prosperous years, is experiencing a period of reaction resulting from a number of causes. During the period 1919 to 1927 the crop has grown from about a quarter of a million cases to over two millions, and shipping and marketing conditions have had to be adapted to meet this trade development. Even now the trade is in a state of flux, and it will require several seasons before it is settled and organised on a really sound economic basis.

As is well known, a very great deal of damage was done to the groves during the War. Very little irrigation took place during the period of military operations, and cultivators found themselves faced with very disheartening conditions on the establishment of peace. Quite soon after the War, however, new plantations were laid out, and they have already started to bear fruit, while every year since has seen more work put in and more new groves springing into existence. The present season, it is true, will see a reduced number of cases shipped to Europe, but this is simply because of the extremely bad weather last winter, when much damage was done to the trees, and it is well within the bounds of possibility that in another two or three years the crop will reach the three million case mark.

The steady expansion of the orange groves may be gathered from the fact that, while in 1922 the area devoted to them amounted to 32,000 dunams (7,272 acres), it had risen by the end of 1926 to approximately 42,000 dunams, while there was a further considerable extension of the area in the past year. The tendency on the part of growers now is not to rely solely on orange trees, which take from four to five years before they begin to yield fruit, and so new groves contain a proportion of other fruit which gives an earlier yield and thus enables the cultivator to obtain a more rapid return on his investment. Seeing that the Jaffa orange bulks so large in the world's orange trade by reason of the quality of the fruit, it is of interest to point out that the yield of these oranges only represents something like three per cent. of the world's production of this fruit. But the yield for a given area in Palestine is much higher than it is in the chief orange growing regions; it is roughly double the yield in California, while it is about 20 per cent. greater than in Spain; so that it is evident that, if Palestine has an incomparable orange, local conditions must be particularly suited to the fruit.

Methods of picking and packing the oranges have not undergone any great changes. Shortly after the Armistice a scheme was put into execution for collecting fruit in a central warehouse, where it would be scientifically graded, treated, and packed, but this was not a success. To-day the yield of a grove is packed on the spot, often in small barns which are not suitable for the work, and experts who have seen the work going on state that, although the quality of the Jaffa orange is superb, the care exercised in picking and packing is not nearly sufficient. On the other hand, certain Jewish groups have greatly improved their standards, and it is interesting to note that the majority of prizes in the yearly Jaffa Orange Show are carried off by the more modern Jewish packings. These are certainly more expensive, and the Arab packer does not classify his fruit so carefully, preferring to market as much as possible, even though the standard is not so good. In the long run it would appear, however, that the financial results are very much the same in each case.

With regard to transport, the last two years have seen the inception of a service of steamers running in competition with the Conference Lines, which for the past thirty or forty years have carried practically the whole of the orange shipments, either in direct steamers or in transhipment *via* Egypt. For the competitive service, which is called the Jaffa Union Line, it is argued that the line has had the effect of reducing the quantities to be carried in one steamer, and certainly since its arrival in Jaffa there has been no repetition of the heavy cargoes, sometimes of 45,000 and 50,000 cases, which were loaded during the 1924 and 1925 seasons. On the other hand, the Jaffa Union Line do not determine the destination of their steamers until they are actually loaded, and this plan they say enables them to choose the market which at the time is the least encumbered with fruit. In the opinion of the writer this is a disadvantage, first, because many of the steamers are slow, and while their departure from Jaffa may be well regulated, their arrivals in ports of the United Kingdom often synchronise with Conference steamers which left Jaffa several days later. Further, different ports have their different preferences; Glasgow, for instance, sells large-sized fruit better than other markets, and it is highly inconvenient for a shipper packing large fruit in the belief that the steamer will go to Glasgow to find that after all the destination will be, say, Manchester, where large fruit is not in such demand. In addition, the absence of knowledge regarding destination is very disconcerting, especially when, as often happens, the destination is not fixed until the steamer is five or six days out of Jaffa. Buyers in England hold back if there is cargo afloat for an unknown port.

The future, and, it might be said, the salvation of the Jaffa orange trade lie in distribution. Before the War shipments were made only to Liverpool, but first Hull, then Manchester and Glasgow, and latterly London, Cardiff, Southampton, and Belfast have all been added to the list of ports for Jaffas. This season there is a much increased demand on the Continent, and large cargoes have already been dispatched to Hamburg, Rotterdam, and elsewhere. This Continental demand is one of the great hopes for the future of the Jaffa orange trade. It is obvious that the United Kingdom cannot consume a crop of 3,000,000 and more cases and pay the same prices which are now in vogue. The greater the prestige which Jaffas obtain on the Continent, the greater will be the scope for the extension of orange groves without the fear of the low prices which must inevitably come about when increasing supplies are forthcoming for a restricted market.

THE INDIAN MATCH MANUFACTURING INDUSTRY.

Questions of considerable interest and importance are raised by the Indian Tariff Board in their recently issued letter to the Chambers of Commerce in India on the subject of the match industry. On matches imported into India from abroad a Customs duty equivalent to 100 per cent. *ad valorem* is imposed. This is a revenue, and not a protective, duty. But it has had a protective effect, as since 1922—when it was first levied—numerous match factories have been established in India. The result has been that the proceeds of the duty have fallen, with the fall in imports, from Rs. 154 lakhs in 1922-23 to Rs. 118 lakhs in 1925-26. Faced with this decline in revenue, and with the prospect of it continuing, the Government of India, rather more than a year ago, directed the Tariff Board to investigate the position of the match industry. They asked for an opinion on the point whether the industry ought, or ought not, to be protected. If the Board came to the conclusion that protection was required it was to advise on the extent and methods of such. And it was also to report on the extent to which vested interests have been created by the duty; how far such interests need consideration; and what prospect there is of the industry establishing itself if the duty is maintained at the existing rate. Should the Board decide that consideration must be given to the industry brought into existence by the duty, and that the latter should be maintained at a high level, it was to report whether the loss of Customs revenue could be made up, in whole or in part, by any other method of taxing the industry. To determine whether the industry does or does not need protection the Board was directed by the Government to apply the criteria laid down by the Indian Fiscal Commission. These were, firstly, whether the industry possesses natural advantages such as an abundant supply of raw material, cheap power, a sufficient supply of labour, or a large home market; secondly, whether without protection it is unlikely to develop at all, or is unlikely to develop so rapidly as is desirable in the interests of the country; and, thirdly, whether, without protection, it will eventually be able to face world competition.

The Board entered upon the inquiry in due course, and has since recorded a great deal of evidence from match manufacturers. But so far it has come to no conclusions; and it has now made a reference to the various Chambers of Commerce in India. In writing to the Chambers the Board first directs attention to the activities of the Swedish Match Trust. It says that the Trust has in recent years obtained a dominating interest in the match trade of almost every country; and that its policy is avowedly to secure such an interest in the match trade of the world. The Trust controls the largest and best-equipped group of match factories in India; and it aims, the Board says, at a dominating position there. And when it has secured that position it will, of course, be able to raise prices to the disadvantage of Indian consumers. For a long time past Indian opinion has been against the employment of foreign capital in Indian industries. But the External Capital Committee of 1925, by whom the question was investigated, expressed itself as opposed to general measures discriminating by taxation, or by way of control, against foreign capital. And the Tariff Board now points out that, so far as regards the match industry, the possibility of evasion of any such taxation is serious and must not be overlooked. At the same time the Board says that the remedy which has been most commonly suggested for the trouble in the match trade is the imposition of a special excise duty on matches manufactured by firms or companies financed by foreign capital. The Board is not, however, sure that this would be effective; and it discusses the possibility of the establishment of a monopoly. If such is permitted to come into existence by the crushing of the small manufacturers, then prices may ultimately be far above the cost of production. But the risk of this form of exploitation might be met, the Board seems to think, by the establishment of a regulated monopoly. In Greece and in Poland the Swedish Trust holds such a monopoly. And in India the Trust is in a better position than any other manufacturer to produce a good quality standard article at a low price. The monopoly of both the manufacture and the sale of matches might therefore be made over to the Trust on payment of an annual sum to Government, and subject to conditions regarding the employment of Indians, the issue of rupee capital, the quality of the goods, the price, etc. A monopoly of this kind would mean, of course, that the manufacture of matches would not be a national industry. The Board thinks, therefore, that on the ground of sentiment alone it would not be a practical solution of the problem. The question of establishing a sales monopoly is also raised, the Board expressing the opinion that if such a monopoly is thought to be desirable the most satisfactory arrangement would be to entrust it to an independent sales corporation. Lastly, the advisability of following the example of France and establishing a State monopoly of both the manufacture and the sale of matches is considered. This last proposal the Board, without expressing an opinion, asks the Chambers specially to examine, and to state the extent to which such a monopoly is thought to be desirable in the interest of the industry and of the country at large.

We shall be interested to see the opinions that the various Chambers express on these questions. With the exception of opium there is not, so far as is known to us, any article in India the manufacture and sale of which are reserved to the State or to licensed monopolists. The establishment of a monopoly in an article of popular consumption such as matches would be, therefore, a new departure which would be certain to arouse much discussion. On the face of it a proposal for a monopoly can hardly be considered as other than an admission of incompetence or failure. For it is only another way of saying that the Indian manufacturers cannot face competition. In the five years during which the high import duty has been in existence their foreign rivals who have established factories in India have outstripped them in taking advantage of the tariff wall. This cannot be said

Digitized by Google

to be very surprising when all the circumstances are considered. For it must be remembered that the Indian capitalists who have embarked on match manufacturing have had to import not only their matchinery but also European experts to teach Indians how to manufacture matches. They have been further handicapped by want of experience of the industry, and by their inability to get Indian timber so serviceable for matches as is the timber obtainable in Sweden, Japan, Siberia, and elsewhere. For a number of years they have been trying to build up the industry. But so far they have not, we believe, captured much more than a quarter of the consumption. Another quarter is said to be manufactured by the Swedish Trust in India; and the balance is imported. The Indian manufacturers had first to fight the imported matches in which struggle they were, of course, helped by the duty. But now they find themselves face to face with the even more severe local competition of skilful and experienced rivals with unequalled knowledge of the industry in all parts of the world, and with resources that are practically unlimited. It is not extraordinary, therefore, that they should ask for protection in some form.

CURRENT TOPICS.

The Late Mr. Patrick Lovett.

We saw the other day with very deep regret the announcement of the death in Calcutta of Mr. Patrick Lovett, the editor of the well-known Indian financial weekly, "Capital." Of British journalists in India, Pat Lovett must, we think, have been the oldest. For he had had a good many years experience on Bombay newspapers before he came to Calcutta in 1890 to join Captain Horace Hayes in an effort to work up a paper styled "Hayes' Sporting News." The effort was not too successful, as Lovett himself told us recently; and after a time the "News" was incorporated in "The Indian Planters Gazette." Of this weekly Lovett then became the editor, a post which he held for a number of years. Then he went back to Bombay, but to what newspaper we do not know. Later he returned to Calcutta where he again edited the "Indian Planters Gazette." This was, we believe, in 1904, or thereabouts. He stayed with the "Gazette" for five or six years, and he then joined "Capital," which was at that time under the direction of its founder and proprietor, the late Mr. Shirley Tremearne.

Some years later Tremearne retired from active work, and Lovett succeeded him as editor. Tremearne had himself a trenchant and incisive style which was generally seen at its best in brief personal paragraphs. But Lovett had no difficulty in maintaining the high reputation of the paper, and at the same time preserving his own individuality. For he was always a racy and entertaining writer, and he had never the least hesitation in expressing his views. He was no respecter of persons, as his weekly notes, signed "The Ditcher," have abundantly testified for many years past. But although he could be, and frequently was, severe he had no malice; and if he found that he had made a mistake he was always the first to admit it. He had an unequalled knowledge of men and things in Calcutta and, in fact, in India generally. For he had spent practically the whole of his working life in the country, and he had written for considerably more than forty years on every conceivable Indian subject. He was a journalist of a type which has now almost entirely passed away, at any rate, in India. And he entered the profession at a time when, as he himself said, it was about the worst paid occupation in the country. But his skill and ability could not fail to bring him success; and for many years before his death his position was assured, and he was recognised as one of India's foremost journalists. Unlike his predecessor in the editorial chair of "Capital," he had no special knowledge of, or aptitude for, economics and finance. Nevertheless he almost always managed to take the right line and to say the right thing on economic and financial questions, and the influence of the paper was well maintained under his capable guidance.

The Far Eastern Association of Tropical Medicine.

The seventh congress of the Far Eastern Association of Tropical Medicine was held at Calcutta early in December. Strangely enough, a virulent outbreak of cholera was in progress in the city at the time; and the nine hundred delegates had, therefore, an opportunity of acquiring first-hand knowledge of how that disease is fought in India. It was in such circumstances only fitting that part of the programme of the Congress should be devoted to cholera, and several important papers on the subject were read. Great attention was also given to the important question of malaria control. The complexity of this difficult problem was brought out by various papers and, in the course of the discussion which followed them, the need for further research was dwelt upon, and the methods of control to be employed in the different areas were explained. In the course of his comprehensive Presidential address, Major-General Symons referred to plague among other tropical diseases; and, at a later stage in the proceedings, a special Plague Section of the Congress met. Plague first appeared in India in 1896, and it found in Bombay a soil pre-eminently favourable for its rapid dissemination. The vaccine which was discovered through the research work done by the Bombay Research Institute has proved to be a most efficient prophylactic. Immense quantities of it are used every year in India, in the Punjab alone no fewer than 700,000 doses being given in 1926.

The President of the Congress emphasised its importance as a means of bringing directly home to the Governments of tropical countries a fuller realisation of the fact that the organisation of adequate public health administration is one of the greatest of their responsibilities. And we would add that such gatherings may also be of service in bringing home to the people of these countries the supreme importance of active co-operation in the public health administration. Medicine is a profession to which educated Indians take readily, and which they practise with skill and success. There are numbers of competent and capable Indian doctors; but the ignorance of the masses of the people stands in their way. And as the Governor of Bengal pointed out to the Congress, preventive measures cannot be forced on an unwilling people. Nevertheless, as Sir Stanley Jackson mentioned, there are hopeful signs. Progress is undoubtedly being made with such preventive measures as inoculation against cholera, injections for *kala azar*, the treatment of leprosy in its early stages and so on. But a long time must of necessity elapse before the masses can acquire any adequate knowledge of the elementary principles of hygiene, sanitation, etc. Then again the fact that there is in India very little private effort in the provision of medical relief must be noted. As the President of the Congress indicated this is a special difficulty which has to be faced in India. Practically all medical relief is state-aided; and there is but little of that private munificence which characterises Great Britain.

The Travancore Durbar has sanctioned a scheme for the development of the bell-metal industry in the State, on the recommendation of the Director of Industries. The manufacture of bell-metal ware, one of the ancient industries of Travancore, has declined considerably in recent years owing to lack of capital, the tardiness and inefficiency of methods employed and want of organisation. The lack of time-saving appliances and the practice of making temporary moulds for each article have also contributed to the decadence of the industry. The Durbar is, however, convinced that there is sufficient hereditary skill left which can be utilised for the resuscitation of the industry. With a view to effect improvement in the methods of production the State has approved a proposal to have a temporary bell-metal workshop attached to the School of Art. To organise the workers and render them financial help the State has arranged for loans to be issued by the Director to co-operative societies of bell-metal workers, for all legitimate purposes, including the marketing of bell-metal wares.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 22.

The Royal Commission.

The subject of the Royal Commission has ceased to fill all our newspapers. One need call attention this week only to an article, by an "Indian Politician," entitled "The Boycott Agitation," that has appeared serially in the *Statesman*. The writer joins, but in lip-service, in the protest against the exclusion of Indians from the Commission, but is candid enough to write such things as these :—

"Since leaders of the Hindu Mahasabha and the Muslim League hold diametrically opposite views on some of the outstanding problems that were bound to come up before the Commission for solution, the presence of such men would not have contributed to help the Commission in its task. Besides, the selection of men like Sir Abdur Rahim and Sir M. Shafi, on one hand, and Pandit Malaviya and Mr. Lajpat Rai, on the other, would at once have been denounced in India as a most Machiavellian manœuvre. The considerations may have led Lord Birkenhead to decide on the exclusion of Indian members from the Commission. That decision is unfortunate. But the point to note carefully is that it was already cleverly manœuvred by some of the Congress leaders themselves. In other words, the position is this: the Congress would be led to reject any invitation for its members to serve on the Commission, and thus it would see to the exclusion of Congressmen from it; and when this was done, it would assail the Government for that very exclusion. . . . The Congres was bound to undertake what it has now done—viz., to bank on intransigence and offer obstructive tactics at every step. This is the real significance of the Congress decision to boycott the Commission."

The writer in his second number dealt with the Indian Liberals, and their reasons for joining the boycott agitation. Every word he writes is worth studying by anyone who wishes to get at all deeply into the psychology of the Indian mind. In his view one of the Liberals' reasons was the desire to gain time. If the coming of the Commission could be delayed for two years, it might come to an India that had lived down the blackness of the record of communal strife. Surely a childish calculation. First, the coming of the Commission was never likely to be delayed by any threat to boycott it. Secondly, so deep-rooted a thing as the cause of communal strife in India is not to be removed in a mere two years.

The writer proceeds :—

"Butt here is another reason that has impelled the Liberals to join the boycott campaign. They think that such an agitation is very spectacular and would bring to it the imaginative sympathies of the people at large. They feel that by joining the boycott of the Commission they would be regaining popularity with the electors, and would come to have in the country the same influence as the Congressmen now possess. To them the boycott move affords a vantage ground of strategical importance. They feel that expediency urges them to make common cause with the Congress, to advocate the boycott of the Commission, and thereby regain in the esteem of their countrymen the popularity they lost seven years ago. They now realise that in the height of the non-co-operation movement they risked the utmost popularity and loyally worked the Reform scheme and helped the Government against wreckers. Also they realise that for all that sacrifice the bureaucracy, finding that they have lost the lead over their countrymen, has no use for them and has been dropping them like hot potatoes and squeezed lemons."

There is no doubt whatever that the writer is an Indian. His idiom shows that. What he writes has its value as a study of his fellow-politicians. There is also a significance in the fact that there should have been nothing to make the writer feel that, as he had nothing better to say, reticence would perhaps have been becoming.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 24.

King Amanullah.

With the departure of the King of Afghanistan rumour has woven fanatastic stories regarding his visit to Bombay, more particularly in connexion with the delay of half-an-hour in landing at Gateway, and subsequently with his stay at Government House. What is a fact is that in the city itself the mullahs and moulvies did not relish the public denunciation of their activities by King Amanullah. The Muslim rank and file, carried away by the personality of the King, flocked in large numbers to hear him, and at the Jumma Masjid—the stronghold of the moulvies—the King delivered a speech which shook the authority of the Muslim priesthood to the very foundations. Had his Majesty stayed in Bombay a few days longer, a protest against his speeches would have been submitted to him.

The States and Reforms.

An important announcement in connexion with the terms of reference of the Simon Commission is that the Commission will not have power to investigate and report upon the relation of Indian States to the Paramount Power. It has already been semi-officially announced in Delhi that Sir Harcourt Butler will preside over a special Committee to inquire into the relations of the Paramount Power and Indian States. Mr. Peel and Mr. Holdsworth, the members of the Committee, are expected to arrive in India on January 3. Already protests have been lodged against the institution of a separate inquiry into the position of Native States. The States Subjects Conference held in Bombay has passed a resolution protesting against the attempt to divide British India from the States, and a similar resolution will be moved at the Cutch States Subjects Conference to be held shortly.

The Hindu Mahasabha.

The Working Committee of the Hindu Mahasabha, meeting at Benares, passed a resolution protesting against the composition of the Simon Commission and declaring in favour of a complete boycott. It called upon all patriotic Hindus to do their utmost to settle all communal differences and where such settlement was not possible to postpone consideration of communal questions until a favourable atmosphere had been created. The open declaration of the Mahasabha will go a long way in helping the Muslims to arrive at a decision on the boycott question. Just at present Muslim opinion seems to be equally divided on the issue. That the Hindus, who are in a majority in the Congress, should have elected Dr. Ansari as President at this critical juncture, has made a great impression on a certain section of the Muhammedans. And there is no doubt whatsoever that the Hindus feel that their interests will not suffer in any way by their choice.

Dr. Ansari's Appeal.

On the eve of the Congress session Dr. Ansari has made a spirited appeal to the country to sink their differences. He declares that, given communal unity, there is no obstacle so great that India cannot overcome it. He appeals to all, Hindus and Muslims, to unite on the boycott issue and to fight shoulder-to-shoulder for India's freedom. Except in the Punjab this appeal will meet with a fair response. In the Punjab a considerable section of Muslims under the leadership of Sir Muhamed Shafi have declared in favour of the Commission, and while anti-Commission Muslims will meet at Madras, the pro-Commissioners will gather in full strength at Calcutta, where the Muslim League will hold its session.

Commercial.

The raising of the Imperial Bank rate to 7 per cent. reflected a rise in Government securities, which was followed by a decline. Money rates rushed up this week owing to the heavy demand from Bombay and Calcutta for financing cotton and jute.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Iraq Railways.

Interesting proposals for the development of communications in Iraq are made by Brigadier-General F. D. Hammond in his report on the railways of Iraq which has just been issued. Owing to pressure on our space a detailed review of the recommendations must perforce be held over until next week, and it must suffice here briefly to outline the plans he advocates. The existing system is subject to the shortcomings inseparable from the way in which portions of the lines have come to be constructed, a part as a section of the Baghdad Railway, and a further section to meet military exigencies. It leaves important regions without communications, and is not designed to promote the economic development of the country. General Hammond's proposals aim at developing the system so as to link it up with the chief productive districts and at making it a more efficient instrument for trade and commerce. The principal proposal is for the extension of the line to Mosul, not via Shergat, the present terminus, but by Kirkuk, so as to serve the chief cereal-growing area, and the plan provides for taking up the line from Samarrah to Shergat and using the rails for the new section. Other proposals are for the extension of the line at Khanikin by seven miles to the Persian frontier at Katchal-Katchal and for the establishment of a joint Customs House there with a view to facilitating Iraq's trade with Persia. The approximate cost of the proposals is estimated at £2,100,000, and it is obvious that if this amount is to be forthcoming on reasonable terms a loan would have to be raised with the British guarantee.

Capital for Greek Enterprises.

Concurrently with the negotiations for the Greek Loan comes the interesting news that a company is being formed under the auspices of English, Greek and American banking interests with the main object of investing in Greek enterprises. The company, which will be called the Hellenic Corporation, Ltd., will have an authorised capital of £1,000,000 in £5 shares, half of which will be issued. Half the subscribed capital has been subscribed in England, one-third in Greece, and one-sixth in America. The board of directors will include Sir Eric Hambro, who will be chairman, and the joint governors of the National Bank of Greece, M. J. Drossopoulos and M. A. Diomedes.

Progress in Greece.

The field of activities open to this corporation is undoubted, for the lack of capital is the one thing which is impeding the recovery which Greece is making. That the country in exerting every effort in its power to achieve economic progress will be self-evident to all who have had a recent opportunity of seeing the country. All over Greece new factories and industries are coming into being, while the towns such as Athens bear witness to the great material improvement. The capital, indeed, has been changed out of all knowledge, and to-day presents the picture of a modern, intensely up-to-date, city with a population of between five and six hundred thousand. Apart from the industrial advance, which, as I have suggested, can be quickened into much greater activity if adequate capital is forthcoming, which will now be the case, there are the great reclamation schemes to bear evidence to the efforts which are being made to make Greece a powerful economic unit. Reference must also be made, though it is almost unnecessary since the nature of the work and its importance are widely recognised, to the refugee settlement, the completion of which is one of the purposes of the new loan. It is difficult to find words adequate to describe the real significance of the settlement work which has been going on for the past three years. The presence of the workless and homeless refugees meant for Greece a crushing financial burden and at the same time constituted a serious social problem. Their settlement has not merely relieved the situation, but has given to the country an economic element of real value, for experience has shown that the trials undergone by the refugees have in no way impaired their value as citizens, and the hard work they are doing suggests that in future years they will constitute a very important factor in the country.

Increased Cereal Production.

One of Greece's principal problems is to increase the production of cereals so as to reduce imports of grains which in recent years have stood at a very high figure. It is in this direction that the addition of the refugees to the working population of Greece will be of the utmost value. The figures for the production of cereals for the past two years show a remarkable expansion in the yield as compared with the totals for previous years. Thus the production of wheat (in tons) in 1927 was 1,218,000, as compared with 1,117,587 for 1926, but for 1925 the total was no more than 311,492. This expansion is in evidence throughout the list, though naturally not to such a surprising extent as in the case of wheat. Two more examples may be given. For 1925 the production of barley was 181,386 tons, but for 1926 it was 260,575, while last year the figures were 337,500. Then the yield of rye has risen from 19,761 tons in 1925 to 203,437 in 1926, and to 205,850 in 1927. It is hardly necessary to recall that last year was most unfavourable for agriculture generally, but if it be assumed that Greece was not affected by this factor to any great extent the figures are significant enough, and point plainly to the prosperous future that should be hers.

The B.I.F. Catalogue.

The Department of Overseas Trade is to be congratulated on the production of the advance catalogue of the British Industries Fair, which is, of course, intended primarily for the foreign buyer, as is evidenced by the fact that the index is in nine languages. In the catalogue no fewer than 364 pages are devoted to the exhibitors. As has been pointed out, the 1928 fair will constitute a record, and with the improvement in the economic position the business done may well be a record also.

Motors and Motoring

By G. B. B.

Taking 1927 as a whole it has evolved very few novelties in connection with motoring. It has produced the car with no axles in the usual sense of the word; a car in which each wheel is individually sprung and the weight of the car carried directly on the wheels, and we have seen the reducing of ground clearance until, in some of the newer closed cars, we find the body almost touching the ground. We have also seen, in a few cases, the elimination of the running board, and the unsightly luggage grid has been done away with and a neat trunk built in its stead, into the body of the car. That, I think, is about all.

The system of independently sprung wheels is claimed to prevent skids, but in this respect, as well as in the taking up of road shocks, the wheel must be more than usually strongly built, otherwise trouble in the shape of wheel collapse under impact will certainly occur sooner or later. The innovation is, in my view, a step in the right direction, but it is a step which will have to be taken warily and with due foresight.

The low ground clearance, so far as the British Isles are concerned is all right: low slung bodies are an advantage in every way. Nothing, on our roads, is more dangerous than the high slung body with its marked roll and swing when turning a corner at anything approaching high speed. Especially is this true of the passenger-carrying vehicle. Motor-coaches, for use in this country, should be as low built as possible.

But what is sauce for the goose is not always sauce for the gander. A design that is suitable for British roads with their smooth, even glass-like surfaces, is by no means the most suitable for use in the country a few miles to the back of Salonika for instance. The car for the Near and Middle East should have plenty of ground clearance and in all this, consequently, I see a danger. I can picture the British manufacturer building cars for the British market and receiving scores of letters to say how excellent, indeed, how wonderful a thing is the low slung model—with 2½ins. ground clearance, or thereabouts—that he has put out this season. And then I picture him sending out a letter to a prospective buyer in, say, the Dinaric Alps or the Belashitsa Planina, to say that his new model has only 2½ins. ground clearance and that is the only model he has to sell, and if the buyer does not care to have it he can—very politely, go without it!

Sidecar Carriers.

A recent article in *Motor Transport* dealt with the question of sidecars as goods carriers and mentioned that the main reason why these have not come into favour in the commercial world is that prospective users are not satisfied as to their reliability. The point of view of the *Motor Transport* writer, it is true, is not shared by sporting motor-cyclists, but it is undoubtedly held by some traffic managers and heads of businesses, who, if they decide that the sidecar does not approach a workable standard of reliability, cannot afford to use it. A firm cannot afford to have a single vehicle off the road even for half a day. "The wonderful knowledge that goes to win Tourist Trophy races will avail little or nothing in this field," says the writer. "Detail knowledge of transport requirements, a special and stabilised design of machine, special selling methods and special service are needed; in short, a mentality completely severed from the happy-go-lucky 'sporting' atmosphere prevailing in the motor cycle industry, so busily selling sports models to those of us who, in our leisure moments, remain young in spirit."

When one remembers the wonderful performance put up by the Ariel motor cycle, and described in these columns a few days ago, one knows exactly how much credence to give to those who still cling to the old and, I believe, pre-War idea that the motor cycle and sidecar is not reliable. By the way, I fancy the Ariel people have produced a special little souvenir booklet dealing with and describing the amazing feat of theirs, and readers interested should certainly send the firm a post-card asking for a copy.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*CIRCASSIA	... Jan. 13	*†ELYSIA	... Feb. 14
LETITIA	... Jan. 31	*CASTALIA	May 2

*First class passengers only. Specially low fares. †Calls Port Sudan

T.SS. LETITIA ... ... 13,500 Tons.
From Liverpool Jan. 31. Marseilles Feb. 7.
Carrying First and Third Class passengers.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Letitia for Bombay (Birkenhead, January 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahout for Calcutta (Birkenhead, January 17).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, January 18).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, January 14); s.s. Dumana for Bombay and Karachi (London, January 28).

Cunard Line.—S.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, January 14); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, February 18); s.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool February 4 and Swansea February 7).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 11).

P. and O. Line.—S.s. Rajputana for Bombay (London, January 20); s.s. Perim for Colombo, Madras, and Calcutta (London, January 21).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, January 14); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, January 24).

Ellerman and Papayanni Lines.—S.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 14); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 21); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Ancona, Venice*, Trieste, and Fiume* (Liverpool January 21, Swansea January 26); s.s. Bavarian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 28). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Mr. Charles Nicoll, whilst retaining his seat on the Board of Directors, has retired from the position of General Manager of the National Bank of India, Ltd., after nearly 44 years' service. Mr. W. J. K. Hegarty, London Manager, has been appointed General Manager, and Mr. W. Ross Munro, Inspector of Branches, London Manager.

THE BALFOUR FOREST.

By P. HOROWITZ, B.Sc.

The latest project inaugurated by the Jewish National Fund for Great Britain and Ireland is the planting of a forest to consist of at least 50,000 trees in Palestine, to be known as the Balfour Forest.

Primarily it was conceived as a tribute of Anglo-Jewry to the Earl of Balfour on the occasion of the tenth anniversary of the Balfour Declaration. The first announcement was made by Mr. N. Sokolow, Chairman of the Zionist Executive, at the dinner given in honour of the distinguished statesman, held at the Savoy Hotel on November 11, under the auspices of the Anglo-Palestine Club and presided over by Mr. James de Rothschild, whose interests and those of his family are so intimately bound up with Palestine. It was felt that a forest as a permanent symbol of rejuvenation of the soil would prove a fitting monument of Jewish gratitude to the great author of the Declaration, which Jews throughout the world looked upon as the Charter for their own National Regeneration. Since the announcement, the action taken by the Central Offices of the J.N.F. for Great Britain and Ireland has been endorsed by the widespread support which the project has received from both Jews and non-Jews. Amongst the names of those who have consented to act as Patrons of the Balfour Forest are to be found those of the Duke of Sutherland, the Chief Rabbi of the British Empire, the Marquess of Reading, Viscount Cecil of Chelwood, Mr. Lloyd George, Mr. Philip Snowden, Commander J. M. Kenworthy, and Sir Robert Waley Cohen—a clear proof, if proof were needed, that both Lord Balfour and the project designed in his honour enjoy a popularity which bridges political differences and unites divergent elements.

The planting of the Balfour Forest, for which one of the most commanding sites in Palestine has been chosen, will mark a further step in the afforestation work of the J.N.F. which has been carried on for the past twenty years. Evidence is not wanting that in days gone by Palestine was richly wooded, a circumstance which was conducive in no small measure to the traditional fertility of the land. Successive wars and neglect had, in the course of centuries, almost denuded the country of its trees, thus depriving the land of its protecting shade. Wells dried up; springs became choked with sand; the soil lost its moisture; marshes formed in the valleys. To the dearth of forests may rightly be attributed much of the damage that the land has suffered. And as, for the same reason, progress is still hindered, the importance of this form of activity cannot be over-emphasised.

The J.N.F. was quick to realise the importance of this work and in 1904 inaugurated the Olive Tree Fund. In the same year Dr. Theodor Herzl, the founder of the Modern Zionist Movement, passed away and for both practical and sentimental reasons it was decided that the Memorial to be raised in his name should take the form of a series of small forests—probably woods is the more accurate term—planted in his name. Plantation was begun in 1908 at Ben Shemen and Hulda, two of the first estates acquired by the J.N.F. The olive tree was selected for these early plantations because of the numerous advantages it possesses. It does not require to be watered, nor is it affected by climatic changes. It requires but indifferent soil and lives to a great age. Its economic advantages will be obvious, since both olives and olive oil are readily marketable.

Valuable as the olive tree is, however, experience proved that it was necessary to extend plantations so as to include more varieties of trees which could with more justice be styled forest trees. Small groves of pines, casuarina, cypress, and eucalyptus, which required even less attention than the olive trees, were planted in 1913. In the following year the War broke out and, in common with everything else, the young plantations suffered. For reasons of economy it was not possible to give the shoots the attention essential to their healthy growth. Consequently all afforestation work in Palestine suffered a severe set-back, and at the same time thousands of trees which had been planted with such sedulous care before the War were uprooted in the struggle between the contending Turkish and British armies.

Immediately after the War the J.N.F. adopted a new system of afforestation, whereby trees were planted on soil specially selected for the purpose on account of its nature. Apart from that, the J.N.F. had an obligation to fulfil to those people who had subscribed for trees for the Herzl Forest, and this obligation the Head Office in Jerusalem was determined to fulfil to the letter. As a result of this policy there are now twelve "forests"—in Ben Shemen, Hulda, Merhavia, Kinereth, Degania, Nahlath Yehuda, Bir Tovia, Kiryath Anavim, and Ain Harod, Kfar Hittim, Kfar Malal, Kfar Saba, and in all nearly half a million saplings have been planted and give every promise of reaching maturity.

The effects of afforestation upon the soil, health conditions, and even the climate of a country cannot be overrated. The psychological effects are no less well-marked. When one passes through, say, the grove at Hulda, which is the second of the Herzl "forests," one is seized with the very spirit of "a-wandering in the woods." What it must mean to a land which has been parched through centuries of neglect, to have these green oases scattered in different parts of the country, offering their welcome change from the heat of the sun on the continuous gaze upon rock and stone, only a traveller in the East can fully appreciate. For the moment, in this Jewish glade, one loses sight of the surrounding dry territory of the Arab settlement, and it seems as if there is no end to this continuous stretch of pine trees with their abiding effects upon the spirit and confidence of those coming under their influence. Indeed, it is not too much to say that these woods are absolute necessities for the maintenance of the true pioneer spirit which is playing so vital a part in the upbuilding of Palestine.

On February 6, which corresponds with the 15th Shebat in the Hebrew Calendar, and is the traditional Jewish New Year of the Trees, a beginning is to be made with the planting of the Balfour Forest. The exact number of trees to be planted on that day cannot as yet be stated, but that ultimately the Balfour Forest will prove a valuable addition to the afforestation of Palestine is clear from the interest aroused in the project.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 10.

After the New Year's holiday the Stock Exchange opened in optimistic mood, but the promise of a continuation of the activity which was in evidence in the last fortnight of the old year was not fulfilled. Business was inclined to slacken off and for this the approach of the end of the twenty-one day account was no doubt partly responsible. Gilt-edged stocks, however, have maintained their recent firmness, the excellent reception accorded to the cash portion of the issue of new 5 per cent. Treasury Bonds having reinforced the bullishness which has been a feature of the Consol market for several weeks. The home railway market it still a little uncertain as to dividend possibilities, a subject to which we return in a later paragraph. In the industrial market there have been fewer outstanding features than of late, and some of the recent favourites have suffered some reaction through profit taking.

The annual figures published by the Bankers' Clearing House show that the turnover of cheques, bills, etc., reached a new high record in 1927, and although this was mainly due to financial activity it is satisfactory to find a steady growth through the year in the country cheque clearing, which may be taken as a good index of the state of internal trade.

Home Railway Dividend Outlook.

The gross traffic receipts of the home railways having been completed for 1927, there is increasing interest in the dividend rates to be paid in respect of the past year. It is difficult, however, to give definite guidance, for apart from the customary absence of informative statistics, the position is complicated by the financial consequences to the companies of the country's recent trade depression and industrial troubles. The gross traffic receipts, for what they are worth, disclose a fairly satisfactory position. Comparing the figures with the previous normal year — 1925 — two companies—the London and North Eastern and the Great Western—record increases, while the remaining two companies—the London Midland and Scottish and the Southern—show moderate declines. The L.N.E.R. increase exceeds one million pounds, the G.W.R. advance being rather less than half this figure The Southern Company's decline is slightly over £400,000, the L.M.S. fall being somewhat less. But these figures are not strictly comparable with those for 1925, since in the meantime the companies are known to have effected considerable economies in working, but only the companies are aware of the precise extent of these economies. Moreover, reserves have been seriously depleted since 1925, and, obviously, the magnitude of the distributions will be affected by the directors' policy in this matter. Despite the large element of uncertainty, investors have lately been taking a more cheerful view of the position, the companies' junior stocks having in recent weeks shown considerable rises.

Prosperous Newspaper Companies.

The shares of newspaper companies continue to attract considerable attention, and this is not likely to be discouraged by the report of the Daily Mail Trust for 1927. The net profit rose from £226,531 for 1926 to £306,128; the dividend is to be 30 per cent. tax free, against 33⅓ per cent. paid on a smaller capital in 1926, and, as in the two preceding years, the shareholders are to receive a capitalised bonus applied to the reduction of the unpaid liability on the ordinary shares. There is conspicuous confidence in the future of a number of newspaper companies, and it is true that their recent earnings, despite adverse circumstances, have shown notable buoyancy. Recently the ordinary shares of most of the companies have been advancing, with the result that to-day they considerably discount the future. The ordinary shares of Allied Newspapers, for instance, return no more than £3 6s. od. per cent. There is available, however, a selection of prior charge stocks which do not lack attractions. The Daily Sketch and Sunday Herald 6½ per cent. debentures redeemable 1944, yield £6 3s. od. per cent. A return of £6 10s. od. per cent. is given by the 8 per cent. cumulative preference shares of Sunday Pictorial Newspapers.

The Improving Reconstruction Bonds.

There are signs of an approaching renewal of activity in the London capital market. A number of overseas loans are understood to be in process of negotiation and one of the first to be floated will, according to present arrangements, be the new Greek Reconstruction Loan. This issue will, doubtless, be assisted by the improving tendency recently shown by the leading reconstruction bonds. In the majority of cases the quotations are still considerably below the highest points touched last year, but they mostly show gains on the lowest quotations. There can be no doubt that there is good reason for the recent improvement in prices. The international horizon of Europe is not clouded to any immediately alarming extent, while the economic position is being steadily strengthened. The days of wildly fluctuating currencies seem definitely past, most of the leading countries having returned to the gold standard. France is the outstanding exception, but it is probable that she will join the family circle in the not too distant future. The investor who is in search of a good foreign investment would do well to consider carefully the more popular reconstruction bonds at their present prices. The Austrian 6 per cent. guaranteed sterling bonds, finally redeemable 1943, can be bought to yield £6 1s. od. per cent. A return of £6 7s. od. is given by the Belgian 7 per cent. stabilisation loan, finally redeemable 1956. The German 7 per cent. sterling bonds, redeemable 1949, yield £6 13s. od. per cent.

The Bicycle for the hardest wear

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 29, state:—

Since our last report the futures market has been rather quiet but the tone has been good. The week's summary of price movements is as follows:—

Sakellaridis: January, 34.58 dollars, 5.52 dollars up; March, 35.00 dollars, 0.63 dollars up; May, 35.32 dollars, 0.62 dollars up; November, 35.80 dollars, 0.70 dollars up.

Ashmouni: February, 27.32 dollars, 0.42 dollars up; April, 27.55 dollars, 0.48 dollars up; June, 27.57 dollars, 0.42 dollars up; October, 26.85 dollars, 0.45 dollars up.

Sakel. Again there is very little to say on the Sakel market this week; business has been restricted to four days only owing to the Christmas holidays. Prices show a slight rise on the week as a result of some buying by local operators encouraged by the firmness of New York to work on the long side. Commercial houses have been more or less out of the market, and their operations have been limited to transfer from January to March and to hedges against fixings of spot purchases.

The demand from abroad has continued on the poor side; it is to be hoped that we shall see some improvement after the turn of the year. The stock in Alexandria to-night is up to 2,228,180 kantars—the highest figure this season.

Uppers. The rise in New York has been reflected on prices here, but, being without any real commercial support, the market has not shown much life.

At the third December tender, 47,000 kantars dockets were issued, making a total of 65,250 kantars for the month.

The week's receipts amount to 166,451 kantars, against exports 109,168 kantars; the stock in Alexandria stands at 3,228,180 kantars.

Spot. This has been a short week, the market being only open for four days owing to the Christmas holidays. Business continues on a very meagre scale, and we have had dull markets at Minet el Bassal. Sales amount to about 8,200 bales, of which we estimate 3,600 bales Sakellaridis, 3,950 bales Ashmouni and Zagora, 300 bales Pilion and 350 bales other varieties. On the spot there is no salient new feature to report.

Sakellaridis: Although there was a slightly more extensive inquiry than last week, the actual business transacted continues very poor, but has covered all grades. Spot differences are generally without much change.

Ashmouni and Zagora have been in only moderate demand, and a poor business has once again resulted. All grades up to Good have been dealt in, the better grades being quite out of favour.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 4:—

Egyptian Futures.—Sakel Contract.—For the greater part of the period since our last report this contract has shown a gradual hardening tendency, the firmer tone of the American markets and rather improving trade support combining to influence the improvement. In addition to this Alexandria has sent some strong reports, notably yesterday when an advance of nearly a dollar a kantar carried the January position to 35½ dollars. This, however, failed to arouse the required response at this side, and, with other markets then beginning to show a somewhat reactionary tendency, values to-day have inclined to ease appreciably both there and here, so that the advance since our last report on December 21 registers curtailed gains of 15 to 37 points for near and 10 to 11 points for distant months. Whilst conditions have certainly improved and the offtake appears to be broadening, this factor is fully discounted by the present level, and from reports received it would seem that the latter part of the advance in Egypt was mainly due to customary speculative "bullish" optimism on any encouraging features being noticeable in other markets. One of the most satisfactory features shown by our market has been the comparative strength recently displayed by near positions; at the tail end of last month considerable January liquidation was in evidence, and this depressed the option in question to 35 points below March. In certain quarters fairly heavy tenders were anticipated, but we did not share in this view, having in mind the relative cheapness of our contract compared to the overseas market. Yesterday, the first tender day, only one docket was circulated and since this differences have closed up materially, at the time of writing the current position running at only 20 points under March. We have already referred to the trade situation; both official and private reports from Manchester are decidedly more reassuring, and quite a fair business has been done in fine counts during the past few days; more confidence in the position is now in evidence and whilst it is improbable that spinners will, in view of the present plentiful supply, abandon their policy of only covering their near-by commitments, we consider that the demand will be of a much more sustained character than that experienced during the latter part of the old year.

Again we are rapidly approaching the period when the new Sudan crop will be marketed, and this in itself encourages a considerable degree of confidence amongst producers regarding their supplies and will also probably serve as a check to any manipulative or heavy "bullish" speculative activities in Egyptian Sakels. The present American/Egyptian difference of approximately 700 points appears quite wide enough in regard to the supply figures, and we consider that any advance over this premium will, for the time being, at any rate, meet with opposition from holders of actual.

Egyptian Spot.—The rather better tone which was noticeable in spot circles just prior to the Christmas holidays has continued during the broken period which has elapsed since we last wrote. A substantial advance has taken place in the price of Sakel cotton, and Upper and Pilion have also benefited. The best qualities of these growths have proved to be most sensitive to the reaction, but it has also become apparent that the market for inferior Sakel cotton has been very well "combed" during the past three months, with the result that an exceptional net rise of 80 points has occurred in the spot quotations of Fair. Until to-day we have witnessed a series of remarkably steady markets, interspersed with occasional bursts of strength, towards which Alexandria has on several occasions contributed. Last evening, however, witnessed an unexpected break of some 75 points in the New York market, with the result that to-day all markets have reacted in sympathy.

The demand for Sakel cotton has continued to show improvement, practically all qualities coming in for a share of attention, but inquiries for low cotton, at from 11½d. to 15d., have easily claimed the largest share. Uppers have been in fair request at from 13½d. to 14½d., but very little attractive cotton is now offering at under the latter figure. Pilion has remained a rather neglected commodity. Sudan cotton has been in better request and a fairly good business has resulted. Forwardings to the trade have been dislocated by the intervention of the holidays. Estimated sales (for seven business days), 2,100 bales Egyptians and 2,350 bales Sudan.

Notes of the Week.

The Egyptian "Conversations."

The Egyptian Government is to be congratulated on having adjusted the differences of opinion that had arisen within its ranks. It has in this way emphasised the closeness of the co-operation of Nahas Pasha with the Prime Minister and the loyalty of the Wafd to its leader and to the Coalition. The impatience of the country to learn of some concrete issue to the conversations between Egypt and Great Britain is only natural; but it is equally evident that the discussions should not be unduly hurried. The mere fact that they are continuing is a sign that there is still ground to explore and that the provisional understanding between the two countries still holds good. It could hardly fail to reassure public opinion in Egypt if the appointment were announced without further delay of an Egyptian Minister to London, in succession to Aziz Izzet Pasha, whose tenure of the post contributed so much to the improvement of Anglo-Egyptian relations. Adly Yeghen Pasha, it is understood, has so far not seen his way to accepting the offer made to him; but if the obstacles to his acceptance could be overcome, there would be, as it were, a second big power station at this end generating current for the machinery of Anglo-Egyptian friendship. Should, however, Adly Pasha's affairs not permit his prolonged absence from Egypt, the Government's choice may, it is reported, fall upon—and equally well—an important member of the Cabinet.

Bulgaria and the Powers.

The loyalty and thoroughness with which Bulgaria has accepted the onerous conditions of the Treaty of Neuilly have not passed unrecognised by the Great Powers. It is not the fault of the latter, if the same verdict is not recorded by Bulgaria's neighbours. Due allowance has always been made for Balkan nervousness, and in the long run the confidence shown by the Western Allies in the good intentions of the Sofia Government has not been without its effect on those who pay the Bulgarians the compliment of fearing them even with reduced armaments. In these circumstances it would be unfortunate if at this particular stage Bulgaria were to grow weary of well-doing and relax the self-discipline that has saved her from adventures and purposeless kicking against the pricks. At the end of last June the Liquidation Board appointed by the Conference of Ambassadors to see that the military clauses of the Treaty of Neuilly were still carried out after the withdrawal of the Commission of Control from Sofia concluded its labours in Bulgaria and submitted its report, which has now been passed on to the League of Nations. In this document it is pointed out that, although on paper the Bulgarian Government appears to be doing all that is required of it for the satisfactory execution of the clauses of the Treaty of Neuilly, there are indications that "the new military laws, particularly so far as they concern army recruiting and organisation, have not been enforced or have been infringed." Moreover the Article in the Bulgarian Constitution which embodies the principle of compulsory military service—a principle incompatible with the stipulations of the Treaty, has not been revised in accordance with the undertaking given by Bulgaria. For these reasons the possibility of the League's having to enforce its right to carry out a special investigation in Bulgaria is hinted at.

The Wiser Course.

The warning, it may be hoped, will be taken to heart betimes by the Bulgarians. The root of the trouble is probably to be found in the failure of the military authorities to see eye to eye with the civil administration. While successive Governments have wisely recognised the foolishness of any attempt to go behind the Treaty of Neuilly, the Army leaders from misguided devotion to their profession have hoped to drive the thin end of the wedge into the Allies' resolve to see the Treaty literally fulfilled in all its details. In regard to conscription Bulgaria is entitled to a considerable amount of sympathy. It is unreasonable—and the Continent is aware of the fact—to expect a Balkan State or any other wholly agricultural in character, to work the voluntary system of enlistment successfully, except at a prohibitive cost. The Bulgarian Government, accordingly, has tried hard to secure the revision of this particular condition, and in the hope of being able to regard it either now or in the immediate future as *sub judice* has naturally refrained from altering the Conscription Article in the Constitution. It may be better in the long run for the country to recognise that on this point the scales are hopelessly weighted against it and to give up the unequal struggle. Bulgaria will fare much better and have more money to spend on

Digitized by Google

needed economic development, if she makes up her mind that for many years she had better place herself unreservedly in the hands of the League of Nations and trust to the world's conscience to see that she suffers no prejudice to her independence and territorial integrity.

A Further Macedonian Outrage.

The criminal struggle in South Serbia continues, and has claimed two more victims—the police official who conducted the inquiry preceding the recent trial of the Macedonian students at Skoplye and a woman, said to be the wife of a Bulgarian, who wounded him and then turned her weapon on herself. In the case of the students the death penalty was not inflicted, the majority being sentenced to long terms of imprisonment, while six were set free; but reports were circulated of their torture in prison while awaiting trial, and embittered attacks in the Skupshtina shortly afterwards on the management of State prisons lent colour to the statements regarding the treatment accorded to the students. So long as the Macedonian Committee can find willing tools to carry out its orders and Yugoslav authorities supply what are regarded as incentives to outrages, this unhappy chapter in Balkan history may be expected to continue. Gradually, it is to be hoped, absence of provocation will begin to assert itself. There is a steady improvement in the administration of South Serbia—a problem which the Belgrade Government appears to be grappling with conscientiously. If there was any regrettable treatment of the students in Skoplye gaol, it reflected a state of affairs that was common to prisons all over the kingdom. There will be the inevitable demand in Yugoslavia for drastic action against Bulgaria, because the woman who perpetrated the murder in Skoplye is reported to have come recently from that country; but the Belgrade Government has fortunately shown its ability of late to resist this shortsighted clamour. If the principle that a would-be murderer, who has no thought of self-preservation, can be prevented from effecting his purpose is maintained, the onus of preventing him rests with the Government of the country in which he does the deed, rather than with that of the State of which he may be a national. The Yugoslav police system, it would be imagined, could be put to better purpose than maltreating its prisoners, if it set about to make itself regarded as the friend and protector of the community at large, so that the whole population enlisted itself on its side as far as possible for the prevention of crime. In the present instance a more effective procedure than the dispatch of Notes to Bulgaria and wholesale arrests and intimidation would be to trace the sequence of events that allowed this particular agent of the Macedonian Committee to enter Yugoslavia and to move about freely until she accomplished her mission. If it can be shown that the Yugoslav Government is powerless to protect its subjects by its own right arm and the intelligence of its agents, then the case for making its peace with the Macedonians becomes very strong indeed.

An Abyssinian Incident.

No other course could be adopted by the British Government, in the face of the Abyssinian Government's refusal to recognise a Legation official, than to threaten a rupture of relations, unless the ban was immediately withdrawn. It is unfortunate, however, that such an incident should have arisen, as it suggests that tempers are on edge in Addis Ababa and that consequently there is not much hope of an amicable understanding in the immediate future between Great Britain and Abyssinia on the subject of the Lake Tana dam. The details of the incident in this instance are of less importance that the fact that there has been an exhibition of bad blood. Mr. Photius Zaphiro, Oriental Secretary at the Legation, is a naturalised British subject of Greek origin, who has been connected with the British Legation in Addis Ababa since 1911. A year ago the Abyssinian Government took exception to a statement regarding slavery in Abyssinia, alleged to have been made by Mr. Zaphiro, which the latter denied having made. Instead of accepting this denial, the Abyssinian Government seems to have maintained its point, and its hostility to the Oriental Secretary has come to a head in the rejection of a formal communication from the Legation, bearing Mr. Zaphiro's signature. The document, as a result of the British Minister's threat, has now been accepted; but the incident shows an unfortunate state of affairs, which must, very obviously, be mended, in the interests of both countries.

The R.A.F. and the Wahhabis.

Ur of the Chaldees is now prominent in a double light, for, apart from the searchlight which Mr. Woolley's archæological expedition is throwing upon it, it is, so to speak, enjoying a spotlight from the fact that the Royal Air Force have made it their base for their expeditions against the marauding Mutair of Faisal ud Dawish. From Ur aeroplanes have been distributed to several desert posts, whence searches are made for the miscreant Wahhabis. It was, incidentally, some such expedition as this which we foreshadowed as the only feasible expedition, the idea that Iraqi troops were to be engaged in territorial combat with the Wahhabis being absurd—although such might have been imagined from the statement which was prepared for the Baghdad Majlis on the subject. So far, the R.A.F. appear to have had little luck in discovering the Mutair. It is stated that they have even visited Artawiyah, only to find the headquarters of Faisal ud Dawish and one of the first strongholds of the *Ikhwan* movement deserted by all males. It is possible, of course, that before the R.A.F. have been able to inflict punishment on the Mutair and their fellow violators of the peace, Faisal ud Dawish will have made his submission to King Ibn Saoud, who will then, presumably, account to the authorities of Iraq for the recent raids and apply a fit punishment. If the whole affair is not to be the veriest "eye-wash," the penitence and humiliation of Faisal ud Dawish, or at least the outward signs of such penitence and humiliation, must satisfy both the Iraqis and the British authorities in Arabia: there must be no pseudo-punishment by the Wahhabi King of the indefensible Faisal ud Dawish.

The New Iraqi Cabinet.

Sir Abdul Muhsin as Saadun has had little difficulty in forming a new Cabinet, but, in order to strengthen his position in the Majlis, he decided to dissolve Parliament. His Cabinet does not contain many men who have already a reputation for ability, and the new Prime Minister is stated to have announced his intention of concentrating

CAPITULATIONS IN EGYPT.

The word Capitulations has a sinister sound to-day; yet it is fair to recall that in its origin the system carried with it advantages to the country where it was introduced. In the case of Egypt capitulatory rights have been exercised by foreigners in virtue of agreements entered into by the Sultan of Turkey, Egypt's over-lord, and against the long list of privileges that foreign nationals have enjoyed—exemption from courts of local jurisdiction, immunity from personal taxation and arrest, inviolability of domicile and commercial advantages—could be set only the asset that the institution of the Mixed Courts provided as a training-ground in judicial procedure and for the formation of an Egyptian judiciary. The difficulties that the capitulatory régime placed in the way of the Egyptian Government—apart from any question of limitation on Egyptian sovereignty—and the prejudice caused to the economic life of the country have long been recognised by Great Britain. In the Report of the British Agent and Consul-General for 1904 the question of the Capitulations and their harmful effect was dealt with at length. Ten years later, when announcing that the suzerainty of Turkey was abolished, the British Government in a Note to Sultan Hussein declared that the Capitulations were no longer in harmony with modern conditions and undertook to secure a revision of the Treaties at the close of the War. In 1917 the Egyptian Government appointed a Commission to investigate the modifications that might be necessary in the existing judicial and legislative conditions of Egyptian Courts when the War came to an end; in other words, to frame proposals for the abolition of the Capitulations. The magnitude of the Commission's task entailed a protracted inquiry, which coincided with an unfortunate epoch in Egyptian history. The chastened frame of mind produced in the early stages of the War had passed; every separate interest in the country, whether Egyptian or foreign, considered itself threatened, and while foreigners made up their minds not to surrender any of their privileges, Egyptians still further queered the Commission's pitch by hostility towards it, because it was supposed to be playing into British hands by working for the abolition of the Capitulations. The Commission's labours came to nothing, although they were made use of by Lord Milner's Mission. In the Memorandum issued by that Mission in 1920 it was proposed that in the Treaty to be arranged between the two countries "the necessary modifications in the régime of the Capitulations will be secured by agreements to be concluded by Great Britain with the various Capitulatory Powers. These agreements will provide for the closing of the foreign Consular Courts, so as to render possible the reorganisation and extension of the jurisdiction of the Mixed Tribunals and the application to all foreigners in Egypt of the legislation (including legislation imposing taxation) enacted by the Egyptian Legislature."

The stage for further action on the part of the Egyptian Government in regard to the Capitulations was set in King Fuad's Speech from the Throne last November at the opening of Parliament, when reference was made to the favourable reception that had been given to overtures on the subject by the Powers who had been consulted during his Majesty's tour abroad. On December 25 the Egyptian Government addressed a Note to the representatives of the Capitulatory Powers asking consent for the introduction of certain modifications in the rules for the administration of justice, and, in the event of the Governments concerned wishing to discuss any of the points, inviting them to send delegates to an international conference to be held in Cairo early in February. The shortness of the notice is explained by the fact that the proposed modifications may affect the Egyptian Budget, and the Government was anxious to embody any credits required in the Budget which has to be passed by Parliament in April. Although the actual changes proposed in the rules for the administration of justice are few in number, they raise the question of the Capitulations, and it is clear that the Conference when it meets will have to deal with the régime as a whole with a view to its adjustment to altered conditions in Egypt. In these circumstances it is unlikely that all the Powers concerned will be able to determine their attitude definitely on the subject in time to reply to the Egyptian Note before January 31 and to be represented at a Conference early in February. In spite, therefore, of the pressing nature of one at least of the modifications in the judicial administration that the Egyptian Government wishes to introduce, it will probably prove wiser in the long run to hold the proposed Conference when all the Capitulatory Powers have had time to adjust their views to the necessities of the new situation in Egypt.

Egypt has reason to appreciate the lead that Great Britain has given to the other Powers in regard to the capitulatory régime, and it is satisfactory to find that the two Governments are in harmonious co-operation on the subject. Lord Cromer held the opinion that foreigners lost more than they gained from their privileged position; at the same time he could not bring himself to believe that Egypt would be capable in the (then) near future of exercising administrative and judicial control over the persons and property of foreigners. Many years, however, have passed since this dictum was delivered, and it is evident that the demand for the removal of the more glaring anomalies of the capitulatory system cannot be opposed on any tenable ground. The main requirements of the Egyptian Government at the moment concern the widening of the competence of the Mixed Courts so that they may deal with new categories of breaches of the law, prominent among which is the traffic in drugs, and with certain misdemeanours which at present are punishable only by ordinary police penalties. Among the latter are enumerated procuration and the white slave traffic, food adulteration, commercial frauds and gambling. One article of the Mixed Civil Code is held to clash with a clause of the Constitution determining the promulgation of laws passed by Parliament, and it is sought to bring the two into harmony by the modification of the former; it is also proposed to abolish judge assessors of the "Tribunal Correctionel"—a reform approved of by the Mixed Courts themselves—and to institute a new Chamber of Judges at the Court of Appeal, to be composed of three judges only, to deal with judgments of first instance made by a single judge, with a view to expediting the course of business in the Mixed Court. There is also to be a modification of the present system of appointing judges so as to provide for the appointment for three years of both Egyptian and foreign judges, and finally—as a question of *amour propre*—the Government seeks to remove the present disability which does not allow judges of the Mixed Courts to be recipients of honours from the Egyptian Government. The points raised are not of equal importance; but in so far as the trend is to remove anomalies which conflict with the efficient and prompt administration of justice in Egypt, strengthening the Mixed Courts at the expense of the Consular Courts, the Egyptian request should be assured of the sympathetic consideration of the Capitulatory Powers.

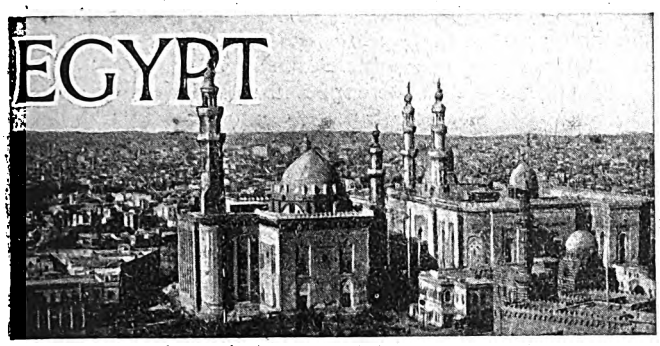
The Near and Middle East*

From Our Own Correspondents.



Cairo, January 7.

The King of Afghanistan.

King Amanullah left Egypt on Thursday for Italy, after spending two days in Alexandria, where he visited the Museum, the various gardens and Minet El Bassal, and attended a tea-party given in his honour by the Municipality. As both His Majesty and his suite showed a degree of independence unusual amongst royal guests, which considerably added to the anxiety and work of the responsible officials here, it is not unnatural that their departure without any untoward incident having occurred should find the Egyptian authorities considerably relieved in mind.

The Statistical Congress.

The International Congress ended on Thursday with a brilliant banquet at Shepheards Hotel, presided over by Abdel Hamid Suliman Pasha, General Manager of the State Railways and the Vice-President of the Organising Committee. The Congress has been in every way a success. The delegates have by no means had an easy time of it, for, in addition to the deliberations which took place practically every day, a full programme of sight-seeing was arranged for them, as well as a series of entertainments, among which, apart from the reception at the Palace on the first day and the farewell banquet referred to above, the outstanding feature was the reception given by the National Bank of Egypt at the Semiramis Hotel, where a delightful musical programme as well as a sumptuous buffet were provided, and the evening finished in an impromptu dance. The next session will be held at Warsaw in 1929.

The Political Situation.

This past week the air has been full of rumours of resignations and disagreements between the parties of the Coalition, and of more or less semi-official contradictions. As a consequence there has been considerable restlessness all round The trouble seems, however, to be over, for the time being at any rate, for, as I write this, comes word from an authoritative source, confirming the statements of the Ministers mentioned, that the incidents in question have been satisfactorily settled and that the Coalition is as strong as ever. So much the better, and it is sincerely to be hoped that the two parties will continue to work smoothly together and so facilitate the task of Sarwat Pasha in conducting the negotiations with the British Government to a mutually satisfactory finish.

The Negotiations.

There has been some adverse comment at the duration of the conversations and the delay in giving any definite information on the subject, and the inference has been made that things are not progressing satisfactorily. This is not so. I am assured that there has been no hitch whatsoever, and that all is going on well. At the same time it is as well to point out that these conversations, or whatever you may like to call them, have not been so far unduly long.

The public appears erroneously to think that the start in this connexion was made when Sarwat Pasha arrived first in London with King Fuad last July. What, as I understand, took place then was a sincere attempt on both sides to clear the air of the misunderstandings which then recent events had created, and it was not until Sarwat Pasha returned to London at the end of October after his flying visit to Egypt that any serious discussion was initiated in regard to a settlement of the important outstanding questions. Moreover, compared with the negotiations of the Adly Delegation with H.M.G. in 1921 there has been no undue delay. That delegation was four months in London and its stay would certainly have been much longer if there had not been the rupture as the result of the Curzon Note. Further, it must be borne in mind that those negotiations took place in London directly between the Delegation and the Foreign Office, whereas the major part of the conversations which Sarwat Pasha has conducted have been carried on from Cairo with London through the Residency, which naturally must prolong the discussions. In any case, it is unreasonable to complain at the time that has elapsed, or to see in it anything to justify pessimism.

The Case of Former Ottoman Subjects.

Satisfaction is about to be given in the matter of nationality to the communities in Egypt, formerly Ottoman subjects, whose land of origin has become detached from the Ottoman Dominions as a result of the Peace Treaties. Basing itself on those treaties the Egyptian Government drafted a new nationality law, laying down conditions for acquiring Egyptian nationality and for opting for the nationality of the countries under whom these detached parts of the Ottoman Empire have now been placed. These conditions were unnecessarily harsh, and not unnaturally aroused some agitation amongst the communities in question. Two of the provisions to which exception was particularly taken were: first, the one empowering the Egyptian Government to expel any former Ottoman subject within six months of his or her exercising their option in favour of a nationality other than Egyptian, and, secondly, the one laying down that, while five years' residence was necessary to acquire Egyptian citizenship and that privilege could be conferred without any residence on anyone who rendered eminent services to the Egyptian State, no-one could acquire full political rights until a period of ten years after the acquisition of Egyptian citizenship.

The law has been under examination by a Parliamentary sub-committee, and as a result of discussions it has been agreed to delete the clause giving the Egyptian Government power of expulsion, and it is further very probable that a very considerable reduction will be made in the period necessary to qualify for political rights. The Egyptian Government is certainly to be congratulated

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

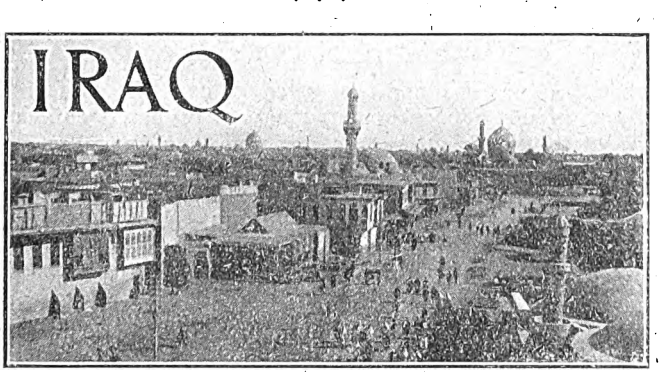
on its decision with regard to the position of former Ottoman subjects after they opted for another nationality. These communities, some members of whom have long been resident in Egypt, have come to constitute a very valuable part of the social structure of the country. The proposal giving the Egyptian Government power of expulsion may have been actuated by a desire to bring pressure on them to become Egyptian subjects, but it was a very short-sighted move and would have completely defeated its own end.

The Noxious Drugs Traffic.

The Residency has issued a notice to all British subjects calling attention to the British Order in Council of 1927 and the Dangerous Drugs Regulations and instructing all who wish to manufacture, trade in, procure or possess dangerous drugs to apply to the High Commissioner for a licence. The issue of this Order in Council puts an end to the anomalous situation of British subjects implicated in drug traffic in Egypt. As was reported at the time, the British Supreme Court, about a year ago, decided to everyone's surprise, that the Order in Council, 1910, governing British subjects in Egypt, prevented the British Consular Court from dealing with British subjects accused of contravening the Egyptian law. The effect of this decision was to afford preferential treatment to British offenders, who had to be taken before the Mixed Courts where the maximum penalty is only £E.1 fine or seven days' imprisonment, as compared with Egyptian offenders and those of other nationalities, who are liable to much heavier penalties before their respective jurisdictions. The new Order in Council and the regulations bring British offenders within the jurisdiction of the British Consular Court, which will henceforward inflict the heavy penalties to which they would have been liable had their offence been committed in the United Kingdom, and British offenders will thus be on a similar footing, as regards penalties, to those of other nationalities. The promptness with which the British Government, having realised the situation, proceeded to rectify it, has made a deep impression on the Egyptian public, and the Press is particularly warm in the expression of its appreciation of the part played in this matter by the High Commissioner. Instructed Egyptian opinion regards the settlement of this question as an earnest of Great Britain's desire to assist Egypt in every way possible to put her house in order, and as an irrefutable reply to those who doubt the sincerity of the British expression of goodwill.



Baghdad, December 24.

The Treaty.

The terms of the new Anglo-Iraq Treaty, so eagerly discussed and awaited, have been quietly received in Baghdad. There have been no raptures of joy or hate; the fair-minded realise that Iraq has gained a definite step towards complete independence, and that in the fresh concessions and promises of Great Britain she has been given quite as much as she can for the present cope with. The extremists, on the other hand, are disappointed, but their disappointment is partly due to the exaggerated rosiness of the hopes held out from England. Their desire to support King Faisal, whose independent monarchy is one of the main planks of their platform, makes it difficult for them to pour scorn on the Treaty, in negotiating which he took so prominent a part.

The only sensational result here of the publication of the Treaty was the resignation of two Ministers—Interior (Rashid Ali Beg al Gailani, who has acted as Prime Minister since the resignation of Yasin Pasha from that position) and Finance (Yasin Pasha al Hashimi). As the Cabinet is in any case expected to fall within the next few weeks, these resignations lose much of their importance, and may, in fact, be regarded as merely moves in the political game. The Prime Minister (Jaafar Pasha al Askari) is expected back in Baghdad at the end of the month, and it is generally felt that no important developments will take place until his return.

Parliament.

At the third meeting of the present Parliamentary Session, on December 17, the only subject on the agenda was discussion of the Speech from the Throne, to which the accepted form of reply was agreed upon. A question was asked: What precautions are the Government taking to protect the Iraq frontier from Wahhabi raids? A reply was postponed until the next sitting of Parliament. The question of conscription was then brought up, a member asking the President whether it was true that he had been asked by the Acting Prime Minister to postpone the presentation of the Conscription Bill to the Majlis until further notice. The President (Abdul Muhsin Beg as Saadun) replied that he had received a letter from the Government to that effect. Several deputies asked whether this meant the complete withdrawal of the Bill; but a proposal to postpone the question "until further notice from the Government" was carried by a majority.

Baghdad, January 7.

The Wahhabi Raids.

The Prime Minister has returned to take up the reins of government with a firm hand; and the expected fall of the Cabinet has not taken place. The reason for this is that the country is profoundly disturbed by the menace of Wahhabi aggression on its south-west frontier. Since the raid reported in my last letter, Faisal ud Dawish has led four more hostile bands into Iraq territory, killing without mercy the shepherd tribesmen whose flocks were grazing in the regions west of Nasiriyah; and a fifth raiding party is reported by telegraph to be making its way towards the frontier. The ruthless and brutal sack of holy Karbala by the Wahhabis in 1801 is still a scar on the national memory, and the terror-stricken dread inspired in the unwarlike Iraqis by the very name of the *Ikhwan* is perhaps not realised by Europeans. The calmness of their British ally in the face of the recent frontier raids is bitterly criticised by Iraqis in the local Press, which clamours for punitive measures.

The Government is careful to state that it is not making war on King Ibn Saoud—who, it is said, is prepared to attack his unworthy vassal from the rear; but a punitive expedition is to be dispatched as soon as possible to deal with Faisal ud Dawish. Hence the Cabinet, which includes veterans of the Great War such as Jaafar Pasha and Nouri Pasha, remains in power; measures for the commandeering of transport, and so forth, are being rushed through Parliament; Iraqi forces, with the support of the Royal Air Force and other British units, are to attack all hostile tribes within four days' march of the frontier. Local opinion expects the war to begin in a week's time and be over within a month; one hopes it may be as short, but it is impossible to overlook the danger that once Iraq has taken the offensive she may rouse against her all the vast hordes of Arabia, and that King Ibn Saoud, unable to control his scattered hosts, may be compelled to throw in his lot with them in order to retain any semblance of kingship.

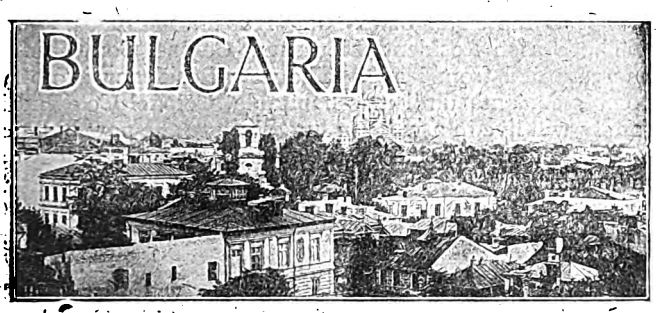
Imperial Airways.

The weekly air mail liner was late last week for the first time since the inauguration of the service, and for two days grave anxiety upon its fate was entertained. The aero-

Digitized by Google

plane "City of Baghdad" was due on Thursday afternoon, but no news of her was heard until late that evening, when two wireless messages were received from the pilot giving the location in which he had been forced to land owing to lack of petrol. Captain Warner, an Imperial Airways pilot whose wife was a passenger in the "City of Baghdad," left early next morning by aeroplane, but failed to find the missing machine; he was joined in the search by another of the Company's aeroplanes from Gaza, and by three machines of the Royal Air Force, but not until Saturday morning did Captain Warner find the stranded "City of Baghdad," about fifty miles from the usual track. A fault in the compass is supposed to have caused the deviation. The pilot and passengers report a most friendly and helpful reception from the Anazah, near whose tents they landed.

Devotees of air travel will soon be able to make the whole journey from England by air, going as far as Egypt by the new Indian airship service, and thence to Iraq by the already established trans-desert air route. A new enterprise of Imperial Airways is the carrying of English newspapers in weekly consignments: after this week we shall be able to read the London papers within eight days of their publication. And among other marvels of progress, it may be remarked in passing that carols sung in St. Mary's Church, Leicester, relayed by wireless *via* London, were heard in the National Cinema, Baghdad, on Christmas Eve!



Sofia, December 22.

The Role of Youth.

In order to appreciate what has been happening recently in Sofia, it is necessary to realise that since the War each of the Bulgarian political parties has been duplicated by an organisation of younger members of the Party, which, representing the new generation, acts as a vanguard, but as a vanguard which tends more and more to become independent of the official "Staff," which is always directed by the "old men." The Communists first introduced this innovation, with an object which it is quite easy to understand. The Agrarians, when they were making serious struggles against the Communists, adopted the latter's tactics in order better to carry on the struggle. The *bourgeois* parties soon followed the example of the Agraro-Communists and, seeing the necessity of adapting themselves to the new conditions, created their *organisations de jeunesses*.

To tell the truth, these organisations have, up to the present, played a rather pernicious rôle, since, in Stambolisky's time, it was precisely these young Agrarians who committed the most revolting excesses. They thus powerfully contributed towards rendering the *régime* intolerable and preparing the moral atmosphere without which the *coup d' Etat* of June, 1923, could never have been accomplished. A year earlier, before a congress of young partisans of the National Progressive Party, constituted by the fusion of the Gueshoff and Daneff groups, M. Bouroff pronounced the fatal words which were the signal for the Bulgarian civil war. Emboldened by the creation of the Constitutional *bloc* which had just been formed by the three parties, Democratic, Radical and National-Progressive, in the struggle against the Agrarians and for the re-establishment of the Constitution, this statesman, otherwise so discreet and so balanced, was prevailed upon to tell his young friends that they must defend themselves to the end and that their enemies would walk over their dead bodies if necessary. The Agrarians at once imagined that they were in the face of an organised *coup de force*, and as the Constitutional *Bloc* had announced a big public meeting at Tirnovo for September 17, they preceded them there, armed with cudgels and revolvers, and unmercifully rushed upon all the adherents of the *bloc*, beating some, killing others, arresting all the leaders, for the most part former Ministers—in a word, departing from the path of law to which they have not even yet completely returned.

In general it may be said that the Young Men's organisations constitute the "heel of Achilles" of the Bulgarian political parties. The Democratic Entente makes no exception to this rule, but rather affords a glaring confirmation of it, for, after the formation in August, 1924, of the Group, when the National-Progressives and a section of the Democrats and Radicals became fused with a certain number of people, civil and military, until then without a party, they leaned on the young men in the hope that they would lend themselves more easily to the change of heart required and attain the desired unity. But the same antagonisms soon made themselves manifest among the young as among the old, with this difference, that in the case of the young, by reason of their natural turbulence they were more violent than and less easily healed than the old. Evidently this was due to causes outside consideration of age. It was visible at the first Congress of the new organisation, in 1925, which left rather painful memories. It was hoped, however, that the second, which has just come to an end, would help to efface that impression and definitely seal the unity of the party. But one has been misled, this time more than before, this Congress having registered only a series of scandals which have ended in an open rupture.

The Second Congress of Young Sgovorists.

It was known that the second Congress of the Young Sgovorists (Sgovor Entente) would be the arena of bitter struggles and stormy discussions, and it would certainly have been better if the rivalries of the party leaders had not been mixed up with them. The result was, nevertheless, inevitable. More than in the official party there was rivalry here to obtain the leadership of this movement, where different groups saw the future of their domination in the Democratic Entente. The main rivalry lay between the Democratic Ententists of M. Liaptcheff and the other party groups, to which the friends of M. Tsankoff joined themselves. It was thus a case of M. Liaptcheff *versus* M. Tsankoff, and the issue both before and during the Congress was between these two men.

At the opening of the Congress there was a scene significant of the spirit and dissensions of the Democratic Entente. A member of the Cabinet, the Minister of Railways, M. Kimon Gheorghieff, had been appointed by the Government to direct the work of the Congress, but when he tried to undertake his rôle, he was received with protestations and cries of "Sit down," which lasted a long time. Profiting by a lull, M. Liaptcheff intervened, in order to greet the Congress in the name of the Government. He had the hardest work to make himself heard, and was even the object of hostile exclamations on the part of a certain group, who shouted to him to go away. The meeting appeared to be hostile to the Government. Then M. Tsankoff, who makes no secret of his wish to overthrow the Government, thought the moment had come for him to deliver his knock-out blow, and he pronounced his famous diatribe against the remnants of the old parties and against the elder statesmen —which was a challenge thrown at M. Liaptcheff.

The challenge was immediately taken up, not by the President of the Council, who remained very calm, but by one of his least fervent friends, M. Raschko Madjaroff, former Minister and President of the Democratic Entente

Digitized by Google

Parliamentary Group, who replied with great vigour that one must be devoid of scruples and consumed with morbid ambitions to condemn one's elders *en bloc*.

This oratorical duel made a deep impression, not only on those present, but on everybody. Naturally, care was taken not to divulge too much of what took place, and the Congress, realising later that it was about to cause irreparable harm to its party and to its country, the following day made excuses to the President of the Council and to the delegates of the Government for the insults which they had hurled at them. But this did not prevent the Congress delegates from leaving each other more disunited than ever, so disunited that they could not even form a council of administration.

The scenes which were unfolded at the Congress of the Young Sgovorists will certainly have wide repercussions. A beginning has been made in the Central Committee of the Democratic Entente, where the attitude of M. Tsankoff and his friends has been violently stigmatised, and will ultimately be followed in the relations between the different leaders of the Government party, and also, perhaps, in the ministerial changes which can no longer be delayed, inasmuch as the enemy of the President of the Council is able to count on some friends in the Cabinet, and it is obvious that the openly declared struggle renders no longer possible collaboration between M. Liaptcheff and M. Tsankoff.

TRANS-JORDAN.

Amman, January 5.

Christmas at Amman.

Christmas was celebrated here with the usual series of dinners and dances. A most successful concert was given by the Royal Air Force, and, on December 23, the Royal and Ancient Order of Buffaloes organised a carol party, who visited all the British residents. The party was much enlivened by the enterprising Buffalo who took the soprano parts, and by the addition of a harmonium.

The Winter.

Last winter was the most severe experienced in Trans-Jordan for years, and it seems possible that this winter may prove equally trying in other ways. No heavy rain has fallen as yet, and the *fellahin* are becoming more and more anxious concerning their crops. The sheep also have suffered, but some recent light showers have improved their condition.

The Allenby Bridge.

Travellers in this part of the world must always be prepared for surprises, and those desirous of crossing the Jordan just after Christmas found one awaiting them at the Allenby Bridge. The bridge, which was badly damaged during the earthquake of last July, was closed to wheeled traffic on December 26, for repair, so that motorists going to or from Palestine must arrange for a car to meet them on the further side of the Jordan. Unfortunately, Trans-Jordan was not notified of the date on which the bridge would be closed, and a good many people were inconvenienced thereby. The temporary trestle bridge across the Zerka, between Suweileh and Jerash, is also out of action, and as the new one is not yet finished, cars must for the stream—a matter of some difficulty at that point.

General News.

The family of the Amir Abdullah have left for Cairo, on a visit to the sister of ex-King Husain.

The British Resident, Lieutenant-Colonel Cox, C.M.G., has returned from leave. The new Residency is not yet completed, and, until it is habitable, Colonel Cox and his family will live in a wooden hut, close to the new building.

Mr. Seton, Judicial Adviser, returned from leave early in January.

PALESTINE RAILWAYS

TRAIN SERVICES

Constantinople, January 11.

The Campaign against Corruption.

Ever since the discovery that the conduct of the ex-Minister of Marine, Ihsan Bey, during his term of office had given rise to suspicion, administration after administration has been shown to be honeycombed with corruption. The cashier of the Grand National Assembly has been found to have a deficit in his cash of £T150,000; Ihsan Bey is alleged to have committed the Government to contracts which were not approved by the Cabinet and to have enriched himself to no small extent by so doing; an ex-director of the Tobacco Monopoly has made £T800,000, while the Company itself has lost exactly that amount; certain police officers have been discovered to be running disorderly houses; an official of the Aidin Chamber of Commerce is reported to have been altering permits delivered by the Minister of Commerce for the introduction of oranges into Russia and to have exported lemons under the quota permit for oranges; irregularities have also been exposed in the activities of certain members of the Turkish Commission for the Installation of Refugees.

In view of this state of affairs, which has been discovered since the Ihsan Bey question came to light, the Government has come to the conclusion that it is time these abuses were brought to an end. Consequently investigations of a severity hitherto unknown are being carried out, and the string of evidence acquired daily becomes alarming, as it affects not only subordinate officials but functionaries in important positions. That prominent officials should have betrayed their trust and laid themselves open to the accusations now levelled at them is calculated to have a bad effect on the general public. Fortunately, however, according to the local Press, the Government means to deal out exemplary punishment on great and small alike, until no vestige of corruption remains. This task is, undoubtedly, one of considerable proportions and cannot be completed in a day; but it is one of absolute necessity. The day the word "backsheesh" is effaced from Turkey's vocabulary will be a happy one for all concerned, and the advantage, both financial and moral, derived from this resolve to put administrations upon a new and proper footing will certainly justify the unpleasant moments which the transition will inevitably entail.

Turkey and the Jewish Community.

The Eski Shehir Court of Appeal has annulled the findings of the Constantinople Penal Court in the question of the nine Jews accused of seditious conduct at the funeral of a young Jewish girl who was murdered by a Turk, and the case come up for re-trial to-day. In view of the fact that nearly all the Jews accused were acquitted, it seems that the Court of Appeal considers that they were let off too lightly. Yet it is difficult to see how any other verdict could have been delivered by the Penal Court, as the case for the prosecution was a complete farce. In the course of the trial the President of the Penal Court told some of the witnesses for the prosecution quite plainly that they were not speaking the truth, and added that, as there was no real evidence to support the charges, the case was dismissed.

Naturally Jewish circles here have again become apprehensive at this new turn of events and view the re-trial with misgiving. Far more importance appears to have been attached to the imaginary affront to "Turkism" by these Jews than to the assassination of the girl whose funeral gave rise to the question. The murderer is still in hospital, "under observation."

The *Aksham*.

The *Aksham* stirred up a little interest in an otherwise uninteresting week by reporting, last Thursday, that Constantinople is the centre of Carolist intrigue. Prince Carol himself was supposed to have the intention of coming here in the near future in order to make an attempt to enter Roumania by aeroplane. Rumours that his partisans are working here have been prevalent for some time, and it was the discovery last week of manifestoes inciting Roumanians to revolt against the present régime in favour of Carol which resulted in the *Aksham's* sensational news. It was further alleged that a certain Captain Sabri Bey, a Mussulman from Dobruja, formerly in Queen Marie's guard, was the head of the organisation in Constantinople.

Whether there is any truth in the *Aksham's* report regarding Captain Sabri Bey's activities it is hard to say, but there is no doubt that a number of Prince Carol's partisans are to be found here, and it has been established that tracts printed in Constantinople are continually finding their way into Roumania and being distributed there. The local police are understood to be watching the movements of these Carolists, but up to now no official information on the subject has been given.

The Ghazi's Statue.

The model of the statue of Mustapha Kemal Pasha made by the Italian sculptor, Signor Canonica, for Constantinople has been approved, and the actual statue is expected to arrive here in May. This statue, apart from representing the President, includes about twenty other figures and reproduces certain scenes in the war for independence; it weighs nearly 100 tons and will cost £T150,000.

A Turkish comic paper recently had the temerity to publish a cartoon which represented a peasant handing a bundle of bank notes to Canonica and saying: "Is this sufficient?" The sculptor replies: "Continue to give; all of it is not for me." Great exception has been taken to this cartoon, which is apparently meant to infer that the people are made to pay for the statue and that Canonica is paying out commission for having been given the contract. The ill-advised paper now finds itself up for trial.

ALBANIA.

Durazzo, December 30.

Italian Activities in Albania.

It is natural that the alliance with Italy should bear fruit and the Mazurana Company, of Trieste, has now obtained the concession for the construction of the port of Durazzo. Negotiations on the subject have been in progress for more than a year, and last summer the price of the contract was fixed at 6,900,000 francs gold. The cost of the works has now been settled at 8,000,000 francs gold, and provision has been made to increase this figure, if the expenditure should exceed the amount contemplated.

On the other hand, the Albanian Government is trying to regulate its relations with Svea, the Italian company which made the notorious loan for 50,000,000 francs gold. Svea claims to control all expenditure made with the funds provided by this loan, which can be spent only on works of public utility, all of which are given to Italian itself from this tutelage, and the Italian Consulta would companies. The Albanian Government is anxious to free seem to have held out hopes of its intervention in the matter.

In the meantime Signor Mussolini's Government is sending food and clothing to the famine-stricken areas, notably in the mountainous country of Skutari and Dibra.

The Concordat.

For the last four years Albania has included in her programme the conclusion of a Concordat with the Vatican. It will be recalled that hitherto Albania has been regarded as a *pays de mission,* dependent on the *Propaganda Fidei.* It is true that the Catholics constitute a very small minority of the Albanians, hardly 100,000 in all, but it must not be forgotten that this country has been almost entirely Catholic at one time, and the Albanians preserve the memory of having on two occasions rendered important service to the cause of Christianity, first, in the hospitality and support that they gave St. Paul himself, and secondly, by the struggles maintained against the Turks by Skanderbeg, who was named *Miles Christi* by Pope Eugene IV.

Up to the present there have been only semi-official overtures to the Vatican; but last week M. Demitri Poppa, Political Director at the Ministry of Foreign Affairs, and M. Juk Koçi, Member of Parliament, left for Rome for the purpose of arriving at an agreement for a Concordat with the Pope, in order that, as far as the Catholics are concerned, the status of Albania may be definitely regulated.

The Autocephalous Church.

Readers of THE NEAR EAST AND INDIA know of the Autocephalous Orthodox Albanian Church, which has been in existence now for five years. Its relations with the Œcumenical Patriarchate still remain unregulated owing to the adverse influence of the Grecophil element with the Phanar. A commission composed of Senators, which was formed last year in Tirana, has now decided to make one last effort to induce the Patriarchate to regularise a state of affairs already existing in fact and of right.

A Plethora of Holidays.

On the top of the November 28 holiday, which is general and altogether official, there is the holiday known as "The Triumph of Legality," to commemorate the return in 1924 of Ahmed Bey Zogu from Belgrade, which falls on December 21 and is always celebrated with much ceremony by the municipalities of the different towns and in official circles. Now comes January 21, the anniversary of the Proclamation of the Republic, of which Ahmed Bey Zogu is the first President.

Albania's Gold Coinage.

As is known, gold 20-franc pieces of every country—France, Belgium, Italy, Roumania, Greece, and Austria, both of old and modern mintings—circulate in Albania. They are known under the single name of "Napoleons," French coins being the most numerous. There are also in circulation some British sovereigns, the equivalent of 25 francs gold. Since last November the National Bank of Albania has ceased to accept these gold pieces. It has put in circulation Albanian coins of 10, 20 and 100 francs, bearing the effigy of Ahmed Bey Zogu, whose name for some reason not quite clear is written "Amet."

NEW IRAQ CABINET.

The new Cabinet of Sir Abdul Muhsin Beg as Saadun was announced from Baghdad on January 11 as follows:—

Abdul Muhsin Beg	Prime Minister and Minister for Foreign Affairs.
Abdul Aziz Beg Qassah (Sunni)	Interior.
Yusuf Effendi Ghaninah (Baghdadi Christian)	Finance.
Hikmat Beg Sulaiman (Sunni) ...	Justice.
Taufiq Beg Suwaidi (Sunni) ...	Education.
Abdul Muhsin Shallash	Communications and Public Works.
Shaikh Salman al Barraq (Shiah)	Irrigation and Agriculture.
Shaikh Ahmad Daoud (Sunni) ...	Auqaf (Pious Foundations).

It is expected that the Ministry of Defence will be filled by a Kurdish Deputy.

As M. Venizelos insists on abstaining from active politics, his candidature at the Hydra by-election was last week withdrawn.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

THE IRAQ RAILWAYS.

The long-awaited report on the Railways of Iraq, which Brigadier-General F. D. Hammond investigated between November, 1926, and January, 1927, was published on January 17 by the Crown Agents for the Colonies, at five shillings. It covers six definite problems:—the management and operation of the Iraq Railways, the proposed programme of development and the sum necessary to carry out that programme, the sum necessary to put the existing system into a condition to cope satisfactorily with the requirements of traffic, the prospects of the Railways becoming remunerative and the period which is likely to elapse before they will be in a position to pay a full return upon capital expenditure, the possibility of the formation of a suitable Board of Directors in Iraq, and the present establishment and salary scales of the Senior Staffs of the Railway Directorate.

Now this Report by Brigadier-General Hammond is additionally interesting for several partly extraneous or previous considerations, such as the reforms which he had already introduced into various African Railways, the reported offer of a private syndicate to purchase the Iraq Railways, and the suggestion of Sir Edward Hilton Young in the House of Commons that they should be given by H.M. Government to the Iraq Government. In general, however, the changes which are proposed, though many of them are patently vital, are not so revolutionary as had apparently been expected in some quarters.

In his Introductory Chapter, General Hammond points out that the only pre-War section of railway in Iraq—the standard gauge built by the Germans from Baghdad West to Samarra—is in marked contrast to the rest of the system. For this 74 miles line is constructed with 75lb. rails, steel sleepers and shingle ballast, and a maximum gradient of 1 in 333, and in general is on a standard "quite out of proportion to the traffic prospects of the railway." The extension of this line to Sharqat, on the Tigris, was due to military reasons, and rails, sleepers, and ballast were merely what could be procured at the time. The Basrah-Baghdad metre gauge system is of varying quality, being built both during and after the War; it has, of course, two branches, from Ur to Nasiriyah, on the Euphrates, and from Hindiya to Karbala.

The rest of the metre-gauge system is on the left bank of the Tigris. From Baghdad it goes to Qaraghan (mile 92), whence there is a branch to Khaniqin (7 miles from the Persian frontier). From Qaraghan it goes to Kirkuk (mile 200).

The two metre-gauge systems are connected by a wagon-ferry across the Tigris which is subject to floods, and can transfer but 72 four-wheeled vehicles in eleven hours (that is, in a day, for night operations are rare and dangerous).

Of the locomotives, five have been bought since the War, there are 20 American Mallet engines, but all the rest are second-hand ones from India.

Apart from the export of grain and dates, the main traffic on the Baghdad-Basra section is import, most of which is destined for Persia. On the Baghdad-Sharqat line, the main traffics are the pilgrim traffic and the through traffic to Mosul; and on the Baghdad-Khaniqin and Baghdad-Kirkuk line the main traffics are the transit trade to Persia and machinery to the A.P.O.C. fields at Naft Khana, machinery to the Turkish Petroleum Company's centres at Tuz Khurmatu and Sulaman Beg, and through traffic to Mosul and Arbil via Kirkuk.

In his remarks upon the Engineering Department, General Hammond speaks of the breaches, drifting sand, and other difficulties in maintaining the track, but he considers not only that as good a standard is maintained as can be expected, but also that the number of men employed are moderate. He further points out the difficulty of laying down a fixed establishment, because the Iraq Railways have a high proportion of replacements or completion work to do, and the funds for this depend upon the receipts.

In the Chapter on Locomotive and Carriage and Wagon Department it is stated that the Railways own in all 97 metre-gauge and 17 standard gauge engines; these numbers are much in excess of present requirements. The scheme that was prepared in 1920 allowed a traffic of four trains a day, but now only 1½ are running each way on the main line. Other notable remarks in this Chapter are that the clerical staff of the Locomotive Superintedent is capable of substantial reduction, that no proper engine registers are maintained, and that the staffs of the "home sheds" at Baghdad West and Ur Junction should be reduced.

General Hammond, in his comments on Traffic Department—Transportation Branch—fully explains the difficulites arising from the Wagon Ferry over the Tigris at Baghdad. He states that the mileage run by trains could be improved, and that they could be more punctual. All the locomotives, incidentally, were run at the time of his writing on oil obtained from the A.P.O.C. at Muftiha (near Basra), and he says that supplies will be drawn from the wells at Naft Khana.

He then approaches one of the most serious problems of the Iraq Railways: namely, the tendency of the all-important Persian transit trade to decline, and the river competition for import traffic, and in this examination is moved to defend a system which has given rise to considerable criticism in Iraq, both official and unofficial—the system of employing a Railway Canvassing Agent. General Hammond supports the Railways in their employment of Mr. Nathaniel Haim.

He passes on to motor competition with the Railways, a competition which is more serious in passenger than in goods traffic. To counteract this, he recommends a wholesale reduction of third-class fares to ¾ anna a mile, the present charge being 1 anna (1⅛ pence) a mile.

One of the most interesting Chapters in this Report deals with Staff questions. General Hammond states firmly that there can be no question of lowering the standard in order to employ more local men. He believes, however, that the proportion of Indians to Iraqis employed is still too great. It should, he says, be the definite and declared policy of the Administration to replace Indians by Iraqis—a policy with which a mere pursuance of retrenchment is not identical. He asserts, too, that leave among the local permanent staff is excessive.

Upon Management and General Questions he supports the Director of Railways in his desire to maintain a Medical Department independent of the Government Health Directorate. He notes a lack of interest among Iraqis in the Railways, and he suggests, as a remedy for this, greater publicity, the printing of the Annual Report in Arabic, its proper dissemination and so on.

Coming to the present financial situation, General Hammond remarks that up to April, 1923, the British Government provided the funds for capital expenditure; since that date they have been obtained by loans from the Iraq Government and the A.P.O.C., and from the Railways' own net revenue surplus. There are, however, grave disadvantages of financing capital expenditure

ITALIAN SELF-TAUGHT, GRAMMAR with KEY
By G. DALLA VECHIA and A. C. PANAGULLI.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea, Cycling, Motoring, etc. Commercial, Naval and Military Terms, etc. Conversations, so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION, Tables of Money with illustrations of Coinage, Weights and Measures.

A course of simple and practical lessons in the Grammar and construction of the Italian language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo. 316 pp. Green Cloth, 6s. net. Postage 4d. extra.
Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25, post free.

from net revenue surplus, and of the purchase of assets from Renewals Account.

Then General Hammond comes to the main purpose of his Report—his proposals for development, completion and finance. First, he proposes the extension of the metre-gauge line from Kirkuk to Mosul, an extension which would pass through 100 miles of the best grain-growing area in Iraq. This extension would cross the Lesser Zab at Dhibbis and then go up the Koza Panka valley. The Greater Zab would be crossed near Gaetli. For this line the standard gauge line between Samarra and Sharqat, which is unprofitable and will be pulled up, could be used.

Next he proposes the construction of a bridge over the Tigris at Baghdad to replace the wagon ferry. This would involve the abolition of Baghdad North and the transference of the main goods work to Baghdad West. The new bridge would carry road as well as railway traffic, so that the State or Municipal Authorities should contribute at least a fifth of the cost, which is estimated at Rs. 50,00,000.

The Baghdad-Khaniqin line should be extended to the Persian frontier at Katchal Katchal, where it is proposed (if the Persian authorities can be persuaded to agree) to build a joint Customs house. Also, the metre gauge line should be extended to the walls of Kadhimain.

The total cost of these development proposals is Rs. 147,90,000, and in order to put the railway in a safe and workable condition, 58.9 lakhs must be spent for capital funds.

General Hammond then examines the raising of the new money required—£2,100,000, which, on the British Government's guarantee, could be obtained at 5 per cent., and on the Iraq Government's guarantee, at 8 per cent. He strongly urges the British Government to guarantee the capital, not only as the best method of developing the Railways and the country, but also as the only means of insuring a return on the interest which H.M.G. holds in Iraq.

If H.M.G. does retain its interest, General Hammond agrees with the Hilton Young-Vernon Report that the vexed problem of the ownership of the Railways should be solved by transferring it to a Corporation, of whose capital H.M.G. would own 250 Lakhs Preferred Stock and the Iraq Government the Deferred Stock. He differs from the Hilton Young-Vernon Report, however, in that he recommends that the Board of the Corporation should consist of a Chairman (the Director of Railways *ex officio*), and two British and two Iraqi Directors.

If H.M.G. does not retain its interest, the Railways must be leased or sold. General Hammond is emphatically against leasing them, and favours private ownership. One advantage of the transfer of the Railways to a private corporation would be immunity from political interference. If the undertaking became the sole property of the Iraq Government there would, he thinks, be grave danger that the Directors would become merely political nominees.

Finally, in discussing future policy, he dismisses as immediately unimportant the possibility of a North to South Persian railway taking away the transit trade from Iraq, but the new Persian motor road which is projected from Hamadan to Muhammarah is another matter. He says that this development in Persia, minimised though it is by expert opinion in Iraq, requires careful watching, as does the competition in Persia from Russia. General Hammond is not in favour of linking up Mosul with Nisibin, inevitable though that connexion be, for the Syrian Railway system would thereby be enabled to compete effectively with the Mosul, Baghdad, and Persian trades. (This advice is given, of course, only from the economic point of view: with the political and military aspects of the suggested extension General Hammond is not concerned.)

It is heartening, in view of the "gusher" at Baba Gurgur, to note that General Hammond's final paragraph is to the effect that he has not considered in his forecast any consequences of the discovery of oil by the T.P.C. in sufficient quantity to warrant export on a large scale.

THE GORDON MEMORIAL COLLEGE.

The "Report and Accounts" of the Gordon Memorial College at Khartoum contains the Annual Report of the College for 1926. This report is the first and last by Mr. E. N. Corbyn, who succeeded Mr. Crowfoot as Principal (Mr. Crowfoot having succeeded Dr. Garstang as Director of Archæology in Palestine). Owing to ill-health, Mr. Corbyn has had to retire, his place being taken by Mr. J. G. Matthew, who has had experience of the Sudan since 1905.

Mr. Corbyn's tenure of office was of a transitory nature. Educational policy in the Sudan is developing on different lines from those followed in former years. The Governor-General has referred to the desirability, for instance, of creating a portfolio for such subjects as Education and Health—these being brought under a Departmental Head.

The success of the College can be seen from the following figures. Whereas in 1914 there were but 67 pupils at Gordon College Higher School, in 1926 there were 303; in the Elementary Vernacular Schools in 1914 there were 3,674 pupils, whereas in 1926 there were 8,196; in Girls' Elementary Schools in 1914 there were 146 pupils, whereas in 1926 there were 555. Of the 303 pupils in the Higher School, 203 were Arabs, 13 Negroids, 66 Muvallads, 18 Berberines, and 3 Somalis.

Three Sudanese Arab Teachers were sent to Beyrout for further training in the American University there.

Other sections of the Report deal with Engineering, Accountants, Clerical, Teachers, Boarding House, Health, Games, Scouting (which movement is extending rapidly in Khartoum and the Provinces), Instructional Workshops, and so on.

In view of the augmented educational facilities which are in contemplation in the Sudan, and of the general interest in the subject of British responsibilities in the Middle East and the matter of education, this Report is well worthy of study. The address of the Honorary Secretary of the Gordon Memorial College at Khartoum is 4, Fenchurch Avenue, London, E.C.3.

THE CENTRAL ASIAN "JOURNAL."

The last issue of the *Journal* of the Central Asian Society contains, in addition to the accounts of various lectures, reported at the time of their delivery in THE NEAR EAST AND INDIA, an informative article on "Affairs in Persia," the second instalment of "A Story of Struggle and Intrigue in Central Asia," and numerous ably written book reviews.

A Decree has been issued by the Soviet Government of Turkmanistan introducing the new Latinised alphabet which is to take the place of the Arabic for the Turki language and all its dialects in Soviet territory. Government establishments will adopt the new alphabet during February and March.

THE WEEK AT HOME

London, Tuesday Morning.

Thomas Hardy.

It is difficult to say anything original concerning the work of Thomas Hardy, who yesterday, by one of those pardonable inaptitudes to which the British are prone, was buried in Westminster Abbey, his heart being preserved at Stinsford—which readers all over the world know as "Mellstock." His novels and particularly his poems were incomparable and untranslatable; they affected the roots of man. I do not suggest—what might possibly have been imagined from the countless, and doubtless sincere articles upon him which have been published in this last week—that he had not intelligent critics; he had these, from Lionel Johnson onwards. But it was his philosophy, not his literary art, which was the real butt of such criticism.

That, however, is a subject which cannot be entered into here; in any case, it can never be permanently decided.

It is sufficient to ask of how many great men (for to me Hardy was a truly great man, certainly not less because he derived essentially from pagan and Roman times) can it be said that they wrote their own immortal epitaphs? At the moment we are thinking of Hardy—and I believe future generations will similarly think—in his own words: "His wages taken and the long day done, and in his heart some late lark singing;" and also in the January verse of his "Afterwards":—

If, when hearing that I have been stilled at last, they stand at the door,
Watching the full-starred heavens that winter sees,
Will this thought rise on those who will meet my face no more,
"He was one who had an eye for such mysteries"?

Amalgamation and Co-operation.

The significant move towards the establishment of trusts or amalgamations is taking on the aspect of a full sociological theory, concerning not merely the capitalist's point of view but also that of the employee. Sir Alfred Mond has made himself godfather of this conception, which is not new indeed but which has not hitherto been so precisely defined, and at a meeting last week at Burlington House he collected a number of employers with members of the General Council of the Trade Union Congress, to hear an exposition of his views. Some estimate of the weight of this gathering may be gained from the fact that, among the employers present, were such successful men as Mr. Bernhard Baron, Mr. S. Courtauld, Sir Hugo Hirst, Mr. M. Mannaberg, and many others.

In a general examination of "co-operation in industry" Sir Alfred Mond spoke of the better organisation of industry by amalgamation, rationalisation, introduction of new processes and methods, and discussed methods of dealing with workers eliminated by new methods through transference and greater mobility of labour and by a system of compensation and pensions. And many other things for the benefit of the employed were examined.

The T.U.C. representatives were guarded in their reply, though apparently in favour of the main aim of the movement.

Whether industry will evolve on these lines I have no means of telling, but the conception must be watched if only because it is a practicable one—only too practicable as many may think. It is in essence the reply of capitalists to those who assert that the days of capitalism are over. From an impartial aspect, it would appear to involve, among other things, monopoly, owing to lack of competition, efficiency, owing to lack of wastage, and comfort in the place of independence of the employee. I should not be surprised if the strongest revolt against it came from the most Tory Englishmen. We shall certainly see, for signs of it are not lacking.

A Tobacco "War."

Inhalers of all kinds of cigarettes were pleasantly excited at the report last week that an American tobacco syndicate intended to enter the British market with cigarettes at a cheap rate in opposition to British manufacturers. It was known that American capital was recently invested in Messrs. Wix, proprietors of "Kensitas" cigarettes, and if, smokers argued here, this interest is so increased as to make British manufacturers reduce their prices, well, perhaps there might be virtue in competition after all.

But later news rather dispels the possibility of a "tobacco war." If it came to a fight, firms like the British Imperial Tobacco Company and Carreras could put up a show. But would they? Can you not already see the British occupiers and the American challengers embracing each other with shouts of the blessed word "amalgamation," and then in chorus repeating the phrase (they have already given solo recitals) that they could not stand the reduction of a halfpenny on a packet of cigarettes?

Now in 1913 the Imperial Company made a net profit of £3,354,000. In 1926 it made a net profit of nearly £9,000,000. Carreras in 1913 made a net profit of £31,216; last year it made a mere £1,258,847. Reduce the price of cigarettes, indeed! Why on earth should they?

B.B.C. Pronunciation.

It is amusing to note the *furore* which is being caused by the Broadcasting Corporation's attempt to standardise the pronunciation of English and foreign words. The B.B.C. has a committee of scholars at its service which is respected by all reasonable men; but that respect does not destroy our individualistic preference.

Possibly the absolute is as unattainable in English pronunciation as it appears to be in English theology; certainly there is no sign of a lack of dogged dissenters. Nor is this dictum applicable only to matters of accent; it applies with equal force to actual differences of vowel and consonantal pronunciation, as exhibited in the provincial dialects. These range from the obvious to the subtle, from, say, the "a" in the "last" of the Yorkshireman to the liquid "ll" of the man of Norfolk's "will."

Landmarks of London.

Within the last few days there has been announcement that two of London's landmarks are to disappear: the block occupied by the Grand Hotel, at the corner of the Strand and Northumberland Avenue, and Tavistock Hotel in Covent Garden, which for long has been known as the "Bachelors' Paradise," because of the frowning welcome which it gave to women.

In place of the Grand an imposing arcade of shops is to be built, an arcade, apparently, rather of the Burlington or Piccadilly type than of the Ritz type. Doubtless we shall get used to it. What is to take the place of the Tavistock is not yet known, yet its going will, to overseas readers at any rate, probably cause more pangs than the disappearance of the Grand. Probably it will be demolished in order to make room for a larger market at Covent Garden. Who will want to go to Covent Garden after the famous piazza which Inigo Jones designed about 300 years ago has been pulled down? To me, at least, those columns in front of the Tavistock and of the National Sporting Club are more romantic than the smell of cabbages even.

Colours of Spring.

It is about this time of the year that the South of France and the Scilly Islands come to the rescue of ever hungry eyes, which for a month or so have been denied the colour of flowers. But now, almost in a night, the shops and barrows of London have been filled with colour: narcissi, jonquils, white, blue and red hyacinths, mimosa and so on. These things hearten us, for they tell us, what we had almost forgotten, of "the spring and foison of the year."

ALTER EGO.

It is announced from Geneva that the Persian Legation at Berne has asked Dr. E. D. Kellenberger, financial expert of the Swiss Federal Finance Department, to accept the post of Director of Administration of Persian Finance. No decision has yet been reported.

PERSONAL AND GENERAL

TO-DAY

January 19, 1928 (New Style).
January 6, 1928 (Old Style).
Rajab 26, 1346 A.H., of the Muslim Calendar.
Tebet 26, 5683, of the Jewish Calendar.

Sir Ernest Budge arrived at Sandringham last week.

Sir John Simon, K.C., M.P., leaves London to-day (Thursday) for India.

The Earl and Countess of Albemarle will leave England to-morrow (Friday) for Egypt.

Sir William Dudley has returned to England from India in the P. and O. s.s. Kaisar-i-Hind.

Lady McCraken joined the P. and O. s.s. Razmak at Marseilles on January 13 for Port Said.

Lady Burghelere sailed from Tilbury on January 13 in the P. and O. s.s. Mooltan for Port Said.

Viscountess Elibank will leave 187, St. James's Court on February 10 to join Viscount Elibank in Cairo.

Major-General Sir Richard Bannatine-Allason left Tilbury on January 13 for Port Said in the s.s. Mooltan.

Viscount and Viscountess Portman left London on January 17 for Monte Carlo, on their way to Egypt. They expect to return in April.

The Afghan Minister in London, who has been visiting the King and Queen of Afghanistan in Italy, returned to the Legation on January 16.

Viscount and Viscountess Inchcape left London on January 12 by the P. and O. express for Marseilles, where they joined the s.s. Razmak for Egypt.

Mr. C. H. O. Scaife, who has for the past year been on the editorial staff of the *Egyptian Gazette*, has been appointed lecturer on English Literature at the Egyptian University, Cairo.

The Earl of Iddesleigh left England last week for Northern Albania, in connexion with the work of the Catholic Mission there. He will be away for about six weeks.

The marriage was celebrated at the Orthodox Church of St. Stephen in Paris, on December 21, of Mr. George Antonius, of the Palestine Government, to Miss Katy Nimr, of Maadi.

M. Jean Guiffrey, curator to the Louvre Museum, has been appointed Commissioner General of an exhibition of French paintings and sculpture which is to be opened in Cairo on February 15.

Mr. Stanley Rees, a prominent member of the G.P.O. staff at Pembroke, is leaving England shortly to take up an important appointment under the Sudan Government as Inspector of Telegraphic Communications.

Mr. P. C. Raiment, M.R.C.S. England, has been appointed to the chair of physiology in the Egyptian University. Mr. Raiment, who took first-class honours in the natural science schools at Oxford, has been for the last six years University Demonstrator in bio-chemistry at Oxford. He arrived in Cairo at the beginning of this month.

Major L. V. S. Blacker, O.B.E., will lecture to the Central Asian Society on January 18 upon "The Central Asian Origins of the Armies of India." The lecture, which will be illustrated and begin at 4.30 p.m., is to be given at the Royal Society's Rooms, Burlington House, W.

The marriage of Mlle. Nelly Sidarouss, daughter of Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires in London, to Comte Charles du Bourg will be celebrated in Paris at the Church of Ste. Clotilde on February 20 at noon. The civil ceremony will take place on February 15 at 4.30 p.m. at Montflours, La Mayenne (Brittany).

Mr. H. Pirie-Gordon will lecture to the Near and Middle East Association on January 25, at 8.30 p.m., on "Rhodes and the Dodecanese." Mr. Leland Buxton will preside over the lecture, which will be given, by kind permission of Mrs. Arthur McGrath, at 28, Wilton Place, S.W.1.

A committee has been formed in Paris to raise funds in order to present H.M. King Fuad with the sword of member of the Institute of France. M. Gaillard, French Minister in Cairo, is hon. president of the committee, the Marquis de Vogué, director of the Suez Canal, president, Comte de Naleche, M. F. Faure and M. Roume, vice-presidents. Among the members are the Duc de Brolie, the Duc de la Rochefoucauld, Count de Lesseps, and Admiral Lacaze.

Sir Alfred Mond, accompanied by Lady Mond and Lady Erleigh, left London on January 16 on a visit to Egypt, Palestine, Trans-Jordan, Syria, and Iraq. Sir Alfred, who is expected back in London in about two months' time, is President of the Palestine Survey Commission, which has nearly completed its task of investigating, in the interests of the Zionists and non-Zionists represented in the Weizmann-Marshall agreement of last year, the possibilities of Jewish colonisation in Palestine.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies :—

Mr. Willoughby Bullock, Relieving President of a District Court, Palestine, to Chief Justice, St. Vincent.

Mr. J. A. Lucie Smith, O.B.E. (Mil.), President of a District Court, Cyprus, to Puisne Judge, Cyprus.

Mr. F. C. Lander, Collector of Customs, Cyprus, to Collector of Customs, Gold Coast.

M. Kaphandaris, Greek Minister of Finance, and Mme. Kaphandaris entertained at dinner at the Ritz Hotel on January 15 the Greek Minister, Sir John and Lady Stavridi, Sir Henry Strakosch, Baron and Baronne Emile d'Erlanger, Commander and Mme. Alexandris, M. Agnides, M. and Mme. Kavvadias, M. Chrysanthopoulos, M. Karavias, M. Kollas, M. Felkin, M. Gerothwohl, M. Hourmouzios, M. and Mme. Lambrinudi, M. and Mme. Mantzavinos, M. Neseritis, M. Kessary, M. and Mme. J. Romanos, Captain Papalexopoulos, M. Tsagis, Mme. Tsouderos, Mme. Vatis, and Miss Wills.

Lieutenant S. G. Haserick, of the King's Own Yorkshire Light Infantry, who was seriously injured on January 9 when the aeroplane in which he was a passenger crashed and Pilot Officer Fisher was killed, died the following day.

The R.A.F. expedition to punish the Wahhabi raiders under Shaikh Faisal ud Dawish (who have been making murderous incursions into Iraq territory) began last week. Four squadrons, using Ur of the Chaldees as their base, were sent out under Air Commodore Higgins. When they arrived at Artawiyah, the *Ikhwan* centre and the marauding shaikh's family home, they found that the majority of the population had disappeared and only a few women and children had been left behind.

NOTES OF THE WEEK

(*Continued from page 66.*)

on schemes for the economic welfare of Iraq rather than on political problems. If this intention is realised during the coming months, and personalities are not allowed to get in the way of policy, it may be that the various questions as between Iraq and Great Britain which could not be solved in the recent Treaty will find an easier answer than would have been possible in the depressed or perplexed atmosphere which has lately seemed to envelope Anglo-Iraqi relations in Baghdad. It may be that spectacular achievements during the régime of Sir Abdul Muhsin are not to be looked for, but it is precisely in such slow, unobtrusive and possibly ungrateful work as appears to be within the capacity of the new Iraq Cabinet that the best hope lies of building firm the foundations of a stable and prosperous Arab State. For the next few months in Iraq it may be well to act upon the dictum that "economic power precedes political power," because the aspirations of Iraq, where they are legitimate and practical, are more likely to be realised in the calm, encouraging surroundings of general prosperity than in the possibly artificial hot-house of individual intrigue or ambition.

Palestine and the Jews.

It is entirely good that the Zionist Executive should have spoken out upon the Jewish Community Ordinance in Palestine, which has been the cause of much criticism on the part of Jews. These regulations, said Colonel Kisch on January 11, are not perfect, but they are a basis on which to build. In any case, the imperfections in the regulations, according to Colonel Kisch, are due to the faults of the Jews themselves. This view of the Ordinance is undoubtedly correct; it is difficult to imagine, indeed, that anyone could take any other view. Nor are these regulations the sole example of imperfections in Palestine being but the mirror of Jewish imperfections in Palestine. Naturally, to the colonists themselves, this fact is not so apparent as it is to outside observers; but it remains a fact. The essential thing, from the Zionist point of view, is manifestly for the Jews in Palestine to pull together, involving, as Colonel Kisch said, "the sacrifice of personal interests on behalf of the interests of the national community." If the Zionists within Palestine do not consolidate, as the Executive appeals to them to consolidate, it is idle to reproach the Government, which must deal with facts, not fictions, for taking note of social or other cleavages. Again we state, what has long been our view, that the basis of a Jewish National Home in Palestine is in existence: it is now for the Jews themselves to build thereon.

The Syrian-Turkish Frontier.

On October 20, 1921, the Accord of Angora was signed between Turkey and France. It provided in Article VIII, among other things, that a commission of delegates from both sides should be appointed *within a month* to fix precisely the frontier between the Nationalist and the Mandated State. It is an indication of the progress of events in the East that that frontier should only just have been delimited. The boundary between Syria and Iraq is, of course, not even yet defined. The boundary which has just been defined concerns the land between Nisibin, the terminus of the Baghdad Railway, and Jazirat-ibn-Omar, which places were both allotted to Turkey. It was stipulated in the Angora Treaty that the frontier between this Railway and the Tigris should follow "the old route," which should belong to Turkey, but over which Syria should have the same rights of user. Now it is a little point, but a matter of some interest, in that disputes in the Middle East often degenerate into more serious things, to note that the Turks wished to substitute for this "old route" between Nisibin and Jazirat-ibn-Omar, a new route, which ran to the south. According to the French, an erroneous map was placed by the Turks before the negotiators at Angora which placed Nisibin and Jazirat to the north of the old route. The French representatives, however, discovered this, and claimed the frontier following the "old route." Little was done to settle this frontier question until 1925, when the Mixed Commission, provided for in the Angora Treaty, began to operate. But the Turkish claims for a line between Nisibin and Jazirat were still unacceptable to the French, and it was not until the agreement reached on February 18, 1926, between M. de Jouvenel, and Tewfik Rushdi Bey, Turkish Foreign Minister, that relations became less strained. Even then, however, M. de Jouvenel would not admit the Turkish claims in this particular sector, and it would seem that the award just recorded justifies the French stubbornness. For it is the line of the "old route" which the Commission has recommended, traversing the villages of Quira, Assen, Servan, Banik, Kelani and Bazeft. Thus ends a pretty story of claim and counter-claim. Possibly this sector of the Turkish-Syrian frontier is the most satisfactory; certainly the Baghdad Railway as a frontier (the permanent way and stations are Turkish) is undesirable from many points of view.

NEWS IN BRIEF.

The Italo-Yugoslav Treaty of Friendship has been prolonged until July 27.

Yussuf Pasha Saddik, of Cairo, was found dead on January 9 at Avignon in a train from Nice.

The Greek Government has granted a subsidy to the Yannoulatos Steamship Company for a regular coastal service between the Piræus and the principal Albanian ports.

Speaking at a banquet in Angora on January 10 Mahmud Essad Bey, Turkish Minister of Justice, said that he was strongly in favour of the adoption of Latin characters for writing the Turkish language.

Students of the University of Stamboul have started a campaign to induce all Turkish subjects to speak Turkish in public places, and an association is being formed to carry on propaganda in favour of the Turkish language.

The new Albanian Penal Code, which is based on that of Italy, came into force on January 1, to take the place of the Ottoman laws previously imposed. According to the new Code polygamy is abolished, although Islam is the dominant religion in Albania.

Mr. C. Leonard Woolley, who is directing the excavations at Ur of the Chaldees, describes the discovery of a Royal tomb of the fourth millennium B.C. as of "the greatest importance," as "it has supplied definite information which is absolutely new to science, and it affords material for theories still more far-reaching."

Cattle plague has been prevalent, with varying intensity, in Palestine, Trans-Jordan, the Lebanon, and Syria since the summer of 1926. On January 12 the declarations were published which have been exchanged between the High Commissioners of Palestine and Syria, announcing that these areas were free of plague and also the removal of restrictions.

Gholan Haider Khan, a merchant of Kabul, who has previously visited England, is expected in London soon to take up the post of Afghan Trade Agent to Great Britain. This appointment has been made in view of the King of Afghanistan's visit to England, and owing to the increase of Anglo-Afghan export and import trade.

The Commission at Constantinople investigating the changes of peculation against Ihsan Bey (the last Turkish Minister of Marine) on January 9 ordered the arrest of Colonel Omar Nazim Bey, brother-in-law of the late Damad Enver Pasha, on the charge of having given false evidence. The Grand National Assembly has now confirmed the abolition of the Ministry of Marine and has voted the union of the Ministries of Commerce and Agriculture under the name of the Ministry of Economy.

The death has occurred of Sir Fairfax Cartwright, who was British Ambassador at Vienna before the War. He had served, among other places, in Teheran, was prominent at the time of the "Bosnian crisis." His diplomatic service at Teheran was especially congenial, for it was during that period that he published, privately, "The Mystic Rose from the Garden of the King," a fragment of the Vision of the Shaikh Hajji (Ibrahim) of Karbala. This book was published for general circulation in 1925.

THE EUROPEAN ASSOCIATION IN INDIA.

In a recent issue we stated that the attitude of the European community in India towards the Simon Commission had been clearly defined by Sir Hubert Carr at a meeting of the Calcutta Branch of the European Association. We are now glad to see that this attitude was endorsed by the annual conference of the various branches of the Association which met at a later date. The Association is of opinion that a small parliamentary commission is the only agency by which so complex a problem can be satisfactorily investigated. The President made this clear in his opening address to the Conference. He also very properly emphasised the fact that, when recommending the appointment of an exclusively parliamentary commission, the Association had no idea of insulting Indian national feeling. And he likewise rightly said that the debates in Parliament show that the Government have taken great pains effectively to associate all sections of political thought in India with the inquiry. The Indian leaders, in proposing to boycott the Commission, are clearly embarking on a dangerous enterprise. There are only two ways by which India can achieve responsible government. One way is by following constitutional methods; the other is by revolution. If the first had been thoroughly explored and had failed there might perhaps be reason for resorting to the second. But constitutional methods have not failed. On the contrary India has been freely offered the widest possible opportunity of collaborating in the framing of its Constitution. It may be, as Mr. Chartres suggests, that the Indian leaders are merely manœuvring for some tactical advantage. But if so they are surely making a huge blunder. They have now the greatest opportunity of serving their country that is ever likely to be presented to them; and the issues at stake are too big to be sacrificed for party politics.

We have previously maintained in these columns that the Europeans in India are not opposed to a progressive policy. It is true that there are among them some who argue that the clock must be put back, the reforms thrown aside, and the benevolent autocracy of former years reintroduced. But they are few in number and they will have to come into line with the facts of the situation. As was pointed out at the Conference, a reactionary policy is not a practical policy. India has been of course always subject to autocratic rule in the past, and that system may still be best suited to her needs. But Great Britain is pledged to the gradual introduction of representative institutions. She is committed to a policy of steady and ordered progress in the direction of self-government for India. We think, therefore, that the Conference was right in resolving to recommend the Council of the Association to consider whether all possible and practicable measures are being taken to put into practice its declared policy of fostering a relationship of cordiality and co-operation with those Indians who are working constructively for the good of India. This resolution means, if we understand it correctly, that the Association will co-operate with those Indians who are working on sound and steady lines for the advancement of their country on the road to self-government. The European community would not support a sudden grant to India of self-government on a widely extended scale. For from their knowledge and experience of the country resident Europeans realise that so violent a change would inevitably lead to a chaotic state of affairs. But on the other hand they recognise that any attempt to re-introduce the pre-reforms system of administration would be equally futile. They favour a middle course of solid progress based on hard work and a genuine attempt to compose communal and religious dissensions. It is idle to imagine that a successful system of self-government can be established in India at a moment's notice by blindly following what has been done in the other British dominions. Yet this is apparently what some Indian politicians have in mind when they demand the immediate grant of dominion status. They do not pause to consider whether, in relation to India, dominion status is or is not a practical proposition. It is of course true that what virtually amounts to independence has been given to the self-governing dominions. But these are relatively small homogeneous nations for the most part without really vital racial, communal, religious or linguistic divisions. The great Indian continent with its diversified races and creeds is differently placed. So wide indeed is the difference that dominion status cannot be practicable in respect of India for a very long time. There must be in the circumstances a paramount power in the country, but subject to that limit there is no reason why all races should not work together to make India, in the words of the authors of the reforms scheme, "a sisterhood of states self-governing in all matters of purely local or provincial interest."

With reference to another subject, namely, the Indianisation of the Army, the Conference also took its stand in favour of ordered and cautious progress. It unanimously adopted a resolution which, while recognising the legitimate aspirations of Indians for military service, made it clear that in the opinion of the Association any scheme with that end in view must be governed by the maintenance of the highest standard of efficiency and of the requisite British element. The resolution also went on to express a hope that these conditions would be deemed essential in respect of any scheme which might be introduced as a result of the recommendations of the Indian Sandhurst Comittee. It is clear from the discussion that the Association fully realises that there is no more dangerous subject for experiment, nor one which should be approached with greater care and caution, than the Army of any country and in particular the Indian Army which is so heterogeneous in character. The proposals framed by the Indian Sandhurst Committee appear to be regarded not altogether without apprehension in India. Their object is to accelerate Indianisation by the establishment of an Indian Sandhurst and by increasing the number of vacancies for Indians at the English Sandhurst. It is considered by the Association that these proposals will mean Indianisation at a pace inconsistent with safety. The Indian Army is essentially an army of the British officer.

Digitized by Google

by whom it has been created and fashioned. Its many widely differing components have been welded into one whole by his devotion and self-sacrifice; and the too rapid substitution of Indian officers may well prove to be, as the Association apprehends, a source of danger. Indians ought to be given such share in the officering of the Indian Army as they may be capable of assuming. But whatever steps may be taken to that end it is imperative that the requisite British element shall be maintained; for, as the Association rightly holds, the whole future of the Army is bound up in that safeguard.

CURRENT TOPICS.

The Appointed Hour.

Sir John Simon and his colleagues, leaving for India to-day, would be less than human if their predominant feeling were not one of distinct apprehension as to the onerous task with which they are faced. Indeed, they would be ill-fitted for their duties if it were otherwise. The Commission, it is true, is not intended to say the last word as to the revision of the Act of 1919. But a grave and in some respects unique responsibility rests upon those who are first called upon and have to begin a work of such magnitude and complexity. A false step at this stage, for instance, would bias the direction of the task of the subsequent tribunals and introduce elements which, though insignificant at the outset, would be aggravated or widened by the passage of time into weaknesses and defects that need never have been. The terms of reference to the Commission are wide enough to embrace most of the progressive ideas which prevail as schemes and ideals in the more thoughtful minds of to-day. But these same terms can equally be interpreted in such a manner as to permit the permanent well-being of 320 millions to be sacrificed to purely political expediency or, what is even worse, the impracticable theories of a few extremists or reactionary die-hards.

The Commission's immediate task is more circumscribed. All their intelligence and industry will be taxed for some time in familiarising themselves with a world and a civilisation so alien to our own. Their present visit can be expected, therefore, to provide little more than a preliminary sketch of the principles which must determine the ground plan, revealing its limitation of extent, its more precise position and general character, without any attempt at showing architecturally in elevation, as it were, any actual structure thereon. Obviously, the most important part of the Commissioners' work in the initial stages of the inquiry will be the establishing of personal relations with representative Indians, gaining their confidence and good will, and removing genuine misapprehensions. And while we do not in any way underrate the strength and extent of the boycott movement, or ignore the serious consequences of failure, we feel that if the other members of the Commission are prepared to divest themselves of all personal prejudices and predilections, and if, conscious of their rôle as "rapporteurs" to the British Parliament, they will approach their duties in the broad and statesmanlike spirit, shown in the Chairman's letter to his constituents, we can wish them God-speed in their mission with every confidence as to its ultimate issue.

A Vision of Swaraj.

At long last Lord Birkenhead's challenge to Indian politicians to produce their own scheme of self-government is meeting with some measure of response. Under the stimulus of the boycott agitation and Dr. Ansari's invitation to the leaders of all parties the constitutional experts are busy formulating proposals which will, they hope, ultimately provide some basis for united action. The reports from India in fact bear a striking resemblance to the events of three years ago when an All-Party Leaders' Conference appointed a Committee, representative of almost every important communal group in India, to consider the best way of re-uniting all political parties in the Indian National Congress, and to prepare a scheme of Swaraj, including a solution of the communal question. The Committee, if our recollection is correct, resolved itself into two sub-committees to deal respectively with Hindu-Muslim differences and with a scheme for constitutional advance. The first sub-committee, like all its successors, found agreement impossible and dispersed without reaching any decision. The labours of the second resulted in little more than the suggestion of certain verbal alterations in Mrs. Besant's projected Commonwealth of India Bill. And the prospect of a united Congress, which should include representatives from all the political parties, failed to materialise.

It has long been a legitimate complaint of British friends of progressive self-government in India that no real attempt has ever been made by the Swarajists to define what they mean by Swaraj, and the record of the Liberals in that respect is little better. Apart from Mrs. Besant's Bill and the revised version devised by Mr. Fenner Brockway and other members of the Independent Labour Party in this country—both of which have been denounced as conveying a wholly inadequate conception of "India's demands"—not even a rough draft of the Constitution of the Free India has hitherto been produced by those whose avowed object in life is to secure the attainment of that ideal. If the latest reports are correct this admittedly unsatisfactory state of affairs has now given place to a situation which we fear is likely to prove even more embarrassing to the newly-elected Congress President. Mention has previously been made in these columns of the plan for a Federal Democracy which rumour has attributed to Dr. Ansari's predecessor. In his scheme, which was submitted at the recent Madras session Mr. Srinivasa Iyengar is in favour of a Federal Constitution of the Canadian type with an Indian Parliament consisting of two chambers and unicameral legislatures in each province formed on a linguistic basis, election being on a common or joint electorate. No provision is made for nominations but somewhat illogically he recognises the necessity for the reservation of seats in favour of all or any of the communities in India, including the European, during a transition period which is not defined.

Mr. A. Rangaswamy Iyengar's draft, we understand, follows more closely the principle adumbrated by Mrs. Besant and is described as "steering clear of the theory of establishing, as in Mr. C. Vijiaraghava Achariar's Bill, what is essentially a wholly unitary constitution and, on the other hand, avoiding the centripetal and balanced federalism which is the essence of Mr. Iyengar's scheme." Mr. Iyengar's reasons for dismissing a unitary and centralised form of government as unsuited to Indian conditions and Indian ideals are by no means convincing but the most telling criticism of the scheme, which evokes comment at every stage, comes appropriately enough from the organ of his own Party. "Excellent draft constitutions have been placed before the Congress," observes the *Bombay Chronicle*, "and will doubtless be carefully considered by a special Committee of the Congress in consultation with similar committees appointed by other political bodies. Our only regret is that the drafts hitherto published fail to stress the most vexed part of the constitution, namely, the equitable representation of minorities in the Legislatures."

Mr. B. E. G. Eddis, of Messrs. Gillanders, Arbuthnot and Co., has been appointed Sheriff of Calcutta for the ensuing year. Mr. Eddis is President of the Bengal Chamber of Commerce.

Mr. H. G. Cocke, M.L.A., of Messrs. A. F. Ferguson and Co., has been elected President of the Bombay Chamber of Commerce for the ensuing year.

The Government of Burma has been advised to defer its decision on the Yunzalin hydro-electric scheme, which would cost £8,250,000, until the possibility of supplying Rangoon with water at a more reasonable rate has been further investigated.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 29.

The Royal Commission.

Since I wrote last week the two most authoritative voices to speak on the subject of the boycott of the Commission have been those of Lord Sinha and Sir William Marris, the retiring Governor of the United Provinces. One may call them the most authoritative, without disrespect to Sir Tej Bahadur Sapru and Dr. Ansari. Sir William Marris spoke first of the two. In bidding farewell to the United Provinces' Council he urged the Council to accept the Commission, and to nominate its ablest men to draw up a well-founded and reasoned statement of their views, such as would command respect and admiration. He could not understand the charges of ill-faith and cynicism that were hurtling through the air, except by remembering that when men are excited, they do not reason clearly. "If India's people show," Sir William added, "that they can rise superior to the emotions of the moment, the world will think better of them."

Lord Sinha, interviewed at Aden on his way to India, said:—"I respectfully suggest that my friends in India stand to lose grievously by the atmosphere they are helping to create. No reforms, however generous, will have a reasonable chance of success, if they are ushered in after the spirit of general ill-will and feeling of utter mistrust that are being created. Past experience bears out my apprehensions, and to the past I appeal for a warning against non-co-operation. It is impossible to set bounds to its underlying spirit. Already there are signs of possible, though probably unintended, excess, when a veteran Indian politician suggests the non-payment of taxes as one method of expressing popular disapproval. I see from the newspapers a dawning good sense in seeking to limit the field of resistance, but we must remember what the past amply bears out—that the cautious and placable method of the leaders will soon be thrown to the winds the moment they involve the evil spirit of non-co-operation. Did we not find to our cost that it is easier to raise it than to exorcise it?"

No one expected that Dr. Ansari, the year's President of the Indian National Congress, that body which can pass a resolution declaring that India's goal is "complete national independence"—no one expected that he would do less than advocate complete boycott of the Royal Commission. Some may have nursed the hope that Sir Tej Bahadur Sapru, the leader of the Liberals, who have been holding their annual meeting in Bombay, would advocate moderate counsels. If any did, they have been disappointed. The Liberal Federation has adopted, with only the Bengal Liberals opposing it, a boycott resolution.

Sir Tej Bahadur Sapru's Presidental speech reads well and repays reading, the last two-thirds of it being better than the first. The Liberal Party had worked, he said, in the belief and conviction that the road to India's freedom was the road of co-operation. If the Liberal Party was now asked to accept the new doctrine of co-operation which means that it must always subordinate its will to the higher will, not of Parliament, but of its agents, then clearly the time had come when they should say that that was not their conception of co-operation. But whoever, one may ask, has enunciated any such new doctrine of co-operation?

Hindu-Muslim Unity.

"Hindu-Muslim Unity" is a phrase that is used, with no intention of irony in to-day's *Statesman*, for instance, as a heading to the report of yesterday's session of the National Congress. The unity is the unity that the more sanguine hope to reach in time to make a favourable impression on the Royal Commission. The word "forbearance" would suit the context better. The utmost that the leaders venture to hope is that the two great communities should show forbearance one toward the other. If they would drop the phrase "Hindu-Muslim Unity" and use the other, "Hindu-Muslim Forbearance," one would look for greater progress.

The resolution was carried unanimously by the Congress. Each community, runs the report, is asked to stand on its own honour, which, you would say, was more likely to lead to more strife than to peace. The two great points of dispute are the slaughter of cows and the playing of music in front of mosques. Pandit Madan Mohan Malaviya appealed to Muslims to try to understand the feelings of the Hindus on the subject of the sacrifice of cows, and not to sacrifice any more cows. Hindus in their turn were to respect Muslim sentiment, and not to play music at any time before mosques.

Mr. Abul Kalam Azad said that the sacrifice of cows was an old question, one that would be finally solved when there was not one cow killed in India. The present time was not quite favourable for effecting that final solution. The resolution, therefore, left the matter to the good sense of both communities. It was, Mr. Sen Gupta declared, the only answer to Lord Birkenhead's challenge. A decade of forbearance would be a good answer. A resolution of which half the villages in the country may never hear is a poor answer, or none at all.

The Money Market.

The following was published on Christmas Day:—

The Government are closely watching developments in the Money Market as the result of the demand for the finance of raw produce;

That every such resource will be availed of as and when need arises;

That the Government have no apprehensions of a depleted supply of currency for trade purposes; and

That any impression of undue monetary stringency in the residue of the cold weather is unfounded, except in the sense, and to the extent, that the usual seasonal hardening of money rates may occur this year.

It will be gathered that there has been a good deal of anxiety as to the probable course of things in the Money Market. The public demand for money has been rising rapidly, as the weekly statements of the Imperial Bank have shown. Already the Bank has borrowed four crores from the Government, and the discount rate has been raised to 7 per cent.

Society.

There has been no Christmas rain this year, but light winds and beautifully sunny skies. Nightjar, an outsider

won the Viceroy's Cup. Dame Clara Butt has given two concerts, the second to an even more crowded and enthusiastic house than the first. The C.A.T.S. are playing at the Empire. The streets, the new market, and the *maidan* have been thronged day after day by brightly dressed crowds. Seldom can Christmas holidays in Calcutta have been more enjoyed. On Monday Lady Jackson opened the Exhibition of the Indian Society of Oriental Art.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 31.

The Madras Session of the Indian Congress had a special significance in view of the fact that two very important question—Hindu-Muslim unity and Indian reforms—were to be discussed. As regards the latter, almost all Congress leaders had declared themselves in favour of a boycott as soon as the composition of the Commission had been announced, so the decision of the Congress on that subject was a foregone conclusion. The first part of the resolution gives a very clear idea of the scope of the boycott. It states:—

"In particular (a) This Congress calls upon the people of India and all Congress organisations in the country: (1) To organise mass demonstrations on the day of the arrival of the Commission in India and similar demonstrations in the various cities of India which the Commission may visit; (2) To organise public opinion by vigorous propaganda so as to persuade Indians of all shades of political opinion effectively to boycott the Commission.

"(b) This Congress calls upon the non-official members of the Indian Legislatures and the leaders of political parties and the communities of India and all others, not to give evidence before the Commission nor co-operate with it in any manner, public or private, nor attend the social functions given to them.

There was some idea of modifying the mass demonstration part of the programme, in order to meet the Liberal Party half-way, but it seems that at the last moment this idea was dropped in favour of a more vigorous form of boycott. Beyond this little change, which seems to have been the direct result of the Liberals refusing the invitation of the Congress to participate in the deliberations, there is nothing in the resolution which suggests anything new.

The Independence Resolution.

The Madras session will be remembered long for the Independence resolution which was passed unanimously. I have good reason to believe that the right wing of the Congress were taken unawares when Pandit Jawarharlal Nehru moved the Independence resolution in the Subjects Committee. The resolution declared the goal of the Indian people to be independence, with full control over defence and the forces of the country, financial and economic policy, and relations with foreign countries; and demanding that this right of the people of India should be forthwith recognised and given effect to, in particular, by the complete withdrawal of "the alien army of occupation." That the resolution was a bombshell to the sober section of the Congress was obvious from the fact that Mrs. Besant, Babu Rajendra Prasad, Pandit Madan Mohan Malaviya, and Mr. C. Vijayaraghavachariar opposed the resolution in the most uncompromising terms. Mrs. Besant declared that complete national independence and the withdrawal of the alien army were both impracticable, because at present India had no power to defend herself. Babu Rajendra Prasad was crushing in his condemnation of the resolution. He asked Mr. Mahomed Ali, who had supported the resolution warmly, whether the country was prepared for independence. He concluded by saying that the resolution was moonshine and made the Congress the laughing-stock of the whole world. Pandit Jawaharlal Nehru explained that the resolution did not involve any change in the creed of the Congress, as he desired for India the freedom which Canada enjoyed in regard to foreign affairs. Ultimately an amendment, moved by Mr. Satyamurthi, defining the goal of the Indian people to be complete national independence was adopted and passed in the open Congress the next day.

Alienating the Liberals.

This extreme step by the Congress has had the effect of further alienating the Liberals, who are opposed to mass demonstration in regard to the boycott on the ground that it may lead to violence. The Independence resolution has confirmed their feeling that an alliance with the Congress would end in disaster; and I feel convinced that the Liberal leaders have resolved among themselves to map out their future programme independently of the Congress. Sir P. S. Sivaswamy Iyer, in moving the resolution for the boycott of the resolution before the Liberal Federation which met in Bombay, was very anxious that the Liberal attitude should not be misunderstood. It was, he said, something quite different from that which the N.C.O.'s projected. All that the Liberals intended was that they would not co-operate with the Simon Commission. They were fully aware of the futility of non-co-operation and did not propose to boycott the Councils. Sir Moropant Joshi, in seconding the resolution, made this point more explicit and repudiated the charge that the Liberals had abandoned their traditions and adopted non-co-operation as their creed. He said that all that they intended to do at present was to show the intensity of their feeling against the Commission. If there is anything by way of repentance or better terms, they had left ourselves free to raise the boycott.

The Communal Problem.

Perhaps the most notable achievement of the Congress is the adoption of the communal pact, which is a distinct improvement on the Lucknow Pact. The new pact provides for joint electorates and concedes the Muslim demand for the separation of Sind, as also the plea for the extension of the reforms to the North-West Frontier Province and British Baluchistan. The deliberations on this resolution were fraught with great difficulties, and it was feared that a serious breach would occur at one stage in the discussions. But, ultimately, owing to the extremely conciliatory attitude adopted by the Hindus, a provisional agreement was reached, which, on the admission of those who are a party to it, is not a final one. It remains to be seen how far the leaders of the two communities will carry out the conditions in the pact. A great blow to the strengthening of the bond between the two communities is the sudden death of Hakim Ajmal Khan, who had considerable influence among the Muhammadans in Northern India and who was a sincere worker in the cause of communal unity.

INDUSTRY IN THE UNITED PROVINCES.

Opening an exhibition of the products of the Technological College and the Technical School organised by the Director of Industries at Lucknow last month, Sir William Marris, the retiring Governor, reviewed in detail some of the wider aspects of industrial development in the United Provinces. Industrial enterprise in the province, Sir William pointed out, fell into four main categories.

There was the industry of the village craftsman who made things for his own use and for a purely local clientele. Then there was the cottage industry of the man who worked at home, but drew his raw materials from outside and sought a wider market. Then there were the smaller organised industries requiring some capital and generally some form of mechanical power, such as sugar and oil mills, glass works, furniture works. Finally, there were the great established industries concentrated almost entirely at Cawnpore. The Cawnpore Mills were practically independent of any Government assistance. They had achieved success unaided. Their problems were mainly All India problems, matters of tariffs, of railway rates, of taxation, of factory and commercial legislation.

The problem of Government encouragement for what had been called smaller organised industries was very obscure. Their primary need was capital. Government were trying to help them by turning out technically trained men at the Technological Institute and the higher technical schools. Government were now spending roughly ten and a half lakhs of rupees on 30 Government and 78 aided schools.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Egyptian Trade Revival.

The figures of Egypt's trade for the year ended December 31 last, which are now available, make a much better showing than seemed probable early in the year and bear witness to the rapidity with which the country is recovering from the economic depression which was so largely in evidence in 1926. For the period the value of the exports was £E48,340,503 as compared with £E41,759,391 for 1926, while that of the imports was £E48,685,184 as against £E52,400,059. It will be seen from these figures that Egypt had a very small adverse balance of trade as compared with one of over ten millions in 1926, while if the re-exports are included there would be quite a fair balance in Egypt's favour. If it were possible to feel confident as to the cotton position, it would be possible to anticipate that 1928 should prove a distinctly prosperous year for the country, especially as Egypt's second great asset—the tourist season—promises to be of much greater importance to the country this time. As it is, with the world trade position gradually on the upgrade, it is reasonable to look for the continuance of the gradual improvement to which the trade figures for 1927 have borne witness.

The Greek Loan.

As was anticipated, the negotiations for the Greek loan were speedily concluded, the offer made by Hambros Bank, Ltd., being accepted. The loan, which will be issued at 91, will bear interest at 6 per cent., and will be redeemable in forty years. The date of issue is dependent on its ratification by the Greek Parliament, which is to consider the terms on either January 26 or 27, so that the loan will make its appearance in the following week. The total amount of the loan, allowing for the loan recently concluded in America, is now only £6,500,000, and as portions of it are to be issued in the United States, in France, Italy, and other countries, the amount available for issue here will not be so large as had been expected. The terms of the loan are appreciably better than those of the Refugee Loan of 1924, and indicate the improvement that has taken place in Greece's economic position, and they would probably have been better still but for the existence of the previous loan, whose terms, it may be pointed out, scarcely did justice to Greece's position and eminently satisfactory financial record.

France and Mosul Oil.

The recent strike of oil in the Mosul area, which has aroused so much interest in the prospects in that region, has excited considerable attention in France, for the French evidently depend on their share of the Mosul oilfields to enable them to be independent of other countries as regards oil supplies. So much was clear from the long statement which M. Briand has just made before the Oil and Foreign Affairs Commitee of the Chamber of Deputies. From what he said it is evident that the attempts to obtain oil from other Near Eastern regions are not regarded seriously, and that it is on the Mosul area that French hopes are fixed. One cannot help thinking, however, that the French are a little premature in their enthusiasm and also in their expectations. If it may now be assumed as proved that the Mosul area is rich in oil it is certain that its commercial development will not be a thing of the immediate future. For one thing the building of the pipeline, when a decision is come to on the matter, will be a long task, and it may be said in this connexion that there is no ground for assuming that the line will follow the route that is anticipated in France. There is also the not unimportant point that the world at the moment has too much oil. In four or five years, when the Mosul oil is available for commerce, the world market for this commodity will need further supplies, but if it were to be available in the near future it would simply mean a further decline in prices to the detriment of all the oil companies.

Phœnix Oil Dividend.

The announcement by the Phœnix Oil and Transport Company of an interim dividend of 6d. per share on the £1 shares and of 3.465048d. on the 1s. shares is of particular interest in view of the general situation in the oil industry. For the previous year the company declared two similar interim dividends and a final dividend of the same amount, but in view of the fact that the report for 1927 will not be forthcoming for some months, this early declaration will lead shareholders to hope that there will be an improvement on last year's dividend despite the fall in oil prices. They will be supported in their hope by the fact that the production of the company for the past year amounted to 434,897 tons, representing an increase of 74,666 tons on the figures for the previous year.

The New Nile Bridge.

A further landmark in the development of the Sudan was reached on Monday when the Governor-General, Sir John Maffey, formally opened the new bridge over the White Nile between Khartoum and Omdurman and also the electric tramway system and water supply. The bridge, which was built by Messrs. Dorman, Long and Co., Ltd., was completely nearly six months in advance of the contract period despite difficulties arising from the industrial troubles in this country. An achievement such as this is, needless to say, the best possible advertisement that British enterprise can receive. It is to be regretted that, except on occasions such as the function referred to, the Sudan usually receives too little attention in the Press, and that tends to obscure the extensive and valuable work that is unceasingly being carried out with a view to developing the resources of the country and making it what it promises speedily to become—one of the most prosperous regions within the Empire. Trade statistics only tell a part of the tale, but the fact that in 1927, a year of economic depres-

sion, the value of the volume of trade for the first ten months showed an increase of £E358,234 on the corresponding figures for the previous year is a self-evident indication of the progress that is being made.

Greek Shipping and Insurance.

The interesting report is forthcoming from Greece that the shipowners there have decided to establish a Greek "Lloyd" with an initial capital of £500,000, the reason given for this departure being the high premiums which underwriters are said to charge for Greek risks. As it happens a large part of the Greek mercantile marine consists of old ships, and it is the practice of underwriters to charge addition premiums for every so many years over a certain age. It is only business that this should be the case, and while the new Greek departure will be watched with interest it would seem obvious that the really satisfactory way to reduce the premiums is to reduce the average age of Greek shipping by replacing the old vessels by new ones.

The New Indian Loan.

The City was taken considerably by surprise by the sudden news at the week-end of the pending issue of a Government of India sterling loan for the large amount of £7,500,000. The loan duly made its appearance yesterday morning, and was rapidly subscribed, the list being closed at 3.30 p.m. This constituted a second surprise, for in some quarters it was not considered that the terms were sufficiently attractive—4½ per cent. at an issue price of 91½. The result only goes to show that there is still plenty of money available for investment pure and simple. It also indicates plainly the improvement in India's credit, seeing that it is now possible to raise a loan on such terms, whereas a few years ago India's credit stood on a seven per cent. basis.

COMMENTATOR.

An exceptionally large tobacco crop is expected in Darfur Province in the Sudan.

The City of Sofia is reported to be negotiating for a large loan for municipal improvements.

The exports of gum from the Sudan in November were 13 tons of bleached of the value of £E741, 1,001 tons of hashab of the value of £E32,984, and 189 tons of talh of the value of £E3,824.

Colonel Percy Morland Acton-Adams, D.S.O., a well-known sheep farmer, of New Zealand, died at Clarence Reserve, Kaikoura, on November 23 last at the age of 49. His illness was contracted while on active service in Egypt. At the outbreak of the Great War he was placed in command of the C.Y.C. Squadron of the Expeditionary Force, with the rank of major. The success with which he led the C.Y.C. in Gallipoli and in Egypt and Palestine gained him promotion to the position of second in command of the Canterbury Mounted Regiment, and on several occasions he commanded that regiment. He was awarded the D.S.O. and the Order of the Nile, being also mentioned in dispatches.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 17.

The first account of the New Year in the Stock markets opened fairly satisfactorily, though the movement of prices has exhibited no particular tendency. Among the prominent features were the rally in prices of cable companies' stocks and the fluctuations in Marconis, on news of the *rapprochement* between the two groups, to which we refer below. Industrials generally, moved somewhat irregularly and although in some cases recent rises were maintained there was some profit taking in other directions which produced reactionary movements. Oil and rubber shares have been very quiet and the market for the latter has been heavy. The reduction in the interim dividend of the Anglo-Dutch Plantations of Java and the failure of the price of the raw material to respond to restriction, have been adverse factors.

Recent developments in the money market have again given rise to hopes in some quarters of a reduction in Bank Rate in the not distant future. There has certainly been a striking improvement in the Bank of England's position, its gold stock being now higher than at any time since September 1926, but there are still many uncertain elements in the outlook and until these are cleared up a change is unlikely. In the meantime the action of the French Government in removing the ban on the export of capital suggests that formal stabilisation of the franc in the course of the next few months is being aimed at.

Safety Glass Companies.

The manufacture of safety glass for motor cars and other purposes has lately attracted considerable attention in financial circles. In recent weeks the price movements of the ordinary shares of the Triplex Safety Glass Company have been a conspicuous feature of the stock markets, while a new company has been floated this week and another undertaking is understood to be in process of formation. Whether there is a profitable field for all these companies remains to be seen. The directors of the Triplex Company have issued a statement to their shareholders in which they refer to the very important contracts recently concluded by the company. The directors make no reference to the profits for the current year, which ends on June 30, but they point out that the contracts referred to in the statement will not affect the current year's earnings. This was followed by a modest advance in the price of the shares, the present quotation being £11. On Monday the Safetex Safety Glass Ltd. appealed to the investor for funds, and the issue was substantially oversubscribed. A notable feature is the composition of the directorate, which includes (as chairman) Sir William Schooling, Vice-Chairman of the National Savings' Committee and Mr. Hartley Withers, the eminent financial authority. It has been stated that the Non-Inflammable Film Company contemplates the formation of a subsidiary company, involving a public issue of shares, for the purpose of manufacturing safety glass.

A Prosperous Bank.

The dividend announcement made by the Hong Kong and Shanghai Banking Corporation suggests that the earnings of this important banking institution have again been well maintained. The directors propose a final dividend of £3 per share and a bonus of £2 per share, making for the whole year £8 per share, less income-tax; the shares are of the denomination of 125 dollars, this being equal to approximately £13 at the present exchange rates. The allocations are substantialy unchanged, as compared with last year, while the amount carried forward is practicaly identical. In view of the disturbed conditions ruling in China, it may appear remarkable that the bank should have such a sustained record of satisfactory earnings. Its sphere of operations, however, is by no means limited to the area indicated by its title. It is true that it has considerable interests in China, but it is also true that it has considerable interests elsewhere; there is, in fact, a tendency to exaggerate the importance of China to the Hong Kong and Shanghai Bank. The chairman has never been inclined to regard China as an alarming factor and in any case he has never been a pessimist concerning China. In these circumstances the investor who is seeking a good overseas bank investment should carefully consider the ordinary shares of the Hong Kong and Shanghai Banking Corporation, which will give a return of £6 10s. per cent.

Cables and Wireless—A Timely Move.

The many holders of the cable companies' stocks should be reassured by the latest development in the cables versus wireless controversy. It will scarcely be less satisfactory to the shareholders of the Marconi Company. Two eminent chartered accountants, Sir William Plender (acting on behalf of the cable companies) and Sir Gilbert Garnsey (acting on behalf of the Marconi Company) have been asked to make a joint report as to a possible arrangement in the interests of the different companies. This move, if not over-due, was certainly inevitable. Two alternatives were available: the companies could wage a rate war to the bitter end or they could co-operate. They have wisely sought to explore the possibilities of the second method. It was hardly conceivable that our traditional saving grace of common sense would permit a rate war, for this would have involved the dissipation of valuable resources for no good purpose. Co-operation, on the other hand, should give no one a single sleepless night. The parties enter the discussion without any great balance of advantage. The cable companies are in an exceptionally strong financial position and have done practically everything in their power to maintain the efficiency of their services, while the Marconi Company, possessing a highly promising invention, has cleaned up its financial position. Meanwhile, the cable companies' stocks are showing encouraging signs of recovery.

In November last 54 vessels of a net tonnage of 201,551 entered Port Sudan harbour as compared with 77 vessels of 264,513 tons in the corresponding month of 1926.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, December 29.

Economic Crisis in Transylvania.

An unfortunate illustration of the economic crisis at present prevailing in the province of Ardeal was given last week by the crash of the United Economic and Mortgage Bank of Cluj, an old and respected institution, of Hungarian origin. It appears that the bank, like many others in Transylvania, has been tempted, under the pressure of the existing money stringency, to embark upon more or less risky operations. It is reported that the other banks of Cluj, both Roumanian and Hungarian, have agreed to come to the assistance of the bank in question, as soon as its balance has been made out so as to show the exact situation. In his introduction of the Budget estimates M. Vintila Bratianu, realising the difficulties in which many of the Transylvanian banks now find themselves, promised to make arrangements to come to their assistance through the Roumanian National Bank.

The Weather.

A sudden and very keen frost caused the Danube to be closed to shipping on December 21, and many ships were caught in the ice and others were prevented from leaving the ports of Braila and Galatz. A subsequent thaw has probably enabled some of them to get away. The temperature is reported to have fallen as low as 26 degress below zero Celcius.

Situation of the Government.

The Minister of Finance has now introduced his Budget estimates for the year 1928, in which revenue and expenditure are balanced at a total of 38½ milliard lei (as against about 32 milliard lei last year). This is not inclusive of the budgets of the Railways and Posts and Telegraphs, each of which Departments now has its own separate budget. In spite of a good deal of adverse criticism the estimates were accepted and passed by Parliament. Another important measure undertaken by the Liberal Government is the revision of the Customs Tariff which came into force last April. It is expected to be ready for submission to the Chamber in the late spring.

The National Peasant Party have intimated their intention of starting an energetic campaign against the present Government in the beginning of the year. They still persistently refuse to join forces with the Liberals or to promise any continuity of policy.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date December 31 :—

Arrivals Old Crop.—Arrivals in Kordofan Stations from November 25 to December 31 were in all only 4 tons in 1927 as against 335 tons in 1926.

Arrivals New Crop.—Arrivals in Kordofan Stations, including Tendelti, were 1,410 tons in 1927 as against 1,090 in 1926, or an increase of 30 per cent.

Old and new arrivals taken together were 11 tons less than in 1926.

The tendency of prices was to rise. On November 25 the market was closed and the difference between the prices at El Obeid on November 26 and December 28 was exactly one shilling. On the 29th and 31st the price was easier by a piastre, i.e., 2½d.

Demand as shown by our sales was good and somewhat better than last year.

Taking the crop of a season to begin with the middle of one November and end with the following one, our revised estimate for the shortage of Kordofan during the season 1926-1927 as against the season 1925-1926 is about 3,300 tons, but to this we must add about 2,000 tons for the inferior or G.G.G. qualities of Hashab, which makes a total shortage of roughly 5,300 tons for the season which has just closed.

There is no doubt that owing to the smaller crop of 1927 all old stocks were exhausted, and we had to refuse many orders because such gum was simply unobtainable. This clearance has enabled us to get a more correct basis on which to base the stocks at the end of 1926 and on which to calculate in future. There is now little question that the stocks at the end of 1926 were much larger than could be then estimated and these may be said to have very largely balanced the shortage during 1927.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at November 30, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,145,625; current, deposit, and other accounts, £E16,904,805; Egyptian Government, £18,470,369; Sudan Government, £E225,411; Mixed Tribunals, £E1,825,828; bankers' accounts, £E334,020; cheques and bills payable, £E290,793; sundry other accounts, £E2,272,636—£E45,856,987. Assets: Government securities and securities guaranteed by the Egyptian Government, £E23,150,842; sundry securities, £E691,274; advances on merchandise, £E4,561,827; advances on securities, £4,519,862; advances otherwise secured, £E1,612,914; sundry other advances, £E1,224,337; bills of exchange, £E3,019,872; local bills discounted, £E666,417; buildings and furniture, £E142,306; money at call and at short notice, £E1,511,250; bankers' accounts, £E566,017; sundry other accounts, £E1,508,682. Cash: Notes, £E1,991,811; gold, £E380,286; silver, nickel, etc., £E309,290—£E2,681,387—£E45,856,987. Issue Department.—Notes issued, £E31,200,000—£E31,200,000. Gold, £E3,339,576; *British Treasury Bills, £E12,260,424—£E15,600,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,355,896; British Treasury Bills and National War Bonds, £E14,244,104—£E15,600,000—£E31,200,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

WESTMINSTER BANK.

The net profits of Westminster Bank, Ltd., for the past year, after providing for bad and doubtful debts, and all expenses, amount to £2,132,815 9s. 10d. This sum, added to £508,522 6s. 8d. brought forward from 1926, leaves available the sum of £2,641,337 16s. 6d. The dividend of 10 per cent. paid in August last on the £20 shares and 6¼ per cent. on the £1 shares absorbs £678,137 11s. A further dividend of 10 per cent. is now declared in respect of the £20 shares, making 20 per cent. for the year; and a further dividend of 6¼ per cent. on the £1 shares will be paid, making the maximum of 12½ per cent. for the year. £200,000 has been transferred to bank premises account, £150,000 to rebuilding account, £200,000 to contingent fund, and £200,000 to officers' pension fund, leaving a balance of £535,062 14s. 6d. to be carried forward.

NEWS FROM ALL SOURCES.

During 1926 the number of vessels visiting the Yugoslav ports totalled 67,722, of a total tonnage of 10,200,000. Of these vessels, 62,367 flew the Yugoslav flag.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 20 amounted to £E9,099, making the total from April 1 £E221,439.

The traffic receipts of the South Indian Railway Company for the week ended December 17 amounted to Rs.11,63,506, making the total from April 1 Rs.4,40,08,123.

A Jerusalem message states that the Muslim Supreme Council have resolved to permit Christian and Jewish visitors to enter the mosque at Hebron, and visit the Cave of Machpelah, at a charge of 3s. Hitherto entrance has been restricted to the more privileged visitors, and a written permit from the Muslim authorities was required from each person, making it impossible for casual tourists to enter.

The decorations bestowed on the occasion of King Fuad of Egypt's visit to Europe include the Collar of Mohammed Ali upon King George, the King of Italy, and Cardinal Gasparri. The Order of Al Kamel, Supreme Class, is bestowed on Queen Mary and the Queen of Italy, while the Duke of York, Prince Henry and Prince George are recipients of the Grand Cordon of the Nile.

Motors and Motoring.

The Hull Corporation Watch Commitee has just refused, for some obscure reason, to license a new six-wheeled double-decker omnibus which has been purchased by, of all people, its own Tramways Committee. It would have been thought that the latter, before making the purchase, would have ascertained whether it would be allowed on the streets or, alternatively, that the Corporation would have given its Tramways Committee a hint.

As far as I can ascertain the reason for the refusal is that the Deputy Chief Constable in a written report has expressed the view that the omnibus would be a danger to other traffic as it had a turning circle of 70 ft. Had he said of 23⅓ yards it would not have sounded so much! The curious thing about this is that the omnibus was again tested by the police after the official report had been put in and it was found that the vehicle would turn in less than 50 ft. I take it that a licence will soon be given, if it has not been granted by the time this appears in print. Personally, I view the coming of the six-wheeled omnibus as a step in the right direction. Once we can get these mammoth vehicles on the road we shall be able to do without trams and the consequent obstruction to traffic.

Six-wheeled Vehicles.

There are already five or six of these big omnibuses in London, which are capable of turning in a circle of 62 ft. and which have received the approval of Scotland Yard, and I understand that it will not be long before a number of others will be plying for hire. I have had a good deal of conversation with the driver of one of these and I gather that the vehicle is easy to handle and as readily controllable as any other omnibus.

It must be remembered in connexion with these omnibuses, however, that we are getting rather near, under present conditions, to the limit. It is of no use developing our motor vehicles faster than our road engineers can develop their highways, a fact that apparently some are in danger of forgetting.

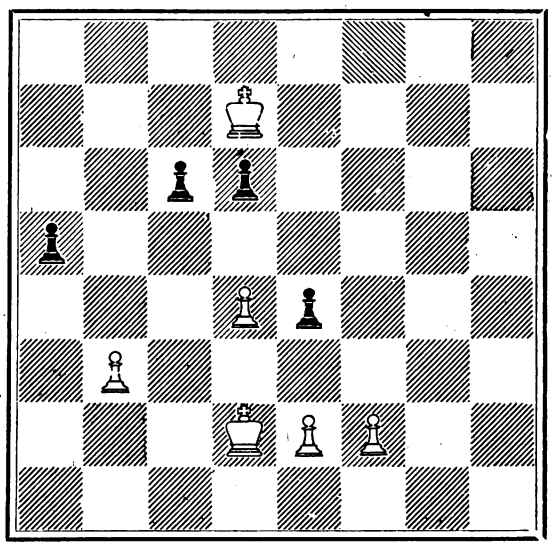
A reference to the Heavy Motor Car Amendment Order shows that the general requirements as to overall length, unladen weight, and the weight to be carried per axle are modified in the case of six-wheel vehicles of the rigid frame type, provided they conform to structural requirements as follows:—(a) The maximum overall length is fixed at 30 ft. instead of 27 ft. 6 in.; (b) the maximum unladen weight is raised from 7¼ tons to 10 tons. It is distinctly stated in the Order that the authorities hold the view that higher maximum laden weight for rigid frame, six-wheel vehicles is justified on the ground that vehicles of this type, if suitably constructed, offer special advantages from the point of view of the road used, on account of the distribution of weight over three axles and the reduction, as a consequence, of impact. It is interesting to see that the view of the authorities thus coincides with that of our more progressive engineers, but it may, I think, be taken as yet that while licensing authorities in the exercise of their discretion may license omnibuses of a greater overall length than 26 ft., the Ministry of Transport is not of opinion that the time is nearly ripe for a wholesale licensing of that class of vehicle.

The Turning Circle.

Personally, I think too much is being made of this matter of turning and I do not consider that the large turning circle would make the vehicle dangerous except under special and very exceptional conditions. A large number of municipal corporations up and down the country have licensed six-wheel omnibuses, and there are not only no reports of accidents having occurred through them being placed in commission, but such reports as are to hand are to the effect that the buses are running in a most satisfactory manner. Actually, the Deputy Chief Constable of Hull, in his report, seemed to forget that under the Heavy Motor Car Amendment Order the running of six-wheeled omnibuses with a total overall length of 30 ft. and a turning circle of 72 ft. is permitted! Most of the buses in use of this type have a turning circle of 66 ft., and I may say without fear of contradiction that the general consensus of opinion amongst users of these giant omnibuses is that, properly handled, they are far safer on the street than buses of the four-wheeled type.

CHESS.

By "CARO-KANN."



White to play. What result?

The solution to the problem given in THE NEAR EAST AND INDIA of January 5 is as follows:—1, K—B3, P—B4; 2, K—Q4, K—Kt4; 3, K—K5, P—Kt5; 4, PxP, PxP; 5, K—B4, K—Kt5 and draws.

The approximate receipts of the Suez Canal for the past year totalled 207,000,000 gold francs.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following telegram from their Alexandria office:—"The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending December 31 are £4,752,468 against £4,127,967 for the corresponding month 1926, and the exports are £5,104,423 against £4,501,521 for the corresponding month 1926. The cotton exports for the month are £4,163,001 against £3,706,950 for the corresponding month 1926.

Near East Markets

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the folowing reports:—

Egypt.

The month ending December 20 has been notable for erratic movements in the price of cotton. At one time it appeared as though quotations would remain steady, but news of a crop in America larger than was anticipated, and increased estimates of the yield of the Egyptian crop, caused a fall of nearly 5 dollars from the highest. Part of this decline was subsequently recovered, but in the meantime all branches of trade had suffered. Stocks of cotton are accumulating in Alexandria and the offtake is not very good, but in spite of these factors, exports are only 20,000 bales less than a year previously. Manchester goods, which at one time were moving freely, received a setback and, at the moment of writing, the demand from the Interior has quite fallen off. Colonial produce has suffered in a similar manner, but sugar is firmer and flour is steady.

Owing to the restricted area under cotton, there is an exportable surplus of cereals, and a certain demand for Egyptian maize has already become manifest. It is expected that there will be a surplus of wheat and barley for shipment later, which will help to increase the balance of trade in favour of Egypt.

The Sudan.

Very little change has occurred in conditions since a month ago, although confidence is felt in a general improvement shortly. The rains have been good in all parts, and the dura crop is plentiful, but until the actual figures are known, the Government is continuing the embargo on exports. The forecast of the crop, apart from the Gezira irrigated dura, is 160,000 tons in the Blue Nile, White Nile and Fung, as compared with 51,000 tons a year ago. The import market is improving and a good demand is reported from Medani and the Blue Nile Province generally. Sales of benzine and fuel oil are showing a large increase. Motor cars are being imported in large quantities, but sales are not keeping pace with the supply, and there seems every probability that the market will be overstocked. Nearly all cars sold are on the hire-purchase system.

Cotton prospects are good, particularly in the Gezira and it is stated, on good authority, that damage by locusts is negligible.

Palestine.

An increase in trade activity was noticeable during the month, which, together with the anncuncement regarding the granting of a concession for the exploitation of the Dead Sea, tends to reiniforce hopes of an early revival in trade. The prices obtained for oranges have ranged between 9s. and 13s. per case, and it was considered that the low figures were due to competition between shippers. The principal exporters have held a meeting at the National Chamber of Commerce to regulate shipments and it was decided to suspend consignments to the United Kingdom for a period of 15 days. A Committee was also elected to supervise shipping, fix quantities, dates of shipments and ports of destination. Favourable reports concerning the Spanish crop are still being received, but experience shows that changed weather conditions during the months of January and February may damage the crop; 187,000 cases of Jaffa oranges were shipped during the month.

Importers in general are busy receiving winter stocks, although sales have been slightly retarded, owing to delayed rains. Distributors, however, are satisfied with the volume of sales, which show an improvement over the dull summer season.

CYPRUS TRADE IN NOVEMBER.

The Trade Commissioner for Cyprus has issued the following report on Cyprus trade in November:—

The value of imports was rather below that of the previous month but continued to be good.

The value of exports was also below that of October but considerably more than the corresponding month of 1926.

The decrease in the quantity of asbestos exported is due to the approaching end of the working season. Carob shipments were exceptionally high and account for one-third of the total export trade.

The pomegranate and raisin season is now over.

Exports of potatoes was brisk, but, as anticipated, disease has reduced quantities and quality to a great extent.

Owing to the late rains the orange crop will fall short of expectations. A small trial consignment was sent to England and has been very well received.

THE REGULATION OF JOINT-STOCK COMPANIES IN EGYPT.*

The constitution of joint-stock companies in Egypt is regulated by articles 46 of the Commercial Mixed Code and 40 of the Commercial Native Code, of which the following is the text :—

"Joint-stock companies can only be created by virtue of a firman of the Khedive, who approves the conditions embodied in the articles of the company and who authorises its establishment."

This text was inspired by article 57 of the French Commercial Code of 1807, abolished by the law of July 24, 1867. During the period between 1807 and 1864 a system of jurisprudence was developed in France in regard to the regulation of joint-stock companies. Authorisation for the establishment of joint-stock companies had to be granted by decrees issued after consideration by the Council of State. As the law contained no positive prescriptions regarding the terms of statutes, the marketing of shares, the minimum of paid-up capital, etc., the Council of State was absolutely at liberty to subordinate its approval to whatever conditions it might consider advisable to impose. The Council could reject the petition, or grant it without altering the statutes, or require as a condition of authorisation some alteration. Further the authorisation could be revoked, and revocation occurred especially when the company violated the statutes approved or imposed by the Government. Sometimes the Government attached to Boards of Directors auditors to superintend the progress of companies. Preliminary authorisation was required not only for the establishment of the company, but also for any change in the approved statutes.

In Egypt all joint-stock companies are subject to governmental authorisation. The decree of authorisation is issued after an examination of the statutes of the joint-stock company by the Committee of Crown Solicitors, and the statutes must conform to the decisions of the Council of Ministers of April 17, 1899, and June 18, 1906. Once the decree has been promulgated and published in the *Official Journal* the joint-stock company thus duly authorised may operate freely, subject always to the civil and penal responsibility of its founders or directors. Although from the legal point of view it is possible for governmental authorisation to be withdrawn there has been no instance of this hitherto.

From what has been stated it may be concluded that the Egyptian Government have always been and are to-day empowered to impose upon joint-stock companies, as a condition of authorisation, terms which are not necessarily restricted to the prescriptions of the Council of Ministers, and which are only limited by legal restrictions, considerations of public security and propriety, and naturally under reserves as to the economic and financial standing of the companies concerned. It was on the basis of this principle that the Council of Ministers issued a Decision on July 18, 1923, the text of which is attached herewith (Annexe No. 1), which prescribes more especially that "the Board of Directors must always include at least one director of Egyptian nationality," and that "in every public issue of shares at least one quarter of the total amount of the issue must be reserved for public subscription in Egypt."

These conditions were slightly altered by a Decision of May 31, 1927, in that the number of Egyptian directors required was raised to two, and four-fifths of that part of the company's capital which, in accordance with the Decision of July 18, 1923, had to be issued in Egypt, should be reserved for Egyptians. The Council of Ministers reserved the right to dispense with this second condition, if the shares offered to the Egyptian public were not taken up within a period of three months. Last year's Decision further prescribed in article 2 that "apart from workhands the employees of the company must be of Egyption nationality in the proportion of one fourth."

These regulations have naturally no retrospective effect, and are only applicable to companies formed after May 31, 1927. An explanation of their significance and of the reasons for their promulgation is not without importance. In the first place, the Decision of May 31, 1927, in no way affects articles 3 and 4 of the Decision of July 18, 1923, concerning the registration of company stock for quotation on the Exchange and the publication of documents setting forth the annual position of the companies. On the one hand, it goes no farther than to elucidate the intention of article 2 of the Decision of the Council of Ministers of July 18, 1923, which prescribes that when there is a public issue of stock at least one-fourth of the total amount of the issue must be reserved for public subscription in Egypt. This explanation is embodied in a statement to the effect that out of the fourth part of the total amount of its issue, four-fifths shall be reserved for Egyptians. It is worthy of note, in the first place, that in the great majority of cases joint-stock companies formed in Egypt make no public issue of stock, there being only a few exceptions, and, in the second place, that the Council of Ministers, to obviate possible difficulties arising from a too strict application of this condition, reserved the right, in the event of the issue offered to the Egyptian public not being covered within a period of three months, either to extend this period for another three months, or to dispense with this condition altogether. Thus the worst that could happen for a company whose stock offered to the Egyptian public had not met with a very favourable reception, would be a delay of three months at the most in closing the subscriptions.

Further, the Decision of May 31, 1927, increases the number of Egyptian directors from one to two, and requires that the personnel shall be of Egyptian nationality in a proportion equal to one-fourth. This clause is intended chiefly to give Egyptians the opportunity of obtaining practical experience of European methods of business and of acquiring those habits of order and foresight which characterise the management of great commercial, industrial, financial, and other enterprises directed by Europeans.

From its inception the regulation of joint-stock companies may be said to have operated without opposition or challenge from any quarter. It is worthy of note, indeed, that both before and after the Great War, numerous foreign companies, British and other, operating in Egypt, preferred to abandon their foreign statutes and transform themselves into Egyptian joint-stock companies. It would seem, therefore, that other considerations entered into the agitations that arose recently in certain foreign commercial circles, happily very limited, against the last decision of the Council of Ministers, for it has to be remembered that there is hardly a single joint-stock company which has not spontaneously considered it to be in its own interests in the first place to include Egyptians amongst the members of the Board of Directors, in the second place to employ Egyptians at least on the non-technical staff, and in the third place to appeal to Egyptian investors who, breaking away in an increasing degree from the hoarding habit so often criticised by Lord Cromer, ask for nothing better than to employ their capital in industrial, commercial, and financial enterprises worthy of confidence. To such an extent is this the case that in reality the decision of the Council of Ministers of May 31, 1927, simply had the effect of endorsing accomplished facts.

According to the official statistics of December 31, 1925, the number of joint-stock companies in Egypt amounted at that date to 195 with a capital of £E.104,949,734.

* "Joint-stock company" is the nearest equivalent of the French term "société anonyme," which is quite a different institution from the British "limited liability company" or "société en commandite par actions." The nearest British equivalent is the "incorporated society."

Digitized by Google

These figures were divided as follows:—

Nationality of Companies.	Number.	Capital paid up.
Egyptian	151	£E87,051,029
British	30	£E12,482,536
Belgian	11	£E4,229,984
French	3	£E1,196,185
	195	£E104,949,734

The total dividends paid by these companies for the year 1925 amounted to £E.7,669,215.

In conclusion it may be pointed out that joint-stock companies have continued to develop and prosper under the present system. Thus, in 1883, the total capital of joint-stock companies amounted to £E.22,135,144. By the end of 1925 this figure had increased almost five-fold to £E.104,949, 584. Since the Decision of the Council of Ministers of May 31, 1927, no less than forty new Egyptian joint-stock companies have been formed. From May 31 to December 3, 1927, fourteen other joint-stock companies have been constituted.

ANNEXE No. 1.

Decision of the Council of Ministers of July 18, 1923, relative to the formation of joint-stock companies in Egypt.

The Council of Ministers will not proceed henceforth with petitions for the formation of joint-stock companies unless the preliminary instrument and statutes are in conformity with the prescriptions already enacted by the Decisions of the Council of Ministers of May 6, 1899, and June 18, 1906, and further with the following prescriptions:—

I. The Board of Directors shall always include at least one Director of Egyptian nationality.

II. In every public issue of bonds, shares, or debentures, at least one-fourth of the total amount of the issue shall be reserved for public subscription in Egypt. Only in the event of the proportion of the issue thus offered to the public in Egypt not being entirely subscribed shall subscriptions from abroad be accepted.

III. All bonds, shares, or debentures, having been publicly issued or offered for public subscription, shall be presented within a period of one year at most from the date of issue for registered quotation on the Egyptian Stock Exchanges in accordance with the conditions established by the regulations of the Stock Exchanges in question.

IV. The documents setting forth the annual position of the Company (balance-sheets, profit and loss accounts, reports of the Board of Directors and the auditors) shall be published in full in two daily newspapers (one in the Arabic language, the other in a foreign language) of the locality where the general meeting is held and at least 15 days before that meeting.

18th July, 1923.

The President of the Council of Ministers
(Signed) Y. IBRAHIM.

ANNEXE No. 2.

Decision of the Council of Ministers of May 31, 1927, relative to the formation of joint-stock companies in Egypt.

The Council of Ministers will not proceed henceforth with petitions for the formation of joint-stock companies unless the preliminary instrument and statutes are in conformity with the prescriptions already enacted by the Decisions of the Council of Ministers of April 17, 1899, and June 3, 1906, and further with the following prescriptions:—

I. The Board of Directors shall include at least two Directors of Egyptian nationality.

II. Exclusive of workhands the employees of the company shall be of Egyptian nationality in a proportion equivalent to one-fourth. This provision applies to all persons employed as auditors, accountants, or in any other administrative or technical capacity, remunerated by the company.

III. In every public issue of bonds, shares, or debentures at least one-fourth of the total amount of the issue shall be reserved for public subscription in Egypt, provided that four-fifths thereof be reserved for Egyptians. In the event of the proportion of one-fourth of the issue thus offered to the public not being entirely covered within the determined period of subscription, the Council of Ministers may either extend this period for a term not exceeding three months or may in accordance with circumstances dispense with this condition.

IV. All bonds, shares, or debentures, having been offered for public subscription, shall be presented within a period of one year at most from the date of issue for registered quotation on the Egyptian Stock Exchanges in accordance with the conditions established by the regulations of the Stock Exchanges in question.

V. The documents setting forth the annual position of the company (balance-sheets, profit and loss accounts, reports of the Board of Directors and the auditors) shall be published in full in two daily newspapers (one in the Arabic language, and the other in a foreign language) of the locality where the general meeting is held and at least 15 days before that meeting.

The decision of the Council of Ministers dated July 18, 1923, is abrogated.

Cairo, 31st May, 1927.

The President of the Council of Ministers.
(Signed) SARWAT.

Official communiqué of the President of the Council of Ministers, dated December 20, 1927.

This morning Mr. R. P. Carver. M. V. Mathieu, and M. Lascaris, presidents of the British, French, and Greek Chambers of Commerce of Alexandria respectively, and M. S. Pinto, delegate of the Italian Chamber of Commerce of that town, were received in audience by H.E. the President of the Council of Ministers and submitted to His Excellency resolutions passed on the 12th inst. by the representatives of the said Chambers in regard to the Decision of the Council of Ministers of May 31, 1927, in regard to joint-stock companies.

Mr. R. P. Carver read a letter (Annexe No. 1), in which he assured the President that the action of the said Chambers of Commerce had no political significance and that the resolutions (Annexe No. 2) which they had taken had not been adopted in a critical or hostile spirit but in the hope that the Egyptian joint-stock company laws would be brought into harmony with those which existed in European countries.

H.E. the President of the Council thanked the president of the delegation for his assurances and his explanations as to the exact important of the resolutions pasesd by the Chambers of Commerce and the nature of the representations which the delegation made to His Excellency.

H.E. Sarwat Pasha went on to point out that Council of Ministers, in taking the Decision of May 31, 1927, acted within its powers, and added that the Egyptian Government was prepared to examine with care and sympathy all criticisms which should be presented to them by those interested in regard to the regulations which governed joint-stock companies in Egypt and also on the Decision of May 31, 1927.

The Egyptian Government would be glad if the Chambers of Commerce as well as private individuals would make such proposals as their business experience would suggest as to the best means of filling the gaps in the present régime.

The delegates thanked H.E. the President of the Council for his kind reception and his declarations, and in taking leave promised His Excellency to submit to him shortly a memorandum in the sense desired.

ANNEXE No. 1.

Letter from Mr. S. R. P. Carver, President of the British Chamber of Commerce of Alexandria, to H.E. the President of the Council of Ministers.

Excellency. I have the honour to present to you the delegates of the French, Greek, and Italian Chambers of Commerce at Alexandria, who, with the British Chamber, have signed the resolutions taken regarding the law relative to joint-stock companies, which resolutions have been already submitted to you.

I must first assure Your Excellency that the joint action of the said Chambers has no political significance. These Chambers have examined the Decision of the Council of Ministers of May 31, 1927, purely from the economic and commercial point of view, and they have come to the conclusion that it will not be in the best interest of Egypt and that the object aimed at by the Government will probably not be attained.

They therefore desire to draw the attention of Your Excellency to their views on the said resolutions, which are made not in a critical or hostile spirit, but in the hope that the Egyptian company laws will be brought in consonance with the laws existing in European countries where the right of shareholders to direct the business of their companies is recognised as an essential principle.

They think that the alterations in the constitution of joint-stock companies are of such importance that it would be desirable that they should be submitted to the discussion of Parliament and of the General Assembly of the Mixed Courts before their promulgation.

I do not propose to enumerate now the reasons which have made us think that some clauses would drive foreign capital from Egypt, but I can assure Your Excellency that we shall be at the disposal of the Government not only to submit our reasons but also to help as far as possible in arriving at a satisfactory basis for drawing up new laws on joint-stock companies, it being admitted that the clauses existing at present in the Code are very incomplete.

I regret that our joint action has been so misinterpreted by the local Press and that the British Chamber of Commerce in particular has been accused of having criticised the decision of the Government; that is not at all our intention.

We Europeans are all interested in the well-being of Egypt and the Egyptians, and we desire to see Egypt progressing commercially and industrially on the lines laid down during the past forty years.

We earnestly desire the co-operation of Egyptians who wish to employ their capital and to take their share of responsibility on boards of directors; but we consider that such co-operation should exist of good will and with free will on both sides.

I therefore ask Your Excellency to take into favourable consideration our resolutions which represent the desires of a large body of Europeans having important interests in the country.

(Signed) S. R. P. CARVER.

ANNEXE No. 2.

Resolutions passed by the delegates of the British, French, Greek, and Italian Chambers of Commerce of Alexandria at their meeting held on December 12, 1927.

The undersigned, delegates of the British, French, Greek, and Italian Chambers of Commerce at Alexandria, assembled for the purpose of examining the position created for joint-stock companies by the Ministerial Decision of May 31, 1927,

Considering that the conditions and restrictions which it imposes are of a nature to hinder the formation of new joint-stock companies and to divert foreign capital from Egyptian business when that is still necessary for the economic development and the future progress of the country,

Considering that a special law in regard to joint-stock companies is necessary,

Express the desire

(1) That the Egyptian Government appoints a Commission on which the financial, commercial, and industrial interests of the country shall be represented, with the object of preparing a comprehensive law, fixing in a permanent manner the conditions for the establishment and the functioning of joint-stock companies, and passes that law in the customary way.

(2) That the Egyptian Government should suspend the application of the Decision taken by it on May 31, 1927, pending the promulgation of the said law.

Signed by:—

S. R. P. CARVER, President, British Chamber of Commerce of Egypt.
A. STOCK GIVAN, Vice-President, British Chamber of Commerce of Egypt.
H. E. BARKER, British Chamber of Commerce of Egypt.
V. MATHIEU, President, French Chamber of Commerce of Alexandria.
ED. BOURRE, Delegate, French Chamber of Commerce of Alexandria.
M. LASCARIS, President, Greek Chamber of Commerce.
G. ROUSSO, Delegate, Greek Chamber of Commerce.
R. LUSENA, Delegate, Italian Chamber of Commerce.
SILVIO PINTO, Delegate, Italian Chamber of Commerce.

[The *Communiqué* and the two Annexes following are translated from the French.—ED.]

Ismail Bey, heir-presumptive to the Throne of Tunisia, died in Tunis of typhoid fever on January 11. The new heir-presumptive is Prince Ahmed, cousin of the reigning Bey.

Company Meeting.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1927, submitted to the shareholders at the twenty-second ordinary general meeting held at Alexandria on December 22:—

We have pleasure in placing before the shareholders for their approval our 22nd annual report together with the audited accounts to August 31, 1927.

The quantity of cotton ginned in our factories during the year 1926-27 was 844,827.38 kantars, against 828,835.74 kantars in 1925-26.

During the season ending August 31, 1927, we did not steam press. The following are the result to August 31, 1927:

	£E	£E
Factories profit		45,574
Less: Sundry repairs and renewals in the factories		1,232
Add: Interest earned	433	
Profit on Insurance Department	934	1,367
Less: Expenses and management at head office	4,719	
Insurance Premiums	3,077	
Sundry expenses	1,591	
Commissions	54	9,441
		36,268
Less: Depreciation on buildings and machinery		8,504
		27,764
Less: Statutory Reserve 10 per cent.	2,776	
Dividend, as per statutes 6 per cent. to the shareholders	15,795	18,571
		9,193
Less: 10 per cent. to the board		919
Leaving a balance of		8,274
We have therefore to deal with the following amounts:		
Statutory dividend 6 per cent.	15,795	
Above mentioned balance of	8,274	
Amount brought forward from last year	17,716	
		41,785
Of which your Board propose to distribute as dividend to the shareholders one shilling and four pence per share, making		23,400
And to carry forward		18,385

The Egyptian Branch of Lloyds Bank Ltd., having been absorbed by the National Bank of Egypt and the Factory of Benha sold, your Board has secured the cancellation of the lease of Benha Factory.

Your Board has to inform you with the utmost regret of the resignation of Mr. F. Allemann and that it is therefore deprived of his valuable collaboration.

Mr. F. Allemann, on the basis of article 6 of the agreement between the founder firms and the company has appointed in his stead Mr. G. Allemann, an appointment which we ask you to ratify.

Your Board has decided on the purchase and installation of a 500 h.p. Diesel Motor at the ex-Choremi Factory at Kafr Zayat in order to keep abreast with the modern improvements introduced by competitors.

Mr. T. A. F. Critchley retires from office by rotation and is eligible for re-election.

You are now asked to approve and adopt the report and balance-sheet for the year ending August 31, 1927, as presented.

You have also to appoint auditors for the ensuing year and to fix their remuneration Messrs. Russell and Co. offer themselves for re-election.

Al Mokattam, of Cairo, states that Muhammad Reda as Sanusi, son of the Saiyid al Mahdi, Grand Sharif or Shaikh of the Sanusi sect, surrendered to the Italian authorities on January 3.

A young woman fired several revolver shots at M. Velimir Prelitch, judicial councillor at the Prefecture at Skoplie, as he was leaving his office to go home on January 14. He was seriously injured. The assailant, named Mara Boulieff, turned the revolver upon herself and fired in the region of the heart. Questioned in the hospital to which she was taken, she declared that she had received an order from the Macedonian Revolutionary Committee to go to Southern Serbia on a mission and to attempt to assassinate certain personages whose names were subsequently given to her. Mara Boulieff succumbed to her injuries.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 11 :—

Egyptian Futures.—Sakel Contract.—Up to the end of last week values in this market showed an advancing tendency, stronger Alexandria reports and the maintenance of the improvement in the trade demand both helping to create a firmer undertone. During more recent sessions, however, quite a limited amount of Continental liquidation and some local short selling have not encountered sufficient support to hold the earlier gains. In addition, a setback in the American markets has also induced some easiness, so that the final result of the week's trading leaves the position 17 to 18 points lower for near months and 13 to 21 for distant options since our last report. Trade reports so far as fine spinning sections are concerned continue to be of a more cheerful character, and a steady business is being transacted. In certain quarters, however, apprehension exists regarding the outcome of the tentative proposals on the part of the employers to work longer hours and reduce wages. The natural result is that commitments are kept within reasonable limits, a state of affairs which also applies to spinners' operations in detail.

The Alexandria market has again ruled relatively stronger than the local option, cables from the other side attributing this to further speculative activities encouraged in part by the unsatisfactory Nile level and the rather improved spot demand. The parity between the two markets has widened further as a result, at the time of writing Liverpool standing at a discount of 25 points, quite apart from the usual importing charges. Little change has taken place in the differences between the various positions, near cotton tending, if anything, to weaken slightly in comparison to the later spring and summer months. With the market running so far below Alexandria we certainly could not recommend short commitments, even although at the moment the undertone leaves something to be desired. Rather we would prefer to recommend the policy of watching the position with the idea of purchasing on the down scale should further recessions take place.

Upper contract.—Only minor changes in the level have to be noted in this contract as a result of the week's trading. It has to be reported, however, that an appreciable improvement in the spot demand has been in evidence and the local stock, which is decidedly attractive in comparison to the prices demanded by shippers in Alexandria, is beginning to show a reduction. The Liverpool Alexandria difference is too narrow and once the above supplies of cheap imports have been declared off, a sharp readjustment will have to come into operation. On this account we favour purchases here against sales in Alexandria or in the American market. We also consider that out-and-out purchases are to be recommended on any material reaction.

Egyptian Spot.—During the past week a broadening of the inquiry has resulted in an improved offtake for spot Egyptians. The effect of the heaviness apparent in the American markets has to a certain extent been offset by the unlooked-for buoyancy of Alexandria, and, as a result, fluctuations in price, with the exception of to-day, have been of relatively minor importance. Reports from up-country indicate a larger business, together with some improvement in margins, and it is evident that at the current level of approximately 17d. for March Sakel and 14d. for March Upper spinners are finding that trade is not only possible, but also profitable. The movement now on foot to bring together employers and employees, with the object of reducing costs in the manufacture of the raw material, is the most significant sign that has yet appeared that Lancashire is at last determined to set her house in order. The movement is fraught with danger, owing to the issues involved and the possibility of a strike resulting, and until the situation becomes clearer it is certain to exercise a restraining influence on trading generally. At first sight it would appear unfortunate that issue should have been joined just when the trade is displaying faint signs of revival, and yet it is possible that this giant movement towards reconstruction is in itself the mainspring of the better trade which has recently been witnessed.

There is little fresh to report in the local inquiry. Low Sakellaridis from 11d. to 14d. has again been in considerable request. The next range has been from 50 off to 50 on, followed by a very limited demand for cotton at from 250 to 300 on. The finer grades have been neglected. Buyers of Uppers have been principally interested in the docket cotton, which is still freely offered here at from pass to 25 on, and only a minor interest has been displayed in anything over 50 on in this growth. Pilion and White have suffered from neglect. Sudan Sakellaridis has been in fair request, but there is little (beyond an occasional spinner's re-sale) with which to meet the inquiry. White Sudan has been in moderate favour only.

C.i.f. business, on the whole, has shown improvement, but the expansion, such as it is, still leaves much to be desired. Forwardings to spinners for the week ending the 6th inst. were returned as 9,568 bales Egyptian and 700 bales Sudan. Estimated sales, 2,600 Egyptian and 1,250 bales Sudan. Quotations of Sakel show a net fall on the week of 25 points. Uppers have declined 30 points and Pilion 55 to 30. F.G.F. Sakel to-day, 17.40d. F.G.F. Upper to-day, 13.85d. F.G.F. Pilion to-day, 14.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 5, state :—

The futures market during the past week has been on the quiet side without any decided tendency. The week's summary of price movements is as follows :—Sakellaridis: January, 34.87 dollars, 0.29 dollars up; March, 35.26 dollars, 0.26 dollars up; May, 35.53 dollars, 0.21 dollars up; November, 35.68 dollars, 0.12 dollars down. Ashmouni: February, 27.10 dollars, 0.22 dollars down; April, 27.30 dollars, 0.25 dollars down; June, 27.40 dollars, 0.17 dollars down; October, 26.60 dollars, 0.25 dollars down.

Sakel.—This week has been a series of colourless markets. The commercial houses have done very little, a reflection of the continuance of the poor demand from the consuming centres. This week's Alexandria stock figure is 3,309,038 kantars—a fresh record for the present season.

At the moment we rather look for sagging markets. With stocks so heavy and the demand so poor, present levels seem high enough; later on the prospects of the next crop will play a part and influence the market, but for the time being the factor is demand, and that is not encouraging.

At the first January tender, 750 kantar dockets were issued.

Uppers.—The Uppers market has been quiet with a downward tendency in sympathy with the desire in New York. The distant months straddle seems inclined to narrow in.

The week's receipts amount to 169,507 kantars against exports 88,649 kantars; the stock in Alexandria stands at 3,309,038 kantars.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for December was 47,310 tons.

The Phœnix Oil and Transport Company announces that the gross production of crude oil of the Phœnix group of companies for December was 34,899 tons. For the twelve months ended December 31, 1927, the production amounted to 434,897 tons as compared with 360,231 tons for the previous year.

The Court of Directors of the Royal Exchange Assurance announces that the rate of interim bonus on life policies becoming claims either by death or maturity during the current quinquennium, ending December 31, 1930, has been increased from 37s. 6d. per cent. to £2 per cent. in respect of each full year's premium paid on or after January 1, 1928.

SUDAN COTTON REPORT.

The following extracts are taken from the current report of the Central Economic Board of the Sudan Government :—

Red Sea Province.—Cotton in the Tokar area is looking well. It has been severely scorched by sandstorms and is in want of rain. There has been one heavy rainfall in Burr and Shashkeil.

Upper Nile Province.—Cotton cultivation has absorbed the energies of the native cultivators at Gelhak, where little else has been sown. More cotton has been sown than last year by the Annuaks of Akobo and Pibor.

Darfur Province.—More cotton has been planted in Zalingei District this year and the seed of American cotton issued by the Government appears to be doing well.

Mongalla Province.—The cotton crop has suffered severely from drought. The Meridi District crop of 240 feddans is expected to yield 317 kantars, whilst the Yei District crop, though retarded by the drought, is healthy on the whole. About half the normal yield from the area sown is expected from Amadi District, and the Central District crop appears to have failed. In the Latuka District the crop was still alive at the end of October, but it is doubtful whether the heavy rains of early November will save it.

Dongola Province.—It is estimated that 200 feddans of cotton are being cultivated on land irrigated by private pumps and 700 feddans by sagia irrigation. Pumping Stations Reports :—Nuri.—Cotton is mostly a good crop. Picking has started, but is not yet general, 12 kantars only having been received. Gureir.—30 kantars of pump cotton were brought into store in November and picking should be general in December. On the whole the crop is doing well and the cotton brought in is good and clean. Ghaba. —Cotton is very healthy and picking has started, but very few bolls are open yet. It is hoped that weighing in will start about the middle of December.

Berber Province.—Pumping Stations Reports :—Mikeilab.—Cotton on the Gezira land looks very well and gives promise of a good yield. On the Karu it is very patchy; in some places it appears to be fair and in others is very poor and likely to give a poor return. 122 kantars have been picked. Kitiab.—Cotton is looking very well and is well covered with bolls. It is late on account of late sowing, but should yield well from now onwards. It is of good quality and clean. Gendettu.—Cotton, generally, is looking better and beginning to yield well. 874 kantars have been picked.

Blue Nile Province.—The cotton everywhere looks promising. There has been a certain amount of late sowing, particularly in the northern blocks.

Notes of the Week.

Yugoslav Politics.

Domestic politics in Yugoslavia continue to follow a rather uneasy course. The coalition between the Radicals and the Democrats is maintained more by the difficulty of forming any other Government at the present time than from conviction or identity of aims of the component elements. It would not have been an unexpected development, if the recent congress of the Democratic Party had pronounced against further co-operation with the Radicals; but in spite of some stormy scenes the Congress stopped short of a complete breach. The existing régime was severely criticised, especially in regard to the state of affairs in South Serbia, and the head of the Party, M. Davidovitch, was given a free hand to take what steps he might think fit to bring about a fresh grouping of parties with a view to future political developments. With the appointemnt of M. Cheda Radovitch to the Ministry of the Interior—a post that he has hitherto held himself—M. Voukitchevitch, the Radical Prime Minister, may intend that the Macedonian question should receive more undivided attention than he has been able to give it himself. In these circumstances it would be unfortunate if relations in the Cabinet between the Democrat Foreign Minister and the Radical Minister of the Interior were strained over the method of the appointment of the latter. M. Marinkovitch was taken to task in his party Congress for having been kept in ignorance of the changes that were about to be made in the Government. He was guarded in his reply; but, while declaring that he knew that there were to be changes, he admitted that he did not understand that they were to be made so soon. A solution of the Macedonian question is so essentially bound up with Yugoslav foreign policy in regard to Bulgaria that any serious attempt to grapple with the problem in all its bearings would call for very close co-operation between the Foreign Minister and the Minister of the Interior. To M. Marinkovitch belongs the credit of having realised that the Bulgarian Government cannot be held responsible for every outrage committed in Yugoslav territory. It follows as an inevitable corollary that Yugoslavia must seek the solution of the difficulty in her own territory, and for this reason the appointment of the new Minister of the Interior, following upon the criticisms levelled at the administration of South Serbia, may prove to be a landmark in Macedonian history, if the present Yugoslav Government can remain long enough in office.

The Salonika Question.

The question of the Yugoslav Free Zone at Salonika promises to become the keystone of a Balkan settlement. Originally the Serbian demand was based on the natural and legitimate desire to promote the interests of Serbia's trade by ensuring for goods coming from the Ægean efficient handling and rapid transport. In those days they were likely to meet with neither, and Greece was prepared to recognise her limitations in these respects by conceding Serbia's wish to look after her own trade. From that point, however, it was a long stage to the details of the Yugoslav-Greek treaty concluded under General Pangalos's dictatorship, and in the interval Yugoslavia's demands had emerged from trade considerations to territorial ambitions and sovereign rights. Realising this aspect of the case, Greece feels strong enough to-day to impose an absolute veto on anything in the nature of encroachment upon her sovereignty. M. Michalakopoulos, Greek Foreign Minister, prefers in this matter to resort to open diplomacy. In a speech at Salonika he stated the Greek case without reserve. Greece, he implied, could not tolerate under any form, whether disguised or not, the annexation to Yugoslavia of even the smallest part of Salonika. The Greek Free Zone offered the Yugoslavs all they wanted, if they were aiming solely at the unfettered movement of their goods to and from the Ægean; and he hinted that the application of the terms of the Pangalist treaty would enable the Yugoslavs to exercise a stranglehold on the rest of the trade of the Salonika port. In the face of this attitude a settlement becomes an index of Balkan feeling, because Yugoslavia can now hope to have

Digitized by Google

her own way only by showing fight. In the time that has elapsed since she first took possession of the port, she has not contrived to make enough use of her position in order to improve her Ægean trade or to satisfy her own merchants. Her position is accordingly weakened by the knowledge of the latter, that they are likely to benefit more by using the Greek Free Zone in Salonika than by sending their goods through the Yugoslav Free Zone. From this admission it may be inferred not only that Greek administration has made great strides in efficiency, but also that it is now being recognised in each country that to sacrifice efficiency of management to the policy of administering pinpricks to your neighbours is bad business. Yugoslav goods are likely now to pass through Salonika more promptly and safely than they would have passed before the War, not because the Greeks love the Serbs more, but because their outlook on certain things has changed. The argument is not without force in Yugoslavia itself, and as far as present indications go, it may be inferred that the present Government in Belgrade is seeking a suitable method of meeting the Greek point of view. To this end certain limitations should perhaps be placed on open diplomacy.

Greece and the Balkans.

In the course of his speech at Salonika, in which he dealt with Greco-Yugoslav relations and the question of the Salonika Free Zone, M. Michalakopoulos also discussed the subject of a Balkan understanding. As he could not bring himself to regard either a "Balkan Pact" or a "Balkan Locarno" within the bounds of possibility, it is of interest to follow his line of reasoning. The latter he dismissed by pointing out that it was an essential part of the Locarno Pact that Great Britain and Italy stood by as guarantors of peace between France and Germany. If the same conditions had to be applied in the Balkan Peninsula, there would be the comedy of Roumania, Yugoslavia and Greece on one side and Bulgaria on the other, and who would play the part of guarantors? The Greek Foreign Minister's objections to a Balkan Pact are that the countries concerned have, apart from the principle of "the Balkans for the Balkan peoples," other interests, "Central European and Mediterranean, not to say in part Russian." No single formula, he urged, could be devised to cover these multiple interests and to guarantee peace; consequently, in his opinion, the solution of the question was to be found in the maintenance of the *status quo* in the Balkans, without any one country seeking the hegemony, and in the conclusion of agreements between groups of two States, the separate agreements being, possibly, co-ordinated. M. Michalakopoulos' scheme, it is to be feared, might keep the peace in the Balkans, but it could hardly make for that development and material prosperity which would inevitably follow a federation. The Balkan States would still be encouraged to struggle each for its own hand, instead of seeking that accession of strength for all which would result from union. It is only necessary to realise the authority which would attach in the councils of Europe to a group representing between forty and fifty million people, who spoke as a single Power, to understand what the Balkan Peninsula has to gain by looking beyond the local interests of the component parts and seeking a common ground for political and economic action.

The Situation in Roumania.

With the reassembling of the Roumanian Parliament the trial of strength between the Government and the Opposition may be expected to take a more concrete form. Before the holidays an attempt was made by the Bratianu Government to win over the National-Peasant Party to a policy of co-operation, so that Roumania could meet her troubles, whether within or without, with a Coalition Government representative, more or less, of the whole country. The refusal of M. Maniu, the Transylvanian leader, to fall in with M. Bratianu's scheme, on the ground that it was useless to attempt to build up any sound political edifice on the unsound foundation of "made" elections, left the Prime Minister with no alternative than to carry on with things as they are and to dare the Opposition to do their worst. The latter's first move appears to have been to seek to gauge the reputation enjoyed abroad by the present Roumanian Government, and in this way it has contrived to touch its political adversaries on a sore point. One result has been to complete the *volte face* of the financial policy of the National Liberals in regard to foreign help in the economic development of the country. Government organs in the Press now represent the eyes of world finance as fixed upon Roumania, where the stabilisation of exchange and the existence of natural resources still largely unexploited present a field "which awaits only the help of foreign capital to produce a rich harvest and to give magnificent results." This fortunate state of affairs is represented as being due to the sound financial policy so carefully developed step by step by the National Liberal Government, and the inference is left to be drawn that any break in that policy at the present time would be prejudicial, if not fatal, to Roumanian interests. The Opposition is accused of harbouring the intention not to stop even at force, in order to secure its end; but, as the National-Peasant Party takes its stand on strict constitutionalism, it could hardly fail to compromise its position by resorting to unconstitutional means to gain power. In any case the present session of the Roumanian Parliament is not likely to be lacking in interest or liveliness.

Communications in Turkey.

The cancellation by the Turkish Government of the contract concluded with a Belgian group for the construction of the Turkhal-Sivas section of the Samsun-Sivas Railway and of the line from Kaisaria to Sivas is of interest, if only for the reason that these two lines headed the Turkish programme of railway construction. The contract was given at the end of 1926, and both lines were to be completed by March 1, 1930. Accordingly one year has already been lost, for, inasmuch as the Government and the group have been at loggerheads for some time, it is unlikely that any real work has been undertaken. In the meantime the Turkish Government has been proceeding with the construction with Turkish funds of the line from Samsun to Turkhal, and the section as far as Amasia was recently opened by the Minister of Public Works. The same Belgian group also secured a contract for improving the harbour at Samsun; but as no mention is made of this part of the agreement, it may be that it intends to proceed

with this work. Fortunately for Turkey, the programme of railway construction was distributed among German and Swedish firms in addition to the Belgian group, and other lines may materialise according to plan. The North-South railway from Samsun to Ulu-Kishla on the Baghdad Railway, north of the Taurus Tunnel, was the most important item on that programme, and the most that can be hoped for now is that the whole line will be completed when the Kaisaria-Ulu-Kishla section is handed over by the German constructors in February, 1931. The cancellation of yet another of the big contracts given out by the Turkish Government—the Alcohol monopoly came to grief some time ago—at a time when a Minister of Marine is being impeached for corruption in connexion with a naval contract is calculated to arouse misgivings in Turkish circles over the policy underlying the work of reconstruction. It is because the Turkish Government has failed to adopt a reasonable financial policy, which would throw open to it the leading Western markets for loans, that it has been obliged to resort to the methods employed for the execution of its programme of public works. These methods have been shown to open the door to personal bribery and corruption, and it is commonly supposed that the contracts—regarding the financial side of which little is published—carry with them some immediate financial advantage to the Turkish exchequer. If this is so, it is certain that Turkey is paying more heavily for the accommodation than she would if the Government were to make a more straightforward attempt to meet its foreign indebtedness and to put its financial house in order.

The Turco-Persian Frontier.

There must have been many heart-to-heart talks at Angora between the Turkish and Persian representatives on the subject of the Turco-Persian frontier before the decision (just reported from Constantinople) was reached to suspend negotiations. That conversations should have dragged on since last autumn, when we dealt at some length with the "incidents" in the neighbourhood of Mount Ararat, is in itself proof that it is easier to impose a solution in regard to this vexed frontier than to obtain one by amicable discussion. It was hardly possible for Persia to have had her case more discreetly put before the Turkish Government than it has been by Mirza Mohamed Ali Khan Faroughi, formerly Minister of War, but in spite of his persuasive powers the Turkish Ambassador to Persia, Memduh Shevket Bey, has not yet returned to Teheran, which he left last October in order to protest to his Government against the anti-Turkish agitation which had been indulged in Persia. It would appear that neither side has found it possible to convince the other of its good faith, that Turkey still suspects Persia of deliberately fomenting unrest among the Kurds and of protecting Kurdish malcontents who have committed assaults on Turkish soil, and that Persia, with the idea at the back of her mind that Turkey wishes to push her frontier eastwards, still cherishes her own conceptions of how to deal with the Kurdish border tribes. Notice should be taken, particularly by those observers who conjure up the bogey of a Middle Eastern *bloc* of nations, of the difficulty with which two Islamic countries, theoretically in harmony with each other, are attempting to settle differences which can scarcely be described as capital.

Parliamentarism in Iraq.

For those who have eyes to see there is unusual significance in the phrasing of the Royal *Iradah* which was issued in Baghdad on January 19 for the dissolution of Parliament. As we have already recorded, Sir Abdul Muhsin has resolved by means of new elections to attempt to gain a stable majority in the Majlis. In previous years Baghdad Cabinets have undoubtedly suffered from the fickle nature of their support in Parliament; in other words, the Legislature has been to some extent a clog on the Executive. Now a new election is necessary, according to this *Iradah*, because "fundamental constitutional principles demand a suitable equilibrium between the Executive and Legislative authorities, such equilibrium requiring the presence in Parliament of parties with specific principles and known programmes." Now this last phrase concerning "specific principles" may cause a smile over the faces of those who know the qualifications of the average Iraqi voter, for it is one with which even the "educated" British electorate could scarcely claim to have very close connexion. How much less, then, is the chance of ideal Parliamentarism in Iraq! Constitutional developments in Iraq will certainly be most interesting to watch, if only because of the dissatisfaction which the present obligation of Cabinets so closely to study the desires of Deputies has created among intelligent Iraqis. It is by no means impossible that a demand should spring up in favour of altering the Constitution in the direction of virtually abolishing the Majlis, and of Cabinet rule aided by an Advisory Council. For many Iraqis feel that, if parts of Europe have outgrown the need for Parliamentarism, the East has never shown either liking for or aptitude in the democratic system.

Syrian Railways.

The direct linking up of the railway system between Syria and Palestine by means of a line from Beyrout to Haifa has been the subject of strong rumour more times that we can count, but the latest reports seem a little more categorical. It is to the effect that the High Commissioner has decided to put into immediate execution the project of a line from Tripoli to Ras al Nakoura, the border town. If this report is true it is wholly to be welcomed, for much benefit would accrue both to Syria and Palestine if they were joined by a coastal railway line—it being taken for granted that if Syria prolonged her line to the southern frontier, Palestine would similarly prolong her line along the shorter distance to the northern boundary. Syria and Palestine are, of course, both awaiting with impatience the decisions in respect of the "big" things of Western Asia, the route of the trans-desert railway, the building of the port at Haifa, the extent of salts extraction from the Dead Sea, and so on: but they would be well advised in the meantime to concentrate upon precisely such small enterprises as are foreshadowed in this linking up of Tripoli with Haifa. The wonder is that this particular enterprise has not been accomplished before.

Persia and Great Britain.

Prince Suleiman Mirza (or "Mr." Mirza, as his Western Socialistic friends choose to call him) is reported recently to have given an interview, in the course of which he threw considerable light on the way in which the Note which Great Britain, in answer to a query upon Customs tariffs, sent about two months ago to the Persian Government is regarded by the incompletely educated or Russian-fed Persian. That Note, as is now known contained references to the continued retention by the Teheran Government of Shaikh Khazal of Muhammarah, to the question of air facilities for the British over Southern Persia, and to the repayment of Persian debts to the British. Now Suleiman Mirza had reached Vienna *via* Moscow, and perhaps due account should be made when the nature of his statements is read. He is alleged to have protested that Shaikh Khazal was dismissed because he was "a blind supporter of England," and that if he were reinstated, "his province would become almost a colony of England." He regarded the request for the ratification of the Imperial Airways Convention as "a military measure intended to help Great Britain maintain its domination of the countries of the Near East." And of the debts claim, he is reported to have said that it was one "for money which had been used to bribe officials of the old régime, from which the Persian people had derived no benefit at all." It would appear, therefore, that the need for educating the Persians upon their real interests and obligations is urgent. A possible line of approach to this vital object is suggested in our leading article.

PERSIA WITHOUT AND WITHIN.

The recent revolt in Khuzistan against the revenue officials of the Persian Government, though possibly of small consequence in itself, will have drawn fresh attention to a country the attempted renaissance of which is one of the features of the Islamic world to-day. Into the causes of this particular Arab resistance to Teheran it is hardly profitable to inquire now : suffice it to say that the rebellion near Qasbah did not spread to the tribes, the Bakhtiari, the Kashgais, and so on, who, if the complaint had been anything but a purely local one, might have been expected to manifest some degree of sympathy with the malcontent Arabs. It appears, indeed, that the Persian troops, who are an incomparable instrument in enforcing the wishes of the Teheran Treasury—an instrument, incidentally, which the present Shah deserves almost the whole credit for having fashioned—had little difficulty in dealing with the "oppressed" Arab resisters. A total number of sixty casualties on both sides is hardly justification for magnifying the importance of an event which is not exactly unique in the hodiernal annals of Persia. It may be thought more profitable, then, to turn for a moment from this incident and to examine certain aspects of Persia's foreign relations, which, though they are in truth of less importance than her internal development, are naturally more prominent in the eyes of the world at large, and are also regarded by politically-minded Persians as the main influence upon the growth, or arrested growth, of their country. First of all, of course, because nearest (and, speaking financially, dearest) is Russia. But it is too early yet to describe the effect of the recent Russo-Persian Agreement. That Pact was in theory no worse, from Persia's point of view, than might have been expected; its actual working-out will probably depend on, as its signature probably derived from, extra-Persian affairs, that is, the success or failure of the Bolshevists in other parts of the world. With Afghanistan and India the relations of Persia are satisfactory; but it is not so with Iraq. The refusal of the Teheran Government yet to recognise Iraq is a stumbling-block both to the Arab Kingdom and to the Power which is sponsor for that State; not only does it prejudice the interests, both religious and economic, of two peoples who ought to be on terms of increasing amity, but it also involves outside disadvantages. For instance, there is yet no direct telegraphic communication between Muhammarah and Basrah (a fact which conceivably accounts for the not wholly accurate messages emanating from Basrah concerning recent events in Khuzistan); nor is it a sign of high intelligence on the part of Teheran that, in spite of repeated proposals from Baghdad, one should still have, in order to telegraph from Qasr-i-shirin to Khaniqin, to refer back to Karachi. A common Customs Post at Katchal-Katchal is, it will be recalled, one of the suggestions which Brigadier-General F. D. Hammond has made in regard to the development of the Iraq Railways, but there seems to be little prospect at the moment of Persia's agreeing to this obviously desirable institution. Lastly, it is regrettable to record the fact that there is no apparent improvement in the relations of Persia with Great Britain. No publicity, certainly, has been given to any manifestations of conciliatoriness on the part of the Teheran Government as a result of the British Note delivered towards the end of last year. The most notable incident since that suggestion has, indeed, been the exiguous protest by Persia on the subject of Bahrain. Something would appear to be wrong, therefore, in the respective methods of approach in Anglo-Persian relations.

Nor is the aspect very much more encouraging, if we look at Persia from the inside. The departure of the heads of the American Financial Mission has been followed by rumour after rumour that now another American, now a German, and now a Swiss financial expert is prepared to take up the position which Dr. Millspaugh spurned as unworthy and impracticable. That a falling-off in efficiency and possibly in probity is likely during the interregnum is probably fully recognised by the Persians themselves; yet to see the people of Persia as a financial Sisyphus would be sad indeed. Nor can anxiety be absent from the edict issued by the Ministry of Education last autumn that all foreign schools and missions, in conforming to the curriculum, must abstain from religious teaching. To this question there may at first sight be two sides, for it would do only good for foreigners living in Persia to learn Persian; but on the whole it is a retrograde step, seemingly inspired by the *mullahs*, who are not slow, when balked in one way from cramping the style of the progressive forces in Persia, to exercise their influence in another. It is hardly too much to say that, if the American College at Teheran and the C.M.S. College at Isfahan were closed down, the cause of the Persians would suffer more than the Christian cause. Yet another aspect of this urge in Persia to become more and more self-containing and independent is to be seen in the reconstruction of their Courts of Justice, and the more or less simultaneous demand for the abrogation of "Capitulations" in Persia. As we have said before, this demand is theoretically and superficially not unnatural; but it is possibly owing to a lack of publicity upon the way in which the institutions, devised by Davar, the young Swiss-trained Minister of Justice, are operating, that the foreigners chiefly concerned in the disappearance of a long-standing agreement have so far shown little sign of their reply to the intimation that the Persian Government wishes to see the end of "Capitulations" by next May. It is conceivable that Englishmen, in regard to this subject, are thinking of the analogous example of Japan, which did not surge into complete enjoyment of *amour propre* at one single bound, but trained itself over a period of years to prove to the West that Japanese justice was not a mere boast, rather than of Turkey, which in Ottoman days undoubtedly did suffer through the abuse by certain nationals of different privileges. The hospitality of Persians to strangers is an old and acknowledged asset, but scarcely less old, in the eyes of Persians themselves, is the corruptibility of many a Persian official, and their inexperience in the operation of Western codes of justice will be equally admitted. It might be wise, therefore, first to systematise and to familiarise the new Persian justice, and then, in both theoretical and more patent right, to apply for the abolition of the extra-territorial privileges.

Some of these points, however, are merely things at issue, or in suspense, between Great Britain and Persia. Viewed singly and narrowly, they may appear difficult enough of resolution. Yet that there is a solution, other than that which favours an impossibly patient policy of "wait and see," of the present perplexing state of Anglo-Persian relations, we are profoundly convinced. The problem should be regarded comprehensively, not incidentally. The Indian side, the Gulf side, and the Iraq side of Persia are but parts of one common question. It might be, for instance, that in return for a settlement of questions outstanding between Persia and Iraq, adjustments might be arranged for the benefit of Persia from the Indian side, or from the Gulf side, or from both. Firmness and generosity, insistence and imagination—these are the qualities which seem to be called for as substitute for a flat, "incidental" policy which appears to regulate the relations of Great Britain and Persia. To judge by results, this latter policy would appear rather to

The Near and Middle East*

From Our Own Correspondents.

Belgrade, January 19.

Birth of a Prince.

Outstanding among the many important events of the past fortnight is the birth to-day at 1.20 a.m. of a second son to King Alexander and Queen Marie of Yugoslavia. This good news was announced to the citizens of Belgrade by the firing of a salute of 101 guns. To-day is the Orthodox feast of Epiphany, and a general holiday, and it is considered of good omen that the Prince should have been born on this day.

The Skoplye Outrage.

Komitaji activities in South Serbia have begun again. On the Orthodox New Year's Eve, January 13, M. Velimir Prelitch, legal advisor to the Veliki Jupan (Governor) of Skoplye, was shot down in the street near his home by Maria Bunyeff, a Macedonian woman, married to a Bulgarian officer, who had recently come from Bulgaria to reside in Skoplye. The woman turned her revolver on herself, and, despite the intervention of passers-by, inflicted wounds from which she died a few hours later. Before she died she expressed regret that it should have been her duty to kill Prelitch, who had, she said, been very kind to her on several occasions, but she declared that she had been ordered to do so. It was Prelitch who recently discovered the secret revolutionary organisation in Macedonia, which was working hand in glove with the Macedonian Internal Revolutionary Organisation in Bulgaria and secured the trial of many people involved in this organisation and their imprisonment. This would seem to have been the reason for selecting him as the next victim. He died of his wounds on the 17th inst. While many of the most famous murders carried out by the Bulgarian *komitajis* in Vienna, Prague and other European capitals have been the work of women, it is a new departure for women to be sent into South Serbia on such errands, and this outrage may be the first trial of new tactics made necessary by the increasing difficulties of sending armed *troïkas* across the frontier.

The series of attacks on military arsenals in Serbia has also been resumed. It was reported in yesterday's papers that an attack was made during the night of the 15th inst. on the arsenal near Ralya, and a sentry was wounded before the assailants fled. On the 16th an attempt was made to blow up the military stores near Mladenovatz, but the five attackers were again driven off by the guards. A search was organised and in the morning of the 17th five suspects armed with parabellum revolvers and carrying bombs were arrested by a military mounted patrol near Topola. It is stated that the prisoners are Bulgarians, but further information is not yet available.

Democrats and the Government.

The Democratic Party Conference which was held in Belgrade on the 15th and 16th inst., was eagerly awaited in political circles, as it was expected to seal the fate of the Voukitchevitch Government, the difficulties of which become more and more patent and increasingly complicated every day. M. Davidovitch opened the Congress with a speech in which he severely criticised the present régime, especially as regards its policy in Macedonia, and emphasised the need for a concentration Government in which each party should be represented by its most able members. M. Marinkovitch refrained from any mention of internal politics and thereby maintained the apparent unity of the party. He paid homage to the good work of the League of Nations, in which he puts great trust; gave an excellent definition of the principle of "The Balkans for the Balkan Peoples," making it quite clear that this means co-operation as equal units and not the hegemony of any one of the Balkan nations, and ended by referring to the recent outrages at Skoplye, making a dignified protest at such tactics and giving a warning that Yugoslavia has almost the whole world behind her in her fight against opponents using the revolver and the bomb, and that, if any of her neighbours think her isolated, they may be sadly disillusioned should it come, which God forbid, to a trial of strength.

From the general discussion which followed the speeches of the Democrat leaders it can clearly be seen that there is much dissatisfaction in the ranks of the party with the working of the present Coalition, but that the majority of the party believe it necessary to hold on to the Coalition until some better combination can be formed. All realise the need for maintaining the unity of their party even at the cost of compromise. The resolutions passed deal with the abuses in the Civil Service and the grave economic crisis, due to the bad harvest of last year, and they are hailed by the supporters of the Government, including the Democratic Ministers, as giving a mandate for the continuance of the Coalition. But the Opposition and M. Davidovitch's followers consider that they entail the breaking up of the Coalition and the formation of a concentration Government or a Democratic-Peasant *bloc*. M. Davidovitch was expressly given a free hand to carry on negotiations with the Opposition leaders and to decide as to the future of the Coalition according to the results of these negotiations. For the present the Democrat Ministers will not resign, but M. Davidovitch has already begun negotiations with the Opposition leaders.

Ministerial Changes.

As a result of growing discontent among the Radicals as well as of the attacks of M. Davidovitch and his followers on the Government's policy in Southern Serbia, for which the Prime Minister is responsible as Minister of Interior, M. Voukitchevitch had handed this office to one of his followers, an almost unknown Member of Parliament, M. Cheda Radovitch, who is not expected to make any great changes in policy. Certain Veliki Jupani (Governors of provinces) in South Serbia have also been changed. It is very hopeful to notice that the Opposition and the Democrats (who may one day combine to form a Government) are energetically attacking the present Government's policy in the southern provinces and advo-

cating a policy of moderation and concilation as the best way to solve the many problems which have arisen there.

A sign of the growing friction between the parties forming the Coalition Government was the resignation last night of the acting Minister of Finance, Dr. Spaho, owing to five of the Radical members of the Finance Committee voting against a proposal that he brought forward in the name of the Cabinet. On M. Voukitchevitch's explanation that they voted only against one clause with which they could not agree and that no want of confidence was implied, Dr. Spaho withdrew his resignation.

ROUMANIA.

Bucharest, January 12.

Slow Advance of Roumania.

The year 1927 was one which will long leave its mark on the history of Roumania. It is often contended by more or less cynical philosophers that a country progresses more in spite of its Government than thanks to the latter's administration, and this contention would appear to apply to Roumania. For since the close of the Great War Roumania's successive Governments have been constrained, as they thought, by considerations of immediate urgency, to adopt a policy which was often shortsighted and often showed a lack of experience in economic administration. Thus the happy consummation was delayed which might have been achieved more rapidly by measures more radical and more far-sighted. Nevertheless the country has continued to advance economically, struggling manfully against the adverse conditions created on the one hand by the inadequacy of the transport system and on the other by heavy taxation, money stringency and the continuous rise in the cost of living. The currency has become practically stable (round 780-790 to the £), and there is every prospect that it may be legally stabilised within the next few months; moreover, since the consolidation of all its internal and external debts the country's credit has gradually been restored on foreign markets, and trade would no doubt improve rapidly if the stabilisation of the currency were once effected.

The Position of M. Maniu.

But Roumania's political organisation received two heavy blows during the past year by the death of King Ferdinand and shortly afterwards of M. I. C. Bratianu, the great statesman who has literally held her destinies in his hand since the beginning of the War. So strong was the personal influence of this great leader of the Liberal Party that he virtually ruled the country, and even his own party were so shaken by his loss that they at once recognised the expediency of trying to organise a National Government representing all parties in order to retain some of their influence. This scheme was wrecked against the obstinate refusal of M. Maniu, the leader of the National-Peasant Party to take part in any but a freely elected Government. M. Maniu further considers that it is in the best interests of the country that it should be governed alternately by two parties opposed to one another in certain aspects of their policy. The Liberals appear to have given up the attempt to create a National Government, and as they connot be said to have a preponderance of public opinion in their favour, will no doubt seek an opportunity of retiring with dignity. It is not expected, however, that any change will be made in the immediate future.

Should the party of M. Maniu come into power in the near future, as there seems little doubt that it will, the changes in the internal policy of the country which he will introduce will be most interesting to follow. It is possible that the year 1928 may mark the beginning of a new era in Roumania's economic development, for without question her natural wealth opens up great possibilities for the future. The Budget estimates for 1928 have already been passed by Parliament and the next important task which the present Government is engaged on is the revision of the Import Tariff, which is to be ready by April next, just one year after the publication of the Tariff now in force.

But although the Ministry of M. Maniu would be full of fresh energy, very few of its members would be men of any political experience, and one cannot help reflecting that he might have been wise to accept the proposals of the Liberal party to work with them, at least in the beginning, so as to bring about a happy combination of this energy with the experience of these older politicians. Had their methods proved incompatible with his principles he could always have resigned along with his supporters, when it would have been necessary to hold the fresh elections for which he now calls.

Amber in Roumania.

It is reported that besides the amber deposits of Bazau a deposit of "green" amber has been discovered in the north of Roumania. The Buzau amber is of an extremely brittle quality, much less valuable than Chinese amber, but it is stated that the newly discovered deposit, the importance of which has not yet been determined, is of the same quality as the Chinese amber. If this is so, it may prove of great value.

THE HIJAZ.

Jidda, December 30.

The Amir Faisal at Jidda.

Jidda has recently been honoured by a short visit by H.H. the Amir Faisal, Viceroy of the Hijaz, who arrived here on December 28 and left this morning. The Amir, well-known in England owing to his two visits in 1919 and 1926, is now an accomplished motorist, and regularly drives his own car, while his younger brother, Khalid, is already an expert mechanic. Motoring has, indeed, become a sport of kings in Arabia. Faisal is the only member of the Royal family at present in the Hijaz, having been absent from Riyadh since he left it in the autumn of 1925 to put the finishing touches to the Hijaz campaign. The King is still in Najd, and no news is available here about recent events in the Kuwait area.

The Tomb of Eve.

It will be remembered by readers of THE NEAR EAST AND INDIA that two years ago various newspapers reported that the tomb of Eve, the only "sight" of Jidda, had been razed to the ground. Those reports did not correctly represent the facts of the case, as only the dome of the building had been removed in deference to Wahhabi prejudice against the use of domes over tombs—your readers will scarcely require to be reminded that the great "green dome" of Madina stands not over a tomb but over the house of the Prophet. The reports above referred to were, however, the shadows thrown before them by coming events! And now they are true, for, the flimsiness of the claim of a quite modern building to mark the veritable site of the burial-place of the Mother of the human race having been established beyond reasonable doubt, by reference to authorities going back only some 500 out of the 5,000 years which have elapsed since the interment, the structure has been removed from the face of the earth. And the incident appears to have excited so little comment that the fact of the disappearance of a graceful monument seems not to be generally known.

The "Leaning Tower" of Jidda.

Jidda is doubtless destined to lose much of its "gim-crack Elizabethan" beauty in the rapid march of modern progress. And already we have to record the partial disappearance of one of its most famous landmarks, the minaret of the Sanusi mosque, whose divergence from the vertical was more pronounced than that of Pisa's famous tower, while its slender proportion emphasised the ever-increasing imminence of a crash. A few days ago the woodwork "candle-extinguisher" cupola was

Digitized by Google

observed to be leaning in a different direction from the rest of the minaret, and a suspicion was aroused that perhaps an earthquake had disturbed its equilibrium. But inquiry established more prosaic reasons for the occurrence, and a once graceful but exceedingly dangerous structure has now been reduced to a mere stump under the orders of the Government. It had long been a local tradition that it was unlucky to enter the Sannsi mosque.

Raghama.

Anotner vanished landmark is the old Turkish and Sharifian road-post of Raghama whose masonry blocks of basalt and granite have been removed and broken up to serve as metal for the new Jidda-Mecca road. Military posts for the protection of the routes seem to be unnecessary under the *régime* of King Ibn Saoud.

The Pilgrimage of A.H. 1346 (1928 A.D.).

The pilgrims already in the country number some 4,000, mostly from the Dutch East Indies, but for some days past no boats have arrived. A number of ships are expected in the New Year.

The Consular Corps.

Some changes have already taken place in the various Consulates and others are imminent. Abdul Ghani Bey Seni, formerly Turkish Consul-General at Beyrout, has recently arrived in succession to Sulaiman Bey Shevket as Consul-General and Diplomatic Agent for Turkey. Amin Bey Tawfiq, the Egyptian Consul, is under orders of transfer to Beyrout and will depart as soon as his successor has arrived. Amin Bey has made himself popular in all classes of society, and his period of office has witnessed the solution of at least one important problem. The Mahmal controversy, once so live an issue, is now disposed of beyond possibility of resurrection, and this result has been achieved without any serious disturbance of the goodwill which should exist between Egypt and Arabia.

GREECE.

Athens, January 16.

Political Tranquillity.

Politically, everything is very quiet. Both M. Caphandaris by his manipulation of the Refugee Loan, and M. Michalakopoulos by his speeches in Salonika, have added greatly to their reputation as statesmen. The personal inspection by the latter of refugee settlements, and of the Foundation Company's works at Amátovo has produced the best impression, visits of Ministers to the provinces being none too common. In his speeches he rightly emphasised the three most important items on the Government's programme, i.e., the making of roads, the draining of the marshes, and the stabilisation of the drachma.

The Financial Situation.

On January 6, in the Parnassos Club, M. Diomedes, Governor of the National Bank, gave a most illuminating discourse on the financial situation, ending on a note of optimism. The news of the conclusion of the Loan has naturally been received with great satisfaction, and there is a general feeling that a most critical phase of the country's economic life has been passed and that a period of returning prosperity lies ahead.

Cruelty to Animals.

It is impossible for an Englishman to live or travel about in Greece without being constantly struck by the curious indifference of the Greeks to animal suffering. Though by nature a kind-hearted race, and not given to conscious or deliberate cruelty, they seem unable to realise that animals have feelings. A bad case came to the writer's notice recently in a remote Greek village. A peasant had shot and wounded a hawk in the wing, and had it tied by the leg to a post at the door of his house. When asked why he did not kill it, he replied that he was keeping it for his children to play with, and his little girl was in fact teasing the helpless creature by pulling the string to see it tumble over. Several men stood by, watching the game. Similarly, to prevent donkeys and mules straying, they are left with their heavy wooden saddles on for days on end, and it is almost an unheard-of thing to unsaddle a beast during a halt, even on the hottest summer's day. The excuse given is that the animal will catch cold if its saddle is removed.

In Athens, a barbarous institution survives—the dog-cart. A man goes round with a kind of cage on wheels, collecting stray dogs with an instrument like a large pair of tongs—and not only stray dogs, but dogs that have been left outside a shop or house, while their owners are inside. They are then taken to a "home," and if not reclaimed within twenty-four hours, are put into a so-called lethal chamber, which, however, is only half-lethal. Much unnecessary suffering is thus caused. The reason why dogs, that can in no sense be regarded as "stray," are thus seized is because the man of the cart receives a small sum of money, which has to be paid before dogs can be reclaimed from his horrid clutches.

It is gratifying, therefore, to know that a serious attempt is being made to put life into the Greek Society for the Protection of Animals, which has actually existed, though little more than existed, since 1916. At that time Lady Granville took great interest in it. Its President is M. Kanarakes Rouphos, the ex-Minister for Foreign Affairs, and the First Vice-President is M. A. Philon. Last summer, the Jackson General Trust, the trustees of which were Messrs. E. Bell, the publisher, and Leonard T. Hawksley, made a grant to the Athenian Society for the purpose of a Dog's Refuge, to avoid the horrors of the present system. A site has been granted in Boulevard Alexandra, thanks to M. Papanastasiou, Minister of Agriculture; and plans are now awaited from England. A meeting to discuss the erection of this building is to be held on January 21. The principal obstacle

is the apathy of Greek opinion. This meeting and the distribution of a pamphlet with commendatory letters from the Œcumenical Patriarch and the Orthodox Archbishop of Athens will, it is hoped, do something to revive the Society and remove what is a serious blot on modern Greek civilisation.

CYPRUS.

Nicosia, January 8.

The Jubilee Celebrations.

The Greek community is engaged, amongst other subjects, in considering in what light the coming fifty years' jubilee should be regarded, and what attitude should be generally adopted by the Greek inhabitants. The Archbishop and Holy Synod have, as stated, been in favour of abstention from any favourable demonstration. But general opinion appears to regard their decision as rather premature, and more reasonable views are likely to prevail. To take up what would be an actually hostile attitude, by standing aloof, could do no good, but rather the reverse. What seems likely is that the Greeks will participate, but that occasion will be taken once more of submitting to His Majesty King George, to the Home Government, and, perhaps, to the House of Commons, memorials expressing the aspiration of the Greek Cypriots, and their hope that the British Government may, by an act of grace, comparable with that by which the Ionian Islands were ceded to Greece, hand over Cyprus to the same Power.

At a recent meeting of the Cyprus Museum Committee, the Governor spoke on the subject of the coming celebration, and expressed the hope that the Cypriots would join whole-heartedly in co-operating on an occasion in which the King was taking a keen personal interest, and which should mark the beginning of a new era of progress and development in Cyprus. The Archbishop, who was present, made a very guarded reply, stating that further communication with members of Council and others would be needed before he could make any definite statement. It is not yet known when the celebrations will take place, but an idea prevails that, as the King's birthday falls on June 3, it is probable that the ceremonies assigned to the respective dates may be brought within the same period.

Cyprus in 1927.

The papers contain brief reviews of last year. The tone is rather gloomy, and little gratitude is expressed for the benefits secured in 1927. The new Public Library and the School of Music are, it is allowed, excellent institutions. But these should have come last, not first, in order of importance as regards public works, of which the island stands in such urgent need. There is as yet no news of a Loan. There is much discussion on the manner in which it is considered that the available surplus of nearly £33,000 should be applied. It need hardly be repeated that among the principal needs of the island, especially of the agricultural classes, may be included the following:—An Agricultural Bank with a capital of £500,000, increased water supplies, and exhaustive artesian borings, re-afforestation, roads, reforms in education, and in the Agricultural Department, besides aid in promoting a Tourist Trade, and hotels.

A Hospital for the Blind.

A project in which the Governor and Lady Storrs are keenly interested is one for the founding of an asylum for the blind, with provision for treatment of patients by qualified oculists. It is to be hoped that this will be one of the memorials of an important year. The Governor, when lately in Egypt, conferred with Cypriots on the subject, and through their generosity, and that of others, a fund has already been subscribed, which when sufficiently augmented, will enable work to proceed. Such an establishment is much needed.

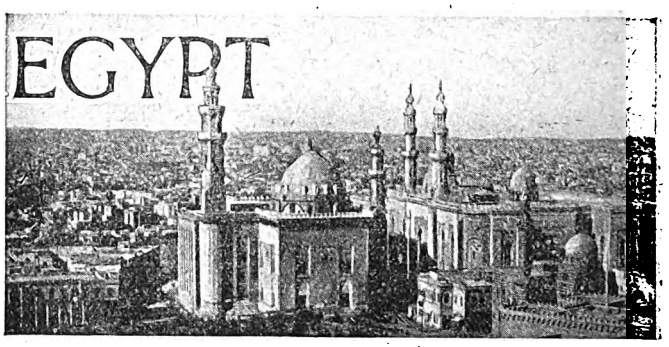
General News.

The Cyprus Museum has decided, at the request of the British School at Athens, to send to that institution duplicates of various objects of antiquity, and similarly to a local museum at Larnaca.

A meeting of the Legislative Council was held on December 2, but the subject of the proceedings has not been made known.

The work of the Forest Commission will be completed on January 7. The report will be awaited with no little interest.

EGYPT



Cairo, January 14.

A Banquet.

A banquet was given by King Fuad at Abdin Palace on Wednesday evening in honour of the High Commissioner and Lady Lloyd. The guests included Mr. Henderson and the Residency Staff, Lieut.-General Sir Peter Strickland and Lady Strickland, Air Vice-Commodore Webb Bowen, Sir John and Lady Percival, Mr. and Mrs. Frank Watson, Mr. Farnall. Afterwards a reception was held at which the leading British residents were invited. On this occasion the programme comprised some most enjoyable dances by the Sakharoffs and the Loie Fuller's pupils.

The New Customs Regime.

I understand that it has been decided to appoint an Italian expert, Signor Mansioli of the Italian Ministry of Finance, to co-operate with the two other experts, Mr. Lamontagne and M. Petit, who have been engaged to redraft the Customs régime. Pending the arrival of their colleague, Messrs Lamontagne and Petit are getting into touch with all the interests concerned and collecting the information with regard to the requirements of the State and of the commercial community, necessary to enable them to carry out their mission. They have issued an appeal to manufacturers, producers and in general all parties interested in any respect in the redrafting of the Customs tariff and the replacement of the present *ad valorem* system of import duties by one of specific duties to submit their observations with regard to the manner in which home production and industry can be fostered or protected by changes in the existing Customs régime, making due allowance for the financial needs of the State. And I understand that the various Chambers of Commerce and leading industrial enterprises are preparing important notes on this question.

The International Conference.

It is understood that in acknowledging receipt of the circular letter of the Egyptian Government in regard to the proposed reforms in the Mixed Courts the foreign Legations have pointed out that the time-limit fixed for the receipt of replies is quite insufficient, as some of the Powers in question will need to consult with one another before being in a position to send in their observations. At the same time there is a growing opinion in diplomatic circles that there will be no necessity for holding a conference, since it already appears obvious that there will be unanimity among the Powers on the points on which there is disinclination to make any concession or in regard

Digitized by Google

to which definite guarantees will be demanded. At any rate it looks as if it will be very unlikely for any conference to meet before the summer, and if, as some think, there will be a change in Cabinet before then, the idea of a conference may have to be put off until some more favourable opportunity presents itself, and so resort may have to be made to the alternative of direct discussion with the Powers.

A Well Deserved Distinction.

Widespread satisfaction has been caused by the bestowal of the C.M.G. on Mr. Keown Boyd in the last list of honours. Mr. Keown Boyd is the Director-General of the European Department of the Ministry of the Interior. As such he is responsible for the control of public security in so far as it concerns the safety of foreign property and lives, and he has gained widespread esteem, and, in fact, popularity among all the European communities by the able and tactful manner in which he has discharged his, at times, very delicate duties. And a proof of his fitness for his difficult post is surely to be found in the fact that he has equally the respect of the Egyptians, among whom he enjoys probably more personal influence than any other Briton at present in the service. He played a very important though unobtrusive part in the inquiry into the murder of the Sirdar, and the subsequent trials of his aggressors and of those who participated in the murder of Englishmen prior to that outrage, and it was generally considered that he should have received the recognition at present bestowed on him at least at the same time as others who received honour. However, "better late than never," and everyone is unfeignedly pleased that Mr. Keown Boyd's admirable work should at last have been suitably recognised.

The Royal Opera.

The season is in full swing at the Royal Opera House, and the troupe which Conte Guido Visconti de Modrone brought out is proceeding from success to success. The latest has been Wagner's "Tristan and Isolde," which had not been played in Cairo for many years. Unfortunately there does not appear to be the same demand for good opera and good music as there was even a few years ago. The subscription list has fallen off very much, and as a result the opera is playing at a steady loss, in spite of the good fare provided for its patrons. It is a thousand pities that there is not greater support for these efforts. But, while to a certain extent public tastes have certainly undergone a change, it is a moot question whether the prices charged have not something to do with this decrease in attendance. The fact is that the money nowadays is not in the same place, and that whereas a certain element in the theatre-going public did not mind paying a fairly small price to be seen in the places where it was considered to be *chic* to be seen, to-day they do not feel inclined to put their hands in their pockets to the same extent to satisfy their pride, while the real patrons have now not the money to pay for the rather high prices which are demanded for seats. It is a question whether the Government would not do well to bring down the prices which it controls and slightly increase its subsidy.

Successful Amateur Effort.

Once again we have to record a very successful amateur incursion into the realm of musical comedy. This week there was produced at the Kursaal a "Nautical Extravaganza" entitled "Captain Reece of the Mantelpiece," and all concerned therein are deserving of the warmest congratulations at the result of their combined effort on behalf of military charities. The production was under the patronage of Lord and Lady Lloyd and of Lieut.-General Sir Peter and Lady Strickland, all of whom attended the first performance. The piece is entirely due to the brain of Colonel Campbell Todd, the very popular head of the Army Pay, and constitutes a really remarkable achievement. That a great deal of trouble had been taken was evident from the excellent choruses, male and female. Indeed it is some time since such good concerted work has been seen here. The cast was a very large one, over sixty names being down on the programme and it is difficult to single out anyone from among so many good performers. But if one were pressed to say what one considered to stand out, one would select Mrs. Dudgeon, who was simply inimitable and Mr. Godwin, who will be remembered by those who were in Egypt during the War for his fine baritone voice.

CYPRUS JUBILEE STAMP ISSUE.

On February 1 the Government of Cyprus will issue a set of postage stamps in commemoration of the fiftieth anniversary of the British Occupation of the Island by virtue of the Convention with Turkey of 1878.

The ten denominations represent persons, objects and incidents of interest in a history proverbially rich in traditional associations. The currency of the Island consists of a pound sterling divided into 180 copper piastres, so that ninety piastres are the equivalent of half-a-sovereign, forty-five of a crown, and so on.

For the ¾ piastre design an archaic Cyprus coin has been chosen, presented in high relief. The one piastre gives a late contemporary marble portrait of the philosopher Zeno, founder of the Stoic philosophy, who was born in Kitium (the modern Larnaca) towards the close of the fourth century B.C. The design of the 1½ piastre stamp is based on a map of Cyprus in the mediaeval style drawn for Mr. H. C. Luke's "Anatolica," showing the six principal cities and Mount Olympus (6,400 ft. high): in the south-western corner will be observed a miniature presentment of Aphrodite rising from the sea before Paphos. The 2½ piastre is a reproduction of the early eighteenth century fresco in the Orthodox Church of Nicosia, showing the finding at Salamis in the fifth century of the body of St. Barnabas, the Patron Saint of the Island. In this connexion it will be remembered that Cyprus was the first country in the world to be ruled by a Christian Governor, the Roman Sergius Paulus, who was converted by Paul and Barnabas. The four piastre stamp gives a view of the thirteenth century Cloister of the Premonstratensian Abbey of Bellapaise, close to Kyrenia on the northern coast of the Island. The six piastre shows the Badge of the Colony, as approved by his late Majesty King Edward VII., borne on the Governor's flag: the two lions which Richard Cœur de Lion displayed on his banners at the taking of Cyprus. The nine piastre stamp is taken from a pen-and-ink drawing of the Tekke (Hospice) of Umm Haram, nurse of the Prophet Muhammad, who died in Cyprus. The subject of the 18 piastre will be familiar to Londoners as Sir H. Thorneycroft's bronze equestrian statue of Richard Cœur de Lion, the first English King of Cyprus, outside the House of Lords. The 45 piastre or five shilling stamp gives the façade of the thirteenth century French Gothic Cathedral of St. Nicholas in Famagusta, now a Turkish Mosque, and the pound a portrait of His Majesty King George V.

This special issue is for twelve months only, after which any stocks will be destroyed and the present series resumed.

A set of the stamps is on view at the Office of the Trade Commissioner for Cyprus, 1, Queen Anne's Chambers, Dear Farrar Street, Westminster, S.W.1.

THE CHURCH MISSIONARY SOCIETY.

We extract the following paragraphs, relating to the forthcoming Jerusalem Conference, and to the situation in which missions in Persia are placed by a recent edict of the Minister of Education, from the latest "slip of information" issued by the Church Missionary Society:—

From March 24 to April 8 there will be held at Jerusalem under the auspices of the International Missionary Council a meeting composed of what will surely be the most significant group of men and women who have met in Jerusalem since Pentecost. They will represent many races and languages: Japanese, Chinese, Indians, Africans, Anglo-Saxons, and members of most of the European nations. The meeting, the purpose of which is "to gain a fresh view of the most vital issues in the world mission of Christianity at the present time," will consist of some 200 selected delegates from the Churches in East and West, together with members of the Council itself.

The present situation in Persia is causing grave anxiety to all friends of missions. A new syllabus of instruction in all recognised schools has been issued by the Government, and no place is found in it for Bible teaching, while instruction in the Muslim law is made compulsory. Representations have been made to the authorities by those in charge of the mission schools of the Church Missionary Society, but so far there is no sign of any relaxation of the rule, and the missionaries fear that the Christian schools may be obliged to close. Such a step would be a heavy blow to the young Church, and the relinquishing of one of the most effective means of bringing Muslims to the knowledge of Christ.

The Greek Chamber has passed a law for a census of the population of Greece every ten years.

GOVERNMENT ORDINANCES IN PERSIA.

By MIRZA FIROOZ KHAN.

Tabriz, December 26.

Conscription.

For over two years now Conscription has been in force. The beginning was mild. Loopholes were many through which the citizen could escape, and, perhaps, the authorities used to overlook irregularities. But, later on, the rope was pulled tighter and tighter, until, at last, revolt showed itself in the closing of the bazaars in many of the larger cities in Central and Southern Persia. This closing of bazaars is the only palpable manner in which our people can express themselves.

All who are twenty-one years of age must enlist. There are, however, exemptions. Students and school pupils are granted time until they graduate. Separation from father and mother and the forming of an independent family life exempt one from being enlisted. The single son of his father also enjoys immunity! Smart young men take full advantage of these loopholes. Fully 300 young men have separated from their parents (in a certain large city), are married, and have escaped recruiting! Some blame the Persians for lack of *vatan-parasti* (patriotism).

Still, others, who graduated last June from our various schools, have become "students" again by starting to learn German or French. Others have found means to procure passports and escape into Russia. . .

Sigil, or the enforced enlistment, or census, is being enforced with great zeal. The head of each family goes to the "Compulsory Enlistment Department"—a big building near the Government House—there to register his own name, age and occupation, as well as the names, ages and occupations of his sons and daughters and the name and age of his wife.

The fee for the registration of each person is one kran. Persia is estimated to have—approximately—a population of nine millions, so that this means an indirect income into the State treasury of 900,000 tomans (or, about 200,000 pounds sterling, according to the day's exchange). For unknown reasons this registration has been discontinued for the past ten days.

Prohibitions.

Four years ago cartridge rifles all over the land were gathered in. Some who had hidden their rifles (giving up one, say, and hiding four) were punished very severely. Even two Shahsevan Khans, in the region of Ardebil, were hanged for being guilty of hiding rifles. Another man, who had hidden in his office a German rifle, was imprisoned for six months and fined 500 tomans. This man escaped the rope, because he was a Russian subject. Shot-guns were not bothered about. The holder of a shot-gun, however, had to have a written permit from the Army headquarters with his photograph attached to this permit, which was not transferable. It would cost the holder 10 krans, and it was good for one year only; for at the end of the year it was to be renewed.

And now the shot-guns, also, are being gathered in. The permit has been revoked, and no new ones are to be given. Thus, the beloved shot-gun, both single and double-barrelled, is doomed to become a walking-stick, if, indeed, it will command a price as much as a good cane. No reason has been given for this unexpected order, except that the people may not be able to shoot rabbits (or foxes), the skin of which has suddenly jumped in price from Shahis 8 to 60.

Since last fall the sale of strychnine has also been forbidden. It is commonly known as "fox-drug," and was sold in one-dram bottles. Peasants would buy it to kill foxes. Because of the prevention of the sale of this drug, fox-skins are scarce this year, and the price of each skin has increased from 25 krans to 80 krans. The poorer class grumble against this unlawful order, because they are no longer able to earn their living by hunting.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

CONSCRIPTION IN PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A curious legend which is now repudiated by the learned world still persists among the less educated of the world. It is held that the Parsi community are in India owing to the intolerable religious persecution to which they were subjected by the Mussulman conquerors of Zoroastrian Persia in the middle of the seventh Christian century. And to support the semi-fiction, a section of the Parsis raised a pillar somewhere on the coast of Gujarat to mark the advent of the mythical refugees, who, "for the sake of religion dearer than life," left their hearths and homes in Persia to seek an asylum in India. The inscription sins against history, inasmuch as the religion of Zoroaster, far from being extinct in Persia in accordance with the implication, is professed by some eight thousand souls to this day in Yezd, Kerman and Teheran.

Yet, whatever the causes which urged the ancestors of the Parsis to change their habitat—and a natural revolt against the victorious Arabs, whom they had always considered contemptible foreigners, was certainly one of them—it is indisputable that about a century ago the condition of the Zoroastrians was far from enviable, chiefly on account of the cruelty with which the *Jaziya*, or poll tax, was extracted from the Zoroastrians by the agents of the Qajar rulers.

Now the *Jaziya* itself, as history shows, is neither of Arabian origin, being levied during the Zoroastrian period in Persia, nor quite an inequitable imposition. For, it exempts from military service those "protected peoples," or Zimmis, who are liable to its payment. And, accordingly, the Parsis of Persia were under the provision never called upon to bear arms against the enemies of Iran. Thanks to the fellow-feeling and generosity of the Parsis of India, led chiefly by the late Manekji Hataria, the *Jaziya* was finally abolished in 1882, through the exertions of Sir Dinshah Manekji Petit after a prolonged and most persevering campaign. The very humane effort of the Parsis in this direction were supported by Sir Henry Rawlinson and Mr. E. B. Eastwick. It cost the Indian Parsis the then equivalent of £10,000. Now, however, under Riza Shah, when religious equality is the order of the day, Zoroastrians are recruited in the military service in accordance with the new rules of conscription. It is, therefore, to be earnestly hoped that Zoroastrians, who were groaning under the tyranny of the Qajars, will come forward with enthusiasm to participate in the organised defensive measures of their dear country. It is necessary publicly to express this fervent hope because of the rumours that have reached India of the various devices by which the Persians are attempting to evade conscription. May I appeal to the Persian Zoroastrians that whatever the other subjects of His Majesty Riza Shah may contemplate doing, they, the Zoroastrians, are doubly bound to join the Army with alacrity, first to clench the justification of the abolition of the *Jaziya*, and, secondly, to demonstrate their grateful appreciation of the new era in Iran which has emancipated their ancient land from the fetters of religious fanaticism?—I am, etc.,

INDIAN PARSI.

MODERN BULGARIA.

At the School of Slavonic Studies, University of London, King's College, Lady Muir is delivering two public lectures on "Modern Bulgaria." The first of these lectures (both of which begin at 5.30, in the Institute of Historical Research, Malet Street, W.C.1) is to be delivered to-day (January 26) on "Bulgaria from the Liberation to the Accession of Prince Ferdinand, 1878-1887)"; and the second, to be given on February 2, will be on "The Reign of Prince Ferdinand, to the Balkan Wars (1887-1912)."

Four other lectures will be given at the School by Dr. T. Tchitchovsky, of the Bulgarian Legation. These are to be delivered respectively on February 9, 16, 23, and March 1; and will be on "Economic and Social Structure of Modern Bulgaria: General Survey"; "Economic Problems: Agriculture *versus* Industry—Protection—The Co-operative Movement—National Finances"; "Social Problems: Conservative and Liberal Tendencies—Capitalism and Socialism—Town and Country—War Ravages—Civil Strife—Fascism or Democracy—The Parliamentary System"; and "Cultural Life: Social Legislation—Education and Religion—Art and Literature."

For Lady Muir's lectures, Major-General Lord Edward Gleichen will be Chairman, and for Mr. Tchitchovsky's, the Right Hon. Noel Buxton, M.P.

VISITS TO WAR CEMETERIES IN THE NEAR EAST.

At the request of many relatives, a second St. Barnabas Pilgrimage is being arranged to the cemeteries and battlefields in the Salonika and Gallipoli areas. The s.s. Stella d'Italia has again been chartered. The pilgrimage will leave London for Venice, the embarkation port, during the last week in August, and will last about three weeks. It is primarily intended for relatives and ex-soldiers, but there may possibly be some berths for others who are genuinely interested in these areas. In addition to the War cemeteries and battlefields at Salonika and Gallipoli, it is proposed to visit Corfu, the Corinth Canal, Athens, Lemnos, Constantinople, Candia, and Scyros, where Rupert Brooke is buried, and where a short memorial service will be held and one of his poems read. Relatives who have found difficulty in obtaining photographs of graves in the Near East will be gladly assisted in this direction by the organisers of the pilgrimage. Preliminary details can be obtained from the Hon. Secretary, St. Barnabas Pilgrimages, 7, Hobart Place, S.W.1.

THE SOCIETE DE PHILOLOGIE.

The Egyptian Minister in London, as President of the Société Internationale de Philologie, Sciences et Beaux-Arts, and the Senate of the Society, had issued invitations to an "At Home," at the Society's Rooms, 8, Taviton Street, Gordon Square, on January 16. The guests were received by Sesostris Sidarouss Bey, Chargé d'Affaires of the Egyptian Legation, who was accompanied by his two nieces. M. Cattaui, Secretary of the Legation, was also present. Among others present were Sir John Cockburn, Dr. A. D. Jilla (Bombay), Dr. Abdul-Majid, Mr. John Campbell, Dr. Knight-Chorley, Mrs. Neville, Lady Hewitt, Professor and Mme. Lafourcade, the Rev. A. Graham-Barton, Mr. Glanville Mason (Chatham), Mr. S. Marchant, Professor N. Stephen (Liverpool), Mr. R. May (Belfast), and Dr. H. M. Léon (general secretary).

SIR JOHN DE ROBECK.

The death took place on January 20 of Admiral of the Fleet Sir John de Robeck, the brilliant commander of the Naval Forces in the Dardanelles in 1915. He bore the responsibility for the naval side of the landings in Gallipoli, and also was in charge of the naval forces which assisted in the withdrawal of the troops from the Peninsula. After commanding a battle squadron in the Grand Fleet he was appointed Commander-in-Chief in the Mediterranean, and for three years acted as High Commissioner at Constantinople. He left the Mediterranean in 1927, when he became Commander-in-Chief of the Atlantic Fleet. He was born in 1862, and had Irish and Swedish blood in his veins.

PERSIA WITHOUT AND WITHIN.

(Continued from page 100.)

provide fresh irritation than to gain an end. A round-table Anglo-Persian conference, it would be thought, might discover, in a mood of give-and-take, some solution of the differences, some outlet for feelings, more satisfactory than the presentation of "Notes." It is indeed lamentable that Great Britain, whose interest, both from an intellectual and a material point of view, it is to see a strong and united Persia, should occasionally appear in the eyes of Persians to be desiring the reverse.

NEWS IN BRIEF.

The Iraq Parliament was dissolved on January 19.

At Bikaner on January 19 a daughter was born to Maharajkumar Bijeysingh, younger son of the Maharaja of Bikaner.

The King of Egypt will go to Nag Hamadi on February 17 to lay the foundation-stone of the new dam and will afterwards visit Luxor.

Of the 415 immigrants who entered Palestine during the month of November, 306 were Jews, and of the 639 emigrants from the country during the same period, 407 were Jews.

A slight earthquake shock was felt in Jerusalem on January 18. Reports from the Jericho district indicate that stronger tremors were felt in the Jordan Valley and round the Dead Sea, but no damage has been reported.

H.M.S. Queen Elizabeth and H.M.S. Warspite arrived at Alexandria on January 21 on the customary visit of the flag-ships of the Mediterranean Fleet to Egyptian ports, Admiral Sir Roger Keyes and Lady Keyes being the guests of Lord Lloyd at the Residency, Cairo.

It is reported that the Government of the Hijaz has asked the Swiss Government to place at the former's disposal three officials to organise the Posts and Customs services, and the finances of the kingdom.

It is announced from Jerusalem that Mr. Suprasky, of Tel Aviv, and a company with American financial backing, has bought out the Arab Company which held the concession for exploiting the medicinal hot-springs at Tiberias, on the Sea of Galilee. It is stated that a first-class hotel will be built and the baths will be modernised.

The King has given Mr. Joseph Frank Dyer, Honorary Consul of Greece at Wellington, New Zealand, authority to wear the Cross of Officer of the Order of the Redeemer, which decoration has been conferred on him by the President of the Greek Republic in recognition of valuable services.

The criminal Court at Constantinople on January 16 began the hearing of the case against 57 Turkish Communists, who were arrested some weeks ago, on charges of plotting to create disturbances throughout Turkey with a view to changing the system of government.

Hamdulla Subhi Bey, a former Turkish Minister of Public Instruction, has been appointed President of a Committee which is to study the question of a new alphabet for the Turkish language. The Committee will first examine the feasibility of the adoption of Latin characters.

The former King Ferdinand of Bulgaria, who was on his way to Buenos Aires, was forbidden to land in Rio de Janeiro on January 20 while the ship was in port. He arrived in the liner Sierra Morena and had arranged to visit Bolivia and Peru and several other countries.

It is announced that the Roumanian Cabinet has decided to establish communication by civil aircraft between the Dobruja and the opposite side of the Danube owing to the difficulty of navigating the river in its present flooded state.

The negotiations which have been going on at Angora between the Turkish and Italian Governments regarding possession of the Isle of Ipsili, in the Dodecanese, having been without result, the two Governments agreed at the end of last week to refer the matter to The Hague Tribunal.

It has been decided that the responsibility for the defence organisation at Aden shall be transferred from the War Office to the Air Ministry. In accordance with this decision, a Royal Air Force officer will be appointed in April next to assume the command and administration of the troops in the garrison.

The new cable between Larnaca (Cyprus) and Haifa, which links Palestine with the submarine telegraph system of the world, has been opened to public traffic this week. Work is now proceeding on underground lines between Port Said and Suez in order to accelerate communication with India.

The Court at Sultan Ahmed in Stamboul has acquitted Mr. Williams, who had been accused of violating the new Turkish Navigation Act by acting as wireless operator of the Turkish steamer Kaplan. Mr. Williams's defence was that he had ceased to act as wireless operator when the Kaplan entered Turkish waters, and had then become a passenger.

Queen Marie of Yugoslavia gave birth on January 19 to her second son. According to the Serb custom, says *The Times*, the child was named at his first christening Znamenye, or Andrew, but will keep this name only until his second christening, when he will receive his definite name to be chosen by the godfather or "Koom" of the whole family. The Duke of York is "Koom" of the Yugoslav Royal Family, and thus will have a second godchild in Yugoslavia.

PERSONAL AND GENERAL

TO-DAY

January 26, 1928 (New Style).
January 13, 1928 (Old Style).
Shaaban 10, 1346, A.H. of the Muslim Calendar.
Shebat 11, 5688, of the Jewish Calendar.

The Swiss Minister and Mme. Paravicini have left London on a visit to Egypt.

Sir Richard Sennett arrived last week at Luxor from Cairo, and will return to London at the end of this month.

Lord and Lady Plumer, who arrived at the Residency, Cairo, from Jerusalem on January 21, are proceeding thence to Khartoum.

The Countess of Malmesbury left last week for Italy on her way to Egypt, and will not return until towards the end of March.

Mr. and Mrs. Robert Williams left London on January 20 for Cairo, where they will be the guests of Lord and Lady Lloyd at the Residency.

M. Kaphandaris, Greek Minister of Finance, and Mme. Kaphandaris left London on January 17 for Greece, arriving in Athens on January 22.

Princess Mary Viscountess Lascelles and Viscount Lascelles will leave London on March 2 for Egypt, travelling in the P. and O. s.s. Ranchi.

The King has conferred the rank of Honorary K.C.M.G. on Dr. Castellani, Director of Tropical Medicine at the Ross Institute and Hospital for Tropical Diseases, Putney Heath.

Lieutenant-Colonel J. E. Colenso has been appointed to command the 2nd Bn., 3rd Queen Alexandra's Own Gurkha Rifles, in place of Colonel C. H. A. Tuck, vacated.

Lady Robson of Jesmond, who has been the guest of Sir Ronald and Lady Storrs at Government House, Cyprus, is expected to return to 26, Eaton-square, about the beginning of February.

The Crown Prince of Italy and his suite are expected to arrive in Egypt on January 31 on board an Italian battleship. They will stay at Abdine Palace for two days, and then at the Semiramis.

M. Ivan Stancioff, son of the former Bulgarian Minister to the Court of St. James's, and of Mme. Stancioff, *née* Comtesse de Grenaud, has entered the Bulgarian Diplomatic Service and been appointed Secretary at the Foreign Office, Sofia. M. and Mme. Ivan Stancioff left London for Sofia last week.

The death has occurred of Mrs. J. E. Quibell, who had lived much in Egypt. She assisted in excavation work under Sir Flinders Petrie, and did much to help archæological experts by her drawings. Her husband in the early years of this century was Inspector in the Antiquities Department of the Egyptian Government. In later years Mrs. Quibell, who published in 1925 a book called "A Wayfarer in Egypt," devoted herself to much appreciated social work.

THE GENEALOGY OF THE ARMIES OF INDIA.

Major L. V. S. Blacker, of the Guides, lectured to the Central Asian Society on January 18 upon "The Central Asian Origin of the Armies of India," General Sir George MacMunn being in the Chair. Major Blacker dealt with the various waves or emigrations of the Mongol peoples, checked by the Great Wall of China, to the south-west, and of the trek westwards of the Nordic peoples from the region of the Caspian, who, unable to cross the Oxus, which then flowed to the Caspian, had to penetrate the west by way of the Caucasus. There were three great waves, taking place roughly from 2000 to 1300 B.C., in the first centuries of the Christian era, and again about the time of the Norman conquest of England.

The armies of India to-day consisted of those of the Nordic race, that is, those (chiefly) by the N.W. frontier, and the Ghurkas and Burmans of Mongol origin.

The lecturer drew freely upon ancient and medieval history to prove the connexion of existing races with races which no longer bore their former name. Thus the Juts of India were identified with the Jutes, whom he spoke of with the Angles and Saxons of pre-Norman England. The Rajputs were like the Celts of Ireland, who lived on as something of an aristocracy; the peoples of Bactria were not foreign but akin to the troops which Alexander of Macedon brought with him upon his eastern conquests; and so on. Major Blacker further showed photographs to show the persistence of Mongol and Nordic facial type or costume.

Afterwards, Sir Claud Jacob described the extraordinary fineness of a battalion of Hazaras (Shiah Mussulmans) which he commanded. These were commonly supposed to be descended from Ghengiz Khan, but their origin was obscure. Talking of the Rajputs, he said that he had seen their quality decline when in different climatic conditions from those to which they were accustomed. The Chairman remarked that it was just and proper for the people of India to be ruled by the British rather than by those of another race.

THE SLAVONIC REVIEW.

The current issue (Vol. VI. No. 17: December 1927) of the *Slavonic Review* is an extremely interesting number. Sir Bernard Pares leads off with a trenchant summary of ten years of Bolshevism, the point of which is enhanced by the subsequent banishment of Trotsky. Under the heading "Police Provocation in Russia," M. Vladimir Burtsev contributes two articles on Azef, the Tsarist Spy, and the Bolshevist Spy System, which rival in their way the best detective story. The relations between the various Slav peoples, as modified by the Great War, form the subject of four articles by eminent representatives of Slav thought; their differences of view and of treatment are most instructive. M. Paul Milyukov, the first of the four writers, makes some pointed criticism on Yugoslav-Bulgarian relations. There is a further article on "The Mission of General Liman von Sanders" (the first appeared in the *Slavonic Review* of June, 1927), which throws light on the tension that the dispatch of the German General created between St. Petersburg and Berlin. The whole volume of 240 pages (Jonathan Cape, Ltd., Price 6s. net) repays study, as much of it has a special bearing on future political developments in Europe.

The Roumanian Government will shortly extend to the province of Bessarabia the civil code and other laws of the original Roumanian kingdom.

A body of about 500 villagers maltreated the collectors of taxes near Candia (Crete) on January 18 and destroyed all the local revenue records.

Three members of a reactionary Circassian band, led by Haji Samy, who landed on the Smyrna coast from Samos with the object of making an attempt on the lives of Turkish leaders at Angora, were hanged at dawn on January 18 on the bridge-head at Stamboul. A crowd of sightseers witnessed the spectacle.

THE WEEK AT HOME

London, Tuesday Morning.

Elections General and Particular.

A certain activity in political circles is being manifested now, although no such thing as a campaign is feasible until the scattered Cabinet Ministers return to England. No one knows, for that matter, when the General Election is to take place, although people who imagine they know speak gloomily or eagerly (as the case may be) of the beginning of next year as the appointed time. For myself, I cannot see why the Government should not hang on for its full five years, but, of course, it is all a question of political opportunism. If a popular "slogan" can be found before the end of the Parliamentary five years, doubtless it would be folly not to attempt to ride to victory on it.

In the meantime, we are all variously interpreting the different by-elections. At Northampton recently the Labour candidate got in, but so narrowly that the Government does not seem in the least dismayed—rather the reverse, for Northampton has never strongly supported the Conservative Administration. What will happen at Faversham to-morrow it is difficult to say, but apparently the issue depends upon local rather than on national issues. At Faversham, too, what has been called "the pathology of democracy" has been displayed in the form of tanks, kinemas, and other so-called American methods of political propaganda.

Roads and Railways.

The competition which was visible soon after the end of the War between road and railway transport has become more bitter, if anything, with the passing of years and of freights from the keeping of the railways. The latest phase, moreover, is distinctly depressing. For it amounts to an attack by the Federation of British Industries upon the grant of any road-powers to the railways.

Now the railways are promoting Bills in the House of Commons to obtain powers to compete with their rivals on the roads. It is a problem with which many countries of course are familiar. The railways complain that by statute they are bound to carry anything that is sent, and that the more remunerative traffic is going on the roads. They want legal freedom to compete with what they call unfair rivalry. It all sounds reasonable enough, but what do the F.B.I. make of it?

The F.B.I. state bluntly their fear of an effective railway monopoly of transport. They believe that the competing carriers will, if this Bill goes through, be crushed by the railway companies, and that the railways will then make good their losses on passenger and other railway traffic by increasing road charges. That also sounds reasonable, but what do the public make of it?

As far as one can gather, the general opinion is against the railways. But obviously there must be co-ordination in the question of traffic, and whether eventual public control is desirable or not, the appointment of a Royal Commission to deal with the matter seems the line of least resistance.

An Analysis of Deaths.

At this cheerful time of the year we are bidden to welcome the publication of the Registrar-General's Report, which tells us, more or less, which of us is likely to die next. The papers are full of the hilarious subject, even bubbling over into bright little leaders. It is true that the Report refers to that incredibly remote period, 1921-1923, but one supposes that our habits have not changed very much since those days of long ago.

Well, it seems that clergymen are quite exceptionally healthy—a point to remember when every other person at the present time seems prepared to run down the particular kind of clergyman whose doctrines are suspect. The rich people to whom eating and drinking are an indulgence rather than a necessity are peculiarly apt, according to the Registrar-General, to find their pastimes interrupted by appendicitis, diabetes, or alcoholism. It is unhappily only too natural that tuberculosis should be most prevalent and fatal among the poor.

Cancer is possibly the most dreaded of all diseases at the present day. Those who suffer least from it are clergymen, bank officials, machine compositors, and leather goods makers; and those who suffer most from it are waiters, cutlery grinders, tin and copper miners, and cellarmen.

For those who will be morbid at any cost, it may be mentioned that of the ten highest suicide rates, textile occupations are responsible for four classes, publicans and brewers for two, and medical practitioners for one.

It is presumably a sign of progress that all this information should be readily available, but what earthly influence it can have upon the normal man is a mystery.

The B.B.C. and Controversy.

The wireless in this country could be an incomparable instrument of instructing the mind to think. Instead of this, as all listeners-in know, it aims, when mere entertainment is not its motive, only at informing. In other words, controversial matter is strictly eschewed by the Postmaster General. The time has apparently come for a wholesale attack upon this prohibition.

Matters came to some sort of a head last week when a debate, one of an interesting series, was cancelled. Mr. Philip Guedalla and Mr. Arthur Ponsonby were to have discussed "Should Diaries be Burned?", but since it was the purpose of the Liberal speaker to dilate on the qualities of certain living politicians, the B.B.C. had to exercise a veto.

Now the existing regulations prohibit the broadcasting of any controversy relating to political, religious, or industrial affairs, that is, the very subjects in which men and women are primarily interested, and upon which it is desirable that they should have, not the mere partisan stuff which they read in their morning newspapers, but the observations of original and unfettered minds. This restriction has nothing that I can see to recommend it. If it were abolished the authorities could always ensure that liberty of speech did not degenerate into licence. If, on the other hand, this censorship is to continue, the wireless, as Mr. G. K. Chesterton has said, will "soon be left to the witless."

THE INDIAN NATIONAL CONGRESS.

The Indian National Congress, which held its forty-second session at Madras in Christmas week, is not the flourishing organisation that it once was. Dr. Ansari's presidential address gives abundant evidence of how serious its decline has been. Its capture by the Swarajists greatly weakened its influence, and it is now only a sectional body without any valid claim to the title of national. Its resolutions have but little weight in India; and the President emphasised the need for its reorganisation. He admits that the set-back that it had received in the non-co-operation movement had told heavily against it. The enthusiasm of seven or eight years ago has given place to apathy and in some cases to open hostility. The numbers of Muslims and Sikhs on the roll have dwindled considerably. The Parsees, who formerly took a leading part, have largely disappeared. The Indian Christians hold themselves aloof. Dr. Ansari strongly urged all these to return to the fold; and he pointed to the example of the non-Brahmans who had decided to come back. The Congress should stop at nothing short of a surrender of basic principles, he said, in order to get every party in.

It is not perhaps surprising that in these depressing circumstances Dr. Ansari was not disposed to take an optimistic view of the Indian situation. He was, indeed, distinctly gloomy on the subject of the Hindu-Muslim dissensions. Hardly a day passed, he said, without news of the occurrence of some violent outburst of communal fury with its legacy of bitterness and hatred. And he apprehended that these unceasing quarrels would reduce the country "to one vast camp of warring communal factions bent on destroying each other." This is plain language, and it suggests that the gravity of the situation is realised. But unfortunately Dr. Ansari had no remedy to recommend. He dealt with the subject at great length in his address; but he failed to propose any practical solution. All that he could do was to appeal to both sides to settle their differences, not by the "barbarous methods" of communal violence, but by making use of the Indian National Congress for the protection of their rights and the redress of their grievances. The practical value of this recommendation may be gauged by what has been said above on the subject of the present state of the Congress. Dr. Ansari does not believe in the Legislative Assembly and the Legislative Councils. He said so plainly in his address. To him the Congress is the only proper channel for the expression of public opinion. But as has been already pointed out by a Calcutta contemporary, the real leaders of public opinion are now to be found in the Assembly and the Councils. There is no need for the Congress, which has consequently become merely a piece of political machinery. And being such, it is useless as a court for the settlement of differences between Hindus and Muhammadans. Dr. Ansari might possibly have been able to make a more useful and practical suggestion if, in his address, he had carefully investigated the causes of the great development of communal trouble in recent years. He rightly said that the Hindu-Muslim problem is essentially a problem of two different cultures, each with its own outlook on life, coming in close contact one with the other. But he offered no suggestion as to how it comes about that during the last few years this close contact has resulted in such an enormous increase of friction. He traced what he described as the three experiments which have been made by the Congress during the forty odd years of its existence. An unbroken period of thirty years had been given to co-operation. Then about a year and a half had been given to non-co-operation; and then four years to the policy of obstruction within the Councils. What had been the result? Nothing whatever had been gained by co-operation, which was a policy doomed to failure from its inception: it had led nowhere. Obstruction within the Councils had been equally futile. And as for non-co-operation, it had certainly not achieved all that had been expected of it. But its spirit had come to stay, although it could not now be actively resumed by reason of the communal troubles.

It does not seem to have occurred to Dr. Ansari that as the spirit of non-co-operation, the spirit of lawlessness in other words, had permeated Indian politics so the differences between Hindus and Muhammadans have become increasingly acute. These differences have of course always existed. But so long as the principle of co-operation was observed, and the law was respected, they were held largely in check. That the introduction of the reforms scheme has contributed to their growth is also doubtless true, as each community has sought to strengthen its position at the cost of the other. Dr. Ansari admits that non-co-operation has been unsuccessful. But he is not prepared to depart from it. On the contrary, he strongly urges the boycott of the Statutory Commission. He is neither surprised nor disappointed that no Indians were asked to serve on the Commission. It was exactly what he had anticipated; and his remedy is that India should treat the Commission as the Milner Mission was treated in Egypt. His position is therefore that while on the one hand he advocates measures that have in the past promoted disunion, on the other hand he preaches unity. It is his unshakable belief, he said, that India cannot advance unless unity is established in the country. He admits that the framing of a constitution for 320 millions of people professing different religions and speaking different languages is the most gigantic experiment in democracy that has ever been attempted. And he might have added that this description of the task would be correct even if all these heterogeneous races and communities were living together peacefully. What the difficulties will be in the present situation when the country is tending to become "a vast camp of warring communal factions" he did not attempt to explain. But he is fully persuaded that the work of constitution making must go on and that at once. The constitution is to be framed by the Congress and approved by a National Convention; and the British Parliament is then to be forced to accept it. "Ours must be the decisive voice in the determination of our future," said Dr. Ansari. It would not be easy to imagine a proposal less practical in character than this.

Digitized by Google

For there surely could not be a more unfavourable time than the present at which to attempt to achieve unity in constitution-making. And there could not be a more inopportune moment at which to propose to compel the British Parliament to accept a ready-made constitution. Great Britain is pledged to the gradual development of self-governing institutions in India as an integral part of the British Empire. But the British Parliament is the judge of the pace at which the development is to proceed. And it has now unanimously appointed a Commission of its own members to inquire whether the time is ripe for a further advance. It has offered to the Indian people every possible opportunity to co-operate with this Commission, and to put forward their own views and proposals. But no reasonable man can expect it to relinquish its position as the final arbiter and to accept whatever scheme may be presented to it. We think that Indian politicians who put forward such proposals should remember what a former President—the late Sir William Wedderburn—said to the Congress in 1910 in the course of his opening address: "It is only by the good will of the British people that India can attain what is the best attainable future, the United States of India, under the ægis of the British Empire. . . . Hand in hand with the British people, India can most safely take her first steps on the new path of progress."

CURRENT TOPICS.

Lord Birkenhead's Plea.

One may concur or not in the suggestion that with the departure of the Statutory Commission "a real measure of responsibility has passed from the India Office to be discharged jointly by Sir John Simon and his colleagues and the Viceroy." But Lord Birkenhead's hope that no anxiety would be caused to the members of the Commission, who are also members of Parliament, during their absence with regard to their seats in the House of Commons will be echoed by all who appreciate the difficulties of the task upon which they have embarked. Two of the members are Conservatives, two are Labour Members, and one is a Liberal, and although the situation is complicated by the fact that a General Election will undoubtedly take place during the two years or more that the Commission is at work, the plea is one which we have little hesitation in endorsing. In the recent debates in the House of Commons, as the Secretary of State has pointed out, "the Commission was unimpeached by a single dissentient vote." It would certainly be a fine gesture, befitting the gravity of a wholly exceptional occasion, if the managers of the three parties were to crown the exhibition of public spirit evinced by the members in question by using their influence with their supporters in the various constituencies in the desired direction. And if, as we believe, the cordiality of the send-off accorded to Sir John Simon and his colleagues on their departure last week is any indication of the widespread interest which has been aroused in their mission, one of the most momentous that has fallen to the lot of any British Statesmen within living memory, we have little doubt as to the outcome of Lord Birkenhead's timely and appropriate appeal.

Trade and Sentiment.

It is not necessary to subscribe to the belief of a morning contemporary that Great Britain's erstwhile supremacy in its largest overseas market "is being slowly but steadily undermined by the activities of foreign competitors" to admit that the latest "Report on the Condition and Prospects of British Trade in India, 1926-27" affords food for serious thought. Here it is only possible to deal with certain big facts which emerge from Mr. T. M. Ainscough's comprehensive and stimulating survey, to which we shall have occasion to refer in greater detail in a subsequent issue. The first is, of course, the marked decline in the proportion of the aggregate trade transacted with this country. Four years ago fifty-eight per cent. of the imports into India came from the homeland; last year only forty-eight per cent. In the five years which preceded the War the proportion was sixty-three per cent. In other words, in the short space of three years the United Kingdom's share has fallen by no less than ten per cent.

Thus baldly stated, without qualification or analysis, the figures are certainly disquieting. But as Mr. Ainscough is careful to point out, they do not by any means represent the true position. For one thing they relate to many articles—foodstuffs and raw materials mainly—which are not produced in the United Kingdom. Moreover, the period under review was a particularly trying one for trade and industry in this country and the twelve months ended March 31 last, when the greatest setback occurred, were even more abnormal. After reviewing all the attendant circumstances, Mr. Ainscough arrives at the conclusion that "Great Britain still supplies nearly 70 per cent. of the imports into India of competitive manufactured goods."

The estimate, based as it is upon a long extended experience of the Indian market for the commodities in question, may be accepted. The point which we wish to emphasise is not the precise figure, nor even the fact that for the first time since the War Mr. Ainscough feels that "it is possible to strike a definitely optimistic note with regard to the import trade of this vast market." A wise man once remarked that: "It is not ignorance that spoils things, but knowing things are aren't so." It is the important and far-reaching changes, now taking place in India, which "tend to weaken the British position and call for special efforts and revised methods and organisation to meet them" upon which, like Mr. Ainscough, we wish to lay stress. And of these not the least important is the extent to which political sentiment is being allowed to cloak and conceal the real economic bond of mutual interest which exists between the two countries.

An Untenable Case.

For those who delight in such coincidences there is no doubt some significance in the fact that Sir John Simon and his colleagues, on the way to the scene of their labours in India, will pass in mid-ocean the members of the Donoughmore Commission who have recently completed a similar inquiry in Ceylon. Be that as it may, it must be conceded that the two tasks have many points in common. But pending the publication of that body's report we may content ourselves with observing that the evidence tendered on behalf of the Planters' Association of Ceylon before the Donoughmore Commission adds an interest that, owing to the belated appearance, would otherwise be lacking in the annual administration report of the Island in 1925. Refuting the charges of lethargy made against the European commercial community, the witnesses quoted interesting statistics in support of the Association's contention that with a few notable and praiseworthy exceptions in rubber research and other matters the initiative in the commercial and industrial development of the colony rested almost entirely with Europeans. Out of a total membership of just over 1,400, the European members alone muster 1,243, and the aggregate area of the land in which the Association is interested, roughly one-twenty-fifth of the whole area of the Island, actually produces three-quarters of the total exports. The extent of this stake in the country is indicated by the fact that during the twelve months under review the export trade rose in value to over 492 million rupees. The result was a surplus of revenue over expenditure of no less than ten million rupees, in spite of the more liberal provisions made for development projects. In the light of this one fact alone, it is difficult to see how certain Ceylonese politicians can contest the Association's not unreasonable claim to representation on the reformed Council on the ground that "the plantations only benefit the European and Indian communities, and do no good to the permanent residents of the island."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 5.

The Moslem League.

The story of the split in the Moslem League is too tangled to tell in full. There have been two meetings, on the same days, at the same hours, one in Calcutta and the other in Lahore. Which spoke with more authority for the Moslems of India is a disputed point. Te disinterested would probably say that Lahore did. The Calcutta meeting opened its arms to many non-Moslems who had hurried here from Madras and the meetings of the National Congress, while the leading Bengal Moslems either absented themselves, or were excluded on technical grounds. "It is clear," declared Mr. Jinnah before his departure from Calcutta, "that the Lahore meeting was a farce. Even the reports in the Anglo-Indian press show that not more than a dozen delegates from other provinces went to Lahore." For all that, the Lahore meeting declared the Calcutta meeting illegal.

The Calcutta meeting amended the rules of the League, which provide that no President shall hold office for more than two consecutive terms, and elected Mr. Jinnah Permanent President. The Lahore meeting elected Sir Mahomed Shafi President of the League, the supporters of the resolution stating that Mr. Jinnah's presidentship expired in June.

The *Statesman's* comment on the situation is the forcible one that "the outer world can do little but look on in amazement at the lack of elementary political instinct that brings about confusion and leads to open public recrimination," while the *Englishman* says, "A very great responsibility for the present breach rests with those Moslem leaders who, when the composition of the Royal Commission was first announced, let their emotion run away with their reason, and then had not the manliness to stand up and argue for what was the right cause. Faint-heartedness is the curse of the average Indian politician."

The Political Welter.

Never has political India presented such a welter as in these weeks, and any observer would say that this last fortnight has seen the welter intensified. Nevertheless, and though at the moment the strength of the boycott movement appears to be great, there are many who are confident that its strength will dwindle as time goes on, because the movement will reveal itself as against the highest interests of India. Nothing that can happen will keep the Moslems of the Punjab from appearing before the Royal Commission. Equally nothing will turn the depressed classes from their determination to give evidence in the hope of securing an improvement in their conditions. The Liberals and the Moslems of Bengal will co-operate. There are clear signs that the boycott must break down. "It seems possible," yesterday's cables reported the *Manchester Guardian* to have said, "that various Indian Parties may act on Sir Tej Bahadur Sapru's suggestion to frame among themselves an agreed constitution." The Manchester journal had this comment to offer, that "there is a wide gap between the minimum demand of the Indian politician and the maximum which the British Parliament could, at present, be induced to concede." That may be true. An equally pertinent comment would have been that even that act of non-co-operation, for as such it would be intended, would be to co-operate with the Commission; for what it must want most of all to know is what constitution, in the united counsels of India, the country is ripe for. The terms of any agreed constitution would be made public, so it would not matter if the framers did not present it in person to the Commission. If the Indian leaders do not co-operate in one way or another, "they," to quote another of yesterday's cables, "will neither enhance their political reputation outside India nor advance the cause which they have at heart."

Lord Sinha.

Lord Sinha, interviewed on his arrival in Bombay, expressed his entire disagreement with the resolution passed by the National Liberal Federation and the Congress, urging the boycott of the Commission. He denounced in strong terms the boycott movement, which he averred was due to a misunderstanding of what the procedure of the Statutory Commission was going to be, and deeply regretted that some of his friends should have thrown their weight on the side of non-co-operation. The boycott movement was entirely impracticable and would do no good to India. By resorting to a boycott, Liberals and Conservatives would be creating a spirit of ill-will, suspicion and mistrust which would vitiate any reforms that might come and was absolutely incompatible with the working of any other reforms. "Do not you know what the effects of a boycott will generally be?" he asked. The talk of *hartals* and mass demonstrations in the Congress was absolutely futile. These things would not do any good to the country. With all that one may agree.

H.H. the Aga Khan.

On New Year's Day, with a faith in men's willingness to listen to reason for which one must honour him, H.H. the Aga Khan issued a manifesto giving expression to his thoughts on the present political situation in India. The Reforms Act of 1919, His Highness says, brought fresh problems in its train, the greatest of them being the correct relation of the Hindus to the Moslems. The real friends of India were those who were striving for a genuine and lasting *entente*. Appealing to the elected Moslem members of the Legislatures, His Highness urged the formation of a permanent Moslem political body "to enter into compacts with the Hindus and the British Government." The need for an authoritative body of this character was great at a time when the constitution was in the melting-pot.

The National Congress.

The Madras session of the Congress and men's memories of it have already been almost completely overlaid. "To impartial observers," one correspondent writes, "it was clear that it was Mr. Gandhi who pulled the strings, and Congress, taking advantage of the situation created by the appointment of the Simon Commission, altered and stiffened its programme so as to approximate it to the Cawnpore decision of 1925, with the walk-in and walk-out of the Councils as a prominent feature of Swarajist activities. No other tangible result has been achieved by what is advertised as the most epoch-making session of the Congress. Mr. Gandhi, having surrendered his political conscience after the failure of the *khaddar* programme, was marking time, but now, in the absence of Pandit Motilal Nehru, he has re-asserted his view, with the result that whatever hopes the non-Brahmans and Liberals had of joining the Congress, because of the "Birkenhead challenge," has been irretrievably lost."

What would exclude those Parties, if nothing else did, is the declaration of the goal of the Congress as "complete national independence," for by that was meant independence outside the British Empire. This declaration is, of course, directly contrary to the advice that Mr. Gandhi gave to the Congress at Gauhati, but this year, though he was approached by some leading Congressmen to oppose the motion, Mr. Gandhi allowed the hotheads to have their own way.

The Indian Science Congress.

The members of the Indian Science Congress, under the presidency of Dr. Simonsen, have been at work throughout the week. Dr. Simonsen was one of the originators of the movement, which is now in its teens. The proceedings, which are highly technical, do not attract the

Digitized by Google

attention aroused by sessions of the Moslem League and other such bodies, but they may be thought of as more fruitful of good to India.

Patrick Lovett.

The death occurred on Monday morning of Mr. "Pat" Lovett, the editor of *Capital,* and the well-known writer of "A Ditcher's Diary." He was the oldest and most outstanding journalist in Calcutta, and he had many other interests in the city. His death is a loss that nothing can make good.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, January 7.

The Congress—and After.

Now that Congress week has come to a conclusion there is a lull in the political atmosphere. Occasionally some leader expresses dissatisfaction at the decision arrived at regarding a particular problem either at the Congress or at some other political conference. The convention that has come in for the greatest share of criticism is that of the Muslim League which had to be split up into two sessions owing to the divergence of opinion between two sections of the community on the issue of the boycott of the Simon Commission. Those who went to Lahore had already made up their minds to support the Commission, while the Calcutta session opened its doors only to the boycotters. Of the three hundred and fifty-two delegates who attended the Punjab session three hundred were from the Punjab while the remaining fifty-two were from the rest of India. Be that as it may it cannot be denied that the Punjab section at least is not in favour of a boycott. In every province there is a minority which is wavering, and the double session has left them more uncertain than ever. A resolution has been passed at Calcutta disaffiliating the Punjab Provincial Muslim League and censuring Sir Mahomed Shafi. The only reason for the belief that the Calcutta session has the power to disaffiliate the Lahore League is that on a similar occasion in 1917 Sir Mahomed Shafi was severely reprimanded.

The Hindu-Muslim Pact.

Owing to the differences between the two sections of the Muslim League the Unity Pact provisionally agreed upon at Madras has failed to secure the unanimous support of the Muslim community. The Calcutta session has agreed to joint electorates provided Sind is constituted a separate province and the North-West Frontier and British Baluchistan are granted a full measure of reforms. These are briefly the terms suggested by the Congress, subject to the condition that joint electorates do not come into force until the other conditions have been fulfilled. The Lahore session on the other hand has unceremoniously rejected the proposals as inadequate and not meeting the Muslim demands. Mr. Jinnah in a statement issued to the press soon after the conclusion of the Calcutta session, maintains that while only a handful of delegates from the other provinces attended the Lahore session, the session at Calcutta had a record attendance. Continuing, he states: "It is painfully clear that history has repeated itself. In 1917 Sir Mahomed Shafi happened to be president of the Punjab Muslim League and on that occasion he took up the same reactionary attitude. The result was that the All-India Muslim League had to disaffiliate the Punjab branch. I trust that the Punjab Muslims will know how to deal with Sir Mahomed Shafi and his colleagues." It is to be seen whether the Punjab Muslims will stand firm in their resolve to support the Commission, for I have excellent reasons for believing that they will have very little support from the other provinces.

The *Times of India.*

Another remarkable factor in the boycott controversy is the sudden change of front of the *Times of India.* That paper seems to have modified its opinion considerably. Discussing the Commission, it states that while "no better Chairman than Sir John Simon could have been found, the members, other than the Chairman and Lord Burnham, do not—to put it mildly—belong to the first flight in British politics. There is a sting in that fact." That is a complete change of front. It is a conclusion which does not fit in with the premises, which the *Times of India* has been laying down day after day since the appointment of the Commission. I shall take the liberty of quoting at length from an article which has been the talk of the town during this week.

Discussing the attitude of the Liberal Party the article states:

"However, whatever our opinions, one dominant fact emerges—the Commission as constituted does not inspire the confidence of men whom any intelligent Government must strive to carry with it when it approaches the question of the Indian constitution. When publicists of the weight, sobriety and responsibility of Sir Sivaswamy Aiyer and Sir Chimanlal Setalvad, and those for whom they speak, feel impelled by the strength of feelings to go not into political outlawry, but into political abstention, even if we do not agree with them, even if we are not convinced by their arguments, we must seek a path of agreement or compromise with them. These men whose services in anxious times give them an unanswerable claim to be considered by the State; if we cannot carry such men with us, then there is too much reason to believe that our work will be in vain. Reading again their speeches at the session of the Liberal Federation, we see that their claim is their natural and moral right to share in the determination of the constitution of the country. If we think that they have that right under the procedure proposed, that is not enough. They must be convinced that they have the right, they are reasonable men; and if we cannot convince them—we have failed to convince them—then every effort must be made to find a path of agreement. Here we invite special references to the words which Sir Chimanlal Setalvad used towards the close of his address. 'The scheme as announced is unacceptable and we cannot take any part in it. If fresh proposals or modifications are made we are prepared to consider them with an open mind.'

"The position here disclosed imposes a double obligation. It imposes an obligation on the British Government earnestly to strive for an agreement with men whose ability, position and service give them an irrefutable claim to consideration."

I was reminded, when I read the article, of the days when the *Times of India* was looked upon as a paper which would not hesitate to support the Indian viewpoint, even though it was not acceptable to Government; when its opinions carried weight with Government as coming from a mind closely in touch with the trend of political opinion in the country. I have no doubt that Liberal politicians in the country will welcome the support, however tardy, which they had been denied in the most unmistakable terms.

The Mill Strike in the City.

Bombay is again in the throes of a mill strike. The trouble arose from notices posted by the authorities in announcing certain measures of retrenchment. As many as twenty thousand workers were out on Wednesday and as there was every likelihood of demonstrations which culminate in violence, police were placed all round the mill areas. On the following day there was a partial resumption but the mills that opened in the morning were compelled to close down later in the day owing to insufficient workers. On Friday, however, the situation became worse and a number of strikers gathering together in groups resorted to stone-throwing. While there is little prospect of an immediate settlement the present discontent is not considered serious, as the labourers are anxious to go to their villages every year at this time and seize upon the slightest change in mill regulations to go on strike

THE MATCH TRADE IN INDIA.

The letter from the President of the Tariff Board to Chambers of Commerce and other bodies on the subject of the match trade in India, to which editorial reference was made in last week's issue of THE NEAR EAST AND INDIA, has elicited a lengthy reply from the Swedish Match Company. Alike on account of its general interest and in fairness to the undertaking whose activities have been brought into such prominence by the inquiry, a brief summary of the memorandum will not be out of place.

Two specific charges, it is stated, have been brought against the Swedish Match Company in recent years. One is "that it carries on a systematic dumping policy with the object of destroying the business of the local Indian match manufacturers," and the second, "that the Company is aspiring to a monopoly of the Indian match trade in order to be able to charge the public exorbitant prices for its products."

In a short outline of the Board's price policy, the continuance of which, it is emphasised, will depend upon the Board's decision as to whether the present rate of duty on imported matches is to be regarded as a purely revenue duty or a protective one, the memorandum states :—

"It must be evident to anybody with experience in the export business that a Company like the Swedish Match Company, doing business in all different parts of the world, cannot adopt a uniform price policy for all countries. The selling price of matches must vary not only according to the manufacturing cost of the different types, but also according to local competition, purchasing power of the public, popularity of a certain trade-mark and a great number of other factors. In many instances the monetary system of a country is decisive for the retail price which the public has to pay. For example, in the United States, the retail price of matches will be at least one cent a box and in Great Britain at least one penny a box, independently of the price charged by the manufacturer. It is natural that in such cases the Swedish Match Company will be able to obtain for its well-established trade-marks considerably higher prices than its competitors, and a lowering of the prices quoted by the Swedish Match Company for its products would not then be of any benefit to the public. In other countries like India where the retail price of matches plays a greater rôle to the public than in the United States and England and consequently is more closely dependent upon the price charged by the manufacturer, it is necessary for the Swedish Match Company to maintain prices on practically the same level as the competitors."

The memorandum proceeds emphatically to repudiate the suggestion that the policy of the Company is to establish a monopoly in India. "Except in cases where the Swedish Match Company has made agreements with Governments, the Company has never aimed at obtaining a monopoly of the trade, but only at getting the opportunity to compete on equal terms with its competitors." In this connexion stress is laid upon the fact that the modern match industry is the result of Swedish inventions, and that during the last 80 years all the most important improvements in manufacturing methods and machinery have originated in Sweden. For half a century the Swedish match industry has had a firmly-established trade with India, during which period "the Company, or its predecessors, has been the main factor in deciding the prices in the export markets, and in no case can be shown where the Company has abused its position by charging excessive prices to the public."

"The Swedish Match Company," it is stated in conclusion, "feels convinced that the Indian Tariff Board will recognise that the Company has a fair claim to compete for the Indian match trade on equal terms with other competitors, and that the general policy of the Swedish Match Company is neither aggressive nor monopolistic in its tendency. It is, however, admitted by all parties that the present situation in the Indian match trade is not sound and calls for legislative measures to be taken by the Government. In deciding what measures should be taken it seems to us that the main considerations of the Government would be to decide if the local match industry can establish a claim to protection and in such case how large this protection should be. If, as a condition for protection, it is maintained that the Indian match industry should ultimately be able to exist without protection, it must be stated that this condition is not fulfilled.

"The cost of manufacturing matches in India is at present considerably higher than in Sweden, including freight from Sweden to India, and it is hardly probable that this difference can be materially reduced. Furthermore, the wood problem and the question of deterioration of both Indian and imported wood during storage has not yet been satisfactorily solved. It may, however, be argued that an Indian match industry has already been established on the basis of existing legislation and that it, therefore, has a right to claim a reasonable protection even in the future . . . but it seems illogical of the Indian match manufacturers to ask for excessive protection at the same time as they claim that the Indian match industry will ultimately be able to compete with imported matches without any protection whatever."

LAND MORTGAGE BANKS IN INDIA.

(From a Correspondent.)

The formation of land mortgage banks has for some time past been a subject of interest in India, where the problem of long term credit for the agriculturist has assumed an increasing importance as a result of the Royal Commission's inquiries, now approaching completion. Three provinces, namely Madras, the Punjab and Burma, have already introduced the system, based largely on the model of the German *Landschaften*. The need for similar institutions in the Bombay Presidency has long been recognised but progress, for a variety of reasons, has been slow.

The co-operative societies are able at present to meet the requirements of their members for such purposes as the purchase of seeds and manure, water rates and taxes and other current and incidental expenditure during the period of cultivation which can be repaid after the relative crops are harvested and sold in the market. It is not, however, possible for them to raise capital for long-term loans required for the redemption of the debts of agriculturists and for the improvement of their lands. The long-term capital in the co-operative movement at present consists partly of (1) the shares and reserve fund—only a portion of which, however, can be utilised for long-term loans, as the remainder has to be kept in a liquid state; (2) debentures of the Provincial Co-operative Bank, the interest on which is guaranteed by Government; and (3) the amount placed at the disposal of the Registrar of Co-operative Societies by Government for distribution as *tagavi* to members of co-operative societies.

In order that new sources of capital for sufficiently long periods may be made available, the organisation of land mortgage banks is admittedly the best solution. After prolonged discussion among all the interests concerned a scheme has lately been prepared to that end and received the general approval of the Bombay Govermnent who have directed that it shall be tried as an experimental measure and that two land mortgage banks shall be opened in the first year, one in the Broach district and one in the Dharwar district.

The purposes for which long-term loans are to be provided for agriculturists in the areas in question are defined as:

(a) The redemption of lands and houses of agriculturists.
(b) The improvement of land and methods of cultivation.
(c) The purchase of costly agricultural implements and

Digitized by Google

the purchase or installation of agricultural plant or machinery.

The machinery of organisation will consist of the Provincial Co-operative Bank as apex bank and primary units consisting of local Land Mortgage Banks or Associations. The Provincial Co-operative bank will take up the work as one of its ordinary activities without any change in constitution or organisation. It will provide the main source of finance by raising debentures of the value of Rs.9½ lakhs at 4 per cent. In order to lend support to the scheme Government will purchase debentures to the extent of Rs.5 lakhs at such discount as will ensure that they do not lose on the transaction.

The area of the local unit of operations will be a fairly large tract which will ordinarily be a revenue district but it need not necessarily be a revenue district nor need it necessarily be co-terminous with one. The members of local banks or associations will be holders of agricultural land who are borrowers and other members nominated by Government. Each borrower will subscribe to shares in the proportion of one-twentieth of his borrowings. The money thus borrowed will not be kept by the local bank. It will either be invested in Government securities and the securities deposited with the Provincial Bank at the best rate of interest which the Bank can give. The local banks will thus have no concern with finance beyond receiving and investing the share money and acting as the intermediaries for advancing the loans to borrowers and the whole business of finance will to this extent be done by the Provincial Bank. Each local bank will require an expert valuer of land. He will be of the status of an Aval Karkun and will for the present be supplied and paid by Government. Loans will be made on first mortgages up to a limit of 50 per cent. of the value of the land mortgaged.

"INDIA."

An Empire series of historical biographies is in course of publication by the British Empire Educational Press. The fourth volume of the series is devoted to India, volumes 1, 2 and 3 having dealt with Canada, Australia and South Africa respectively. The Indian volume is edited by Sir John Cumming and Sir David Chadwick; and it would certainly not be an easy matter to find two better qualified or more competent editors. The volume is intended primarily, we gather, for those who are unacquainted with India, and Indian problems; and it is an attempt to outline the history of the country in ten brief biographical chapters. These deal with Gautama Buddha, Chandra Gupta, Tulsi Das, Akbar Shah Jehan, Aurungzeb, Clive, Hastings, John Lawrence, Temple, Durand, J N. Tata, and David and Albert Sassoon. This is a fairly representative selection of names, and we have no fault to find with it. At the same time we agree with the ex-Viceroy, who is quoted in the preface, that it would not be difficult to frame a different list. There is much useful information in the chapters, the leading facts being simply set forth. But to write a history of India in ten short chapters of biographies is manifestly a most difficult if not an impossible task. A book so planned must be of necessity incomplete seeing that the history of India extends over something like 4,000 years. What we have in mind is well illustrated by the second and third chapters. The second chapter deals with Chandra Gupta who flourished about 323-297 B.C.; and the third is devoted to the poet, Tulsi Das, who was born in 1532 A.D. To a lesser extent the same may be said of chapters 6 and 7 which deal with Warren Hastings and Lord Lawrence respectively. For a very great deal of Anglo-Indian history was made between 1785 when Hastings left India and 1862 when Lawrence returned there as Viceroy.

One criticism we feel bound to pass on the volume. It is that the chapters, or at any rate most of them, are overloaded with quoted matter, which extends in some cases to about half the text. In themselves the quotations are excellent, as they are mostly from the writings of acknowledged authorities on India such as Sir William Hunter, Sir Alfred Lyall and many others. But they interrupt the narrative and give the chapters a patchwork appearance. Moreover it seems to us that such a parade of authorities may be likely to dishearten readers who are new to the subject. An additional chapter gives a very brief account of the various British rulers of India from Cornwallis to the late Lord Minto. Here again it seems to us that the inclusion of quoted matter has overburdened the chapter. Sir William Hunter's summary of the more conspicuous results of Dalhousie's administration is of course all that such a statement ought to be. But its inclusion in the chapter means that very little space is left for most of Dalhousie's successors. For instance the important administration of Lord Dufferin is disposed of by the following: "His Viceroyalty was noted for the dethronement of King Thebaw of Burma, and the annexation of his territory." Lord Lytton and Lord Ripon are likewise dealt with very summarily. We see also that in this chapter it is stated that Lord Ellenborough followed Lord William Bentinck as Governor-General. The compilers must surely have forgotten Lord Auckland. Lord William Bentinck left India in 1835, and he was, of course, succeeded by Lord Auckland who had been appointed by Melbourne "in an evil hour" as one of the foremost of modern historians has aptly said. Auckland's unfortunate Afghan policy brought discredit upon his administration; and in 1841 Peel, who had in the meantime become Prime Minister, appointed Lord Ellenborough to be his successor. Ellenborough proved, however, to be much too adventurous for the Company, and after two years he was recalled, Sir Henry (afterwards Viscount) Hardinge taking his place.

OBITUARY.

THE BISHOP OF LUCKNOW.

THE NEAR EAST AND INDIA regrets to record the death, at the age of 65, of Dr. G. H. Westcott, Bishop of Lucknow. Dr. Westcott, a brother of the Metropolitan of India, had been in failing health for some time, and was shortly to retire from the Bishopric, to which he was appointed in 1910, in succession to Dr. Alfred Clifford. His long experience of India, covering nearly 40 years, his missionary zeal and devotion, and his knowledge of Indian customs and modes of thought, made him a notable and revered figure in the religious life of India.

George Herbert Westcott was the fourth son of Dr. Brooke Foss Westcott, the great Bishop of Durham from 1890 to 1901, and was born on April 18, 1862, when his father was a Master at Harrow. He was sent to Marlborough, and gained a scholarship at Peterhouse, Cambridge, graduating with a second class in the Classical Tripos of 1885. He was at Peterhouse with his younger brother, Foss, now Bishop of Calcutta, and formerly Bishop of Chota Nagpur. The Bishop of Durham's zeal for missions, and especially for missions to India, reproduced itself in four of his seven sons, of whom one was for some years in Madras, and one died at Delhi, while the two who became Bishops first chose Cawnpore as their sphere.

There in 1889 they established in connexion with the S.P.G. a brotherhood on simple lines, and there, with brief furloughs, G. H. Westcott worked from 1889, when he went out to India after three years as a master at his old school. His work at Cawnpore, where, in association with his brother, he founded Christ Church College and other educational institutions, was varied and interesting and his appointment to the head of the diocese was generally welcomed.

Less a man of affairs and ecclesiastical statesman than his brother, he nevertheless shared the latter's keen desire to secure the passing of the Indian Church Measure, for as a missionary Bishop he recognised the anomaly of a Church now mainly Indian in composition being statutorily, through the Metropolitan, under the superintendence and control of the Archbishop of Canterbury. Without being either a great scholar or a great administrator, Bishop Westcott resembled his father in the quiet, unassuming saintliness of his life and character, and heartfelt sympathy will be extended to his brother, the Bishop of Calcutta.

LIEUTENANT-COLONEL PAXTON MORE.

Lieutenant-Colonel Paxton St. Clair More, O.B.E., late I.M.S., who died at Bournemouth on January 8, joined the Indian Medical Service and took part in the Relief of Chitral in 1895. His War service with Indian troops in various theatres was continued in Iraq and on the frontier through the years of pacification to 1921.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Poor Harvest.

I referred recently to the effect of the unfavourable climatic conditions on Yugoslavia's harvest. Roumania is in little better case. The area cultivated in 1927 amounted to 12,448,272 hectares as compared with 12,276,807 hectares in the previous year, but the increase in the acreage was to be be the only increase recorded, for without exception the yields of the crops show substantial decreases. The figures are as follows (in wagon loads) :— Wheat, 263,446 as against 301,776; maize, 369,520 as against 608,343; barley, 124,991 as against 168,494; oats, 95,181 as against 115,902; and rye, 25,264 as against 28,557. With a bad season like this to contend with it is no matter for surprise that the Balkan countries have not made more progress towards stability than they have. Greece, owing to special circumstances, has been a unique exception in the Balkans as regards the harvest. For the other countries the elements have been too much.

An Improving Outlook.

Mr. F. C. Goodenough, Chairman of Barclays Bank, opened the series of annual bank reviews with a speech which may be described as being mildly hopeful about the general outlook, and this unusual hopefulness on the part of one of the Chairmen of the great banks will justly encourage considerable optimism on the part of the general public. He pointed out that good grounds now exist for confidence, as both industry and trade are now showing signs of revival, and while similar expectations hitherto have come to naught, each revival has tended to be longer than the preceding one and the last was only cut short by the tragic events of 1926. In his opinion the continuous process of stabilisation of currencies and world prices which is taking place holds out the prospect that the improvement in trade will be more permanent. Elsewhere in these columns will be found the report of Mr. Goodenough's speech at the meeting of Barclays Bank (Dominion, Colonial and Overseas), on which occasion there was issued to the shareholders a review of trade conditions and prospects in the territories in which this bank operates, a perusal of which, as Mr. Goodenough suggested, shows that the outlook for the current year is distinctly encouraging.

Prospects in the Near East.

Some reference is called for here to the sections of the review dealing directly with Near Eastern territories. In regard to Egypt it is pointed out that the 1926-27 season was unfavourable for cotton growers, although the crop was a large one, but that in April the demand for Egyptian cotton revived, with the result that money was released to the benefit of trade in general. The prospects in Egypt, it is remarked, are now said to be brighter than for several years past. As I pointed out last week, the one adverse factor for Egypt is the cotton situation; but given the continuous improvement in trade which is anticipated and the smaller cotton crop looked for this season (the official estimate is 6,041,499 kantars as compared with 8,634,851 kantars for 1926-27), the large existing stocks which are at the moment an embarrassment will quickly cease to be anything of the kind. The outlook in the Sudan is also the subject of favourable comment. It is expected, it is pointed out, that the present dura crop will provide a surplus for export, and if that forecast is fulfilled it goes without saying that the year should be a good one for the Sudan, for it has been the failure of the dura crop in recent years that has been almost entirely responsible for the economic depression in that region. A further encouraging note is struck in the statement that the rain-grown cotton looks well. The third Near Eastern region referred to is Palestine, in regard to which it is pointed out that large new areas have been brought under cultivation, and there has been a great increase in the output of certain products, that of oranges amounting to 37 per cent. The verdict is that the prospects of the country are now more hopeful, which will be encouraging reading to any who may have become somewhat despondent as to the outlook in this region owing to the adverse developments of recent months.

The Coming Fair.

A development of special interest in connexion with this year's British Industries Fair, which is now only some four weeks distant, is the formation by the Department of Overseas Trade of a waiting list for the 1929 Fair. This is due to the fact that all the space in the London section of the Fair has been taken, a plain indication, if such were need, of the niche that the Fair has carved for itself in the esteem of the British trader. As to the interest taken in it abroad, it is worth pointing out that buyers are coming from no fewer than sixty-seven countries. Clearly next year, as has been the case this time at Birmingham, it will be necessary to provide much more space to meet the requirements of the British manufacturer.

The Late Mr. Spencer-Smith.

By the death of Mr. Michael Seymour Spencer-Smith, as a result of injuries received in a motoring accident near Cambridge, the banking world has lost one of its outstanding personalities. Mr. Spencer-Smith, who was only 46, had already made a great name for himself in banking circles. Besides being a director of the Bank of England and a partner in H. S. Lefevre and Co., of Bishopsgate, he was vice-chairman of the Anglo-International Bank, Ltd., a member of the London Committee of the Ottoman Bank, and a director of the Anglo-Czechoslovakian Bank, the British-Italian Banking Corporation, and the London Assurance. As the list of his directorships suggests, he was particularly interested in Near Eastern finance and had played a prominent part in financial developments in recent years.

Greek Shipping.

I pointed out last week, in commenting on the proposal

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET, LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :
E. W. H. BARRY. Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :
BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Digitized by Google

to establish a Greek "Lloyd's," that a large part of the Greek mercantile marine consists of old ships. Recent statistics emphasise this point. Thus of 114 passenger vessels, 56 were built between 1880 and 1900, while of 326 cargo ships half were constructed prior to 1900. In the circumstances it would seem obvious that Greek shipowners have little cause for complaint if they find the insurance premiums heavier than in the case of countries whose mercantile marine contains a much larger proportion of relatively new shipping.

COMMENTATOR.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the month ended December 31:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 42,100 tons, and the sales to date are put at 39,700 tons. Closing prices Smyrna: Type 12, 39s. 6d.; type 13, 43s.; type 14, 46s. 6d.; type 15, 52s.; type 16, 57s. 6d.

The market is steady. In our last report dated December 3 we gave it as our opinion that no marked change in the position would occur over the month. It will be observed from the figures stated above that, on balance, a slight advance in prices all round has been recorded. The estimate of the remaining stocks which, at the beginning of the month, were assessed at 11,500 tons, has now been reduced to around 7,000 tons, although in the opinion of some of the leading dealers this figure is regarded as excessive. Of this stock it must be borne in mind that over 40 per cent. consists of low grade fruit only suitable for distillery purposes. The biggest factor in consumption has again been the purchases effected by the Alcohol Monopoly for the local distilleries, hence the discrepancy between the total of exports figuring at 33,325 tons, as opposed to the volume of sales totalling 39,700 tons.

CYPRUS CROP REPORT.

The report on Cyprus crops for December is as follows:—

Cereals: Crops greatly retarded by lack of rain.

Potatoes: Lifting of potatoes has now finished, and farmers are preparing their fields for planting the summer crop. Prices are steady between 1s. and 1s. 2d. per stone. There is a good demand from Egypt and Greece.

Oranges and Mandarines: Crops have been damaged by Mediterranean fruit fly and red scale. Export continues to Egypt and Greece. Price from 36s. to 40s. for Jaffa, and 15s. to 20s. for round oranges.

Olives: Gathering and oil-extraction has practically finished.

Onions: A shortage of onions has caused an increase in price to 1s. 4d. per stone.

Carobs: Nearly the whole crop has now passed to the hands of merchants. The price during the month was from 20s. to 21s. per cantar.

Broad Beans: The coming season's crop is estimated to be very moderate owing to lack of rain.

Shipping Intelligence.

CONSTANTINOPLE'S TRAIN FERRY SERVICE.

The Turkish Government has signed a contract with a Belgian group for a service of train ferry-boats between Sirkeji (Stamboul railway station) and Haidar Pasha (terminus of the Anatolian Railways). The service is to be in operation eighteen months after ratification of the contract by the National Assembly, the Government binding itself to indicate within one month from that date the sites allotted for the landing stages; the group undertakes to have its construction plans ready within three months and these are to be returned within another month with the Government's endorsement or modification. The ferry-boats, it is reported, will resemble those used on the service between Richborough and Belgium. Provision is to be made for carrying 480 railway coaches or wagons in the twenty-four hours. The contract is for forty years. The Turkish Government incurs no financial liability, but receives one per cent. of the revenue derived from the ferry service.

With the inauguration of this link, and the construction of a railway connecting Tripoli, Beyrout and Haifa, the Calais-Cairo through train comes into sight, provided that a swing-bridge can be thrown across the Suez Canal at Kantara.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, February 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Calcutta (Birkenhead, January 31).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, February 1).

British Indian Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, January 28); s.s. Dumana for Bombay and Karachi (London, January 28).

Cunard Line.—S.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, February 18); s.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, and Fiume (Liverpool February 4 and Swansea February 7).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 11); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 25).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, February 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, February 4).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, February 3); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, February 4).

Ellerman and Papayanni Lines.—S.s. Bavarian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 28). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

It is reported that a delegation representing the Polish metal manufacturers who are members of the Metal Industry Export Syndicate is to leave shortly for Persia to take part in the competition for contracts for the provision of various metals required for railway construction in Persia.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 24.

Attention during the past week has been largely centred in the monetary situation. The large influx of gold, the strongest Bank Return for several years past (with a proportion of Reserve to liabilities of nearly 34 per cent.) and the reduction in the French Bank Rate from 4 to 3½ per cent. have conspired to cause weakness in the discount market and anticipations in some quarters of lower money rates. It must not be forgotten, however, that the position here is still largely governed by the situation in New York, in which centre the drain of gold, the extent of foreign loans, and the large amount of brokers' loans is provoking some discussion.

In the meantime the highly successful result of the British Government's recent issue of 5 per cent. Treasury Bonds for conversion purposes and the ready response accorded to the India 4½ per cent. loan have provided bull points for the gilt-edged market, which has otherwise shown a duller tendency.

Industrial Profits.

The *Economist's* analysis of industrial profits for the final quarter of 1927 shows no decided change as compared with 1926, the accounts of 403 companies analysed during the quarter showing an increase of less than one half per cent. in the aggregate net profit. The net profits of these companies, after paying debenture interest, etc., amounted to £33,525,160, this being an increase of .3 per cent. in comparison with the net profits earned by the same companies in their previous financial year. This follows an increase of 2.4 per cent. for the preceding quarter, but the first two quarters of the year showed considerable declines. Apart from these two decreases there has been an unbroken series of quarterly increases since 1922, which were largely due to the high profits derived from the rubber and nitrate industries. Returning to the figures for the past quarter, these are undoubtedly affected directly by the coal stoppage, for most of the accounts cover the year ended June 30 or September 30, 1927. The analysis of the figures according to the industries to which they belong discloses several satisfactory features. The iron, coal and steel group shows an appreciable advance, this being also shared by shipping, shops and stores, and trusts. Among the industries which had a much less favourable experience are nitrate, rubber, tea, and telegraphs. Taking the year 1927 as a whole, the average return on ordinary capital was 10.8 per cent. as compared with 11.1 per cent. for 1926 and 10.3 per cent. for 1925. In view of the long-drawn out coal stoppage these figures are better than might have been expected.

Confidence in the Tobacco Outlook.

The many shareholders of the British American Tobacco Company will be reassured by the Chairman's speech at the meeting this week, for its keynote was confidence. Commenting on the rumours of a tobacco price-war, Sir Hugo Cunliffe-Owen professed to be unaware of its existence. Tobacco shares as a whole have lately been under the influence of this rumour and so authoritative a denial should go far towards removing uneasiness. Indeed, the British American Company, so far from assuming the rôle of defender, is actually continuing its campaign of conquest, the company having recently purchased an undertaking in America. China, the Chairman admitted, had been disappointing, but he went so far as to say that the outlook was a little brighter. The results in nearly all parts of the world, however, were very satisfactory. Turning to the future, Sir Hugo Cunliffe-Owen was not less optimistic. The business for the first three months of the current year, he declared, continues to be satisfactory. Replying to a shareholder, who pointed out that the shares had been depressed, he said: "May I suggest that you follow my example—when they depress our shares, buy some." The meeting has been followed by a slight advance in the price of the shares.

Tin Share Manipulation.

A curious incident on the London Stock Exchange just recently has consisted in a series of advances in a particular group of tin shares in face of a decline in the metal which has rendered the general tendency dull. The group responsible is a powerful one, and operators who in the past have gone counter to its proceedings have paid for their temerity. All the same the object of forcing up prices in the circumstances is far from evident. The fall in the price of tin must sooner or later be reflected in the earnings of all companies engaged in the production of the metal. During the past six months tin has dropped from over £300 to under £250 per ton. It is doubtful whether bottom has even now been reached. There are clear indications of a further increase in the supplies from Malaya and of a slowing-down of the industrial prosperity of the United States. Hence any who may have been induced to buy shares of the group in question at high prices are likely to regret their action.

THE LATE ADMIRAL SIR JOHN SLADE.

The death occurred on January 20, at his London residence, of Admiral Sir Edmond John Warre Slade. Admiral Slade, who was sixty-eight, and retired from the Navy in 1917, was vice-Chairman of the Anglo-Persian Oil Company, Ltd. In 1912 the Admiralty appointed him its chief representative on the Royal Commission on Oil Supply, and when the agreement was made subsequently with the Anglo-Persian Oil Company he was appointed as the first Government representative on the board.

Motors and Motoring.

By G. B. B.

The applications of the four group railways for sanction to run motor vehicles on the roads for passenger and commercial transport purposes will be heard in the coming session of Parliament and a storm of opposition has been aroused. The proposals will form one of the most important subjects likely to be brought up for discussion, and the transport section of the commercial motor industry is naturally greatly perturbed at the prospect of the measures passing into effect. The *Commercial Motor* says that it is well that every person engaged in the carrying of passengers and the haulage of goods should be fully alive to the nature of the claims of the railways to such powers, and to the effect which the granting thereof would have upon his business. Wide road powers, it says, thanks to the wisdom of our legislators, have always been refused to the railways, being limited to the auxiliary services. Four of the railway companies in the past have, however, secured such powers, but they have never been exercised to any extent. In recent years an extensive traffic has grown upon the highways, and the question arises: Why should the railways require the powers for which they are now asking? Is it contended that the services now provided by private enterprise are inadequate to the requirements of the public? As that argument would be difficult to uphold, says the journal quoted, then the railways can only duplicate the services now provided, to the detriment of the interests of existing operators and of the highways.

The answer to the first question is simply that the railways hold the view that by obtaining the powers for which they ask they will obtain more business. The railways of this country are run by business men, with a keen desire to make money and who are accustomed, further, to weighing well the pros and cons of any proposition before they adopt it or turn it down. If they think they can make money by running passenger and goods-carrying motor vehicles on the road, we may rest assured that they have sound reasons for holding that view. And it seems to me, in that event, that no one has any right to grumble at what they do, except shareholders who do not see eye to eye with them.

With regard to the second question, of course the "services now provided by private enterprise" are inadequate. The commercial motor industry knows that perfectly well. Were they adequate all that the manufacturers of commercial motor vehicles of the type concerned would be able to do would be to make engines, chassis, and bodies to replace those worn out. The only real reason manufacturers of commercial motor vehicles keep in business is that they know the present services are inadequate and they hope to see them extended. That is exactly what the railways say. Further, to argue that because a certain concern runs a railway it must not also run a motor omnibus service might be met by the statement that already one of the largest passenger-carrying railways in the country runs England's largest fleet of motor omnibuses, and, in addition, runs a veritable fleet of electric tramcars. From every point of view it seems to me that if the railways come into the road transport field and the existing services suffer it will be clear evidence that they are filling a need and that the existing facilities are neither so adequate nor so efficient as their owners like to imagine.

Motor Cycle Prices.

The impending increase in the price of motor cycles will not affect, adversely, the sale, as it is not sufficiently large to make any real difference. The British machine is now of such excellent design and is so reliable that users at home are quite prepared to pay the additional five per cent. As far as export is concerned, however, manufacturers must go very carefully. Buyers abroad know that the British product is good, but any appreciable increase in price would have a very bad effect on the sales and would probably be followed immediately by a reduction in the price asked by American manufacturers. So far as the Near, Middle, and Far Easts are concerned it would be folly, I think, even to talk about an increase of prices.

JAFFA ORANGE TRADE.

A report, dated January 6, received from the Empire Marketing Board's correspondent at Jaffa stated that local merchants were suspending shipments as a protest against the Government scheme for compulsory inspection of cases prior to shipment, which came into operation at the beginning of the month. Merchants complain that the regulations regarding this inspection were put into force without consultation with the Fruit Export Commission. The report further stated that the Government had ordered a relaxation of the inspection methods pending further discussion with the trade. No very material disorganisation of shipments appears to have occurred, however, and about 175,000 boxes are now on the way to this country. Total shipments to United Kingdom ports up to January 16 amounted to 598,246 cases, as compared with 621,954 cases at the corresponding date last year.

Mr. William Edward Preston, Chief Manager of the Chartered Bank of India, Australia, and China, Mr. Henry Bateson, Mr. Colin Frederick Campbell, and Mr. Edward Fairbairn Mackay (three of the directors of the Chartered Bank) have joined the Board of the P. and O. Banking Corporation, Ltd. Mr. Alastair Cameron has resigned the Deputy Chairmanship but retains his seat on the Board and is succeeded as Deputy Chairman by Mr. W. E. Preston. Sir Frederick Eley and Mr. Walter Osbern Grazebrook have resigned their directorship.

THE BULLION MARKET IN 1927.

The following extracts are taken from the annual report of Messrs. Samuel Montagu and Co.

The fortunes of 1927 have been chequered, for international politics have had their successes and their disappointments.

Signs are not wanting of a better understanding between France and Germany, though discussion of the debts question still outstanding between these countries—a matter sooner or later to be faced—will obviously demand much delicacy of treatment.

The influence of the League of Nations, and the ventilation of international questions at Geneva, have assisted world tranquillity. The failure, for the time being, to reach an agreement as to naval armaments is a matter for regret, on the score of economy as well as for other reasons, but the goodwill, however, of those now differing from technical reasons has not in any way been disturbed.

International affairs seem moving, none too quickly, towards improved conditions, though the total unemployed as yet leaves room for considerable improvement. On December 20, 1926, the official total for Great Britain was 1,309,739 as compared with 1,099,900 on December 19, 1927. Until the industries of Great Britain have been adapted to the changed needs of the world, and the crippled power of our best customers has been restored, no great reduction of these distressing figures can be expected, notwithstanding that the chances of ultimate improvement have been enhanced by the lessened risk of industrial strife. The wider distribution of wealth seems to be influencing Capital and Labour to act as allies rather than antagonists.

Gold.

On March 22 the first portion of legislation, relating to the establishment of an effective gold standard in India, was passed by the Indian Legislature. The Government of India announced on April 1 the following conditions attaching to the acceptance of gold by the Master of the Mint, Bombay. The rate as fixed by the Currency Act is to be Rs.21 As.3 Ps.10 per tola of fine gold (i.e., the price equal to Rs.13 As.5 Ps.4 per full weight sovereign). Either fine or unrefined gold may be tendered. In the case of the former the minimum fineness is limited to .990; qualities lower than that can only be accepted as unrefined. All gold tendered will be melted and assayed upon receipt. A charge of 2 pies per tola gross weight will be made for melting and assaying fine gold, with a minimum charge of Rs.12. The charges relating to unrefined gold or material found to be brittle can be obtained from the Master of the Mint. Gold coin will be treated as unrefined gold. No tender less than 40 tolas (15 ounces) will be entertained. No gold bar exceeding 3,200 tolas (1,200 ounces) will be accepted. Payment of not more than 95 per cent. of the value of the gold tendered will be made on receipt of the gold, provided the Master of the Mint is satisfied that a preliminary certificate shall be issued.

From time to time during the year large purchases of gold have been announced as made for "undisclosed buyers." Sometimes such gold remains in custody here for a considerable time. The destination is ultimately revealed by the Customs entry, if the gold has been sent out of the country, as in the case of Poland. The holding of part of foreign State Bank gold reserves in London as a temporary or permanent measure may often be the first step towards the establishment of an effective gold standard in those Continental countries which have yet to adjust their currency systems to a gold basis. In these circumstances, anticipation of the demand or movement of gold is often very difficult.

Indian Gold Imports.

From the economic point of view the heavy annual imports of gold into India on private account are very interesting. In the days before the association of that great Empire with the British Crown, and before security within and outside of its immediate borders was ensured, the accumulation of wealth in a readily convertible form was obviously desirable. At the present time, however, conditions are very different, and with the great advance of Indian industrialism, the advisability of employing profits in other ways than conversion into unfructifying gold is becoming apparent to an increasing number of the population of India.

During the calendar year 1927 the net import of gold into India has still further fallen from the record of 1925. It will probably be found to be about £12,000,000, as compared with about £17,500,000 in the previous year.

According to the table on page 211 of the Review of the Trade of India 1926-27, an amount of gold valued at Rs.5,511,800,000—or about £414,000,000 at 18d. per rupee—was imported into India during the 48 financial years ended 1926-27. Had India been disposed to employ this vast sum for its industrial development, she would have been relieved from relying so much upon the use of British capital, though, of course, the introduction of such capital has created a good market for Indian exports. In other words, "it blesseth him that gives and him that takes."

The Indian Government has very wisely based its new currency legislation upon the desirability of reducing the practice of hoarding on the part of the Indian people. If this end be achieved, some reduction of Indian gold imports is only to be expected as the years go on.

Silver.

The silver market during 1927 has presented few outstanding points of interest. The narrow range of prices testifies to the fact. The widest fluctuations in any one month of the year occurred in January, when the market was recovering from the shock caused by the Report of the Indian Commission, in which sales of surplus silver were foreshadowed.

The persistence of inquiry from India and China has been remarkable considering that during the period under review supplies have been augmented by demonetization, in addition to a normal production from mines. For this reason we shall deal subsequently with the conditions of the great countries of the East so far as they throw light upon their demand for silver.

The movements of the price of silver, month by month have been rather monotonous. Had it not been for speculation—some in expectation of sales by the Indian Government from its redundant silver reserves, and some connected with the Yen exchange—the value of silver, left to simple supply and demand, would have shown very little variation indeed.

elsewhere has been considerable, though intermittent. Recent Japanese misfortunes, namely, the difficulty of recovery from the great earthquake, and a serious crisis which affected many of its banking institutions, rendered the Yen liable to bear attacks. A bear movement in Yen, owing to hedging transactions, is tantamount of a bull movement in silver. Hence the creation of a very large bear position in Japanese exchange—estimated to have reached some forty million Yen in the late autumn—gave tone to the silver market.

Increasing Coinage of Maria Theresa Dollars.

One of the curiosities of silver coinage is the minting —more or less continuous—of the Maria Theresa dollar, still bearing its antique design with the date 1780. These coins have always maintained active circulation among tribes on the shores of the Red Sea as well as in the Sudan. The creation of an Arab kingdom since the great War, and the activity of trade in the Arabian Peninsular, owing to more settled conditions, have had a marked effect upon the provision of these coins.

The recent output of the Vienna Mint has been as follows: —

	Dollars minted.	Quantity of fine silver used for coinage—Oz.
1924	4,065,000	3,049,000
1925	14,968,000	11,226,000
1926	9,382,000	7,038,000
1927	15,561,000	11,701,000

India and China together have recently absorbed a quantity of silver approximating to three-quarters of the world's production. If, therefore, the future of the market in the metal has to be divined, the financial, comercial, and economic condition of these countries must enter into consideration, for, unless some new revived factor enters into play, the Far East dominates, and will continue to dominate the situation.

Advices from Shanghai contain frequent references to the paralysis of commerce owing to nervousness engendered by civil war and brigandage, and the trade of the Yangtze Valley is said to have been reduced by seventy per cent. It is therefore astonishing that the import of silver into China has shown no sign of diminution. One reason undoubtedly must be, that—like the Great River itself, when one of its ancient channels becomes obstructed—the traffic from the interior changes its course: the flow continues, but by new outlets. It is no new thing for China to carry on the main part of its daily life over vast areas without railways or even decent roads, though trade in the Western Hemisphere would almost come to a standstill if deprived of such modern conveniences.

The official returns of the sea-borne trade of China represent but a portion, though probably by far the most important, of the trade relations of that great country with the outside world. China has a vast land frontier on her south and west over which she trades with Annam, Burma, Tibet, India, Afghanistan, Russia, and Mongolia. The impossibility of controlling this trade by Customs over so extended a frontier renders its size mere guesswork. One thing is fairly certain, here is a substantial outlet for silver brought into China via the Treaty Ports, etc., from overseas.

Indian Demand for Silver.

The capacity of India to absorb silver shows no signs of abatement, nay, may possibly increase, now that Indian industries are becoming so well established. Any improvement in the condition of the artisans and the tillers of the soil is likely to benefit silver. The latter advantage by the great irrigation schemes—present and future—which add to the crops, and also lessen the risk of the distressing famines which have figured so largely in the past history of India.

The wealth of the Punjab, for instance, has increased enormously during the last half century. Ten million acres of land, once barren, have been reclaimed by engineering skill and Government finance, and now add their quota to the crops of that Province, whose produce is the backbone of Indian agriculture. What has been done, however, is small compared to what will happen when the canals and storage dams, already in progress of formation or projected, enable harvests to be reaped from expanses of soil hitherto derelict.

On October 27 last the Viceroy of India also opened an irrigation system in the native state of Bikaner. The way in which this important enterprise was launched and financed indicates how native capital under native control can be applied with profit and safety.

Demand and Supply.

The preceding remarks touching China and India suggest that, for the near future at any rate, absorption of silver by the two great Eastern consuming countries will not be substantially reduced, but whether important sales of surplus silver by the Indian Government could be made without considerable easement in prices remains to be seen.

The possibility of such selling, of less strenuous war operations in China, and some rehabilitation of Chinese notes as currency, are factors which would seem to govern the future; in any case a return to more normal conditions in China will be probably very slow.

The ease with which the Orient has borne the chief burden of absorbing the substantial world output, in addition to a quantity of demonetized Indian and French currency, has been remarkable. The Chinese Maritime Customs Revenue returns for 1927 show a decrease of 9,435,00 Hk. taels, which seems to give the clue. Taking the analogy of figures in preceding years, this deficit represents a trade of about 235,000,000 Hk. taels. The Customs report that this falling off in receipts was owing to reduced imports, and, as the exports were about the same value as in 1926, a considerable part of the balance must have been adjusted by imports of silver. Hence the net absorption of silver by China during 1927 was bound to have been very heavy.

If the import of goods into China continues to languish, the prospects of silver, even though the Indian Government place silver on the market, may not be unfavourable.

OPENING OF OMDURMAN BRIDGE.

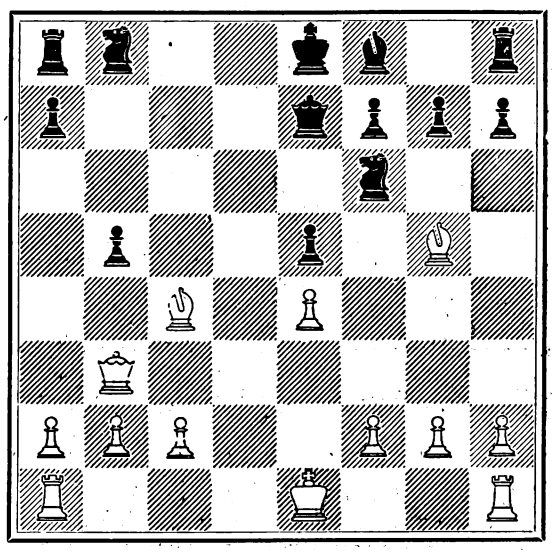
January 16 was a notable day in the history of the Sudan for it marked the inauguration by the Governor-General, Sir John Maffey, of a series of important undertakings, notably the bridge over the White Nile linking up Khartoum and Omdurman, the ten miles electric tramway service connecting these towns, and the Khartoum-Omdurman water supply. Those present on this occasion included Lady Maffey, Sir Hugh Bell, deputy-chairman of Dorman, Long, and Co., and Mr. P. J. Pybus, chairman of the English Electric Company, who represented the contracting firms, the Bishop of Egypt and the Sudan, and a large and representative gathering of the British community and Sudanese notables. It may be recalled that the work on the bridge was begun towards the end of 1925, and was finished nearly six months in advance of the contract time despite the difficulties occasioned by the industrial situation in Great Britain in 1926.

At the opening ceremony Mr. Pybus expressed his satisfaction at the completion of the undertaking, and regretted the unavoidable absence of his fellow directors, Lord Meston, Sir T. O. Callender, and Sir George May. He went on to express his appreciation of the assistance given by the Sudan Government, who, he pointed out, while determined to safeguard the interests of the people, were wholehearted in the assistance they afforded to the contractors.

The Governor-General in his reply said that the undertaking was the Sudan's second experiment in profit sharing, and he pointed out that the country was greatly benefiting from the experiences of the Gezira scheme.

CHESS.

By "CARO-KANN."



The solution to last week's end game is as follows:—1, P—Q5(!), PxP; 2, K—K3, K—K2; 3, K—Q4, K—K3; 4, P—K3, K—K2; 5, KxP and wins.

This week I give a position in one of Morphy's games. A game such as this with its brilliant yet mathematically precise attack is in strange contrast to the stereotyped encounters of to-day. The explanation for the change is that there is now an almost total lack of opportunity for attacks of this nature because there is a much greater equality in playing strength at the present time.

Morphy (white) has to play in this position, and in seven moves mated his opponents (it was a consultation game). Play proceeded as follows:—1, BxKtP(ch), QKt—Q2; 2, o—o—o, R—Q; 3, RxKt, RxR; 4, R—Q, Q—K3; 5, BxR(ch), KtxB; 6, Q—Kt8(ch), KtxQ; 7, R—Q8 mate.

Company Meetings.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

The Trade Outlook.

Mr. F. C. Goodenough's Speech.

The second ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas) was held on January 19 at the Cannon Street Hotel, E.C.

Mr. Frederick Craufurd Goodenough (the Chairman), in the course of his speech, said: Before passing to the balance-sheet and profit and loss account, I wish to refer to several domestic changes which have taken place during the year. Since the report was published I regret to say that Mr. Edmund Henry Parker has found it necessary to retire from the Board on the grounds of health, and we very much regret the loss of a valuable member of the Board and the reasons which have led to his retirement.

As stated in the report, a local Board has been established in Alexandria, and I am pleased to inform you that Mr. Anthony Charles Barnes, D.S.O., formerly a local director of Barclays Bank Limited at Birmingham, has been appointed as Chairman, and has taken up his residence in Alexandria. The other local directors there are Mr. Fred Webster Lucke, latterly manager of the Anglo-Egyptian Bank branches, and Mr. Albert William Jessop.

The policy of the Board contemplates the formation of local Boards from time to time, at points where it may seem advisable to do so, for the purpose of controlling the bank's principal areas, and in pursuance of this policy a local Board has also been established at Cape Town, consisting of Mr. James Benjamin Taylor (who will be its Chairman for the first year), Sir Francis Drummond Percy Chaplin, G.B.E., G.C.M.G., M.L.A., and Mr. Gerald Edward D'Arcy Orpen, who also has accepted a seat on the South African local Board.

In view of the development of Rhodesia, it has been considered advisable to form a Rhodesian committee, consisting of Mr. Peter Corsar Blair, Sir Francis Drummond Percy Chaplin, G.B.E., G.C.M.G., M.L.A., and Mr. Alexander McCalman Fraser.

Mr. Julian Stanley Crossley has been appointed a member of the London committee for South Africa, and Mr. Edmond Wodehouse Lucie-Smith, O.B.E.—who recently retired from the management of Jamaica branch, which position he had held for 25 years—has been appointed a local director in that island.

It gives me great pleasure also to refer to the recognition which His Majesty the King has accorded to Rt. Hon. Sir Frederick John Dealtry Lugard, G.C.M.G., C.B., D.S.O., now Lord Lugard, for his long and distinguished service to the Empire.

Lord Lugard is a member of the Colonial Bank local Board, and the announcement of this well-deserved honour has been received by his colleagues with much satisfaction, which I am sure you will share.

One of our general managers in South Africa will, in future, have his seat at Cape Town, and the Board have appointed Mr. Ernest Langley Jackson as an additional general manager in South Africa.

Balance-sheet.

Turning to the balance-sheet and profit and loss account, the Board are pleased to report that they are well satisfied with the progress made, both as regards the earning power of the bank and also in the co-ordination of the various sections of the combined institution upon uniform lines, in which connextion the necessary internal adjustments have been accomplished with gratifying smoothness and most satisfactory results. This has been due in large measure to the ability of our general manager, Mr. Caulcutt, and to the loyal and hearty co-operation of all sections of the staff.

There has been little change in the amount of our deposits during the year. The note circulation has increased by £95,780 to £920,664, and acceptances, etc., on behalf of customers have also increased by £1,141,320 to £5,081,428. The bills rediscounted, amounting to £824,374, have now all matured.

Cash in hand and at bankers and gold bullion amount to 17 per cent. of the deposits. Bills discounted, as stated in the balance-sheet, are £12,441,561, being 24 per cent. of the deposits, and investments £8,588,187, representing a further 16½ per cent. Advances to customers, etc., are substantially the same in amount as last year, and the bank premises account has increased by certain necessary additions to £1,783,573.

It is difficult to make a close comparison of the profits with those in last year's statement owing to the fact that the net profit of £482,045 now shown represents the results for twelve months ended September 30 last, while the previous figure of £637,020 represented the net profits of the Colonial Bank and the Anglo-Egyptian Bank, Limited, for a period of 15 months and the National Bank of South Africa, Limited, for 18 months.

Such comparison as may be made is quite satisfactory as regards this last year's profits, and the directors have felt justified in recommending a dividend on the "A" and "B" shares for the last half-year at the rate of 4 per cent. per annum, making 3½ per cent. for the whole year, as against 3 per cent. paid a year ago. The dividend which we recommend is upon a conservative basis, while at the same time the reserve fund has been increased by £150,000 to £1,250,000, being therefore slightly in excess of 25 per cent. of the paid-up capital of the bank. This conservative policy, both as regards dividends and the building up of reserves, is one which the Board propose to continue.

Pension Funds.

As indicated in my address to the shareholders last year, this question has received careful attention, and a pension scheme has been approved for future entrants on lines suitable to an overseas institution of this kind. The work of co-ordinating therewith the existing schemes for the benefit of the present staff is still proceeding, and is making satisfactory progress.

Bank Premises.

During the year the work of amalgamating the London offices of the Colonial Bank and the Anglo-Egyptian Bank has been proceeding, and has enabled us to effect considerable economies in staff.

At present the combined staffs are housed in the King William Street premises, and the work of rebuilding the Gracechurch Street premises on suitable modern lines is proceeding, and may be expected to be completed by the end of the present year.

Income-tax and Dominion Income-tax.

Certain questions of income-tax have delayed the obtaining of relief in respect of Dominion income-tax, but it is hoped that decisions will be arrived at, so that an allowance may be made in deduction of tax when dealing with the current year's account.

Outstanding Events of the Year.

Turning to events of outstanding importance which have occurred during the past year, I should mention the passing by the Legislative Assembly of the Union of South Africa of the Flag Bill, which has effected a settlement of that acutely controversial question, and has helped to remove a serious political difficulty.

A Bill has also been passed to place the diamond industry in South Africa upon a more stable footing, through the prohibition of the opening up of further areas for the purposes of alluvial mining.

I desire also to mention the very valuable visit paid by Mr. Amery, Secretary of State for the Dominions, to South Africa during the year, and to the great benefit which the British Empire will certainly receive from the extended tour which he is now making to the British Dominions.

I would refer also to the very important consequences which should follow on the completion of the railway in Uganda to Jinja, which constitutes a further step in linking up the Upper Nile Basin with Kenya and the Indian Ocean, and will afford direct and quick railway communication between those parts, avoiding transhipment on the Victoria Nyanza.

The railway from Lobito Bay in Portuguese West Africa has now reached the Congo border, and will link up with the railway system serving the mines of the Congo and Northern Rhodesia.

Trade Outlook Encouraging.

I wish to draw the attention of our shareholders and customers to our publication of a monthly trade report, which affords information upon trade and business conditions in the various areas in which our bank has established branches.

A general summary of conditions in these areas will be issued to the shareholders, with a copy of my remarks at to-day's meeting.

There will also be circulated a copy of my address to the shareholders of Barclays Bank at the annual meeting which has already taken place to-day, and I should wish to draw your attention to the remarks which it contains in regard to the progress of inter-Imperial finance and trade and their importance both to Great Britain and the Empire.

It will be seen from the review of trade conditions and prospects in the territories in which this bank operates, that the outlook for the current year is certainly encouraging. While it is inadvisable to speak with too great confidence regarding particular areas, many being dependent for their crops upon climatic conditions, and for the profitable marketing of crops upon world markets and supply and demand, yet with the information before us, and with the knowledge that our organisation is being consistently developed so as to meet requirements, we have grounds for confidence in the future.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Herbert Hambling Bart., second the resolution, which was carried unanimously.

BENGAL AND NORTH WESTERN RAILWAY.

Another Satisfactory Year.

The ordinary general meeting of the Bengal and North Western Railway was held on January 24 at the offices of the company, Gresham House, Old Broad Street, E.C., Sir Henry P. Burt, K.C.I.E., C.B.E. (the Chairman), presiding.

The Managing Director (Lt.-Col. W. R. Izat) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—In accordance with our usual procedure on these occasions, I presume the report, which has been circulated, may be taken as read.

The results of the year's working are again extremely good, and for the sixth year in succession we have succeeded in establishing a further and satisfactory advance on previous records as regards the gross earnings of the joint undertaking, which, compared with the year ended September, 1926, have increased by nearly Rs.8 lakhs. This has been due to further improvement in our general merchandise traffic, mainly under the heads of sugar and linseed. But, while there has been no marked increase in the gross earnings from coaching traffic, it is very gratifying to be able to record that the substantial reduction which we made in our fares under all classes last year, and to which I specially referred on the last occasion when I addressed you, has not led to any falling-off in the receipts for our passenger traffic, as the lower fare which is now charged for our third class passengers, who contribute so largely to our gross earnings, has been counterbalanced by satisfactory increases in the number carried. It is also extremely satisfactory to note that our increased traffic has been dealt with at a slightly lower cost compared with the previous year, and our working percentage is now 38.25, which again is the lowest on record.

The company's net earnings, calculated at 1s. 4d. to the rupee, amuonted to £860,041, and adding the gain by exchange, £94,275, the total net earnings amounted to £954,316, compared with £913,273 for last year. After the necessary adjustments have been made on account of income-tax, the payment of interim and preference dividends, carrying £50,000 to reserve, providing £35,000 for the sinking fund, and making a contribution of £40,000 to contingency fund, the amount we have to deal with to-day is £453,245.

The Dividend.

Out of this amount we recommend a dividend of 7 per cent., together with a bonus of 3 per cent., making a total dividend and bonus for the year of 18 per cent., or 2 per cent. higher than we paid last year. I am sure the proprietors will agree that this result is highly satisfactory, to which, I must not omit to say, the zeal and energy of our staff in India have contributed in no small measure. May I remind you that five years ago our distribution did not exceed 11 per cent., a percentage which had remained unaltered from 1919, and it is only since 1924 that there has been such a remarkable advancement in our financial position as to justify your Board increasing the total dividend from the 11 per cent. to the present figure of 18 per cent.

Concurrently with this steady increase in our dividends we have, as I told you last year, continued to strengthen both our reserve and sinking funds. At the same time we have endeavoured to improve, in every way possible, the facilities for the travelling public, especially the third class passengers, by the provision of more waiting and refreshment rooms, and additional rolling-stock, apart from cheapening the cost of their journeys. Only two years ago many of our third class passengers attending the important religious gatherings and fairs at stations on our line had to be conveyed in goods wagons, but with the additional coaching vehicles which are now in running, and improved working, the use of goods wagons on such occasions has now been abolished. I should like to add that the Government of India has shared in the great prosperity of the company as the owners of the Tirhut Railway, which we work and administer for the Government at very low remuneration. I venture to think, Gentlemen, that any company charged with the administration of a railway may well be proud of these results.

Before leaving the subject of the accounts, I should like to draw your attention to paragraph 2 of the report, in which you will notice that your Board have made a contribution from net earnings of £40,000 to a contingency fund. Now, Gentlemen, the object of that fund, which appears for the first time in our accounts, is to meet the contingencies which must certainly be provided for in connexion with the winding-up of the company, should the Secretary of State for India decide to terminate our contract in 1932, and the Board are taking this opportunity, when the results of the year's working happen to be so eminently satisfactory, which may not always be the case between now and 1932, of starting this fund with an initial contribution of the amount stated. It is difficult to estimate the amount which will be needed for the purposes which I have indicated, but it is considered better to recognise now that provision must be made for this expenditure should our contract be terminated in 1932, and therefore to commence forthwith to build up a separate fund for the purpose, and to keep that fund quite separate from our reserve fund. The appropriation of this fund will, of course, be dependent on the decision of the shareholders when the time referred to arrives.

This contingency fund will not be needed if the Secretary of State does not acquire our property in 1932, and in that event the fund would be closed, and the amount contributed to it could then be distributed as a bonus on the ordinary shares.

Construction Plans.

Apart from the accounts for the past year, I have nothing of importance to record as regards matters of general interest. I think it may now be accepted for certain that the Bagaha Bridge, which, as you know, was partially destroyed by severe floods in 1925, can never be restored in its original position, as the river has now completely out-flanked the existing site. A survey party has therefore been put into the field during this working season to investigate the feasibility of constructing a new bridge over the Gundak at a point about 75 miles below Bagaha, which would work in with the proposed Mashrakh-Thawe and Chakia-Sahibganj extensions.

The resurveys and the further investigation of the traffic prospects of the proposed new extensions, to which I referred in my speech last year, have been completed and submitted to the Government of India, with whom the decision rests as regards their construction.

You will remember that, for the reasons I gave you last year, the capital for these extensions, if their construction is undertaken, will have to be found by the Government.

And now, Gentlemen, I should like to refer for a moment to the forecast I gave you two years ago as to what the proprietors would receive if the Secretary of State decided to acquire our property in 1932. I said then that, although the purchase price to be paid by the Secretary of State had been definitely fixed, it was not possible to frame any accurate estimate of the total amount which would be available for distribution amongst the ordinary shareholders in the event of our contract being terminated in 1932, as so much would depend on the rate of exchange then obtaining, and the position at that time of our reserves. But eliminating those two factors, I expressed the opinion that the proprietors would receive about £200 for every £100 of ordinary stock. In the calculation exchange was taken at 1s. 4d. Since then the Currency Act, 1927, has been passed to stabilise the exchange at about 1s. 6d. Therefore, in these circumstances, if you consider it safe to assume that the exchange at the end of 1932 will still remain in the neighbourhood of that rate, the uncertainty attached to that factor in my previous calculation is removed, and my estimate of £200 for every £100 of stock would be increased to about £230, or slightly over that figure. This estimate, of course, takes no account of our reserves, and it is not possible to say now how these funds will stand five years hence.

I am glad to say that the latest telegraphic reports from India indicate that the prospects for the current year are satisfactory.

On the motion of the Chairman, seconded by Mr. Leonard L. Cohen, the report of the directors dated January 14, 1928, together with the audited statement of accounts and balance-sheet for the year ended September 30, 1927, were approved and adopted.

The Chairman proposed and Mr. Edward Christian seconded that a final dividend of £7 per cent. and a bonus of £3 per cent. for the six months ended September 30, 1927, on the ordinary stock of the company, less income-tax, be, and the same are hereby declared, making with the *ad interim* dividend of £4 and a bonus of £4 per cent. paid on July 25, 1927, a total dividend of £18 per cent. for the year ended September, 1927. The resolution was carried.

On the motion of the Chairman, seconded by Lt.-Col. T. Gracey, R.E., Mr. Leonard L. Cohen was re-elected a director of the company. The Chairman also proposed, and it was seconded by Sir George Sutherland, "That the Rt. Hon. Lord Meston, K.C.S.I., be, and he is hereby re-elected a director of the company." The motion was carried.

Messrs. Cooper Bros. and Co. and Messrs. Gerard Van de Linde and Son were re-elected auditors of the company for the ensuing year.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Wood Naphtha.—The Egyptian Customs Administration invites tenders for the supply of 150,000 kilos of wood naphtha. February 29. (D.O.T.)

Pure Alcohol, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of pure alcohol, medical brandy and rum, sherry wine and malaga wine required for the period of one year commencing on May 1, 1928 (March 28); and for the supply of drugs required for the period of one year commencing on May 1, 1928. March 29.

Various.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of materials and metals required by the Government Press during the year 1928-1929. March 29.

Tin Sheets, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for (1) 4,450 tin sheets double of six sizes different and 42,000 tin sheets single 17 in. by 13 in., (2) 10 copper sheets 6 ft. 2 in. by 5 ft. 2½ in. by ½ in., (3) 43,000 kilos open hearth steel plates, equal angles and flat bars to specification, (4) 10,800 kilos bolts and nuts black, hex. heads and nuts, standard Whitworth thread of different dimensions, (5) telegraph and telephone materials at an approximate cost of between £E2,800 and £E3,200, (6) 300 white metal die cast bushes for metallic packing 3½ in by 1⅞ in. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 18:—

Egyptian Futures.—Sakel Contract.—Steady markets have been witnessed throughout the past week, good Alexandria reports, increased activities in spot cotton, and a fairly satisfactory offtake for the finer counts all tending to influence a healthier undertone. The comparative unresponsiveness of our contract to the buoyancy displayed in Egypt continues one of the main features; on the Liverpool quotations cotton can be bought a full halfpenny below its replacement value, yet spinners are not availing themselves of this to the extent necessary to adjust the situation as yet, although there are indications locally of a broadening demand. The disparity between the two contract markets is, of course, more marked, practically all positions here being purchasable at a discount of 30 to 35 points, quite apart from the various shipping charges that would be incurred in bringing cotton from Alexandria to this side. Various arguments are utilised to account for the ruling disparity, the chief of which concern the approaching Sudan crop which is sold entirely in the local market. At a discount of 40 to 50 points it appears good business to purchase Novembers at this side against sales of the corresponding position in Egypt. The recent strength shown by Alexandria is generally attributed to fresh "bullish" speculative activity encouraged by reduced crop estimates, a rather improved outside demand and some important purchases by Russia. As mentioned earlier, trade reports continue to be of a satisfactory character and the fine spinning section appear to be finding a steady offtake for their production. Supplies of all qualities are plentiful and with the new Sudan crop knocking at the door there is no necessity for covering except for near-by requirements. At the moment, we cannot perceive anything in the outlook to definitely turn the market much either way. Short commitments are hardly advisable in a contract comparatively undervalued, so that we consider the best policy is to watch the position with the idea of purchasing should prices decline to the neighbourhood of 16.75d. for the March position.

Upper Contract.—Trading in this contract throughout the week has been of a somewhat restricted character, and only narrow fluctuations have taken place with the result that values show little alteration. The trade demand keeps up fairly well, and satisfactory sales have been made out of the local stock. Docket cotton which can be purchased well below the shipment basis has been particularly favoured, and with this cotton out of the way our contract should come more into the line with Alexandria. We continue to have a favourable opinion of the market and advise purchases on set-backs.

Egyptian Spot.—Little change in existing conditions has been noticeable during the past week. Dullness on the American side has again been offset by the firm tone of the Alexandria market, a steady business in actual has continued, and prices have displayed an upward tendency. The initial Conference between the employers and employees, which met yesterday with the object of finding some remedy for the deplorable state of the trade in Lancashire, does not appear to have had a very auspicious opening, and uncertainty as to future happenings will, we fear, exercise a depressing influence on trade for some time to come. Nevertheless, the current level of about 17d. for Sakel and 14d. for Upper appears to suit spinners of Egyptian counts and, provided that fluctuations can be confined within the comparatively narrow limits to which they have become accustomed during the past six week or so, we see no reason why the present improvement should not continue.

There have been no fresh features in the daily inquiry. The bulk of the business passing in Sakel has again been in the "off" qualities, of which two distinct categories are still very noticeable, 7½ d. to 9½d. and 11¾d. to 13½d. In the better grades, cotton about "Good" at from 18¾d. to 10d. has been in moderate request.

Interest in Uppers has again been chiefly centred on the cheap Docket cotton at from pass to 25 on. Little of this now remains, however, and there are signs that spinners will shortly have to buy rather better cotton and pay slightly more for it. The Good grades have been neglected. Pilion has been in somewhat better request, but business has been of very limited character. White Egyptian has been inquired for on one or two occasions at from 17½d. to 18.50d. A fair trade has taken place in Sudan cotton at hardening rates.

C.i.f. business has become quiet again. Forwardings to spinners for the week ending the 13th inst. were returned as 6,673 bales Egyptian and 1,003 bales Sudan. Spot sales (estimated), 2,200 bales Egyptian and 1,300 bales Sudan. Quotations of Sakel show an advance of 30 points (Fair exceptionally 60 points). Upper and Pilion have been advanced 5 points on the week. F.G.F. Sakel to-day, 17.70d. F.G.F. Upper to-day, 13.90d. F.G.F. Pilion to-day, 14.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 12, state:—

The futures market during the past week has been rather more active, and the tone at the close was fairly firm. The week's summary of price movements is as follows:—Sakellaridis: January, 34.48 dollars, 0.37 dollars down; March, 34.82 dollars, 0.41 dollars down; May, 35.17 dollars, 0.34 dollars down; July, 35.49 dollars, 0.54 dollars down; November, 35.39 dollars, 0.29 dollars down. Ashmouni: February, 26.62 dollars, 0.50 dollars down; April, 26.81 dollars, 0.52 dollars down; June, 26.92 dollars, 0.51 dollars down; October, 26.16 dollars, 0.49 dollars down.

Sakel.—During the early part of the week the market showed somewhat weak, but later on the tone improved and most of the ground lost was recovered. As regards the question of the summer water supply, we can only repeat what we have said in previous reports—that although the Sudan levels are considerably below normal, there is still time for early rains in the Equatorial lake districts to improve the situation, and it cannot yet be taken as definite that the supply in Egypt during the summer months will be insufficient. The matter was brought up in the Parliament a few days ago and the Minister of Agriculture replied that there would be enough water for the cotton crop.

The local statistical position shows no improvement; indeed, the Alexandria stock at 3,319,149 kantars shows a slight increase on the week.

Uppers.—Our remarks on the Sakel market can be applied equally to Uppers, although the slight reaction in New York on the prospects of the American cotton acreage being increased this year induced a somewhat less confident feeling in this market.

The week's receipts amount to 128,580 kantars, against exports 118,469 kantars; the stock in Alexandria stands at 3,319,149 kantars.

Spot: The market was closed for the Greek Orthodox Christmas holiday on Saturday last. Sales still continue to show a slight improvement and amount to about 14,800 bales for the five days; of this total we estimate 7,800 bales Sakellaridis, 6,100 bales Ashmouni and Zagora, 700 bales Pilion, and 200 bales other varieties.

Sakellaridis: The improvement in the demand for this variety mentioned last week has been maintained. All grades have been dealt in, but the larger proportion of the business done has been between Fully Fair and Fully Good Fair. Spot differences in these

grades are, if anything, slightly dearer. Cotton round about Good has changed hands with rather higher premiums, and a fair turnover has been registered.

Ashmouni and Zagora: There has been a small demand for the higher grades during the week without change in the premiums paid. Cotton from Good Fair to Fully Good Fair is still much sought after. Spot differences remain about the same as last week.

Pilion: A fairly good business has been done, mainly in the higher grades, but premiums paid do not show any increase.

TANKER CHARTERING.

Messrs. John I. Jacobs and Co., Ltd., in their report on tanker chartering for the second half of 1927, state:—

Owners will not regret the passing of 1927 in spite of the outlook, for freight rates have reached such low levels that at one time it appeared preferable to some to lay up their tonnage. The shipping trade, perhaps more than any other, is subject to regular cycles of famine and plenty, the former outnumbering the latter. It is the regularity of these cycles which keeps it going.

The shipbuilding programme mentioned in our last report has undoubtedly had its effect on the present state of the market, and is likely to exert its influence for some time to come. World tanker construction, according to the figures supplied by Lloyd's Registry, reached peak figures during the third quarter of the year with a world total of 775,600 tons. A fall of over 30,000 tons is shown by the December returns, and this decline will in the near future be much more appreciable. Motor propulsion for marine purposes finds year by years a wider circle of adherents, and the actual tonnage of motor ships building at 1,609,888 tons exceeds that for steam tonnage by over 115,000 tons. The total tonnage of tankers afloat is computed at about 5,900,000 gross.

World production of crude petroleum has reached record figures, resulting in easy price conditions in the producing countries. Whilst such conditions prevail business is of a hand to mouth character with reduced stocks at the importing points of distribution. This excess production, together with the large amount of new tonnage water borne, has caused the present freight situation.

Oil bunker prices generally show a considerable reduction, and facilities continue to increase, but in spite of both these factors the tramp steamer has kept to the older method of firing owing to the low cost of coal.

The present experiments with pulverised coal and high pressure boilers are being watched with interest by all concerned and may not be without ultimate effect on the oil trade. The question of distilling oil from coal continues to receive the closest attention of scientists, but cannot yet be looked upon as a commercial proposition.

Roumanian exports have continued to expand. There has been a noticeable increase in the number of boats chartered for the carriage of fuel oil, particularly in Spain, and Mediterranean ports generally, owing to the low f.o.b. price and attractive charter rates, such as 11s. 3d. Ceuta, 14s. 6d. Bilbao, 14s. U.K. Continent, and 20s. Dakar. The spirit rate to U.K. Continent is 16s. for a handy boat.

The number of ships transiting the Suez Canal in 1927 was 5,544, which is the highest total recorded, the previous record being 5,373 in 1912. The total tonnage was 28,965,062, which represents a considerable advance on the previous record of 26,761,935 tons for 1925.

Notes of the Week.

Italy and Roumania.

The visit of the Roumanian Foreign Minister to Rome has had the effect of concentrating limelight on to international relations in Central and Near Eastern Europe. A Treaty of Friendship and Arbitration already binds Italy and Roumania; the latter is associated with Yugoslavia in the Little Entente, but hitherto relations between Italy and Yugoslavia, in spite of a pact of friendship, have been the reverse of cordial. A further complication is provided by the circumstance of Italy's being bound by treaty to Hungary, who happens to be at the moment Roumania's *bête noire* in connexion with the question of the Hungarian "optants" of Transylvania, apart altogether from the fact that the Little Entente is based solely on suspicion of Hungary. Amid this whirligig of clashing interests M. Titulescu and Signor Mussolini will find many subjects for discussion. The two countries, moreover, have certain economic problems peculiar to themselves that require adjustment—questions of oil, corn and tariffs. Little wonder, therefore, that M. Titulescu's stay in Rome has accounted for many crowded hours.

Political Knots.

The situation in the Near East calls for candid discussion among the leading statesmen, for much of the trouble that broods over that part of the world is due to insistence upon differences in the place of an honest attempt to establish identity of interests. M. Titulescu will not have gone to Rome in order to convince Signor Mussolini that it is a heinous crime on Hungary's part to import machine-guns in contravention of the Treaty of Trianon, but an entirely legitimate action on Italy's part to sell Hungary those munitions. On the other hand, the Rome discussions will have been rendered less difficult by the recent extension of the term of expiration of the Italo-Yugoslav Pact of January, 1924, a development in the relations between the two countries which opens the door to the possible settlement of outstanding difficulties. It would have been in M. Titulescu's power to interpret Yugoslavia's point of view on many subjects to Signor Mussolini, and his subsequent reference to the fact that "a free and independent Albania is the safest guarantee of peace in the Balkans" suggests that Roumania is as little anxious as Yugoslavia to see the Albanians in the stranglehold, whether economic or political, of Italy. The Italian Prime Minister, again, will have hardly lived up to his reputation if he refrained from counselling Roumania to adopt a more liberal attitude towards the Hungarians. Accordingly, for many reasons these discussions must have been interesting, and could well prove to have been important. M. Titulescu, however, is shrewd enough to have realised that Italy is not the only Great Power in Europe; and while much good is hoped for from his visit to Rome, he is unlikely to have committed Roumania to an orientation which would not harmonise with Roumanian relations with Great Britain and France, whatever the future may have in store for the Little Entente.

The Duty of an Opposition.

Although it is the duty of an Opposition to oppose, there are obvious drawbacks to the transference to a foreign country of the airing in public of Roumanian political disputes. If it believed in its chance of an early assumption of power, the National-Peasant Party of Roumania was well advised to place itself in touch with foreign opinion; but from that stage to the denunciation in foreign newspapers of the Roumanian Government and all its works is a long and bold step. It is bold, because it is apt to convey the impression that any changes that may take place in Roumania are likely to overstep the limits of constitutionalism, and there is nothing more calculated to alarm financial interests than the prospect of civil unrest. We could have wished in the interests of Roumania that the representatives of the National-Peasant Party had not introduced the warmth of home politics into the public interviews given to foreign newspapers. It may be in some way connected with their action that the Roumanian Government is devoting so much time to talk about stabilisation, instead of adopting the wiser plan of introducing the measure without warning and without any flourish of trumpets. The period of suspense, it would be thought, must be embarrassing for all business interests in Roumania.

Digitized by Google

Italy and Yugoslavia.

The possibility of any practical good issuing from the postponement for six months of the date when the 1924 Pact between Italy and Yugoslavia must be renewed or denounced will quickly be eliminated, unless the Italian Press exercises more circumspection in girding at Yugoslavia. In this matter there are, no doubt, faults on both sides, but so long as Italian newspapers follow the lead of the *Giornale d'Italia* and the *Foglio d'Ordini* the greater responsibility falls on the country that ought to know better. A contribution to the further straining of relations between the two countries takes the form of the publication by the *Giornale d'Italia* of extracts from a Yugoslav Military Handbook published in 1922. If the quotations are correct, the book was conceived in the most approved style of Serbian aggressive chauvinism, acting under no little provocation from Italy at that particular period. Officially there has been a considerable improvement in the relations between the two countries, and there would probably be still more, if the press of each could display more sense and statesmanship.

Arms and The Men.

By Article 118 of the Treaty of Trianon the importation into Hungary of arms, munitions, and war material of all kinds is forbidden. A few weeks ago it was discovered that a consignment of machine-guns had been forwarded from Italy to Hungary under a false declaration. The incident has not unnaturally fluttered the dovecotes of the Little Entente, and representations on the subject would have been made before now to the League of Nations if the Roumanian Government had not desired to avoid any possible *contretemps* with Italy at the time of the Foreign Minister's visit to Rome. Unless the smaller States move in a matter of this nature, there may be a conspiracy of silence on the part of some of the Great Powers, not so much for fear of straining the League, as because so many of them live in this respect in glass houses. It would, for instance, be of interest to know how the French Government comes to tolerate the free purchase of war material in France by Abyssinia without giving effect to the spirit of Article 8 of the Covenant of the League of Nations, which places on a Great Power the duty of exercising strict control on the supply of munitions. Particularly must this obligation apply in the case of countries in a backward state of civilisation.

Crime in Egypt.

The Egyptians, it would seem, are perturbed over the discovery that crime has been seriously on the increase in their country. It is, no doubt, an unfortunate phenomenon; but it would seem as if they need not be unduly alarmed, as they have still some way to go before they catch up such notoriously unsafe countries as Denmark, Holland, England, Japan, Canada, Bulgaria, etc. Judicial statistics are notoriously unsafe things to conjure with owing to different methods of compilation; but a cursory comparison suggests that the proportion of criminal cases to population for Egypt is as to 1 to 1,750, whereas the corresponding population totals for the other countries are: Denmark, 875; Holland, 420; England and Wales, 650; Canada, 560; Japan, 460; and Bulgaria, 360.

The Dead Sea Concession.

Although the concession for the extraction of salts from the Dead Sea has not yet been finally awarded, there is no reason to suppose that it can be given elsewhere than to the two applicants who are now engaged in working out the details of the concession with the Crown Agents. In these circumstances it is unfortunate that the unsuccessful applicants should think that any useful purpose can be served by impugning the good faith of those who had to make the award. The suggestion has been put forward that the "tenders" *(sic)* received by the British and Palestine Government ought to be published, as if it were merely a case of farming out the concession to the highest bidder. This may have been the idea actuating the applications of those who imagined that, if they talked largely enough of potentialities, the two Governments would yield to the allurement of the highest flights of fancy. What was required, however, was a careful and exhaustive computation of what could be done with a limited outlay, which would be large enough to prove the potentialities of the Dead Sea under actual exploitation on a commercial basis, while providing a nucleus for expansion, as occasion arose. The scheme accepted, it is understood, had things worked out to decimal points for the next day, and left the billions to America and the distant future.

Exploration in the Sudan.

Pioneer work in the million square miles of the Sudan still calls for spasmodic exploration as well as the regular task of winning its remoter peoples to some form of settled government. The course of the Nile, as well as a central position, has caused the Nubian Desert to be crossed not only by several recognised routes but also by the railway from Halfa to Abu Hamed. To the west of the Nile, as it passes through Dongola Province, however, lies the vast Libyan Desert, which over large areas remains practically unknown. An expedition headed by two Sudan officials spent the last two months of last year in exploring the desert lying, roughly speaking, on the arc of a circle from El Obeid to Halfa—a distance in all of over a thousand miles. As so much of, if not all, the work done by the Sudan Civil Service is taken as a matter of course, little will probably be heard of this small enterprise; but it is worthy of record, if only for its value as a test of organisation and endurance. According to a report, Bir Natrun (the name records the rock salt found there) was reached after a waterless journey of 240 miles; subsequently, Nekheila Oasis in five marches over barren desert previously untraversed by a white man. After a ten days' stay at Nekheila, where "prehistoric rock pictures showing Libyan influences" were found, the route lay over 275 miles without grazing or water. This country, we are told, was a complete blank on the map and equally unknown to the Arab guides; the direction of march was controlled by compass bearings and theodolite observations. Hardly a trace of vegetable or animal life was seen, save for a dozen patches of dried grass and the bodies of dead migrant birds.

The Turko-Syrian Frontier.

In our issue of January 19 last we recorded the fact that the International Commission under the Danish General Ernst had delimited the Turko-Syrian frontier between Nisibin and Jazirat-ibn-Omar in such a way that the Syrian claims were completely justified. Naturally, before the Commission was appointed, the precaution was taken of obtaining the adherence of both parties to its decisions. That formality, however, is apparently not to be allowed to balk the Turkish delegates, who are reported to have refused to accept the decision of General Ernst's Commission. If this is true, it is but another example of the Kemalists' attempt to clothe their wolf in sheep's clothing: such procedure but gives confirmation to those of Turkey's critics who assert that the leopard cannot change his spots. France is not, of course, the first sufferer in this respect, for Iraq and Great Britain underwent considerable inconvenience before the northern frontier of Iraq was finally delimited. It would seem possible that Turkey, who has recently been showing increased interest in the question of Syria, ostensibly over the matter of smuggling and brigandage, is thus dishonouring her word in order later to be able to drive a bargain with Syria. It is to be hoped that the Mandatory Power for Syria will stand firmer towards the Kemalists than she has been prone to stand on certain occasions in the past. For it is in the interests of nobody in the Near East—not even of Turkey herself—that the Angora Government should profit by abruptly breaking its word. Let us trust that it will disown this reported attitude of its delegates.

Zionism: A Critical Phase.

Without any question there is considerable anxiety in the world of Jewry upon the future of the establishment in Palestine of a National Home for the Jews. The more resolute are convinced that the main thing to do is to await the publication of the Report which the non-partisan Commission is to draw up—Sir Alfred Mond, its President, is now in Palestine, and soon after his return to London in March the Report may be expected to be published. But in this period of waiting considerable efforts are being made to collect funds for the work for Palestine to be carried on. Zionist grounds for anxiety are well enough known. Emigration from still exceeds immigration into Palestine; there are still thousands of colonists in the Holy Land unemployed; and the big "relief" works are not in very close prospect. Manifestly the next few months will be a critical time for the Zionist movement, and the endeavour to stifle the rising cry that a Jewish State cannot be built in Palestine will be a stern one. Officially, the Zionist view of the future of Palestine is not changed, but it is interesting to note that, under the stress of circumstance, various schemes, which are really departures from the original conception of Zionism, are coming into the field. Thus it is announced from Jerusalem that a new Society, called *B'rith Shalom*, has been formed with the intention of making of Palestine a bi-national State, on the basis of equal representation of Arab and Jew. Nor should the notion be forgotten of carving out of the Holy Land a special *enclave* which should be wholly Jewish. What the future holds it is impossible to say. It will be easier when we have the Report of the Survey Commission, and are enabled to see how the enlarged Jewish Agency operates and particularly the financial backing which it may command.

The Development of Syria.

The malicious might be tempted to say that the recrudescence of French interest in Syria is a direct result of the discovery of petroleum in the Mosul vilayet and, consequently, of the urgency of the problem whether a pipe line conveying the oil to the Mediterranean should debouch at a Syrian or a Palestinian port. But whatever the explanation, this fresh interest in Syria on the part of Frenchmen is decidedly to be welcomed. We have already referred to the articles which the *Temps* has devoted to the subject, and the concentration of the semi-official journal has been echoed elsewhere in the French Press. On January 22 the *Temps* returned to the charge. It stated categorically that Syria must have fixed frontiers, an Organic Statute and a modern judiciary system. In other words, the existing four States into which Syria has been artificially carved must either be confirmed or abolished, a Statute similar to that which Iraq enjoys must be allotted to Syria, and the existing practice of administering Turkish laws must be discontinued in favour of something more advanced. That done, it would be possible to look forward to an extensive scheme of economic amelioration. Customs tariffs must be reduced —otherwise Beyrout is in danger of losing its capital position to Haifa; a railway must be built to join Tripoli, Beyrout and Haifa—thus making it possible to travel from Paris to Cairo by railway in five days; a line must be built joining Beyrout with the Mosul oil fields; and a vast programme of irrigation must be put in hand. It is believed that with these improvements Syria could be made a tremendously rich country. From many places, moreover, adds the *Temps*, assistance has been offered to the Mandatory Power for Syria, from Paris, from Egypt, from America; and it concludes its article with these words:—"The period of groping and of hesitation is finished; the hour of realisation has struck." All this, though sorely belated, is comforting, from whatever motive it be inspired. It is beyond argument that, if France wishes the pipe line to pass through Syria, one of her most effective weapons is to show that she means to exercise her Mandate in Syria.

The "Revolt" in Khuzistan.

We hinted last week at the inaccuracy of certain messages emanating from Basrah on the recent dispute between the peasants in Khuzistan and the revenue officials, and also at the probable insignificance of the whole affair. This view of the "rising" by the subjects of the Shah in Arabistan is now seen to be correct. What appears to have happened is this. The date palm tax had been increased this year by the authorities at Teheran, an increase which it needed no precedent for the tribe of the Nassar (in the Qasbah area) to refuse. At this show of resistance the Persian Governor dispatched the gunboat Pahlavi with 150 men to patrol the left bank of the Shatt al Arab, and the Iraq authorities co-operated with the Persian authorities to the extent of similarly patrolling the river, with the object of preventing Persians from slipping over to Iraq, whence they might re-attack the Persian authorities. It is probable that this prompt display of correct feeling by the Iraqi authorities had a most depressing effect upon the insurgents, who, for whatever reason, soon threw in their hand. Exercising a wise clemency, the Persian authorities reduced the tax, and made easier arrangements for its payment. It is to be hoped that the lesson to be gleaned from this affair—the desirability of Iraqi-Persian co-operation in all matters of mutual interest—will not have been lost upon the authorities in Teheran, who have to thank Baghdad, not for the first time, for distraining wayward Persian subjects.

THE DEATH OF EARL HAIG.

We regret to announce the death, which occurred suddenly in London on January 29, of Lord Haig, Commander-in-Chief of the British Forces in the greatest victory achieved in their history. He was born in Edinburgh in 1861. At the age of 24 he went out to India with the 7th Hussars. After a certain amount of Staff work he was, in 1897, attached to the Egyptian Army, taking part in the Omdurman campaign. After that came service in the South African War, General Staff work at Home, and finally, the consummation of the Great War. It was wholly characteristic of Lord Haig that he should refuse the honours offered to him until he was satisfied that the ex-Service men were receiving fair treatment at the hands of the nation. Through the agency of the British Legion he did an incalculable amount of good to the country, both materially and morally.

BRITAIN AND ABYSSINIA.

The succession of incidents involving the relations between Abyssinia and Great Britain might seem at first sight to imply that the two countries have now settled down to an era of sparring and pinpricks, which promises to advance the interests of neither. It may be as well, however, not to lose sight of the fact that it takes two to make a quarrel, even if one, when so minded, can, by being sufficiently unpleasant, render relations between the two parties almost impossible. The three untoward episodes which within a comparatively short time have concerned the two countries, although as a result of telegraphic exigencies they may seem merely to ring changes on anti-British feeling in Abyssinia, have not an identical bearing on the relations between the two countries. When Dr. Martin was dispatched from Addis Ababa to the United States, the Abyssinian Government could plead that it was offending no particular canon of diplomatic etiquette, but only taking a customary business precaution, in consulting an independent authority on dam construction; also that it cannot be held responsible if the step attracted more attention than was intended, owing to American publicity methods. The murderous attack on an Anglo-Indian caravan, which had entered Abyssinia from Somaliland under permit of the Addis Ababa authorities, was not made because the caravan was British, but because Abyssinia, although a member of the League of Nations, is for the most part a lawless and uncivilised country, and the Central Government, which had promised a safe conduct for the caravan but never dispatched it, is dilatory and incompetent. The third episode is a more serious matter. As briefly reported, it consisted in the refusal of the Abyssinian Government to accept a formal document from the British Legation on the ground that it was signed by the Oriental Secretary, whom the Government had decided not to recognise. The British Minister threatened to break off relations, if this attitude were persisted in; whereupon the Abyssinian Government withdrew its objection and received the document. This unprecedented action on the part of the Government, it is very evident, calls for careful examination, in order that its true inwardness may be gauged.

The refusal of the Abyssinian Government a month ago to accept a communication from the British Legation was the culminating point of a prolonged agitation against the Oriental Secretary, Mr. P. C. Zaphiro. In the course of last year a newspaper in Egypt had published a report of a lecture of a prominent cleric on his visit to Abyssinia, in which reference was made to the subject of slavery, and the lecturer was represented as basing particular statements on information given him by Mr. Zaphiro. The attention of the Abyssinian Government appears to have been directed to the report by a foreign representative in Addis Ababa, with a kindly solicitude characteristic of international relations in a backwater capital. When the Regent, Ras Taffari, found no reason to attach any importance to the matter, a move was made with more success to stir up the interest of the reactionary elements in Abyssinia. As soon as British attention was called to the subject; both Mr. Zaphiro and the lecturer were able to deny the accuracy of the report, in particular in regard to the part which attributed to the former information regarding slave practices in Addis Ababa, that was calculated to offend Abyssinian susceptibilities. From this point the episode seems to have drifted into the ordinary current of Abyssinia's domestic politics, owing to the statesmanlike attitude of the Regent and to the eagerness of his opponents to seize any weapon for attacking him; for it was apparently not difficult to identify any strictures on slavery, whether true or false, with the prestige of the Church in Abyssinia. As the Oriental Secretary was due to take leave at that time, it was hoped that his temporary absence from the country would serve the cause of domestic peace in Abyssinian politics; but his departure was misinterpreted. On his return to Addis Ababa the agitation against him broke out afresh, and culminated in the act which showed that Ras Taffari had been forced to yield to reactionary clamour. Whether the drastic step which the British Government was obliged to take will have given the episode its quietus remains to be seen.

It is evident that as a result of the different episodes Anglo-Abyssinian relations have drifted into an unfortunate *impasse*, from which it is in the interests of both countries to extricate them. Although Abyssinia has always been a notoriously difficult country to deal with, the business of diplomacy being the cultivation and maintenance of good relations between countries, it should not have been beyond Great Britain's capacity to arrive at a *modus vivendi* with the Abyssinians. For many years now this desirable state has not existed, and the difficulty of attaining it has been seriously enhanced by the Anglo-Italian Agreement of December 1925. The value of that document becomes all the more problematical when it is realized that, as far as Italian relations with Abyssinia are concerned, it is considered as non-existent, and Great Britain is thus left to bear the odium of an arrangement which was entered into in the fond hope that it would secure for Great Britain the friendly co-operation of Italy in the promotion of Abyssinian interests. Until the Agreement was signed there was some ground for supposing that the Abyssinians had begun to weary of the barren policy of playing off one Power against another, and would have welcomed a better understanding with Great Britain, if the approach could have been made easy for them. They were certainly not encouraged to pursue a new line of action by being confronted with the Anglo-Italian Agreement, which merely saddled Great Britain with the additional odium and unpopularity attaching until then to the Italians; still less favourably will the Abyssinians have been impressed with British intentions, when Italy, on finding how suspect the Agreement was, proceeded to make a dead letter of it by means of the visit of the Duke of the Abruzzi to Addis Ababa, while Great Britain did nothing. Better relations with the Abyssinians can be brought about only if the necessity of understanding that difficult people is appreciated, and if it is realised that nothing but intrigue and opposition is to be expected from other Governments represented at Addis Ababa. It implied woeful ignorance of Abyssinia to allow a caravan from Somaliland to cross the frontier until it had been ascertained that permits and instructions which had been promised had been issued and received; it also argues ignorance of Abyssinian methods to regard only as persons of authority those who have text-book titles. If all the years of diplomatic relations between Great Britain and Abyssinia have produced but one channel of communication with the Abyssinians in their own language and that channel is in danger of being dammed, it is evident that opportunities have been lost. Yet with the goal of a barrage at Lake Tana ahead of us, it was worth while to make the most of the opportunities that offered.

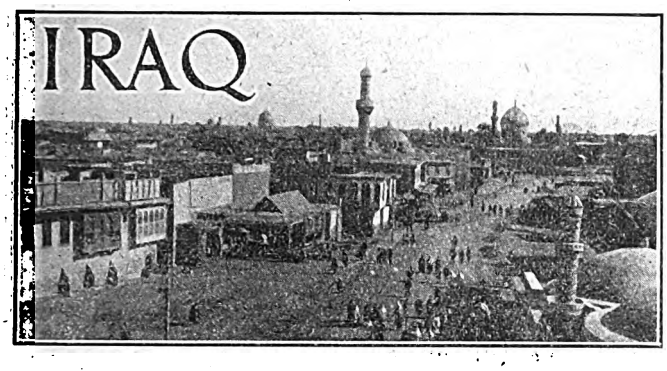
The Near and Middle East*

From Our Own Correspondents.



Baghdad, January 20.

The Cabinet.

The Askari Cabinet, which appeared to have taken on a new lease of life on the country's undertaking a punitive expedition against the Wahhabi raiders, resigned on January 9 after a week of indecision. King Faisal at once sent for Sir Abdul Muhsin Beg as Saadun, who has formed a new Cabinet which, including three Sunnis, two Shiahs, a Christian and (possibly for defence) a Kurd. is representative of every important section of the community. [The new Cabinet was given in our issue of January 19.—ED.]

The new Cabinet was installed on January 13 with the usual ceremony at the office of the Council of State. Sir Abdul Muhsin Beg took office on the understanding that he would appeal to the country unless he found a working majority in the Chamber of Deputies. Parliament was accordingly dissolved by royal warrant on January 19.

The Wahhabi Raiders.

Operations under the command of Air Commodore Higgins, with headquarters at Ur of the Chaldees, have begun, but the whereabouts of Faisal al Dawish is still unknown. Artawiyah, where the Wahhabis were reported to be encamped, was found to be deserted. Aeroplanes are carrying out daily reconnaissances, from various desert posts, and the forces of the Iraq Army are at present occupied only in guarding the aeroplane bases.

A relief fund for the victims of the recent raids on the frontier has been opened by the Chamber of Deputies, but as public interest in the subject is rapidly waning the appeal has not met with any very great response.

Iraq's Diplomatic Representation.

The presentation to Parliament of a Bill making financial provision for the Diplomatic Representative of Iraq with Turkey caused some discussion. A monthly allowance of £125 is proposed for Subih Beg Nashat, with travelling expenses and a special allowance of £300 a year; this does not include the expenses or salaries of his staff. Haji Hasan Shabut considered this amount exorbitant for an official who was to be "little more than a passport clerk." He suggested that Iraq should follow the example of other countries and appoint merely commercial Consular Agents; the Iraq Diplomatic Representative in London, he went on, had nothing to do, and had not even power to negotiate with the Foreign Office; he advised, therefore, that such needless appointments be abolished. This deputy's contentions received little support, and the Bill was passed by a majority. Sabih Beg left for Angora on January 17.

Cholera.

Only three cases of cholera occurred during the month of November, and these all on the west bank. During the week ending January 7 no case occurred, so that it may be hoped that the disease is finally stamped out. The medical authorities are to be congratulated on the success of their energetic measures; more than 70,000 people were inoculated during November alone, and stringent precautions were taken to prevent the spread of infection from the few cases which occurred. Compared with the heavy mortality of 1923, the number of deaths from cholera this year has been almost negligible. A special grant of two lakhs of rupees for fighting cholera was included in a recent Parliamentary addition to the Budget of 1926-7.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

THE HIJAZ.

Jidda, January 10.

The Second Anniversary of Ibn Saoud's Accession.

On January 8, 1926, the Wahhabi conqueror of the Hijaz was acclaimed at Mecca as King of the Hijaz. There was no official celebration of the event on the 8th instant, nor on the corresponding date according to the lunar calendar some three weeks earlier, but Mrs. St. John Philby was "At Home" to a gathering of some seventy guests representing no fewer than fifteen nations in the evening. The King's health was proposed and honoured with much enthusiasm, Dr. Abdullah Beg Damluji, Minister for Foreign Affairs, replying to the toast on behalf of H.R.H. the Amir Faisal, whose duties at Mecca prevented his accepting an invitation to be present. Dr. Abdullah referred to the great progress

made in many different directions during the two years of the King's reign.

The Pilgrimage of 1346 A.H.

The beginning of the Muslim half-year has brought with it welcome breeze from the Far East in the shape of pilgrims (mostly Javanese) whose number has already reached the 10,000 mark. The coming week should see this number doubled, and all bids fair for a concourse which should surpass the record concourse of last year. The Javanese pilgrim is not in general a devotee of motor transport, and for the time being it is camel traffic that occupies the roads. The new metalled road to Mecca proceeds apace and the steam-roller recently went out to begin its work on it, escorted by a large crowd of interested spectators. The competition between motor transport companies is becoming ever keener with the rapid increase in the number of vehicles available. The fare for a single seat to Mecca (forty-five miles) is only about 3s. 6d. as against a legal maximum of about 14s.

The New Arabian Coinage.

A regulation has been published in the current issue of the *Umm al Qura* fixing the first of Shaaban (January 22) as the date for the coming into currency of the new Arabian silver coins—Riyals, half-Riyals and quarter-Riyals. These coins are of the same fineness and value as the hitherto current Turkish Majidies and their corresponding fractions, which will from the date mentioned cease to be legal tender in all Government transactions. A slight adjustment has been introduced in the relative values of the new coins, 10 Riyals (instead of 12 Majidies) being equivalent to £1 sterling and each Riyal being subdivided into eleven (instead of 9) Piastres Miri. Thus £1 sterling will be equivalent to 110 Miri Piastres as against 112 hitherto. It is perhaps to be regretted that the occasion was not used to introduce a complete decimal system with £1 as the equivalent of 100 Piastres Miri, but it was presumably considered that this change would create too violent a dislocation of local market conditions. There are already signs of a fall in the value of the Turkish Majidie, which has been tentatively quoted at 13 or even 14 to the £1 sterling, but this tendency is scarcely likely to persist as the stock of new coins is not yet sufficient to meet all needs.

The New Condenser.

Satisfactory progress is being made with the erection of the new sea-water condenser, and there is every prospect of an ample supply of drinking water being available during the rush period of this year's pilgrimage. So far the seasonal rains, which promised well with an early start, have been exceedingly disappointing, and the supply of reservoir water is short of normal.

Engineering Diplomats.

The arrival is shortly expected of two new British engineers to take charge of the Government workshop and the motor transport school respectively. With the British engineer already in charge of the existing condenser the Hijaz Government has thus created the nucleus of an expert engineering staff, which should result in rapid and solid developments in the near future. There is plenty of work in prospect which requires skilful organisation in order that the best use may be made of the funds available. Progress coupled with economy is the order of the day.

The Weather.

While English and European papers bring us news of a cold spell with ice and snow as its accompaniments, the Hijaz has lately been enjoying a climate as near perfection as climates can be. During the past few days the maximum temperature has been as low as 76 degrees Fahr. and the minimum has touched 62 Fahr. And there is every indication of a further drop in the thermometer readings.

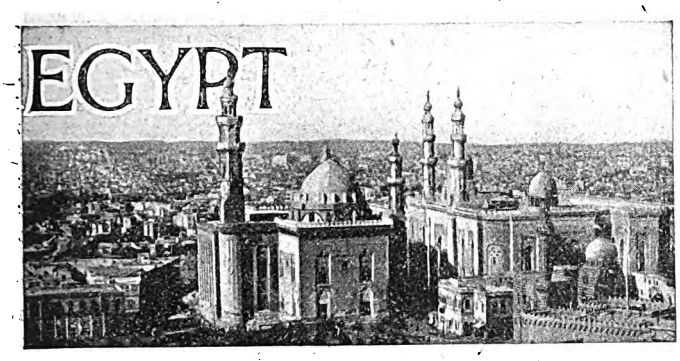
General News.

Abdul Ghani Sani, the new representative (Diplomatic Agent and Consul-General for the Hijaz and Yaman) of the Turkish Republic presented his credentials to H.R.H. the Amir Faisal at Mecca on December 31. He has had considerable experience of Arab lands, having been a high administrative official in the Yaman in pre-War days and Consul-General in turn at Cairo and Beyrout during the past six or seven years.

Amir Bey Taufiq, Egyptian Consul here since the beginning of the Wahhabi régime, leaves Jidda on January 12. A number of farewell parties organised in his honour have testified to his widespread popularity. His successor has not yet arrived, and the Vice-Consul, Mazhar Bey, will act during the interim.



Cairo, January 21.

The Political Situation.

The political horizon continues as obscure as ever. The most contradictory statements and reports are current. Resignations and disagreements are freely talked about, but on their heels come categorical contradictions, to be followed by equally emphatic reassertions of the first reports. Circumstantial interviews are published and as quickly refuted. Personal statements made to one interviewer by prominent men are found later to be contrary to what those personages have told other reliable interviewers. The situation is, indeed, confused. The fact that the Prime Minister, whose conversations with Lord Lloyd continue, has left for Aswan where, obedient to the injunctions of his doctors, he will spend the week-end, may be regarded as giving us at any rate a breathing space.

The Case of Dismissed Officials.

The Native Court of Appeal met in General Assembly this week in order to consider what line should be taken in regard to the various law-suits brought by Egyptian officials against the State for wrongful dismissals. There are at the present moment several of such actions pending before the Native Courts. Many others have already been decided and the decisions given by different chambers have proved so contradictory and in a way so inconsistent with one another that it has been considered in the public interest that the highest Civil Court in the country should consider the whole question and lay down certain privileges for the guidance of the courts in such matters.

Public Security in the Provinces.

Considerable comment has been aroused by the publication of the report on the state of public security by Kaissy Pasha, the Director-General of the Department of Public Security. This report reveals that not only has there been a marked increase in crime during the past year, but that, compared with those of twenty-five years ago, the statistics have quintupled. Thus while in 1901 there were 1,548 crimes, in 1905 the total had reached 3,011, in 1913 4,095, in 1919 the figure jumped to 7,060, in 1922 to 8,681, in 1925 it dropped to 6,890, but since then it has risen until in 1927 it had attained the total of 7,950.

Various reasons are advanced to explain this increase in criminality. To start with, there has been in the meantime an increase in population. In 1901 the population stood at ten millions, whereas to-day it is well over 14,000,000, or an increase of 40 per cent. That cannot, however, account for an increase of 400 per cent. in crime. Another reason given for the rise in the criminal table is that various offences formerly treated as misdemeanours are now dealt with as crimes. Here again this cannot account for the whole increase, for the simple reason that this change in handling took place as far back as 1904, whereas since 1906 the totals have more than doubled. Increased facilities in transport may also, it is true, have made it easier for complainants to reach the seat of justice and so have somewhat reduced the number of crimes which would either not have been reported or not have been followed up.

Kaissy Pasha refers to the inadequacy of the numbers of the force which is provided for the organisation of public security, the ignorance of the great majority of the police, the lack of qualifications of the public security officials to deal with criminal inquiries and the wholly unsatisfactory manner in which the ghaffirs are recruited and their low intellectual standard. All these matters have a serious effect on the prevention and detection of crime and consequently on the state of public security in the country, and they clearly indicate the need for a radical reform of the organisation. It is to be hoped that the Commission which is now sitting to deal with this vital question will take Kaissy Pasha's indications into serious consideration and that in its report it will not only put proposals for placing that Department on a footing calculated to enable it to deal with the present serious state of affairs, but that it will courageously declare, what everyone knows, that a reorganisation will be unproductive of good results so long as the provincial personnel is dominated by Parliament and its members.

Members of Parliament have displayed much indignation at the statements made in the London Press that their interference in executive matters has made the task of the authorities almost impossible, and a question on the subject has been addressed to the Prime Minister asking him whether he has had any complaints on the subject from the officials in question.

Copyright in Egypt.

It will be a cause for satisfaction for all interested in literary, artistic and scientific work to learn that a draft law dealing with copyright has been prepared and is now being considered. Hitherto no legislation on the subject has existed in this country. The Mixed Tribunals have, it is true, on occasion given decisions on the matter—but these have proved contradictory—and the Native Penal Code provides for punishment of pirating of books, objects of art and musical compositions. But there has hitherto been no definition of the right of authors or what constitutes an offence in regard to copyright, and plagiarism and piracy under which responsible and self-respecting journalists, authors, artists and scientists have suffered, have continued undeterred. Indeed, they have never been so flagrant and glaring as they are to-day.

There has been much complaint in the past, but the authorities took little notice until an invitation was received from the League of Nations to adhere to the

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Digitized by Google

Berne International Convention relative to copyright. As States adhering to this Convention undertake to apply measures in their own country to protect copyright, the Egyptian Government found itself compelled to elaborate the necessary legislation.

The new law protects all "creations of intelligence," all original expressions of thought, in the domain of literature, science and art; it defines what publication means and deals especially with cinematograph works and portraits; the publication of letters, reproduction in the Press, posthumous and anonymous publicity. It proposes to fix the period for the reservation of copyright at 30 years from the death of the author, or in the case of anonymous and posthumous publicity 30 years after such publication, but to reserve the right to translate the author must himself publish a translation within ten years of the first publication of the original work. In the matter of translation copyright ceases 15 years after the first publication. In the case of State property copyright is indefinite. Until publication has been made or unless it can be proved that publication is intended, an original work, be it manuscript, painting or statue, will be unseizable and the author of a literary or artistic work publishing for the first time in Egypt will have to deposit with the author two copies of the work for the Royal Library.

The new law is to apply to works not only of Egyptian but also of foreign authors executed or reproduced for the first time in Egypt and to those of Egyptian authors published, executed or reproduced for the first time abroad. But as regards works of foreign authors published, executed or represented for the first time abroad, these will only receive the protection of the Egyptian law, if the country where first publication, etc., has taken place accords similar protection to Egyptians in regard to their works published for the first time in Egypt.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE CHURCH MISSIONARY SOCIETY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—According to your issue of January 26, the Church Missionary Society fears that, owing to the action of the Persian Government, it may have to close its school in Persia and so "relinquish one of the most effective means of bringing Muslims to the knowledge of Christ."

This sentence will possibly sound better to Christian than to Muslim ears, because Muslims consider that what they have known of Christ, from the Quran, for these 1,300 years, is the *right* knowledge.

Were the Mission to say "bringing Muslims to the love of their Christian brethren" it would be better, and a justification of its existence in Persia.

Yet although all such Missions in Muhammadan countries are, in my opinion, useless from a religious point of view, I cannot expect to see them abolished, because in matters of faith no arguing is possible, and when faith can positively move mountains, it may be well to leave it alone. Do we not see Muhammadans trying to win converts in Christian Europe? While Jews still look down upon both!

However, were all these worthy missionaries actuated by pure love of mankind, this world would be a much better place to live in; but unfortunately very few of them are so actuated, claiming to work for the next world! The result is too often that hatred, malice, and all uncharitableness predominate among us!—I am, etc.,

RHODES AND THE DODECANESE.

At the meeting of the Near and Middle East Association, held on January 25 at the house of Mrs. A. T. McGrath, 28, Wilton Place, Mr. H. Pirie-Gordon gave an interesting and scholarly lecture on Rhodes and the Dodecanese. In introducing the lecturer, Mr. Leland Buxton, who presided, referred to Mr. Pirie-Gordon's long acquaintance with the Eastern Mediterranean and to his services in those waters during the War.

The greater part of the lecture was devoted to an historical summary of events in Rhodes and the adjacent islands, during which the lecturer briefly described the five great sieges of the city of Rhodes which had originally been built as a Federal Capital for the three united city-states in the island, Ialyssos, Lindos and Kameiros. The lecturer pointed out how Rhodes in virtue of her insular position, her great carrying trade by sea and her naval power played a part in the Ægean in the days of her greatness not unlike that played by England in the West many centuries later. Rhodian supremacy was so valuable to the Ægean islanders who were thereby rendered safe from the despotic continental monarchies that when the great earthquake of 225 B.C. did so much damage to Rhodes and overthrew the famous Colossus of bronze, voluntary subscriptions and grants from far and near came pouring in to alleviate the great protectress' distress. Rhodes revived after the devastating siege and sack in 44 B.C. by Cassius to whom the city was betrayed, but the earthquake of 155 A.D. put an end to her wealth and greatness. She was never again of political importance, except during the two centuries from 1309 to 1522, when she was the headquarters of the Knights of St. John. The lecturer in reply to questions explained the Italian regulation about washing buildings with colours, saying that it is forbidden to apply any coloured wash to those scheduled by authority as being of that rich golden-brown into which some of the mediæval houses have mellowed, but that other houses may be coloured at the proprietor's pleasure, blue and white in such cases not being prohibited. He also explained why the city of Rhodes enjoys so pleasant a climate, benefiting by its position from the northerly wind that blows round the south-west corner of Asia Minor for the greater part of the year, and how the present Administration is trying to develop the place as a health resort. He referred to the plan for constituting an Autocephalous Orthodox Church for Rhodes and the Dodecanese from the local dioceses which are at present under the jurisdiction of the Œcumenical Patriarch, and described the Turkish community in Rhodes as a small working model of what Turkey used to be in the days when she was still picturesque, unreformed and oriental.

MODERN BULGARIA.

A series of Public Lectures on "Modern Bulgaria" was inaugurated on January 26 at the School of Slavonic Studies (Institute of Historical Research, Malet Street, W.C.1) by Lady Muir, who chose as the subject of her first lecture, "Bulgaria from the Liberation to the Accession of Prince Ferdinand (1878-1887)." These lectures will be continued every Thursday at 5.30 p.m. until March 1 inclusive. Lady Muir in her second lecture (to-day) will deal with "The Reign of Prince Ferdinand to the Balkan Wars (1887-1912)," and the remaining four lectures will be given by Dr. T. Tchitchovsky, of the Bulgarian Legation, who will deal with economic and social questions.

THE LATE M. VLADIMIR POPOVITCH.

By the death at Nice last week of M. Vladimir Popovitch, Montenegro loses one of her most ardent and patriotic sons. The Popovitch family was closely associated with the late King Nicolas and has been distinguished by its extreme patriotism and its devotion to the King. M. Popovitch, a barrister by profession and formerly President of the Municipality of Cettigne, wrote copiously on the affairs of Montenegro during the last twelve years, his last work being a book entitled "Montenegro and the War," which has run into several editions. For the last ten years he has lived away from Montenegro, mainly in France, where he continued to raise his voice in protest against the annexation of his country by Serbia.

NEWS IN BRIEF.

The Prince of Piedmont left Rome last week on his way to Egypt, Eritrea, and Italian Somaliland.

Sir L. Worthington-Evans, Secretary of State for War, and Lady Worthington-Evans left Bombay on January 28 for England.

A treaty of commerce based on the most favoured nation treatment has been concluded between Switzerland and Egypt.

M. Titulescu, Roumanian Minister for Foreign Affairs, arrived in Rome on January 24 and visited Signor Mussolini.

Two submarines for the Yugoslav Navy have been built by Messrs. Armstrong, Whitworth, and Co., Newcastle, and left on January 28 for Devonport.

The appointment of Mr. R. F. W. Grant as British Consular Agent at Assiut has reecived the official recognition of the Egyptian Government.

The Warsaw Cabinet has confirmed the Treaty of Friendship between Poland and Afghanistan, and the document will be submitted to the new Diet for ratification.

It is announced from Luxor that forty-five packages of treasures taken from the tomb of King Tutankhamen were dispatched on January 27 to the Cairo Museum.

Two British cruisers and eight torpedo boats arrived last week in Valona Harbour (Albania), where their officers and crews were given an enthusiastic welcome.

M. Taditch, the new Yugoslav Minister to Turkey, presented his Letters of Credence to Ghazi Mustapha Kemal Pasha on January 24. It is over a year since the previous Yugoslav Minister left Turkey.

The Duke of Connaught, accompanied by Major Berkeley Levett, called on the King and Queen of Afghanistan at Cannes on January 24 and had an interview lasting half an hour.

To mark the occasion of the birth on January 19 of his second son, the King of Yugoslavia signed on January 23 a decree of amnesty from which several thousands of prisoners will benefit.

In succession to the Rev. J. F. L. Southam, now Canon of Chester, the Ven. G. C. L. Lunt, Archdeacon of Egypt, has been appointed vicar of St. Mary's Portsea.

Ex-King Ferdinand of Bulgaria, who arrived at Buenos Aires on January 23 on a three weeks' visit, proposes to make a survey of scientific and botanical institutions in Argentina.

The King of Afghanistan, whose official visit ended on January 27, is now staying in Paris *incognito*. He received M. Poincaré the following day and visited an exhibition of agricultural machinery.

A society or club for the promotion of the cultural and commercial relations of Greece and Yugoslavia has been founded in Belgrade under the patronage of M. Polychroniades, Greek Minister. Its chairman is Professor Anastassyevitch.

The will of Mr. Main Swete Osmond Walrond, of Roy Glen, Marlow, and St. James's Club, Piccadilly, formerly Private Secretary to Sir Alfred Milner, when High Commissioner of South Africa, has been proved at £5,459 (net personalty £5,320).

The King and Queen of Afghanistan placed a wreath on the Tomb of the Unknown Soldier at the Arc de Triomphe, Paris, on January 26. The King and Queen afterwards motored to Versailles and visited the château.

The death occurred at Knole Park, Sevenoaks, on January 28, of Lord Sackville. He served in the War in Gallipoli, Egypt, Palestine, and France. He leaves an only daughter, Victoria Mary, who in 1913 married the Hon. Harold Nicolson.

The official Albanian Press Bureau says that on the occasion of the visit of the British Fleet to Valona a football match was played between a team of the fleet and a combined team representing Tirana and Valona. The British team won by six goals to four.

Sir Alan Cobham arrived in Cairo on January 24. He took luncheon at the Residency the following day, the guests including Sir John Simon and other members of the Indian Commission. He returned to Aboukir on January 26 and started for Luxor the next day, proceeding thence to Khartoum and Kisumu.

In view of the desire of the Queen of Roumania to return at an early date to Bucharest, the King of Yugoslavia's second son was christened in Belgrade on January 25 in the presence of intimate friends of the Court. The entire staff of the British Legation was present. As the Duke of York was unable to be present, Mr. H. W. Kennard, British Minister, acted as *Koom* (godfather), and, as the representative of King George, he was received with Royal honours.

The Times' Constantinople Correspondent reports that over 70 Hungarian labourers in Angora have been arrested on the ground that they are Communists and are spreading Communist propaganda. It is stated that they will be expelled from Turkey.

The death occurred last week of Lieutenant-General von Hobe Pasha at the age of 84. Hobe was one of the first German military instructors to be sent out to Turkey in the early eighties, and was for three years Sultan Abdul Hamid's Adjutant-General.

Sir Reginald Louis Oakes, Bt., of Heliopolis, Cairo, General Manager of the Cairo Electric Railways and Heliopolis Oasis Company, who died on October 11, aged 80, left property in this country of the gross value of £13,272, with net personalty £13,266.

According to a Reuter telegram from Budapest, the Roumanian semi-official newspaper *Viitorul* states that during last year thirty-one tax officials and five high financial officials were dismissed from office and arrested for fraud and misappropriation of funds.

The Greek Government has obtained a vote of confidence from the Chamber by 125 votes to 47 after a debate lasting from January 23 to January 27 on the expropriation of properties near Athens under Article 119 of the Constitution for the settlement of refugees.

M. Marinkovitch, Yugoslav Foreign Minister, and General Bodrero, Italian Minister in Belgrade, signed on January 25 a protocol prolonging for six months the term in which the Italo-Yugoslav Treaty can be denounced or renewed.

It is stated by the Basrah Correspondent of *The Times* that the fighting which has been in progress during the past few weeks between the Khans of Tangstan and Chogadak, about 12 miles from Bushire, in Persia, apparently ended last week, and that their peasants are busy cultivating their fields.

The death is announced from Paris of General Andranik, an Armenian. General Andranik rendered useful services to the Allies during the War, and was given the rank of Major-General by the Tsar, and the rosette of the Legion of Honour by the French Government.

Colonel John Owen Quirk, whose death is announced at the age of 80, took part in the Egyptian Expedition of 1884, being present at the battles of El Teb and Tamai and the advance of Tamanieb, and was mentioned in dispatches. He was also in the two succeeding Sudan Expeditions.

It is stated that a satisfactory compromise on the question of the enforcement of conscription was last week reached between the Persian Government and the dissentient Mullahs, who have now returned home from Kum, where they had taken refuge during the dispute. The bazaars at Ispahan and Shiraz have been reopened.

In connexion with the efforts to form an Arabic branch of the P.E.N. Club in Cairo, Mr. John Galsworthy has written a letter wishing all success to the venture, and promising that British centres will warmly welcome a liaison with writers expressing themselves in the great Arabic language, and possessing a literature so old and so distinguished.

Mr. Arthur Carlyon Stanley-Stone, Chief Commoner of the Corporation of London, who died suddenly on January 24, reecived from the King of Egypt, when he came to London, the Order of the Nile. He had previously held as Commander the Order of the Lion and the Sun of Persia, which the Shah had given him on his visit to the City in 1920.

The Muslim Supreme Council contradicts the announcement that recently gained currency to the effect that non-Muslims could now be permitted to enter the Mosque of Hebron, over the Cave of Machpelah, on payment of a small sum. It is still essential for visitors to obtain a written permission for such a visit from the Supreme Council.

The Criminal Court of Stamboul, Constantinople, on January 30 delivered judgment in the trial of the Turkish Communists who were charged with treasonable practices. The head of the organisation, Dr. Shefik Husni Bey, was sentenced to eighteen months' imprisonment, and twenty-four others were sentenced to periods of imprisonment varying from two to three months. Twenty-five were acquitted.

Lieutenant-Colonel John Willian Yerbury, R.A., of the Army and Navy Club, S.W., and of St. James's Place, S.W., who died on November 10, aged 80, left estate of the gross value of £11,948, with net personalty £11,792. Among other bequests he left to the Political Resident at Aden a set of pamphlets on the Flora and Fauna of Aden "as complete as I have been able to make it," for the use of officers quartered at, and residents residing in, Aden.

Sir James Frazer, who is on a visit to Brussels, was the guest of honour on January 28 at a dinner given by the Belgian Society of Neo-Greek Studies. M. Van de Vyvere, Minister of State, presided, and the guests included a large number of University representatives. Sir James Frazer was entertained the following day by the Greek Chargé d'Affaires, M. Kapsambelis.

THE INDO-EUROPEAN TELEGRAPH DEPARTMENT.

[The following paper was read by Mr. Maurice G. Simpson, M.I.E.E., Director-in-Chief, Indo-European Telegraph Department, before the Indian Section of the Royal Society of Arts, on January 20, Sir Geoffrey Clarke, C.S.I., O.B.E., late Director-General Posts and Telegraphs, Government of India, being in the Chair.]

The Indo-European Telegraph Department is a Department of the Government of India about which very little is generally known, the reason being partly because its executive operations are almost entirely outside India, in the Persian Gulf and Persia, and partly because it is in the anomalous position of being the only Department of the Government of India with its headquarters in London and administered directly by the Secretary of State for India. How this anomalous position arose, the necessity for its continuance and the administrative difficulties it involves will, I hope, be made clear as we proceed.

Telegraph lines began to be built in 1840 in England, and in 1852 in India, and in both countries they very rapidly extended. There were early visions of a telegraphic connexion between England and India, but it is not till 1856 that we find the first mention of negotiations between England and Turkey for the construction for this purpose of a line eastward from Baghdad towards the Persian Gulf. The European and Indian Junction Telegraph Company were then endeavouring to obtain a concession in Constantinople for the construction of a land line to Qurna at the junction of the Tigris and Euphrates. In 1857 the grant of this concession was definitely refused by the Turkish Government, who undertook themselves to construct the line, but expressed a willingness to employ British engineers in carrying out the operation. In pursuance of the scheme the Turkish Government applied for and obtained the services of Lieut.-Col. Biddulph, of the Royal Artillery, who, after preliminary arrangements, was able to commence the actual work of erection in August, 1859. He, however, finding work under the Ottoman administration presented too many difficulties, retired from the project the following year, but left behind him a Mr. Carthew and two brothers named MacCallum, all three retired non-commissioned officers of Artillery, to carry on the construction, which they did in the face of innumerable difficulties, with the result that the whole line from Constantinople to Baghdad was completed in 1861. The question then arose whether the route thence to the eastward should be direct to the head of the Persian Gulf, on which section interference by the Arab tribes was to be feared, or should be *via* the Persian frontier at Khaniqin to Teheran and thence *via* Ispahan and Shiraz to Bushire. Eventually Turkey was persuaded to construct both routes and in 1863 work was commenced, the line from Baghdad to Khaniqin being completed in October, 1864, and that to Fao in January, 1865.

In the meantime there had been considerable activity on the Indian side. During the year 1861 the Government of India instructed Colonel Patrick Stewart, a brilliant young officer of the Royal Engineers and the pioneer of the Indo-European Telegraph Department, to make a survey of the Makran coast and of the Persian Gulf. In the following year he was able to lay before the Secretary of State a definite scheme, in which he recommended that a land line should be constructed from Karachi westward as far as Gwadar, and that a series of cables should be laid thence to Fao at the head of the Persian Gulf. He very shortly afterwards added a recommendation that the cables should be extended from Gwadar to Karachi, thus duplicating communication over this section where, it was feared, the cable might be exposed to damage from the heavy seas of the south-west monsoon.

It is difficult now to realise the boldness of these proposals at a time when confidence in submarine cables had been badly shaken by the failure two years before of a cable laid in the Red Sea as part of a cable route to India, but it was believed that the causes of the failure were well understood and could be avoided, and Col. Stewart's project received the support of the most eminent electricians of the day, among whom was Prof. William Thomson, afterwards Lord Kelvin. The scheme was approved and Col. Stewart was ordered to carry it out. The cable was manufactured at Messrs. Henley's Telegraph Works at Woolwich, and its manufacture and submersion was under the control of Messrs. Bright and Clark, well-known telegraph engineers. It was sent out in five sailing ships to Bombay, whence the ships were towed by steamers of the Bombay Marine to Karachi and up the Gulf and the cables were laid in the sea without any serious accident. The section Gwadar to Mussendam was completed in February, Mussendam to Bushire in March, Bushire to Fao in April, and Gwadar to Karachi in May, 1864, thus completing the connexion between Karachi and Fao in readiness for the Turkish line on to Constantinople, which was completed some months later in January, 1865.

Before this Mr. Walton of the Indian Telegraph Department had been deputed to construct the land line from Karachi to Gwadar; he commenced the work in June, 1862, and completed it the following April. In constructing this 400 miles of line Mr. Walton encountered very great hindrances, not only because of the utterly barren and inhospitable nature of the country with the consequent lack of water and difficulties of transport, but also from the jealousies, bickerings and opposition of the local petty Chiefs, and that he was able to construct it at all is a testimony to Mr. Walton's perseverance and ability.

It has been stated above that the Turkish line from Baghdad to Khaniqin on the Persian frontier was completed in October, 1864. The line from Khaniqin to Teheran and thence south to Bushire was constructed on behalf of Persia by British Engineers under Major Champain, an officer of the Royal Engineers: it was commenced in 1863 and was completed in October, 1864, but the line was so continuously interrupted that it was never really opened, and, in fact, the Baghdad to Teheran section has never been used for international telegraph traffic with India.

The first telegraphic communication between Europe and India was effected on the completion of the Baghdad-Fao section of the Turkish line on January 27, 1865, just 63 years ago. It is pathetic to recall that Col. Patrick Stewart, to whose energy, perseverance and remarkable abilities the success of the project was mainly due, died at the early age of 33, in Constantinople, on January 16, 1865, a few days only before the completion of the connexion between Europe and India for which he had worked so strenuously.

In the month after the opening the number of messages exchanged was 62 only, but this number quickly increased, and in the December following 2,365 messages were exchanged, the charge for a telegram being £5 for 20 words or part of 20 words, while the average time of transit was 6 days 8 hours and 44 minutes. At this time a letter to Bombay took just over a month on the way, being carried by sea to Alexandria, across Egypt to Suez, and thence by sea to Bombay. In the same year efforts were made to transmit messages *via* the Russian lines, which had been extended through Tiflis to Teheran, but the service was found to be most difficult, the average time of transit being 17 days 5 hours and 5 minutes, while messages were so badly mutilated as to be unintelligible.

The delays to messages between England and India was the subject of universal complaint; a Parliamentary Select Committee on "East India Communications, including Telegraphs," sat and took evidence in 1866, and various proposals were made for the improvement of the telegraph service; alternative schemes were submitted and diplomatic representations made, but the difficulty was first solved by Messrs. Siemens and Company, who offered to construct an independent double line of telegraph from London to Teheran provided that Her Majesty's Government gave them adequate support. They received this support, and Messrs. Siemens of London and Messrs. Siemens and Halske of Berlin were able to obtain the necessary concessions from Germany, Russia and Persia. An English company called the Indo-European Telegraph Company was formed to take over the concessions and work them, with the result that the combined Indo-European route, with the section London to Teheran worked by the Indo-European Telegraph Company, and the further section Teheran to Karachi *via* Bushire worked by the Indo-European Telegraph Department of the Government of India was opened for traffic on January 31, 1870. The average speed of messages was immediately increased, and we find in the year 1871 the average transit time by the Turkish route was 1 day 6 hours and 20 minutes and by the Indo route only 6 hours and 7 minutes.

When the Indo Company's line from England to Teheran appeared likely to mature it was anticipated that the new telegraph route to India would be largely patronised by the public, and that a line worked by English telegraph clerks throughout would, by greatly reducing delays and errors, cause a corresponding increase in the

number of messages forwarded. To meet this expected increase in traffic it was necessary to duplicate the line from Teheran to Karachi. Up to this time the departmental system consisted of one international wire from Teheran to Bushire, one cable from Bushire to Gwadar, and one cable and one land line from Gwadar to Karachi. After much negotiation with Persia and the local Chiefs the land line was extended from Gwadar to Jask in 1860, and in the same year a new cable was laid from Jask to Bushire, the first cable having in the previous year been moved from Mussendam to Jask for climatic reasons. It was not, however, found possible to add another wire for international use on the section Teheran to Bushire until the year 1874. Thus, when the Indo route was opened for traffic in January, 1870, there were two wires from London to Teheran, a single wire Teheran to Bushire, and a duplicate line of cables and land lines thence to Karachi.

In the meantime submarine telegraphy had made enormous strides, thanks chiefly to the genius of Lord Kelvin and the far-seeing enterprise of its commercial pioneers, amongst the foremost of whom was the late Sir John Pender. Under his auspices the British-Indian Submarine Telegraph Company, soon afterwards known as the Eastern Telegraph Company, completed a cable route from England to Bombay in 1870, a few months only after the completion of the Indo overland route.

Thus, in 1871 the three telegraph routes between England and India, the Turkish *via* Constantinople, the Indo-European *via* Germany, Russia and Persia, and the Eastern cable route to Bombay, were all in operation, and so continued, with, of course, occasional interruptions to the one or the other, till the outbreak of war in 1914.

We must now turn to the agreements which have been made with Persia under which the Department has erected and worked its telegraph lines in that land. The first convention was made in 1863, and by it the idea of the British erecting and working a line in Persia was entirely set aside. On the other hand, Persia undertook, on our providing the material at Persia's expense, to make and work a line for herself from Khaniqin to Bushire and to allow us, at a tariff to be fixed afterwards, to transmit our Indian messages by its means. The only intervention on our part provided for by the convention was the presence of one English officer for a limited period in Persia to advise as to the best method of construction. Unpromising as such a convention was, it was decided to take action on it in the hope that something more practical might be evolved. Major Murdoch Smith, of the Royal Engineers, with a staff of three officers and twelve non-commissioned officres of the same corps and six civilians, was sent out to construct the line. Their arrival in the country was not unnaturally viewed with the very strongest suspicion, and the whole country from the Shah downwards regarded them as most unwelcome guests. It would be an endless undertaking to attempt to describe the difficulty by which their task was surrounded. Success often seemed well-nigh hopeless, but, thanks to the tact and the zealous and loyal efforts of the widely-scattered staff, suspicion gradually gave way to trust and enmity to friendship. The position, which was a very unsatisfactory one, was much improved by a convention made in 1865, under which a second wire was to be erected, the materials being provided as before at the cost of Persia, but now the erection was to be in charge of a British engineer and staff paid for from British funds. It was also stipulated that a British staff should be engaged to organise the working of the line and to give instructions to the Persians in telegraphy. At the end of five years this British staff was to be withdrawn and the line handed over to Persia. The second wire was to be used solely for international messages sent in a European language. It was under this convention that the Department was working the Bushire-Teheran line when the Indo route was opened in 1870, but the single international wire which was contemplated was soon found to be inadequate to cope with the traffic and a further convention was entered into in 1872 for the erection of another wire. This latter convention was to remain in force up to 1895, but it has been from time to time extended, and, as now agreed, it will remain in force up to January 1, 1945. Under it the line from Teheran to Bushire, which was erected partly at the cost of Persia who paid for the material and partly at the cost of India who paid the salaries of the British establishment and other expenses, was to be maintained wholly at the charge of British or rather Indian revenues. One wire is given over entirely to Persia for working local traffic, that is, messages originating in one station in Persia and terminating at another, the two remaining wires being worked by the Department for international traffic. A certain amount of local traffic is also carried on these two international wires, but the revenue derived from it is handed over to Persia. Receipts for international traffic originating or terminating in Persia are shared between Persia and the Department, Persia receiving the larger share, while for international messages passing through Persia a fixed royalty is paid to the Persian Government. For a comparatively small initial outlay, therefore, Persia is in possession of an efficient telegraph line over 700 miles in length, maintained entirely free of expense to her and from which she derives all the revenue accruing from local traffic and a very considerable share of the revenue from international traffic. On the other hand, India has, so long as the convention lasts, control of an essential link in the Indo route from England to India.

The Gwadar-Jask line which runs through Persian territory was erected under a convention concluded in 1868 permitting the British Government to erect and work the line at their own expense in return for an annual payment of Tomans 3,000, equal to-day to about £600. This convention will also expire on January 1, 1945.

Telegraphic communication between the British Minister at Teheran and the Consul-General at Meshed is afforded by the Persian line between those two places, but it proved so inefficient that in 1885, by agreement with the Shah, the maintenance of the line was undertaken by the Department. India agreed to contribute Rs.20,000 a year towards the cost of maintenance, but this sum, together with such sums as Persia contributed, was quite inadequate to do more than patch up the line, which was in a deplorable condition. In 1892 special grants were made by Persia and India and the late Mr. King-Wood was deputed to put the line in order, since which time it has proved efficient. The cost of maintenance is shared between Persian and Indian revenues. The line is worked by the Persians but the Department has the use of it for a short time daily for the transmission of State telegrams. The line from Meshed south to Seistan was before the War under the control of Russia.

Towards the end of the century the increase of traffic pointed to the need of an alternative line between Teheran and Karachi, and after considerable negotiation a convention was signed with Persia in 1901 for the construction of a three-wire line from Teheran through Yazd and Kerman to the Perso-Baluch frontier at Robat, to meet there a line constructed by the Indian Telegraph Department from Quetta. The line, which was constructed by the late Mr. King-Wood, was completed in 1907, and, a branch line from Nok Kundi on the Robat-Quetta line having also been completed to Karachi the same year, the desired alternative route became available for traffic.

By the terms of the convention this Central Persia line was constructed by the Department, the Government of India treating the cost as an advance to Persia. One wire is made over to Persia for local traffic and the other two are worked by the Department, mainly for international traffic. As in the case of the Teheran-Bushire line, Persia receives all the receipts accruing from local traffic and a major share of the terminal rate on international traffic originating or terminating in Persia, but has leased the revenue from international transit messages to the Department in exchange for an annual rental of 4 per cent. of the capital cost of the line. Thus Persia obtained without any cost to herself a thoroughly good telegraph line almost 800 miles in length, passing right through the centre of her country, one wire of which is entirely for her own use for local internal traffic.

There was one further work undertaken by the Department in Persia before the War, and that was the reconstruction of the lines in Arabistan; the lines running westwards from Bushire to Muhammarah, Shuster and Dizful. These lines had fallen into such disrepair as to be practically unworkable, and an agreement was made in 1913 under which the British Government advanced the money needed for their complete reconstruction, in return for which Persia agreed to a renewal up to January 1, 1945, of (*a*) the convention of 1868 for the Gwadar-Jask line, (*b*) the convention of 1872 for the Teheran-Bushire line, and (*c*) the convention of 1901 for the Central Persia line.

[*The concluding instalment of this paper and some account of the subsequent discussion will be included in our next issue.*—ED.]

TRAVELLERS IN ABYSSINIA.

We are officially informed that considerable inconvenience might be saved if travellers proceeding to Abyssinia would specify their luggage *in detail* when they apply in advance for the necessary passes for it. It frequently happens that the British Legation at Addis Ababa are obliged to over-estimate, in default of exact knowledge, when they submit applications to the Abyssinian Government and when they engage mule transport in advance for persons who have notified their intention of visiting the country.

Travellers applying to the British Minister at Addis Ababa for travel facilities should, therefore, state:—

(1) The number of pieces of their luggage;

(2) The number of rifles, shotguns and revolvers which they wish to import to Abyssinia;

(3) The amount of ammunition which they wish to import for these firearms.

No trouble is usually experienced in obtaining permits from the Abyssinian Government for firearms of all sorts in the case of officials, *bona-fide* sportsmen, and so forth.

BULGARIAN REFUGEES.

Under the auspices of the Near and Middle East Association, Mrs. L. Cobham will hold an "At Home" at 14, Hans Crescent, S.W.1, on February 14, from 3 p.m. to 7 p.m. There will be a sale of articles of all kinds, including Bulgarian Embroidery and Handicraft, the proceeds of which will be devoted to the aid of refugee women and children in Bulgaria. The sale, which will be open from 10 a.m. to 7 p.m., is under the patronage of the Bulgarian Minister.

The Fourth Destroyer Flotilla, Mediterranean Fleet, less the Venomous, but accompanied by the Sandhurst (destroyer depôt ship) and the Vampire, arrived at Valona at the beginning of last week and remained until January 30. The visit coincided with the celebration on January 23 of the third anniversary of the proclamation of the Albanian Republic. A series of receptions in honour of the British visitors was organised by the Albanian Government.

THE WEEK AT HOME

London, Tuesday Morning.

The Death of Haig.

The death of Earl Haig will have brought grief to millions of English-speaking peoples, who, both during the Great War and after it, came to look upon him as a personification of most of the virtues of our race—solid, upright, and unflinching. This sound bulwark of British common-sense and of British courage was of infinite value to the civilian population of Great Britain, particularly during the *tenebrae* of the spring of 1918, when Haig's historic words, used of the men who were the wall against the advancing Germans, struck home to the minds of the peoples of these islands as perhaps no other words uttered during the War struck home.

To those who had the privilege of serving under Haig in France, this sudden passing has caused almost a pang. Nor did the admiration which he then inspired die out in the after years, for his whole life after the Armistice was used in care of the cause of the ex-Service man. Whether he was a great soldier we do not know, but beyond doubt he was a noble Briton.

By-Elections and the Government.

It is a curious fact that although few people seem to be enamoured of the present Government, there is little sign in the country at large that any change is desired—any change, that is, into the only existing alternatives. At Northampton recently considerable encouragement was afforded to the Government, although a Labour candidate actually succeeded; and last week at Faversham the Conservative vote surpassed that given to Labour.

A certain amount is being made of the fact that the combined Labour-Liberal vote at Faversham exceeded that given to the winner and to Mr. Hailwood, the egregious forfeiter of £150 deposits. We are, however, now accustomed to the sight of the winners of elections walking in on a minority vote. The argument against the present electoral system would be more effective, moreover, if there were less difference between the two oppositions to the Conservative Party.

One notes with melancholy cynicism the explanations offered for the defeat of the Liberal candidate, who was, it is claimed, the best equipped of the four candidates, in the personal sense. It is stated that his main "planks" were "Peace and Economy"; and if only, it is suggested, he had substituted for these worn slogans the new healing policies of Liberalism—in relation to the land and other things—he would have done far better. The trouble is, however, that these new "healing policies" derive principally from Mr. Lloyd George, who has rent the Liberal Party far more effectively than could have been done from outside.

In the meantime, content and happy anticipation reign in the ranks of the Government.

Optimism Rampant.

In recent years the habit has grown up among the bankers of making, about this time of the year, optimistic speeches in regard to the national position. In former times the complaints from manufacturers and contractors that things were not actually so rosy as our financiers represented them to be, have more or less offset the comforting words of the "Big Five" and of various smaller fry; but this year the bankers' hopes have been officially echoed by the President of the Board of Trade himself.

According to him, in 1927, Great Britain enjoyed a net balance in trade of some £96,000,000. Sir Philip Cunliffe-Lister says, moreover, that this figure represents a conservative estimate. It is certainly good to know that the improvement during the last three years has been remarkable, and that now, instead of living on our foreign capital, we are augmenting it.

And yet if you ask some of the biggest commercial men in the country they will tell you that all this optimism is pure "bunk." They will want to know exactly in which markets our foreign trade is increasing, and they can tell you disconcerting tales of how it is that we can retain any foreign contracts at all in face of the increasing Continental competition.

It is difficult for one so little concerned with Banks and industries as myself to say which of the two views is correct. On the face of it, the bankers should be able to have a wider view of national energies than the purely commercial man, whose interests must to a certain extent be limited; but the ordinary man in the street will keep as his criterion the ability or the inability of the Chancellor of the Exchequer to reduce the income-tax and of the local authorities to reduce the rates and taxes.

Ochlocratic Emotion.

We had last week a rather typical example of the way in which the feelings of a mass of people can be played upon, or, as the text-books of political science might put it, the functioning of ochlocratic emotion. Three men had been condemned to be executed at Cardiff, though one of them in the time between the committing of the murder and the date fixed for the execution had gone mad. The murder was one upon which the jury at the time of the men's trial were absolutely agreed; indeed, all the legal authorities before whom the case went were agreed that the accused men were without doubt guilty.

But an agitation sprang up for the reprieve of the condemned men. The monster petition with which the modern democracies are familiar was drawn up; and, of course, thousands of signatures were obtained. Thereupon, a stout attempt to influence the Home Secretary was made. It failed; and the men were hanged last Friday.

There is little sign of health in such proceedings on the part of a great number of men and women. Sympathy with the condemned men one can understand, but that surely concerns their souls rather than their bodies. In the present state of education this working-up of the emotions is one of the easiest things to accomplish, and it is one of the gravest marks of the times. To reason little appeal is made. Everything is "stunted"; facts are unimaginably exaggerated; the drab is made dazzling. In a word, we are becoming Americanised.

That the Government should have stood firm against the popular clamour is good. There is really nobody who-

is not proud of British justice, at least when it is compared with any other humanly-administered justice; and the thinking portion of Britain's inhabitants is certainly with the Government in its upholding of the verdicts of its trusted Judges.

The Popularity of Tea.

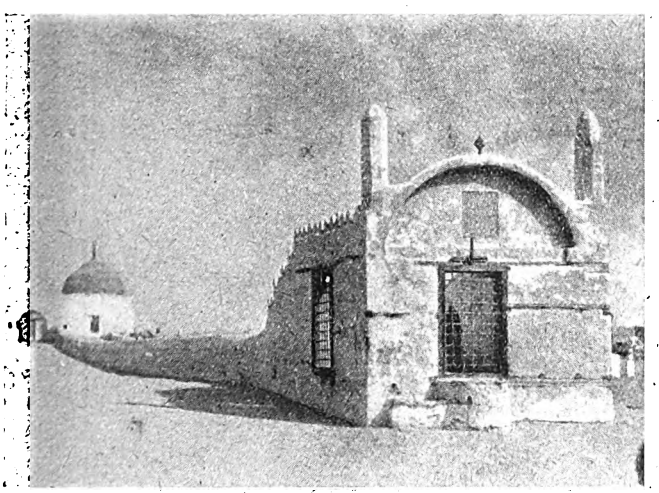
If there ever were a cause wholly lost, it is that of those who fain would dissuade Englishmen from drinking tea. The habit, which is, of course, a national one, has so increased that the East has not only met the West but in this respect has conquered its vitals. For though "tea is like the East he lives in," it has so insinuated itself upon the English palate that last year 416,000,000 lb. of tea were consumed in this country.

This is an enormous figure; 7,500,000 lb. more than last year, and over 14,000,000 lb. more than two years ago. It works out at an average of about nine pounds a head.

Whether this huge consumption of tea should be called one of the blessings of industrialism or one of the sure signs of our national decline, I must leave to readers to decide. Other countries (including America) are, I believe, amazed at our "tea-habits," but then, of course, in other countries (including America) there are so many different things to drink. Presumably it is chiefly men who have lately come to drink tea so plentifully, the apparent causes being either what they learned during the War or what they suffer through the Exchequer's taxation of more exciting potations.

ALTER EGO.

THE TOMB OF EVE AT JIDDA.



This tomb, which is 160 ft. long, is held to be the resting-place of Eve, "Mother of the World," as she is called in Arabian tradition. According to the Muslim legend, the body of Eve at her death was miraculously elongated. The chamber nearest the camera represents the head, and the domed structure in the background the navel of the Mother of the World. The name of the town itself is derived from this legend, Jidda being the Arabic for "grandmother." An old inscription visible in the front chamber (over the barred window) refers to the legend.

Two years ago the dome was removed in deference to Wahhabi prejudice against the erection of domes over tombs, and in December last, as our Jidda Correspondent stated in our issue last week, the whole structure was demolished by the Wahhabi authorities.

It is announced from Baghdad that on January 30 Shaikh Dhari al Mahmoud was found guilty by the High Court (consisting of two Iraqi Judges and one British Judge) as an accomplice in the murder of Colonel Leachman in August, 1920. The Court decided, however, to commute the sentence of hanging to one of penal servitude for life.

It is stated from Basrah that on January 27 Wahhabi forces of the Mutair tribe, under Shaikh ibn Ashwan, invaded the Sultanate of Kuwait and at Umm Rubyan (north-west of Jahrah) killed Kuwaiti tribesmen and stole camels. They were, however, pursued by Kuwaiti forces, who fell upon them at Al Riqai, which is just inside Najd, where there was severe fighting. It is reported that three members of the ruling house of As Sabah of Kuwait were among the slain, but the Wahhabis were defeated and had to abandon their plunder.

PERSONAL AND GENERAL

TO-DAY

February 2, 1928 (New Style).
January 20, 1928 (Old Style).
Shaaban 10, 1346, A.H., of the Muslim Calendar.
Shebat 11, 566, of the Jewish Calendar.

Count Léon Ostrorog has returned to London from the Continent.

Viscountess Wimborne joined the s.s. Rajputana at Marseilles on January 27 on her way to Egypt.

Viscountess Elibank will leave 187, St. James's Court on February 10 to join Viscount Elibank in Egypt.

Sir Hugh Seely sailed in the s.s. Rajputana from Marseilles on January 27 for Port Said.

Lord Illingworth has left for Egypt and Palestine and will not return till April.

Lady Robert Manners and Miss Betty Manners have left London for Egypt in the Rajputana.

Lady Chatterjee left London on January 29 for a few weeks' stay in the South of France.

Mr. and Mrs. E. Ridgill and Miss Ridgill left London on January 26 for Egypt, sailing in the P. and O. s.s. Rajputana from Marseilles.

Sir Ian Malcolm joined the s.s. Rajputana on January 27 at Marseilles to visit the Suez Canal. He will be absent from London for about six weeks.

Sir John and Lady Cargill left Glasgow last week for Egypt, joining the s.s. Rajputana at Marseilles on January 27. They will not return until the middle of March.

The Right Hon. Ian Macpherson, M.P., and Mrs. Macpherson, who are staying in Egypt, will remain abroad until the end of February.

Mr. William H. Taylor, Secretary in the United States Embassy in London, has been appointed Secretary in the Embassy in Constantinople.

The Hon. Dorothy Pickford is travelling in the Bibby liner Gloucestershire, which sailed from Liverpool on January 27 for Egypt and India.

Viscount and Viscountess Portman, who recently left London for the South of France on their way to Egypt, are not expected back until April.

Sir Alfred Mond, President of the Palestine Survey Commission, arrived in Jerusalem on January 30. After a few days in the capital, he is proceeding to Haifa and Baghdad.

Among those who sailed from London on January 27 in the P. and O. s.s. Comorin were Admiral Sir Alexander and Lady Duff, Sir William and Lady Thom, and the Hon. Mrs. Devereux, for Algiers; and Admiral the Hon. Sir E. Fitzherbert and the Hon. Mrs. Parker for Port Said.

INDIAN COMMERCE IN SESSION.

The mercantile community of India was very much in the public eye towards the end of the year. The ninth annual meeting of the Associated Chambers of Commerce took place at Calcutta on December 19 and 20; the fifth annual session of the Indian Industrial Congress was held at Madras on December 29 and 30; and the newly organised Federation of Chambers held its first annual meeting, also at Madras, on December 30. The Associated Chambers are those Chambers that have a membership which is mainly European, while the Federation is a body constituted on more or less similar lines but of Chambers the membership of which is Indian. It is all to the good that the trade of India should be well-organised, and that its organisations should publicly express their opinions on questions affecting their interests. In some respects it might have been more satisfactory if all the Chambers, whether Indian or European, could have been associated in one Federation, seeing that their interests are to such a large extent identical. But the existing arrangement appears to us to be preferable on the whole. A single Federation would have been a large and probably an unwieldy organisation which might have experienced great difficulty in arriving at unanimous conclusions on important questions; and it might thus have been a hindrance rather than an aid to real unity of action. It is unfortunate, of course, that the division must be on racial lines. But can this be avoided in India? And after all Indian commerce and European commerce are separate electorates in the system of government brought into existence by the Reforms scheme. The Associated Chambers are already permitted to recommend to the Governor-General the name of a representative for appointment to the Legislative Assembly. And we take it that they will urge before the Statutory Commission that they should in future be empowered to elect members to that House. Similarly the Indian Federation will almost certainly demand that the same privilege should be conferred upon it. From this point of view, therefore, it is not inconvenient that the European Chambers and the Indian Chambers should be separately federalised.

The Indian Industrial and Commercial Congress will, we understand, now sink its identity in the Federation into which it has been absorbed. Sir Ibrahim Rahimtulla, the President of the Congress, opened the session with a speech in which he expressed extreme dissatisfaction with practically every aspect of the commercial and industrial policy of the Government. The resolutions, which were subsequently debated and adopted were likewise condemnatory of the Government. One of them demanded the re-establishment of the sixteen-penny rupee; another expressed profound dissatisfaction at the negligible protection "reluctantly doled out" by the Government to the cotton industry; and another demanded the reservation of the coasting trade of India to Indian-owned ships, and the development of the shipbuilding industry by liberal State aid. The Congress also strayed into politics, and condemned the Simon Commission, calling upon all Indian Chambers to boycott it. In another resolution the Indianisation of the commercial departments of the Government was called for. Extended representation for commercial and industrial bodies in the central and provincial legislatures was also demanded. Coming to more strictly commercial questions the Congress pressed for the construction of a railway line between India and Burma; and for better telegraphic communication between India and Burma. It likewise asked the Government of India to introduce a Bill to provide for the registration of trade marks in India. It also protested against the abrupt postponement by Government of the Reserve Bank Bill; and on the subject of Indian banking generally it asked for an inquiry to be instituted with the object of fostering and developing indigenous banking. The foregoing is not a complete list of the resolutions which were adopted by the Congress. It is, however, sufficiently comprehensive to show that several useful recommendations were put forward. But such unrestrained condemnation of the Government and of Great Britain as was indulged in by some of the speakers seems to us to be regrettable. Sir Ibrahim Rahimtulla's presidential address was in fact little more than a long catalogue of grievances, complaints and charges of exploitation and inefficiency against the Government. So black indeed was the picture that it is difficult to believe that any Government can be so ceaselessly and so uniformly in the wrong regarding all commercial and industrial matters as the Government of India were represented to be. And on the other hand it is equally difficult to believe that any community of business men can be so uniformly in the right regarding such matters as the Indian mercantile community was represented to be. Indian politicians are accustomed to speak in an unrestrained and irresponsible fashion. But it seems to be great pity that Indian commercial and industrial leaders should follow their example. It is not by such methods that the commerce and industry of a country can be developed.

The Associated Chambers restricted themselves, at their annual meeting, to business matters. The Simon Commission was mentioned, it is true, but only to enable the President to say that the Chambers saw no reason to commit themselves to any opinion as to its composition. On several other questions the Chambers criticised the Government, and particularly in respect of the manner in which the recent strike on the Bengal-Nagpur Railway had been settled. But unrestricted fault finding was not a part of the programme of the meeting. Commercial and industrial questions belong in India to the sphere of the Central Government rather than to that of the Provincial Governments. Sir Stanley Jackson, Governor of Bengal, who opened the meeting was therefore scarcely in a position to deal with many of such questions. But he pointed out that the Provincial Governments are deeply interested in them, and are at great pains to formulate opinions concerning them. Among other matters of interest he made the satisfactory statement that the relations between capital and labour in the province have markedly improved since 1921 when serious difficulties

Digitized by Google

occurred. He also emphasised the claims of Bengal to a larger share in the revenue derived from its industrial and commercial development.

The resolutions adopted by the meeting were mainly of the usual type with no novel or striking features. But the series dealing with the income-tax are deserving of attention. Of these the first condemned the proposal which the Indian Taxation Inquiry Committee made for the regrading of the tax, and for the reduction of the limit of the supertax. In the next resolution the Chambers dissented from the Inquiry Committee's view on the subject of secrecy. The Inquiry Committee recommended that the provisions of the existing Income-Tax Law regarding secrecy should be so amended as to permit income-tax officers to issue to local authorities lists of persons assessable to local profession taxes. Against any such amendment of the law the meeting strongly protested. But in another resolution it agreed with the Inquiry Committee as regards the difficult matter of the levy of tax on the profits of non-resident principals. Others of the series of income-tax resolutions dealt with the question of refunds, the levy of tax on Provident Funds, and the proposed legislation against the so-called one man companies. Another feature of the annual meeting of the Associated Chambers is the presence at it of the financial and commercial members of the Viceroy's Executive Council. At the meeting in December last Sir Bhupendra Nath Mitra attended as officiating Finance Member, and Sir George Rainy as Commerce Member. Both these gentlemen took an active part in the debates, setting forth the views of the Government on the various issues.

CURRENT TOPICS.

"Father India."

In a recent publication bearing the above title Mr. C. S. Ranga Iyer admittedly seeks to counteract the effect of Miss Katherine Mayo's "Mother India." For such a counterblast to be fully effective, it must be at least equal in style and interest to the original volume, and, in the course of impugning the accuracy of the latter, must establish its own claim to fairness and impartiality. Judged by these standards, Mr. Ranga Iyer's book scarcely attains its object. It is true that he correctly stresses the fact, now generally admitted, that Miss Mayo, while painfully correct in many of her details, was inaccurate in her generalisations, and that she did not sufficiently allow for the soundness of ordinary village life in India. The people of India is predominantly agricultural, and the social evils on which Miss Mayo's condemnation is based, naturally have less harmful effect in the villages than in the large towns. But Mr. Ranga Iyer's reply is largely in the form of a *tu quoque*, based on the researches of a social reformer into the morals of an American High School. The dismal story elicited by these researches may be correct. But the frailties found or alleged to exist would be reprobated by all decent people in America, and by none more than the parents of the young people concerned. The real gravamen of Miss Mayo's charges, on the other hand, lies in the fact that the practices of which she most complains are supported, if not enjoined, by the teachings of orthodoxy in India.

India, moreover, is so vast a country that even an orthodox Brahman like Mr. Ranga Iyer can hardly be conversant with the practices and customs of all parts of it, and in some cases his denials of Miss Mayo's statements seem based only on the facts alleged not having come within his own experience. A less pleasing feature of Mr. Ranga Iyer's book is the suggestion more than once hinted, though never plainly asserted, that Miss Mayo's book is propaganda, supported, if not originated, by British officials. The honesty of Miss Mayo's book, whatever its defects, is transparent, and neither Mr. Iyer nor any other of her assailants has been able to bring forward any evidence in support of the allegations which they would fain have others believe.

On the political side, Mr. Ranga Iyer's remarks on the tranquillity of the communal situation and his eulogy of the Maharaja of Nabha, prevent any great confidence being placed in his impartiality. The book is, in fact, a political effort, and, effective though it is in some respects, it fails to carry conviction. A more pleasing result of the agitation caused by Miss Mayo's book has been the creation of an effort by the Women's Societies of England to improve the social condition of the women of India. This is a movement which should have the support of all parties, since neither Mr. Iyer nor indeed any but a few of the most orthodox attempt to defend the social evils indicated, possibly with some exaggeration, by Miss Mayo. We feel sure that no outcome of the discussion could be more pleasing to Miss Mayo herself, whose honesty, as we before stated, cannot with any reason be doubted.

The Meston Settlement.

At a meeting of the Bengal Legislative Council just before Christmas a private member proposed that the Government of India should be asked to allow the proceeds of the export duty on jute to be utilised for agricultural and sanitary improvements in Bengal. This, of course, raised the question of the Meston Setttlement against which the Government of Bengal have repeatedly protested. They have urged more than once that the Settlement ought to be completely revised; and they now propose to approach the Government of India again regarding it. Before the introduction of the Reforms Scheme the principal sources of revenue in India were classified into imperial (or central), provincial and divided. The divided heads were abolished by the Reforms Scheme; and every individual source of revenue became—with certain small exceptions—either central or provincial. It was allocated, that is to say, to either the Central Government or the Provincial Governments. Under the old system the chief divided heads of revenue, so far as they concern Bengal, were income-tax, excise and stamps. The customs duties were central, and the Meston Committee did not recommend that they should become provincial. The Committee's reason was that the duties cannot be traced back to source; and that it would be impossible to make a proper allocation as between the provinces. The Government of Bengal contended that this did not apply to the export duty on jute, seeing that the fibre is not grown outside Bengal. At the same time they did not ask that the duty should be made over to them. Their point was that it encroaches on the taxable capacity of the province. If there were no export duty jute might be taxed by the Provincial Government by way of an excise duty, and so provincial revenues might be increased. The duty was, therefore, the Government of Bengal urged, a factor which ought to be taken into account when the final financial settlement for the province was arrived at. The Meston Committee did not, however, accept this view. The matter is one of moment to Bengal seeing that the proceeds of the duty now aggregate no less than Rs.$3\frac{3}{4}$ crores yearly. Furthermore, the land revenue in Bengal cannot be increased because of the Permanent Settlement. And in view of this inelasticity it certainly seems to be inequitable that the principal heads of revenue raised in the province such as income-tax and customs duties should be excluded from provincial assets. At the same time we agree with the Government of Bengal that it would be a mistake for them to commit themselves to any exact method by which the revision of the Settlement should be affected. Whether the province should be given a share of the income-tax collections, or should share the customs duties, or other sources of revenue is obviously a matter for inquiry. But that a revision of the Settlement will have to be undertaken appears to be more or less established. Seeing that not only the Government of Bengal, but most of the other local governments also have grievances against it. Presumably the Simon Commission will take the matter in hand.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 12.

Mahatma Gandhi and the Congress.

Little did I suspect when, last week, I quoted a correspondent as reporting that it was Mahatma Gandhi who pulled the strings of the last meeting of the National Congress, that I should have this week to quote words of the Mahatma's own in which he positively scarifies the Congress spirits. "At present we have almost sunk to the level of a schoolboys' debating society," he declares in an article in *Young India,* and he goes on, *l'enfant terrible* that he is, to castigate the delegates for irresponsible talk.

"Though I was not able to attend any Committee meetings," he says, "I could not fail to perceive that irresponsible talk and work were the order of the day. Indiscipline was not a rare feature. Resolutions involving great consequences were sprung upon the Subjects Committee, and readily accepted by that august body without much thought or discussion. The Independence resolution that was rejected last year was passed almost without opposition. I know that its wording was harmless, but in my opinion it was hastily conceived and thoughtlessly passed. The boycott of British goods resolution was passed with an equally light heart."

Mr. Srinivasa Iyengar.

Two days after the news of the Mahatma's article reached Calcutta the *Englishman* published a statement from Mr. Srinivasa Iyengar, Deputy Leader of the Congress Party in the Legislative Assembly. The statement may have been written before the writer had received his copy of *Young India.* It is difficult to believe that Mr. Iyengar had read Mr. Gandhi's scarification, for his statement is just that irresponsible talk upon which Mr. Gandhi puts his pitiless finger. Irresponsible is what he calls it: fundamentally meaningless would be a better description of it.

"There is far more unity in the country to-day," we were given to read, "than there was at the time of the non-co-operation movement, and the political boycott we are adopting, as it steers clear of the complicated and chequered histories of co-operation and non-co-operation, is bound to succeed. Fortunately, this political boycott has the wonderful background of complete independence and Hindu-Muslim solidarity. We have been so long restraining ourselves and the youth of the country from declaring that which for a long time has appeared to me and to others as the only self-respecting and true Swaraj for which we should strive, suffer, and sacrifice. Still prudential considerations and some lingering faith in the British Government kept the Congress and the country from declaring complete independence as our national goal."

In what sense, one might ask, can the political boycott of to-day be said to "steer clear of the complicated and chequered histories of co-operation and non-co-operation"? In no sense; just in no sense whatever. These men have not first meanings, which better or worse they clothe in words. They begin with words; they end with them too. It is not, obviously, a thing that lends itself to clear proof. One reaches the fact intuitively.

Reserve Bank.

As a part of the proceedings of the Economic Conference at Lucknow, held this week, Dr. Findlay Shirras lectured on the principles of a Central Bank with special reference to the proposed Reserve Bank of India. From the brief report which is all I have so far seen, while it is clear that Dr. Shirras laid all the stress that should be laid on the need to keep politics out of the question, no attention, or not enough, was called to the need to keep the amateur out of it also. A politician, elected a director of the bank, would almost of necessity have to drop his politics at the door. An amateur would of necessity take his amateurishness inside with him. I am far more afraid of gross incompetence than of any political twist or bias. When it is a question of raising or lowering the discount rate, most political questions fall away of themselves and of their utter irrelevance.

The mere fact that Dr. Shirras having spoken sets one counting the handful of men in India competent to guide public opinion in the matter, and then one realises how small a handful it is. The danger lies there; that India will find herself committed to the wrong course from having had no one in the country to go to for advice. If the country is to be saved, it must be through the watchfulness of London. In India there is Dr. Shirras and Sir Jehangir Coyajee, the recipient of one of the New Year knighthoods; but who else is there who has made a life study of banking economics?

Sir Hubert Carr.

Calcutta has lost Sir Hubert Carr, who is retiring after putting in thirty years' work in India, and sailed on Monday in the Morvada. Most Englishmen are allowed to leave their little corner of India without much public notice being taken of the fact that their time to go has come; but Sir Hubert was a man who could not be allowed to go without a great deal of notice being taken. His public work has been distinguished by an unusual disinterestedness and clearness of judgment. It has been felt that he would lead no one anywhere where it was not safe to be led, and we have all looked up to him as to an elder brother. Even older men (he is only fifty years of age) have so regarded him.

Sir William Marris.

Another figure that will be greatly missed is that of Sir William Marris, the retiring Governor of the United Provinces. He first came very prominently to the front during the Montagu-Chelmsford inquiry into the working of India's political institutions, and it is well known that he wrote a very considerable part of the report. Sir William belongs to that small school of Indian Civilians who have known how to combine great power and success as administrators with pure scholarship. His verse translations of Horace and Catullus, if not well known in India, are appreciated by those who do know them.

Applied Science.

There is a comfort in turning one's eyes from the insane welter of Indian politics to the spectacle of the sound work that is being done by the handful of scientific men in the country. That a new industry of vast importance to Bengal is in sight was the belief declared by Professor B. K. Sen, when addressing the Science Congress on the problem of power alcohol. Experiments with gangwa sawdust, he said, showed that from one ton of the product about forty gallons of absolute alcohol could be obtained compared with half the quantity in other countries. Water hyacinth had also been found to yield a high proportion of spirit. The task of eradicating the pest would obviously be greatly facilitated if the weed could be gathered and treated so as to yield a commercial profit. Whether it should then be a crop to cultivate, within strict bounds, of course, would be for the future to show.

Child Marriage in India.

Lady Barton, the wife of the Resident, addressing the Women's Association for Educational Advancement in Hyderabad, said: "This Conference . . . is a proof that the women of India have begun to think and to feel a desire to voice their thoughts. Perhaps few of you realise how powerful public opinion may become. You may say public opinion cannot make laws. I will not only contradict that, but will go a great deal further and say that public opinion may transcend laws. The legal age of marriage in England is fourteen years for males and twelve years for females, and yet in all my life, and I have been in many parts of England and I worked for a time in the poorest sums of . . . Liverpool, never have I come across such child marriages." The moral for India to draw, Lady Barton thought, was plain, and indeed it is.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, January 14.

The Reserve Bank Bill.

The Assembly begins its session this year with a very heavy agenda which includes the usual protracted discussions on the budget. Speculation in financial circles seems to indicate that there will be another surplus the greater portion of which, however, will go towards the final abolition of the provincial contributions and meeting the reduction in Customs revenue involved by the freeing of mill machinery and stores from import duty. The first big item on the agenda is the Reserve Bank Bill which has been published in the *Gazette of India* so as to give ample opportunity for the study of the revised proposals before the session of the Legislature meets. Sir Basil Blackett in the Statement of Objects and Reasons declares that it has been found necessary to frame an entirely new bill to replace the old one. This does not mean, however, that the contentious clauses have in any way been modified and that a safe passage is assured for the Bill I shall give very briefly the salient clauses in the Bill. The scheme is that of a shareholders' Bank in which is embodied the essence of what opinion in the Assembly maintained was essential in the interests of India as a whole. In furtherance of this object it has been decided that the Imperial Bank should not have the option of subscribing 30 per cent. of the shares and in order that full representation should be secured for all interests preference is to be given to applications for single shares of Rs.100. The maximum shares held by one person, jointly or individually, should not exceed the value of Rs.20,000 and whatever the value of the shares held he shall have only one vote. The maximum dividend is 5 per cent. as long as the net surplus after the payment of the dividend does not exceed four crores, and it is so arranged that the payment in no circumstances shall exceed 7 per cent.

Head Office in Bombay.

A clause which will be received with satisfaction in Bombay is that providing that the head office of the Bank should be located in that city. It is a recognition of the increasing importance of the biggest seaport in India towards which the financial centre of the country is gradually gravitating. Branches may be opened at Calcutta, Madras, Rangoon and Delhi. Definite circles are assigned for each of the centres which will maintain a register of shareholders. The territories of Indian Princes will be included in the Delhi register. In the apportionment of shares Bombay and Calcutta come first with Rs.150 lakhs each, Delhi next with 120 lakhs and Madras and Rangoon 40 lakhs each. Should a portion of the shares in a centre be unallotted it can be transferred to another or purchased by the Government of India and disposed of as soon as possible. The shareholders of the five registers will elect a total number of 92 delegates to form an electoral college for the election of eleven directors of which Bombay, Calcutta and Delhi will have three each and Madras and Rangoon one each. This idea of an electoral college, it will be remembered, was suggested by the leader of the Congress party in the Assembly. There will be thirteen other directors of whom one will represent Government without the power to vote and the rest will represent the staff of the Bank and the commercial and agricultural interests in the country. As regards qualification for the directorship it is laid down that no person who is not or has not at some time been actively engaged in agriculture, commerce, finance or industry can be a director. A contentious clause on which the previous Bill was wrecked is that disqualifying members of the Legislatures. It runs: "The election or appointment as director of any person who is a member of the Indian Legislature shall be void, unless within one month of the date of his election or appointment he ceases to be such member, and if any director is elected or nominated as member of any such Legislature he shall cease to be director as from the date of such election or nomination." This issue was fought to the bitter end in the Assembly and Government were eventually defeated and there is no reason to suppose that the Legislature will now be in a mood to pass such a self-denying ordinance. There is, however, a chance of the Congress refusing to vote on the issue or to abstain from attending the Assembly as a protest against the composition of the Royal Commission, in which case the passage of the Bill would appear to be assured.

The Outlook.

The original share capital of the Bank will be five crores of rupees, consisting of shares of Rs.100 each. Another clause which goes beyond the original provisions of the Bill is the one relating to the note issue. It is proposed to give the Bank the sole right of note-issue for a period of 25 years in the first instance and to provide for renewal as recommended in the Royal Commission's report. Provision is made for submission of accounts to the Governor-General-in-Council and for their regular audit with special audits at the discretion of the Governor-General.

As already stated the fate of the Bill depends largely on the participation or otherwise of the Congress party in the proceedings of the next session of the Assembly. On the other hand it is generally recognised that Sir Basil Blackett is actuated by a sincere desire to place Indian currency policy on a footing independent of the Secretary of State and the Viceroy and it is realised that this will be the last occasion on which he will be present to sponsor the Bill before the Assembly. There seems therefore to be a favourable atmosphere which, if the measure is handled with Sir Blackett's usual skill and tact, should ensure the safe passage of the Bill.

Rajahs and Romance.

Turning to lighter topics, Bombay has during the last week been the centre of sensation of a kind which is not usual even for India. No less than three members of ruling families have appeared in the limelight in rapid and bewildering succession. The first was the heir-apparent of the State of Dewas (Senior) who fled from his State for fear, it was stated, of his life. He sought refuge in Kolhapur where his mother, the Akkasaheb, received him with solicitude. All attempts to bring about a reconciliation between the panic-stricken heir and his father—who by the way quarrelled with the Akkasaheb, his first wife, some time ago—proved utterly useless and the Prince came to Bombay where the intervention of friends brought about the reconciliation which his mother was unable to accomplish. Scarcely had the Prince of Dewas returned to his father's roof, than Calcutta came out with the sensational news that the Rajah of Bhajang, the son-in-law of the Prime Minister of Nepal who is at Calcutta just now, was suddenly spirited away and that the police had been unable to fin dany trace of him. The Raja, it was expressly stated, was a man of sober habits and very learned; he was fifty years old and abhored frivolous pursuits. The mystery was suddenly solved by the announcement that the Rajah had fled to Bombay but the exact purpose of his hasty visit to this city was obscure. All that is known is that he is somewhere in Bombay.

The ex-Maharajah of Indore.

The third sensation of the week is the latest achievement of the ex-Maharajah of Indore who provided Bombay with one of the biggest sensations in the shape of the Bawla murder. His Highness has provided yet another now. He has decided to marry an American heiress of remarkable though vague accomplishments—only this time it is with the lady's consent. He first intended to convert her to Hinduism but the Hindu missionary society is reported to have turned the proposal down and the Maharajah and his bride-to-be are waiting at Colombo to sound the Hindu community there and, in case they too refuse, to seek refuge on the Continent where the ex-Maharajah expects a better reception.

HENRY DEROZIO. 1809-1831.

The memory of Henry Derozio, teacher, journalist, poet, free-thinker, is still cherished by the community of which he was a member. He was born in Calcutta in 1809, and he died there at the early age of twenty-two. Calcutta is a city of public monuments to departed worthies, but it has no monument to Derozio. The Anglo-Indians, or East Indians as they were formerly styled, do, however, observe the anniversary of his death; and on the 23rd December last—the ninety-sixth anniversary—members of the community met in considerable numbers at his grave in the Park Street cemetery. Henry Louis Vivian Derozio was the son of an East Indian of Portuguese descent who was employed as an assistant in a Calcutta firm of merchants. His education was only such as was obtainable in that city at the time. A Scotsman named Drummond—a dominie of the old type—kept a private school to which young Derozio was sent when he was six years old. Drummond is reported to have been something of a free-thinker in religious matters—a disciple of David Hume. But he seems to have been a scholar, and a capable teacher of a somewhat unusual type. Derozio at any rate had only a slender acquaintance with ordinary educational subjects, such as mathematics and classics, when he left the school at the early age of fourteen. But quickened by Drummond's influence and guidance he then became an assiduous student of the English poets, dramatists, novelists and philosophers; and even before he had reached his twentieth year he had acquired an exceptionally extensive acquaintance with English thought and literature. For two years after leaving Drummond's school he worked as a clerk in the office where his father was an assistant. At sixteen he went to stay with an uncle, an indigo planter at Bhaqulpore, where he remained for about a year. It was at this period that he turned his attention seriously to poetry. He sent a number of poems to Calcutta to Dr. John Grant, the editor of the *India Gazette*. Grant thought well of them, and, with his help, Derozio published them in 1827, returning to Calcutta from Bhaqulpore for the purpose. The volume was a success and Derozio, abandoning indigo-planting, at once became assistant editor of the *India Gazette*, editor of the *Calcutta Literary Gazette*, and a contributor to several other local periodicals. At the same time he also joined the staff of the Hindu College as an assistant master in the Senior department.

The Hindu College had been established some ten years previously by the united efforts of David Hare and Raja Ram Mohan Roy. Hare was an English watchmaker who, after retiring from business in Calcutta in 1816, determined to devote the rest of his life to "the education and moral improvement of the natives of Bengal." Raja Ram Mohan Roy, the great Hindu reformer, was animated by the same spirit; and the two jointly founded the Hindu College for "the tuition of the sons of respectable Hindoos in the English and Indian languages, and in the literature and science of Europe and Asia." To this institution Derozio, at the age of nineteen, was appointed as a teacher of English literature and history. He held the appointment for about three years, during which period he appears to have gained a remarkable influence over the more thoughtful of the Hindu students. He lectured on, and gave readings in, literature, philosophy and kindred subjects; and he established a debating society—an Academic Association as it was styled—at the meetings of which the boys debated public questions of all kinds. Religious questions were not excluded, and after a time the students began to cast doubts on the principles of the Hindu religion. The attention of the whole student community was attracted and other debating societies were established apart from Derozio and the College, and newspapers advocating all manner of views on religious matters were founded. Derozio, who was not a professing Christian, was accused of being an atheist; and the Managers of the College soon became alarmed. It was a time when, as has been rightly said, the new wine of Western learning was being poured into the old bottles of Hinduism. In May, 1830, the Scottish missionary, Alexander Duff, who afterwards became so deservedly famous, landed in Calcutta. His mission was to convert high-caste Hindus to Christianity; and, following on the efforts of the Baptists, Carey, Marshman and Ward, he pursued it with extraordinary eloquence and enthusiasm. He, with other missionaries, lectured on natural and revealed religion to young Hindus in his house which was nearly opposite the Hindu College. The Managers of the College then prohibited the boys from attending any meetings where religious or political discussions were held. Against this order there was a protest by the Calcutta newspapers, and there appears to have been some public excitement. The Managers then took decisive measures against Derozio. Those of them who were Hindus were alarmed at the consequences of his teaching. They called a meeting to consider "the necessity of checking the growing evil, and the public alarm arising from the very unwarranted arrangements and misconduct of a certain teacher to whom a great many children have been trusted, who it appears has materially injured their morals and introduced some strange system the tendency of which is destructive to their moral character and to the peace of society." The meeting was held, and it resulted in the dismissal of Derozio, six of the seven Hindu managers favouring that course. The two European managers—David Hare and Horace Hayman Wilson—did not vote. In the course of correspondence which subsequently passed between Wilson and Derozio the latter indignantly denied the charges brought against him.

Derozio was dismissed from the College in April, 1831, and he died on the 23rd December of that year. During the intervening months he worked as a journalist establishing a newspaper styled "The East Indian," which he intended to be the recognised organ of his community. He also took a prominent part in promoting the second of the two petitions that the East Indians presented at that time to Parliament. The first of these petitions was presented in 1830, and it prayed for the removal of a number of disabilities under which the community laboured. The more important of these had reference to the legal position of East Indians outside the limited jurisdiction of the Supreme Court at Calcutta. Within that jurisdiction they were subject to the civil law of England; but outside it they were beyond the pale of all civil law whether British, Hindu or Muhammadan. The Muhammadan criminal law was applicable to them outside the jurisdiction of the Supreme Court. To this also they objected on the ground that the law was intolerant in spirit, that its provisions were needlessly severe, and that it was altogether incongruous with their religious belief and social condition. The other grievances enumerated in the petition referred mainly to the exclusion of East Indians from the public services. As Parliament had not taken action on the petition a further move was made in 1831, when Derozio was instrumental in framing the second petition which was in due course submitted to Parliament. It may be noted here that the movement was not altogether without result; for, in 1832, when the East India Company was granted a new charter, some at any rate of the grievances were removed.

The autumn of 1831 was a particularly unhealthy season in Calcutta, and on the 17th December Derozio was attacked with cholera. Six days later he died. His career was extraordinary considering that even at the time of his death he was little more than a boy. Into the few years of his working life he had crowded an enormous volume of work. He had published a book of poems which had attracted favourable notice not only in India but even in England. He had edited a newspaper, and had contributed to many other journals in addition. He had lectured and taught on an extensive scale, and had

Digitized by Google

exercised over his students an influence which was admittedly remarkable. Indeed, in the opinion of some authorities, for instance, Lord Ronaldshay, to him must be attributed—so far as such a movement can be attributed to persons—the wave of scepticism which subsequently overtook the Bengali student community. That a boy of twenty who had left school when he was fourteen should be able to take an effective part in a movement of this description is, of course, of itself evidence of exceptional talent. And it is clear that Derozio was regarded by his contemporaries as an altogether exceptional youth. For instance, the *Government Gazette* in referring to him after his death, spoke of his literary works as evincing such vigour of thought and originality of conception as to occasion surprise when his limited opportunities were considered. Regarding his dismissal from the Hindu College the *Gazette* said that the consciousness of original powers is apt to lead a youth into some imprudence. But that in his case even if his speculations were not always conclusive, or his inferences legitimate, his moral character was irreproachable, and his conduct as a son, a brother, a friend, and a member of society such as to reflect credit on his memory.

THE BENGALI LANGUAGE.

"Bengali Self-taught," by Dr. S. K. Chatterji, a professor of Indian Linguists and Phonetics in the University of Calcutta, is a useful manual of the Bengali language. It is one of Messrs. E. Marlborough and Co.'s "Self-Taught Series," with classified vocabularies, an outline of the grammar, conversational sentences and phrases, and phonetic pronunciation. It also contains much other useful information for the help and guidance of the student. Bengali is not, of course, a language which is widely known in this country, although it is taught at Oxford, Cambridge and London Universities. But Dr. Chatterji is justified in claiming that it is the most important of the languages of India except Hindustani. In the province of Bengal it is spoken by forty-nine millions of people or thereabouts, and also by considerable numbers in the contiguous provinces of Assam and Bihar and Orissa. Calcutta is the intellectual centre of Bengal, and the speech employed in the book is that of the educated Bengalis of Calcutta. Bengali has not always occupied the high position that it holds to-day. Indeed, it was looked upon as being not much more than a dialect until about the middle of the nineteenth century or even later. Sanskrit was the language of the cultured. An interesting instance of how Bengali was regarded by the educated class even as late as 1845 is given by Lord Ronaldshay in his book "The Heart of Aryâvartar." At a meeting held in Calcutta in that year to commemorate the life of David Hare, one of the speakers spoke in Bengali. This proceeding was warmly approved by another speaker, who said that it was the fashion among his fellow Bengalis to decry their own language. This was, however, a prejudice which was wearing off, and he prophesied that the necessity and importance of cultivating Bengali would ere long be recognised by all. The prediction has been amply fulfilled, and Bengali is able to-day to boast of a larger literature than any of the other languages of modern India.

This literature is mainly the product of the last sixty or seventy years, during which period the language has been moulded by cultivated Bengalis into a medium fit for the imparting of modern learning. A writer who played a decisive part in this work was the celebrated novelist, Bankim Chandra Chatterji. He was followed by many others who used Bengali, some for imaginative works in prose or poetry and others for all kinds of literary and scientific treatises. The influence of the vernacular Press also must not be overlooked, for Bengali journalism has without doubt materially aided in the task of fashioning the modern Bengali language.

NEWS IN BRIEF.

All the sluice gates for the Sukkur Barrage, on the River Indus, will be made of British material, by British labour at Ipswich, by Messrs. Ransomes and Rapier, Ltd.

The order under which the Y.M.C.A. in Bombay was placed out of bounds for the troops has been withdrawn.

A protracted case of alleged defamation was concluded in Bombay on January 27, when the Presidency Magistrate acquitted the well-known pleader and member of the Legislature, Mr. K. F. Nariman, on a charge of libelling Mr. T. Harvey, Superintending Engineer, of the Bombay Development Department, in charge of the Back Bay Reclamation works.

As the result of a judicial inquiry the Bengal Government has dismissed Mr. S. C. Gupta, sub-deputy magistrate at Alipore. During a trial in October, 1926, it was alleged that Mr. Gupta had endeavoured to establish friendly relations with the defendant and his wife.

The India Office states that the Secretary of State for India proposes shortly to make a certain number of appointments to permanent commissions in His Majesty's Indian Medical Service. Medical men who desire to be considered for appointment should apply to the Military Department of the India Office.

Following the formation of similar organisations at Delhi, Bombay and Karachi, the Bengal Flying Club was officially inaugurated at a meeting convened for the purpose in December at Calcutta. Mr. Justice Costello was in the chair and the large and representative gathering included Sir Victor Sassoon, Bart., and Major T. S. Impey, Chairman and Secretary, respectively, of the new Central Aero Club of India; Colonel Shelmerdine, Director of Civil Aviation in India; Sir R. N. Mookerjee, Mr. Justice C. C. Ghose, Sir B. L. Mitter, Advocate-General of Bengal, Mr. H. A. Sams, Director-General of Posts and Telegraphs, Mr. P. H. Browne, and Mr. Arthur Moore.

After the Chairman and Sir Victor Sassoon had addressed the meeting a resolution was adopted authorising the provisional committee to proceed with the registration of the Club, which is to be run on the lines of a country club, and not merely confined to flying. The following were elected office bearers:—Mr. Justice Costello, President; Sir R. N. Mookerjee, Vice-President; and Mr. Arthur Moore, Hon. Treasurer.

ARMY APPOINTMENTS.

Major-General E. T. Humphreys, C.B., C.M.G., D.S.O., succeeds Major-General C. A. C. Godwin as Commandant of Quetta Staff College this month. This will be the first of a number of changes in the higher appointments in India which occur during the year. General Sir John S. M. Shea completes four years as Adjutant-General on February 13, and Lieutenant-General Sir Edwin H. de V. Atkinson completes four years as Master-General of Supply on March 31. Other appointments falling vacant later in the year are those of Chief of the General Staff, Engineer-in-Chief, and three of the District commands..

The following officers have also taken up the Staff appointments named:—

Colonel P. L. Hanbury, C.M.G., D.S.O., G.S.O.1, Lahore District; Major H. R. Stranack, G.S.O.2, Army H.G.; Major J. W. L. S. Hobart, D.S.O., M.C., Brigade Major; Captain E. N. Clifton, Staff Captain, Army H.Q.; Captain C. W. Toovey, M.C., D.A.A.G., Army H.Q.; Captain F. C. Simpson, G.S.O.3, Army H.Q.

Lieutenant-Colonel R. F. D. Burnett, M.C., has taken over the command of the 1st Royal Battalion, 9th Jat Regiment. He was five years in the Royal Artillery before transferring to the 42nd Deoli Regiment, and his later appointments have been as brigade major of the Jullundur Brigade, when Major-General C. C. Luard commanded it; D.A.A.G. of the Lucknow Division; Regular and Territorial duty with the 4th Bombay Grenadiers, and second-in-command of his present battalion. He is succeeded in the latter appointment by Major A. C. M. Binny, of the 3rd Battalion, 9th Jat Regiment.

Major-General Sir Robert Cassels, on his appointment as Adjutant-General of the Army in India, according to a Reuter message from New Delhi, will be succeeded as General Officer Commanding the Peshawar District by Major-General C. A. C. Godwin, Commandant of the Staff College at Quetta.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Fruit-Growing in Palestine.

As fruit-growing has hitherto been Palestine's principal economic asset it is only natural that considerable importance should attach to the report of the Commission appointed by the Palestine Government to investigate the position of the industry. The recommendations of the Commission are very interesting and cover a wide range of matters. One proposal which will be widely approved is for the establishment of a research station for the purpose among other things of investigating the most effective methods of combating pests and diseases. There is also the question of the protection of the Jaffa groves against storms which cause a considerable loss of fruit each year. The main problem that Palestine has to solve, however, is the question of placing fruit on the overseas markets in good condition. It is a problem which is particularly important as regards the orange trade. A number of recommendations are made under this head, notably that shipments must be regulated, that what is known as "American" packing should be adopted, and that there should be obligatory inspection of the fruit prior to shipment. The new regulations introduced at the end of last month represent the first steps in carrying out the Commission's proposals, the effect of which should be to safeguard the standard of Palestine's products abroad.

The Outlook in Palestine.

It stands to reason that whatever the prospects may be for the development of other staple industries Palestine must rely for a long time to come almost wholly on the industry which has served her so well in the past. Equally certain is it that whatever developments the future may hold in store the fruit industry will always bulk largely on the country's economic horizon. It is far too soon yet to hazard a definite opinion as to the outlook in other directions, and there is not likely to be any serious disagreement with the statement of the Director of Agriculture in Palestine in a memorandum issued with the report that "it is becoming increasingly obvious that horticulture is the only local industry of which the economic soundness is not open to question." Had it only been adequately appreciated a few years ago that Palestine held out great prospects for agriculturists but not for town dwellers recent difficulties would have been greatly mitigated and the spectacle would not have been witnessed of the exodus from the country month by month of numbers of those who had come to Palestine in the belief that the regions would quickly be in a position to absorb all kinds and conditions of settlers.

The New Greek Loan.

The English portion of the new Greek Loan duly made its appearance on Tuesday, and, as was to be expected, was quickly oversubscribed. The loan, the full title of which is the Greek Government 6 Per Cent. Stabilisation and Refugee Loan of 1928, was issued at 91, the amount being £3,370,960. As already stated the total amount of the loan is £6,500,000, consisting of £4,070,960 sterling bonds and 17,000,000 dollars. The remainder of the sterling bonds are being offered in Italy and Sweden, while the dollar bonds are being offered in New York and Switzerland. An attractive feature of the loan is that it is repayable in not more than forty years by half-yearly drawings at par, the first taking place on February 1, 1929. The loan is under the direct control of the International Financial Commission, who have acepted definitely and irrevocably the mandate of the Greek Government to retain the amounts ncessary for the payment of interest and amortization of the loan from the surplus of revenues already assigned to them or under their control. The total of these surplus revenues for 1927 amounted to £6,619,400, and as the total service of the loan requires £684,653 the service on that basis is covered more than nine times. It may be noted that for 1928 the surplus revenues are estimated at £7,635,408.

Turkish Debt Negotiations.

It is understood that at long last a provisional settlement has been arrived at in Paris over the Turkish Debt negotiations, and it may be expected that the details of the settlement will be forthcoming at an early date. These negotiations have been unusually protracted, surprisingly so seeing that the actual details of the payments were agreed to months ago; but the question of the contribution of the Debt Council proved a stumbling block to the final settlement owing to the fact that the Powers concerned did not present a united front on the matter. If the reported settlement proves correct, and there is no reason for thinking otherwise, despite the disappointments hitherto experienced in the course of the negotiations, Turkey is to be congratulated on the removal of what was undoubtedly a serious obstacle to her economic progress. So long as a settlement was not an accomplished fact it was impossible for Turkey to approach the money markts of the world for the support which, notwithstanding all that has been said to the contrary, she badly needs. A settlement brings a loan with the region of immediate possibility.

Cyprus Trade Improvement.

An excellent and much improved showing is made by the figures for the trade of Cyprus for 1927. The value of the imports was £1,585,939 as compared with £1,570,279, while that of the exports was £1,542,870 as compared with £1,103,572. It will be seen that there was an increase of £15,660 in the value

Digitized by Google

of the imports and one of £439,208 in that of the exports. Cyprus still has an adverse trade it is now one of negligible proportions, and it is obviously a reasonable conclusion that a continuance of the present favourable conditions will see its disappearance this year and its replacement by a considerable balance on the right side. In the progress of Cyprus economically it is not too much to see an indication of the value of representation at the British Empire Exhibition. The participation of Cyprus in the two years of the exhibition has no doubt done much to extend the scope within the Empire for her products. The figures now quoted suggest that she is beginning to reap the benefit of her enterprise.

Westminster Bank Meeting.

The Chairmen of the great banks have been unanimous in their subdued optimism as regards the immediate economic outlook. At the meeting of the Westminster Bank last week, a report of which will be found elsewhere in this issue, Mr. Hugh Tennant referred to the way in which the country has recovered from the effects of the events of 1925 as providing a testimony to the stamina of the country. His summary of the general situation abroad is that on the whole it would appear that the foundations on which an expansion of world trade might be based have been constituted. In the position here he finds much that is encouraging, and in his view if to the improved relations between employers and employed is added increased efficiency in business the advance along the road to economic prosperity will be greatly accelerated. As he points out, however, while the newer industries are doing well depression persist in three of the great staple industries of this country, and it is obvious that until they too are showing signs of revival anything like general prosperity is out of the question. The main feature in their case is the world trade position, but there is also the vitally important question of increased competition to be considered, and he would be an unbounded optimist who could expect all the industries of this country to regain the positions they held before the War.

The Rubber Market.

As February 1 marks the commencement of a new restriction quarter some further reference may appositely be made to the rubber situation. Those interested in rubber in any way have had a most depressing experience since Christmas. What had happened prior to that festival suggested that in the early months of the New Year it would be "roses, roses, all the way," but as has been the case so often in this market things have pursued an entirely opposite course to what was expected, and with the exception of only one week the London stocks have steadily mounted up ever since. As the weeks have passed so have the reasons for the depression increased, until the variety of the explanations advanced for the situation has become positively bewildering. Probably the market has been affected to some extent by the delay in the issue of the customary statement with regard to the ensuing quarter of the restriction scheme, thought in the light of the previous announcement no change was to be expected with the position as it is. The key of the situation lies, of course, in the development of the demand for rubber, and so long as the Americans abstain from buying as they have been doing so long will the price remain depressed.

CYPRUS TRADE IN 1927.

Large Increase in Exports.

The Trade Commissioner for Cyprus reports that imports during December were normal. Exports continued to be good and considerably in excess of those for December, 1926.

The export of oranges and lemons was in full swing. As anticipated, disease reduced the number available, though not so much as was as first feared, and the Lefka oranges, which will be exported later, have not suffered to any appreciable extent.

Potatoes improved slightly in price, nearly 1,000 tons being exported.

The quantity of tobacco grown in Cyprus during 1927 was considerably in excess of that of previous years and some 30 tons were exported.

The values of imports and exports for the year 1927, as compared with those for 1926, are as follows:—

	Imports.	Exports.
1927	£1,585,939 ...	£1,542,870
1926	£1,570,279 ...	£1,103,572
Increase ...	£15,660 ...	£439,298

Not only is this a substantial increase in total trade, but an improvement in the ratio of exports to imports.

Motors and Motoring.

By G. B. B.

The question as to whether omnibuses, chars-a-banc and heavy commercial vehicles should be equipped with front wheel brakes seems likely to arise again. The efficiency of these appliances has never been in dispute, but there has been a view that their use would lead to skidding and other mishaps and the Public Carriage Department of New Scotland Yard long regarded them with disfavour. It is not long since the Chief Commissioner of the Metropolitan Police said that the matter had "recently received his careful consideration as licensing authority and after consultation with his technical advisers he has decided that the present time is not opportune for the introduction of such brakes upon licensed public carriages."

Of course, the chief advantage of the front wheel brake is that its use enables a vehicle to be pulled up much more quickly than by the ordinary method, and it follows, equally as a matter of course, that to meet the additional stresses which the use and application of these brakes impose on the front axle and the springs, that these must be stiffened up. Even the body has to be secured more firmly to the chassis. Where these brakes are in use a competent staff has to be employed to keep them in order, and whilst there is no difficulty regarding this in the case of the big omnibus organisations, it might be argued with some truth that work of that kind would be beyond the powers of the average taxi owner and that few could be relied upon to carry out front wheel brake adjustment with the necessary care and accuracy. There certainly seems a good deal to be said in favour of restricting the use of front-wheel brakes on London public service vehicles to omnibuses for the present.

Regarding this matter of brakes a correspondent writes to recommend a "little daily attention" to all brakes. I do not know whether he has had any lengthy experience with cars, nor what particular model he has been driving, but I should say that daily attention is quite unnecessary; indeed, if it were, few of us would bother to do our duty. There are many braking systems in vogue that require a minimum of attention, and taking an ordinary car equipped with brakes operated on a vacuum servo system, no real adjustment should be necessary until after, say, 5,000 miles. Weekly attention to good brakes is more than is necessary; a good look round once a month should be ample.

Overseas Cars.

There is no need for cars intended for use in the Near East to have any general increase in power, or reserve of power, as compared with those for service in this country, especially as any alteration of design for that purpose would probably mean a corresponding increase in production cost and selling price. We certainly want good springing and sturdy transmission and a fairly good clearance, none of which calls for any particular alterations, and, above all, we want reasonably low gearing. Roads throughout the Balkans are certainly capable of great improvement, but improvements are being made, and at present motorists in the Near East have far more trouble from gradients than they have from road surfaces.

Good Oil.

One would hardly have thought it necessary, after all that has been written on the subject, to refer again to the need for using suitable oil or to emphasise the fact that the use of poor oil leads to undue wear of moving parts and means a good deal of additional expense in the long run by reason of frequent and often large repair bills. Especially is this true in the case of motor cycles, which is why our big firms, as the Ariel, stress the fact that suitable oil only should be used in the crank case. The majority of motor cycle oils are compound, consisting of a good sound hydro-carbon oil with an admixture of a small quantity of some vegetable oil, as castor. The proportions used are carefully worked out on scientific lines and it is not advisable for any motor cyclist to try and blend the oil for himself. The use of too high a proportion of castor oil may form free acids under the heat of explosion; the use of an unsuitable mineral oil would lead to "cracking" at high temperature and the consequent formation of paraffin oil, but the proper proportions lead to the raising of what are termed the "critical" temperatures for both oils and a consequent increase in stability. Every motor-cycle maker will be only too pleased to send to readers full statements regarding suitable oils to use for various engines and there is consequently no excuse now for anyone using an unsuitable oil.

Increase in Motor Cycle Prices.

With reference to the paragraph on this subject last week the British Cycle and Motor Cycle Manufacturers and Traders Union, Ltd., write to point out that there is no question of an increase in export prices.

The net profits of the National Bank of Yugoslavia for 1927 amounted to 28,249,461 dinars, as compared with 31,881,729 dinars for 1926.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

IVORY PRICES LOWER.

Messrs. Hale and Son's report on the quarterly ivory sales held on January 24 and 25 states that they comprised 42¾ tons (against 38½ tons same time last year, and 42½ tons in October last), viz.: 19¾ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 1 ton Abyssinian, 5¾ tons Egyptian (Alexandrian description), 10 tons Congo and West Coast African, 1 ton Lisbon, and 5¼ tons land carriage; also 2¼ cwt. sea horse tusks, boars' tusks, and walrus tusks, 7 cwt. rhinoceros horns, 6 tons mammoth tusks; total, 49¼ tons.

The sales opened quietly. There was a fair attendance of buyers and generally good competition, but the American demand was not so active, some buyers being absent. The Continent and home trade bought freely. The quantity catalogued was about an average, but there were rather more soft tusks, especially medium sizes, and showed a decline of £5 to £7 per cwt. on the average; hard was steady to £2 per cwt. lower.

Abyssinian was nearly all bought in, there only being one or two lots sold.

Egyptian.—Soft was £5 to £7 per cwt. lower on the average. Hard was steady to £2 lower, ball scrivelloes £2 to £4 per cwt. lower, ordinary scrivelloes rather higher.

NEWS FROM ALL SOURCES.

In the first eleven months of 1927, 32,637 tourists visited the Dalmatian coast, 10,819 being Czechs, 8,464 Germans, 8,113 Austrians and 1,127 British.

The Commission which is drawing up the new Roumanian customs tariff will complete its work by February 15.

The contract for the sluice gates for the Sukkur Barrage has just been placed with Ransomes and Rapier, of Ipswich, by the India Office. The gates will be manufactured throughout of British material and by British labour at the firm's Waterside Works, Ipswich.

The area under sugar-beet in Yugoslavia in 1927 is estimated at about 45,000 against 43,000 hectares in 1926. The output of the eight factories is expected to be 8.500 trucks.

A Reuter message from Belgrade states that the Cabinet has approved a scheme for the building of a railway line from Belgrade to the Adriatic and port development at Bocche di Cattaro. The new line will follow the track Belgrade-Kragujevatz-Kossovo-Podgoritza-Bocche di Cattaro.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year commencing on May 1, 1928. March 29.

Clothing, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of clothing required during the year 1928-1929 (March 29), and for the supply of bunting, ropes, canvas, hose, etc., required during the year 1928-1929. April 9.

Proprietary Articles, Etc.—The Department of Public Health, Cairo, invites tenders for supplies for the year commencing May 1, 1928, to end April 30, 1929, as follows:—(a) Proprietary articles; (b) sundries (including bottles and jars, filter paper, medicated soaps, etc.); (c) dressings; (d) drugs and chemicals; (e) galenicals and packed articles. March 29. (D.O.T.)

Wood Naphtha.—The Egyptian Customs Administration invites tenders for the supply of 150,000 kilos of wood naphtha. February 29. (D.O.T.)

Pure Alcohol, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of pure alcohol, medical brandy and rum, sherry wine and malaga wine required for the period of one year commencing on May 1, 1928 (March 28); and for the supply of drugs required for the period of one year commencing on May 1, 1928. March 29.

Various.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of materials and metals required by the Government Press during the year 1928-1929. March 29.

Tin Sheets, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for (1) 4,450 tin sheets double of six sizes different and 42,000 tin sheets single 17 in. by 13 in., (2) 10 copper sheets 6 ft. 2 in. by 5 ft. 2½ in. by ½ in., (3) 43,000 kilos open hearth steel plates, equal angles and flat bars to specification, (4) 10,800 kilos bolts and nuts black, hex. heads and nuts, standard Whitworth thread of different dimensions, (5) telegraph and telephone materials at an approximate cost of between £E2,800 and £E3,200, (6) 300 white metal die cast bushes for metallic packing 3½ in by 1¾ in. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Clothing, Etc.—The Chief Inspector (Direction General, Customs Administration, Alexandria, invites tenders for the supply of:—(a) Clothing and equipment; (b) tarbushes with tassels; (c) boots for guards, required for the year 1928-1929. February 15.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, February 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, February 9).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, February 8).

British Indian Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, February 11); s.s. Manela for Bombay and Karachi (London, February 18).

Cunard Line.—S.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, February 18); s.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, and Fiume (Liverpool February 4 and Swansea February 7).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 11); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 25).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, February 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, February 4).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, February 4); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, February 12).

Yugoslavia's exports in November amounted to 349,658 tons, of the value of 622,396,153 dinars, as against 526,783 tons, of the value of 796,183,747 dinars, in November, 1926. For the first eleven months of 1927 the exports amounted to 3,963,921 tons, of the value of 5,871,468,693 dinars. The figures for the corresponding period of 1926 were 4,511,934 tons and 7,195,612,671 dinars respectively.

Mr. Frederick Richardson, of Philadelpha, has been appointed to a seat on the head office Board of the General Accident Fire and Life Assurance Corporation. Mr. Richardson is the United States manager of the corporation.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 31.

The past week has seen a further slackening in activity in the Stock Exchange, members' attention being diverted to the arrangement of the settlement. There has been a noticeable reaction to the upward movement in the gilt-edged market, the anticipations of a reduction in Bank Rate, which were entertained in some quarters, having been postponed. The Bank return, it is true, was a strong one with the Reserve at the highest figure since 1926, but the raising of the Chicago Federal Reserve Bank rate from 3½ to 4 per cent., the slight weakening in the American Exchange, coupled with knowledge that February is likely to see a further strain on the Exchange when imports of raw materials from the United States come to be paid for, all point to the necessity for caution and to the improbability of a reduction in money rates here in the immediate future. The approach of the dividend season has so far stimulated only the mildest interest in home railway stocks, which may be said to be marking time. The Metropolitan has repeated the previous year's rate of 3 per cent.; but it is significant that £10,000 is this time added to reserve, whereas a year ago a withdrawal of £100,000 had to be made.

The Ordinary Share.

Mr. J. M. Keynes, the distinguished economist, speaking as chairman of the National Mutual Life Assurance Society, warmly championed the investment merits of the ordinary share in certain circumstances. The qualification "in certain circumstances" is of the greates importance, for he clearly implied that it was unwise for the ordinary investor to hold relatively large blocks of ordinary shares. He spoke of the "care and attention" this policy requires and of the "burden of work and responsibility" it imposes. In short, to exploit successfully the ordinary share at the expense of the fixed-interest bearing security is essentially a task for the expert. He referred to the large proportion of his society's funds invested in ordinary shares and urged on what he described as "important grounds of public policy" the need for other insurance offices to follow suit. In supporting this contention he made two interesting points. The first was that "the living enterprises of the day, where constructive things are being done and to-day's wealth is being earned," should not be starved in the matter of capital or left to the exploitation of people outside this country. His second point was that the insurance offices might, if between them they held large blocks of shares in leading ocmpanies, do much to remedy one of the greatest evils of the present stage in the evolution of joint stock enterprise—namely, the complete impotence of the average shareholders in taking action against a board when things go wrong. It is extremely doubtful, however, whether the other insurance companies will be deeply impressed by Mr. Keynes' thesis.

A Treasure Hunt.

A treasure hunt fascinates boys—and girls—of all ages. It delights the days of one's childhood and is a furtive dream in the years of maturity. Perhaps the most common complaint, especially in later days, is that there are such few opportunities of hunting treasure. But the company promoting world, with characteristic ingenuity, will occasionally provide the opportunity. It has so obliged this week, a company called the Sacambaya Exploration Company, Ltd., having issued a prospectus. It has a capital of £25,000 and the prospectus tells us that "It is believed that the hidden deposit of the old Jesuit Mines of the Sacambaya River district (Bolivia) lies in the ground comprised in the lease and it is the intention of the company to search for and realise this treasure." It appears that in the eighteenth century the Jesuit gold miners, their operations being disturbed, buried gold amounting to over £12,000,000. And this it is the intention of the company "to search for and realise." In a work of fiction this story would hold us spellbound, but considered in the light of an ordinary investment it produces a totally different impression. There are several important omissions from the prospectus. In fairness, however, it may be added that the managing director says "It is not an investment but a purely speculative undertaking." He certainly does not err on the side of caution.

"Safety-First" Investments.

During the past few days the two leading London gas companies have made their dividend announcements respecting the past year. The Gas Light and Coke Company—the larger undertaking—proposes to pay a final dividend making the year's distribution equal to £5 os. 8d. per cent.—the same as a year ago. The South Metropolitan Gas Company, however, proposes to raise its dividend from 6 per cent. to 6¼ per cent. These companies—and others operating elsewhere—deserve the careful attention of the investor whose motto is "safety-first." The earnings and dividends are stable and indeed often progressive. Nor is it easy to conceive circumstances in which they would suffer a heavy set-back in earnings—at least for an appreciable period. Admittedly the yields given by the stocks are not over-generous, but they are higher than those given by some stocks which are inferior in point of security. Dealing with junior stocks first, the ordinary stock of the South Metropolitan Gas Company returns £5 18s. per cent. A yield of £6 4s. per cent. is obtainable on the Liverpool Gas Company's 5 per cent. ordinary stock. The Gas Light and Coke Company's 3½ per cent. maximum stock, which is well covered as regards interest, returns £5 11s. per cent. A yield of £5 6s. per cent. is given by the Liverpool Gas Company's 4 per cent. perpetual debenture stock.

In the first half of 1927 10,696 persons emigrated from Yugoslavia.

It is reported that building activity at Split is now extremely active.

THE WOOL INDUSTRY OF YUGOSLAVIA.

The current issue of the *Belgrade Economic Review* contains an interesting article on the wool industry of Yugoslavia by Dr. Josip Butorac, from which we take the following extracts.

Immediately after the War the S.H.S. Kingdom can scarcely be said to have had a wool industry, because Serbia, where it was most advanced, had been most devastated by the War, and the industry had to be set up entirely anew. In other provinces, except for some small exceptions, it did not exist at all. For that reason no statistics can be given of the position of the industry at that time.

But while the old Serbian industry was being revived, the other provinces were by no means idle, and in a very short time new enterprises were being set up, especially in Croatia, though also in other parts. This process of building up, however, is still going on, since it cannot be said of any of the five new Croatian enterprises that it has reached its full capacity. Nevertheless, they are even now fairly strong, and employ something under 3,000 men, or half the total number engaged in this branch of industry. The best proof of their good prospects for the future lies in the fact that they are developing gradually, and making use of steadily greater capacity. They begin with the manufacture of cheap goods, until they train the necessary number of skilled hands, and only turn later to the manufacture of better goods and fine cloth for town wear. By working on this principle the new factories invest their capital gradually. Thus, for instance, a factory which keeps going 200 looms may be reckoned with certainty to have in two years' time at least twice that number, if not more. Then again the arrangement of the labour is good, since two, and sometimes three shifts of eight hours each are kept at work. A proof that the goods produced by these new factories are well reputed is the fact that they are over-supplied with orders, not only from this country, but also from abroad. In any case, it is interesting to note that this young industry of Yugoslavia is already beginning to export a little; it is also keeping to the proper direction for economic expansion, that is, via the neighbouring Balkan States to Asia Minor and the Levant.

Another illustration of the satisfactory position of Yugoslav industry is the fact that it possesses absolutely new and modern machinery, and consequently has not the problem of old machines with relatively small capacity.

It is true that their capital investments have been so large that it will require a considerable number of years of full-time production for these initial expenses to be written off. Nevertheless, it is unlikely that this will have any bad effect on its future development, because the time is far distant when the S.H.S. Kingdom will not require to import any woollen goods at all. However, rapid writing off will undoubtedly be affected by the present bad economic conditions, which will probably last for some years.

In spite of what we have said about the satisfactory development of the wool industry of the S.H.S. Kingdom in recent years, it is just as true that, in view of the enormous quantity of raw material available in the country, its development should be far greater still.

The Kingdom possseses a large number of sheep, as the figures for 1921-1925 show:—1921, 7,001,204; 1922, 8,461,504; 1923, 7,639,257; 1924, 7,618,708; 1925, 7,906,808.

All the sheep are sheared twice a year, giving about 1 kilogram each time, making an annual total of about 16 million kgs. (reckoning on 8 million beasts). This would be sufficient for the manufacture of about 20 million metres of cloth. This, however, is only theory; in practice only a small amount of the raw material can be used. Only a very small amount is exported, never exceeding 0.40 per cent., while the home industries handle only 5 to 10 per cent. The remainder is made use of by the people for their own needs, for domestic use and clothing. This naturally is a wasteful method, especially in the south, where manufactured goods are hardly used at all. But even if the producer supplied his need of cloth from manufactured goods and turned his raw wool into money the result would not be large. The wool is not of first-class quality and its prices would be still lower in trade because in most cases it is unwashed. Real improvement would come primarily from an improvement of the breeds, and by education of the peasants and other measures, like the creation of better market conditions, even for wool of poorer quality. This would certainly be to the interest of the national industry, which at present only uses home raw material for the manufacture of the cheaper peasant fabrics and military cloth, and for finer materials has to import most of its wool from Australia. This is specially important now when the home factories are growing fast and requiring constantly greater quantities of raw material.

In number of factories, Croatia stands first, and as it has the largest number of looms, this helps towards a large output. Serbia has almost the same number of looms, but the number of shuttles in its four factories is nearly three times as large as that of Croatia. Here it should be remembered that 9,600 shuttles and 12 self-actors for the manufacture of Camgarn yarns are now being set up, which means that the production of woollen fabrics in Serbia next year will certainly be much larger than at present. Voivodina and Slovenia both have one large factory and the other provinces come between these and Serbia.

The total annual output of the 15 factories amounts to something under 7 million metres, but this does not include the large number of blankets, woollen shawls, and other goods which they manufacture. The products have an approximate total value of a milliard dinars. The annual requirements in wool and yarn are about 6 million kilograms, worth about 100 million dinars. Again the greatest demand is in Serbia and Croatia.

As regards relative capacity, Croatia stands first, because it has practically all new machinery. The advantage of this is clear from the output, which is nearly as large as that of Serbia, although the number of shuttles and amount of power are less. Now, however, that many of the Serbian factories are being entirely renovated, especially for the manufacture of the finer cloths, this discrepancy in productive capacity between the two provinces will very soon disappear.

If we remember that the Yugoslav woollen industry was altogether negligible after the War, since Serbia, for instance, had only one factory at work, we may certainly be satisfied with the progress which has been achieved in the relatively short period of a few years. It is certain, however, that as early as next year the position of the industry will be considerably changed, because the number of factories is growing, while others are only in the early stages of foundation.

THE PERSIAN FOREST OF SARDASHT.

The only forest of present commercial consequence in Persian Azerbaijan is that of Sardasht, on the mountainous Turkish frontier, south of Urumia. It has not, up to the present (says the American Consul at Tabriz, Mr. A. W. Ferrin, in a recent report) been utilised except by the local population, and such use has been wasteful. During this last summer the Emir-i-Leshgar (military commander) of Azerbaijan stated that henceforth the forest would be looked after as it should be. Until now, the local inhabitants have used it without control, until in the vicinity of villages it is practically destroyed. In less accessible places it has gone completely wild. Now a series of regulations has been issued restricting the villages to the use of fallen or dead trees as fuel, one-tenth of the branches and leaves of old trees and the tops of the new grown trees for fodder, and an amount of building wood authorised in specific instances by the authorities. These privileges apply only to forest within 14 versts (about 9 miles) of villages. No trees may be cut down for any purpose, anywhere, without particular permission, and on all forest products a tax and profit must be paid to the Government, by which the forest is owned. Penalties for making fires in the forest, for mutilating trees, unauthorised exploitation, etc., are provided.

The extent of the Sardasht forest is officially stated to be 300 square miles, of which about 25 per cent. consists of mature trees, 60 per cent. of younger trees, and 15 per cent. of clearings. The mature forest is mainly oak and is estimated to contain 100,000 trees capable of being cut into railway sleepers.

Half the oaks, both old and young, produce gallnuts, which give the forest its principal value under present conditions and provide the native Kurds with their chief revenue from the forest. There are two principal sorts of gall-producing oaks, one yielding larger galls than the other. Another oak, the "yalov," yields large acorns, the cups of which are used in tanning. The "giavoosh" has edible acorns and its wood is used in making furniture. All the varieties of oaks are used for sleepers. The "sagaz," a kind of spruce, produces a gum which the Kurds chew and a cone whose seeds they eat. The "bnab" and "tacok" are understood to be similar to hickory. Their wood is strong and supple and is used in making tool handles and bent wood chairs.

The "bokh" yields wild plums which the villagers dry and eat, and the "chagala," a bitter almond, is used in making medicine. Branches of the "balalook," a wild cherry tree, are used to make Persian pipe stems. The "tirvee" produces a red berry used as a laxative. Wild apricot, almond, and pear trees are cut for firewood and for manufacture of charcoal.

Of bushes and shrubs, the "gavan" yields three grades of gum tragacanth, which was formerly a principal export of Azerbaijan and the production of which, it is believed, can be largely increased under proper supervision. Other shrubs and bushes give products locally used or are burned as fuel.

No figures of annual production of forest products exist. Two years ago the provincial government made a contract with certain individuals near the forest for 16,000 sleepers for the Tabriz-Julfa railway, but only 2,000 acceptable sleepers were delivered. One thousand more were offered by the village chief of Musul, but were rejected because he refused to allow the railway buyers to pick and choose from them.

A forester sent into Sardasht by the railway administration has estimated that, properly exploited, the forest can furnish 20,000 sleepers annually. No record of other products can be obtained, but the following estimate of Government revenues from the forest, based on a 50 per cent. tax on oak and gallnuts and 25 per cent. on gums, etc., may give some idea of the possibilities (values are given in krans):—Railway sleepers, 180,000; galls, 322,000; gums, 16,000; charcoal, 65,000; chewing gum, 1,200; paste, 1,200; fuel, 50,000; reeds, for mats, 2,000.

Actually, only about 75,000 krans has been collected per annum, the foregoing figures being guesses at what would have been received had the legal tax on all the products been collected.

Transportation of timber from Sardasht is simple. It is floated down the Soujboulak River, which approaches to within 10 miles of the forest, in the spring, when the snows melt, to Hayderabad on Lake Urumia, where there is a pier. The river's banks are hard and afford ample facilities for storage between shipping seasons. From Hayderabad the wood is taken across Lake Urumia to Sherifkhana, where it meets a branch of the Tabriz-Julfa Railway, the rail distances being about 30 miles to Tabriz and 50 to Julfa on the Russian border. The lake distance from Hayderabad to Sherifkhana is about 20 miles. The Tabriz-Julfa Railway owns 14 barges, 8 of them iron, and 7 motor tugboats. The river Tatavan also is used for floating timber from certain parts of the forest to the lake, but is not as serviceable as the Soujboulak River.

Gallnuts and gum are generally carried out by caravans of pack mules and donkeys, through Iraq to Mosul, whence they can be taken down the Tigris to Baghdad or to Tabriz via Soujboulak. Firewood is brought to Tabriz by lake and rail.

The Emir-i-Leshgar reports that he has made a river flowing into Iraq navigable for small boats, by building dams, and that he has erected a bridge over the river which facilitates caravan traffic both to Mosul and Tabriz.

THE CINEMATOGRAPH IN BULGARIA.

The number of cinemas in Bulgaria, which was very small some years ago, increased considerably during 1926 (says an article in the United States "Commerce Reports"). There are no less than 120 cinemas now, of which 22 are located in Sofia. Four of these Sofian theatres are really important, equipped with all modern comforts, capable of seating 1,300, 900, 800, and 700 people, respectively. Four other cinemas, under the patronage of the Ministry of Public Instruction, serve for exhibitions to school institutions. Other of the larger cities have two and sometimes three picture theatres each with seating capacities of 600 to 900 seats. There is no Bulgarian film-producing company, or distributing firm. The films exhibited in Bulgaria are mostly distributed by American or German companies. There are several cinemas which buy films independently and which, after exhibiting them on their own screens, rent them to other Sofian or provincial theatres. In this manner, the same film is shown for several months, until all cinemas in the different districts of Sofia have exhibited it.

Several French films were exhibited on Bulgarian screens during 1926 and more particularly in 1927, and were received with great enthusiasm by the public. The Bulgarian spectator has a pronounced taste for big dramatic, emotional scenes, but besides that, he also appreciates humorous films. Each film must be projected in one performance, as "episodes" with several parts have no success.

A group of Greek capitalists, with the aid of the Bank of Industry at Athens, are said to have proposed the erection of a large sugar refinery near Salonika (says an American Consular report). Their plans in this respect have been submitted to the Minister of National Economy for approval.

Pending the promulgation of a special law for the protection of inventions in Persia, the Persian Government has authorised the Ministry of Commerce at Teheran to accept applications for the provisional registration of patents for inventions. Applications for provisional registration must be made in the manner set out in a draft Patents Law, a copy of the French text of which can be consulted in the Public Library of the Patent Office, 25, Southampton Buildings, London, W.C.2.

Company Meetings.

WESTMINSTER BANK.

Financial and Economic Tendencies.

Mr. R. Hugh Tennant's Address.

The annual general meeting of the shareholders of the Westminster Bank, Ltd., was held on January 26 at the head office, Lothbury, E.C. Mr. R. Hugh Tennant (the Chairman) presided.

The Chairman at the outset referred to the irreparable loss the bank had suffered by the death of their Chairman, Mr. Walter Leaf—one of the most versatile and industrious of men, who for 36 years gave devoted service to the Bank of which he was so proud and for which he did so much. Also, within the last fortnight they had suffered a further loss through the death of their esteemed colleague, Mr. Cecil F. Parr, who had had practically a life-long experience with Parr's Bank, and was Chairman of that bank for 20 years. The directors had done him (the speaker) the great honour of electing him as Chairman of the bank. The Hon. Rupert Beckett had been elected a Deputy-Chairman in conjunction with Sir Montagu Turner, and Sir Alfred Mond and the Hon. Sidney Peel had been appointed directors. Mr. Philip Mortimer, one of the general managers, after 47 years of devoted service to the bank, retired in May last. Mr. E. F. Robinson and Mr. Charles Lidbury had been promoted to the ranks of the bank's joint general managers.

Referring to the bank's balance-sheet, he said the deposits amounted to over £280,000,000 compared with £285,000,000 in the previous year, but on December 31, 1926, from special causes, they had an abnormal addition to their money lodged, and showed an increase of over £14,000,000 compared with the previous balance-sheet. A year ago they were handling certain foreign loans, and the balances from these sources carried their total deposits a good many millions above the large increase which was the common experience of the year's end. Thus, although the bank showed a comparative decline in deposits of some £4,800,00, this did not denote any shrinkage of their ordinary business. As to the appropriation of the profits, they had set aside £200,000 towards writing down the "bank premises" item and also allocated £150,000 to the rebuilding account, this latter account having special reference to the important offices at Lothbury and Threadneedle Street, now under construction, which they hoped to finish without making any addition whatever to "bank premises" account figuring in the balance-sheet. The Threadneedle Street premises were now practically completed. The net profit amounted to £2,132,815, a small decrease of some £24,000. They placed £200,000 to the "contingent fund," against £150,000 last year, and £200,000 to the "officers' pension fund" as before, leaving £535,000 to be carried forward to next year, an increase of £26,500.

Home Conditions.

Alluding to some financial and economic tendencies and developments bearing upon the life of the country as a whole, the Chairman said that the present moment was opportune for such a review, the country having now had time to throw off the main effects of the coal stoppage of 1926—the costliest industrial dispute in its annals. As to the return to the gold standard three years ago, looking back over the course of events both here and abroad, the relative price movements here and in America, and the wide extent to which their example had been successfully followed by other nations, they might say, with confidence, that delay would have been costly and that the psychological moment was chosen for that momentous decision. There was, he thought, one vital thing that could be fairly and safely said about 1927—that the recovery from the set-back of 1926 had been sufficiently quick and sustained to be in itself a testimony to the economic stamina of the country. In the view of those best qualified to judge, the total volume of the country's economic activity was greater to-day than in any year since the post-War slump, and was probably greater also than in the active pre-War year, 1913.

Referring to the notable strength of sterling-dollar exchange, at a time when that rate was usually adversely affected by the financing of heavy seasonal imports of food and raw materials, he explained that the autumn strength had been due to fortuitous causes. Nevertheless, the absence of sudden strain on the exchange had been a blessing, if only because it had relieved business from the threat of dearer money. As to the general position, he said that Europe could not yet be called prosperous, but that definite improvement had been achieved in the past year or two. There had been an increase of stability and confidence, and the period of riotous currency fluctuations was practically at an end. On the whole, it would seem that the foundations on which an expansion in world trade might be based had been consolidated.

In three of the greatest industries, agriculture, coal mining, and cotton, serious depression persisted. In agriculture, the unfavourable conditions which farmers had had to face for some years were reinforced last summer by the descent of disastrous harvest weather upon crops, which, on the whole, had promised well. As to the coal industry, prices were low, and competition in overseas markets was severe. The world's output had outrun its consumptive capacity. Notts and Derby districts, with which the speaker was personally connected, had put forward a scheme in conjunction with Yorkshire, and he was not sure that the proposals were popular with the owners in the districts concerned, but at any rate, unless someone could produce a better scheme, it held the field and should, he thought, be given a fair trial. Referring to the depression in cotton, he commented on the main factors which must engage the anxious consideration of those most deeply interested in the fortunes of that great industry. It was a simple economic fact that to regain their hold on the markets of the world they must attain a competitive price level.

Having commented on other staple industries, wool, iron and steel, shipbuilding, and engineering, the Chairman said that of the features in the story of the year perhaps the most important was that after the labour storm of 1926, the country had sailed into calm waters, and the past year had been free from any strikes or lock-outs. It was the best augury for the immediate future that efforts to secure co-operation between the parties to industry were being made by leaders of employers and the Trades Unions. All good citizens would wish well to the conferences now taking place between the Council of the Trades Union Congress and a representative body of employers.

Newer Industries.

Referring to the autumn movement on the Stock Exchange, which he ventured to describe as a "selective" boom in certain industrial shares, he said it was a matter worthy of general attention that this boom had been concerning itself mainly with the shares of companies operating in one or other of the new industries which were so rapidly expanding in this country. These new industries, most prominent among which were the electrical industry, the motor-car industry, chemical and artificial silk manufacture, were rightly attracting a great deal of public interest. It might seem strange, perhaps, to class chemicals among new industries. But this industry had undergone a great reorganisation so important that it almost amounted to a re-birth, and it was day by day playing a more and more important *rôle* in the industrial life of the nation. In viewing the welcome growth of these new industries, it was necessary to maintain a sense of proportion regarding their importance in relation to the whole economic life of the country. When complaints were made of the plight in which the old basic industries found themselves, some people were inclined to minimise the importance of those troubles and to reply that the growing prosperity of the "new" industries fully compensated for the depression of the "old."

Lest misunderstanding, disappointment, and faulty judgment should ensue, such assertions as this needed very careful examina-

tion. As yet, it was an illusion to suppose that the prosperity in these new industries counterbalanced the depression in the old. Coal mining, agriculture, shipbuilding, and cotton employed among them nearly three million workers. At a rough estimate, the three newer industries mentioned employed altogether 700,000, and the total insured working population of Great Britain and Northern Ireland was over 12 millions. He pointed this out not with a view of disparaging the newer industries; their growth and promise was a tremendous national asset; and apart from their own importance they created a demand for the products of other industries, the value of which was difficult to assess. The time, however, was yet far distant when the full attainment of prosperity in this country would be possible, unless the old trades of coal, iron and steel, shipbuilding, cotton, and wool were also enjoying full activity.

In spite of the substantial volume of money constantly seeking investment, whether through new or old channels, there was a consensus of opinion among economists that as a nation they were saving less and spending more than they did before the Great War. But the problem presented many complexities. Probably most authorities would agree that the general public should pay closer attention than they were at present paying to the need for economy. The same applied to the Central Government and local authorities, for the higher level of taxation, central and local, gravely affected the capacity to save. But in the matter of private and personal expenditure, appearances were often deceptive. In a period of rapid changes, such as they had been passing through, a number of goods had a way of passing out of the category of undoubted luxuries into, or very nearly into, the class of commodities regarded as necessities.

There were two more aspects of this difficult problem of spending and saving which deserved more attention than they received, and both were connected with developments of a permanent nature. There had been since pre-War days a substantial measure of redistribution of income as between various classes of the population, the result of which was that the purchasing power of the richer classes had declined, while an increase had taken place in the real income of the poorer. Since it was easier for the richer to save than for the poorer, this tendency probably meant a permanent decline in the volume of national savings, and emphasised the importance of such efforts to inculcate thrift as that undertaken by the National Savings Movement.

The second factor to which he referred was the extension of the practice variously known as hire purchase, instalment selling or consumers' credit. He stated that although the development was one to be watched with interest and care, there were abundant reasons why they should hasten slowly in its extension in their own country.

The Chairman, in conclusion, said for nearly ten years they had been beset with the aftermath of war, accompanied by industrial difficulties perplexing in their character and far-reaching in their effects. As he had suggested in his remarks that day, evidence was not wanting that the year 1927 had witnessed appreciable progress towards surmounting those difficulties. The recent improvement in the relations between employers and employed was a happy omen, and if to this could be added increased efficiency in industry, the advance along the road to economic prosperity would be greatly accelerated. (Applause.)

The report and accounts were unanimously adopted and other formal business transacted.

THE COPPER MARKET IN IRAQ.

Over 70 per cent. of the copper imported into Iraq for domestic use or for transit to Persia comes from England, and the remainder largely from Belgium and France (says the American Consul at Baghdad, Mr. John Randolph, in a recent report). No copper is brought into Iraq from the United States. During the fiscal year 1926-27 a total of 255,727 kilos, or 563,622 lb. of copper was imported. Of this amount 186,450 kilos, or more than 73 per cent., came from the United Kingdom, 2,391 from India, 575 from Persia, and 3 from Arabia. The total was valued at 325,268 rupees.

The copper imported into Iraq, either for domestic use or for transit to Persia, comes in the form of bottoms or sheets. The bottoms are estimated to supply from 80 to 85 per cent. of the domestic consumption. They consist of plates from 8 to 48 inches in diameter, of different gauges, depending on the weight of each plate, and are shipped in bundles made up of different sizes, with a total weight of two hundredweight per bundle. The sheets are 4 feet square, each weighing 30, 35, 40, or 45 lb., in bundles of 2 hundredweights each. Both bottoms and sheets are used in the manufacture of cooking and other household utensils, the sheets being principally for the larger articles, like washtubs and carboys, and also for ornamenting fireplaces, tables, and similar purposes.

Baghdad has a large copper market where about 250 coppersmiths manufacture all sorts of articles by hand. For generations they have used the same primitive methods. After being completed the utensils are passed to tinsmiths for whitening with sulphuric acid, ammonia, and tin. For the past four or five years aluminium utensils have appeared in Iraq and are gradually replacing copper in some households, especially those of resident foreigners.

About half of Iraq's copper import is re-exported to Persia. In the import figures of the Iraq customs copper is shown as a separate item, whereas in the export figures it is grouped with brass. During 1026-27 copper imports came to 255,727 kilos, or 563,620 lb. while imports of brass totalled 16,741 kilos, or 36,896 lb. The copper imports were heaviest during the March and June quarters, at least in part attributable to the demands of the Persian market. Exports of both copper and brass to Persia during the year amounted to 323,251 kilos, or 712,442 lb. Exports were heaviest during the June and September quarters, owing to the difficulty of using the Persian roads during the winter because of snow in the mountain passes.

Iraq has an import duty of 150 rupees per metric ton on copper bottoms and sheets. The export duty is 1 per cent. ad valorem. The custom transit duty on goods shipped through Iraq, or re-exported without paying the import duty, is one-half of 1 per cent. for goods removed within six months, 1 per cent. when removal is delayed from six months to a year, 2 per cent. when goods remain in the country from one year to two years, and 3 per cent. when they remain two or three years.

The actual importers of copper bottoms and sheets are almost entirely British firms established in Baghdad, which place their orders in England or Belgium or France through their London offices. Local firms interested in the import of copper bottoms and sheets have standard specifications on file with their London principals or representatives. These specificatieons show the number and weight of bottoms and sheets required and the arrangement of the different sizes of bottoms in bundles, 10 bundles weighing 1 long ton. These local firms receive weekly from London a metal broker's report on the condition of the copper market and the prices current. Such reports are brought to the attention of local jobbers interested in the copper trade and also to the attention of coppersmiths who order their own requirements direct from importers. If prices are accepted by jobbers or coppersmiths, orders are placed against a deposit of 10 to 15 per cent. of the amount of the order and a contract is signed by the buyer. Offers, counter-offers, and purchases of copper are all made by telegraph.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total shipments to United Kingdom ports up to January 22 amounted to 726,098 cases, as compared with 723,639 cases at the corresponding date last year. Shipments have lately increased appreciably, no less than seven steamers, carrying over 175,000 boxes having been notified as sailing for United Kingdom ports between January 15 and 22. Total shipments are now in advance of shipments at the corresponding date last year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 25:—

Egyptian Futures.—Sakel Contract.—This market has shown less resistance during the past week, the undertone being unsettled by declining American values and a falling off in the trade demand. As soon as the easier tendency became apparent both spinners and manufacturers largely withdrew from active operations, and as moderate long liquidation has been in evidence throughout the greater part of the week, prices have declined from day to day, to-night's close showing a loss of 31 to 36 points for near and 33 to 48 points for distant positions on the week. A satisfactory feature to be noted is the fact that to-day's decline has attracted a much improved demand, fairly good covering emanating from certain trade sources. This rather bears out our recent contention that consumers are working on a very narrow margin as regards their supplies, and it appears probable that any steadying up in the other markets would be rapidly reflected in this particular department. During recent weeks Alexandria has been the keystone of the position, but latterly weakness has been experienced in this quarter; in fact, the decline on the other side has been more accentuated than that witnessed in the local market. This has led to a certain amount of profit-taking by straddlers, but despite this the markets have still the appearance of coming more closely together; we still consider that purchases of Novembers here against sales of the same position in Alexandria will later on prove a profitable operation. Sentiment at the moment is generally "bearish," and encouraged by the course of the market during recent sessions a fair amount of short selling has been indulged in; on this account we consider that the position would be quickly affected by any favourable influences, such as a continuation of the improvement in the trade demand experienced to-day or to any steadying in the American departments

Upper Contract.—Only a very moderate amount of business has taken place in this option during the past week and weakness in both Alexandria and the American markets are mainly responsible for the decline of 42 to 52 points that has taken place. Active trade support has been withheld for the greater part of the week, but to-day there are signs of a revival of interest, and should the market start to react we would probably be favoured with the necessary increase in the offtake to encourage a more confident undertone. For some time we have expressed the opinion that purchases on set-backs were advisable; we now consider that we have reached an attractive level for out-and-out purchases.

Egyptian Spot.—Business has been distinctly quieter during the greater part of this week. Actual conditions, however, show no significant change, and the day-to-day inquiry has been much the same as usual. The U.S.A. ginning figures published on Monday last appear to have encouraged those with "bearish" views, and the subsequent weakness in the futures markets caused a general easing off in the inquiry for spot cotton. To-day, after a further initial drop, prices have shown signs of steadying and some inclination on the part of spinners to "come in on the drop" has been observed. Everything depends on the course of the New York market, which has now suffered a considerable decline, and we are of the opinion that, given a lead from that quarter, prices will rebound very quickly in our markets here, as many spinners appear to be running short of actual cotton.

Sakel has shown more resistance to the decline than have Uppers, but business has again been of a very restricted character, and an inquiry for Sakel at over "100 on" has been a rarity. At from 50 off to 50 on, a fair inquiry has been in evidence, but once again we have to report that the bulk of the business has been taking place in low grades at from 10½d. to 13½d. Sellers of this low cotton have shown a disposition to meet the market on the decline. The demand for Uppers has broadened out considerably and all grades have been in request, but by far the greater part of the business has been done in cotton ranging from 25 off to 25 on contracts. The supply of easy sellers of Upper cotton appears to be inexhaustible. A fair business has taken place in Sudan cotton. Other growths have been neglected.

C.i.f. business has been very irregular, but on the whole we are of the opinion that some improvement has been shown. Forwardings to spinners for the week ending the 20th inst. were returned as 7,100 bales Egyptian and 1,276 bales Sudan. Spot sales (estimated), 1,850 bales Egyptian and 850 bales Sudan. Quotations show a decline all round to 60 points. F.G.F. Sakel, 17.10d. F.G.F. Upper, 13.30d. F.G.F. Pilion, 13.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 19, state:—

Since our last report the market has been quiet but the tone has kept firm. The week's summary of price movements is as follows:—Sakellaridis: January, 34.35 dollars, 0.13 dollars down; March, 34.58 dollars, 0.24 dollars down; May, 34.80 dollars, 0.37 dollars down; July, 35.10 dollars, 0.39 dollars down; November, 35.17 dollars, 0.22 dollars down. Ashmouni: February, 26.28 dollars, 0.34 dollars down; April, 26.40 dollars, 0.41 dollars down; June, 26.55 dollars, 0.37 dollars down; October, 25.87 dollars, 0.29 dollars down.

Sakel.—There has been very little doing in the market, professional jobbing constituting the bulk of the turnover. The commercial demand is not good and an improvement in the near future is hardly indicated with spinners buying only from hand to mouth and the Sudan crop rapidly coming into view. With industrial conditions so poor in the countries which take the bulk of the Egyptian crop, it rather looks as if this hand-to-mouth policy will be maintained for some time.

Uppers.—The Uppers market has been quiet and slightly lower in sympathy with the weakness in New York. The demand from abroad has been only moderate.

The week's receipts amount to 112,477 kantars, against exports 201,967 kantars; the stock in Alexandria stands at 3,229,659 kantars.

Spot: The market was closed on Saturday last for the Greek Orthodox New Year holiday. Total sales amount to about 11,900 bales, of which we estimate 5,900 bales Sakellaridis, 5,000 bales Ashmouni and Zagora, 600 bales Pilion, and 400 bales other varieties.

Sakellaridis: There has been a very active demand for cotton ranging from Fair up to Fully Good Fair, but the turnover has been restricted owing to the small amount of this cotton showing on the market—this especially applies to the lower grades in this range. Spot differences have consequently hardened. The demand for Good is still maintained and a fair business has been done at about last week's premiums.

Ashmouni and Zagora: All grades have been dealt in, but cotton from Good Fair to Fully Good Fair is still the main feature of the demand. Spot differences do not show much change from last week.

Pilion: A small turnover has been registered from Fully Good Fair to Good at about last week's premiums.

Other Varieties: The bulk of the business done has been in Nahda Good and Good About. A few lots of White changed hands. Spot differences remain about the same as last week.

Up-Country: Business in the interior is very quiet; there is very little cotton offered for sale and the ginning factories are working only two or three days a week. Interior stocks are certainly less than at this time last year, although there is plenty of cotton still in the factories. Ploughing for the new crop is progressing normally, and, if weather conditions keep favourable, sowing should soon commence. The demand for planting seed has been heavier this week. Pilion is out of favour and many of the cultivators who planted this variety last year are this year planting other outside growths, particularly Nahda. The Nile gauges still show considerably below normal, and prospects for the summer water supply are not, at the moment, favourable, but it might be mentioned that any shortage of water during the summer will affect rice cultivation more than anything else.

DEMAND FOR PRINTING INKS IN EGYPT.

It is believed that the Egyptian demand for printing ink is growing, owing to the increase in printing. The advance which has been made in a quarter of a century in the direction of education is very significant (says an article in the United States "Commerce Reports").

There are but few large job-printing establishments in Egypt, but a number of small printing establishments throughout the country, together with the leading newspapers, brings the annual consumption of ink up to around £12,000 annually. During the last three years a steady increase in imports of printing ink has been perceptible, receipts during 1926 reaching a total of 214,655 lb. as against 212,552 lb. during the preceding year, while those during 1927 give promise of reaching somewhat more than 235,000 lb. Germany has been the leading source of supply, having furnished from 40 to 45 per cent. of the annual receipts, with the United Kingdom and France as its nearest competitors. Imports from the United States during this period have been negligible.

As a general rule, the price of a commodity determines its market here. Regardless of quality, the cheaper of competing articles will have a great advantage over a rival line. Thus, in the introduction of printing inks into Egypt, price will have to be given the first consideration. So far, the cheaper printing inks of Germany, the United Kingdom, and France have held a leading position. Black, red, blue, green, browns, and yellows are the leading colours in use, black ink being used principally for the printing of periodicals and some job work, while the coloured inks are in demand for the printing of handbills, posters, magazine covers, and similar work.

A new bank has been established in Bucharest, under the name of Banca Saporta, S.A., with a capital of 10,000,000 lei.

Notes of the Week.

M. Titulescu's Tour.

Roumania has a valuable asset at the present time in her Foreign Minister, M. Titulescu. Although a member of the Liberal Government, he is known to have kept himself aloof from party politics, and for that reason he represents, as it were, a more continuing phase of national policy than is usually to be associated with individual statesmen of Near Eastern countries. His tour of European capitals, therefore, should prove of considerable advantage at this juncture to Roumanian interests. In the first place he can speak more dispassionately than any other member of the Bucharest Government of the political situation and potential changes in Roumania, and he will, it is to be hoped, reassure public opinion abroad as to the essentially peaceful character of whatever developments, political or economic, may be in store. Whether he will be equally successful in evolving out of the existing tangle of international relations in Central and Near Eastern Europe any practical policy for the countries concerned remains to be seen.

Roumania and the Powers.

The prolongation of M. Titulescu's stay in Rome for several days beyond the period originally fixed suggests that he found Italy to be the crux of the international situation in which Roumania is particularly interested. Apart from the tangle of cross-purposes for which various complementary and contradictory agreements are responsible, there would be little in this international situation to give cause for uneasiness. No country would think of entering lightly upon war to-day in the face of the Legaue of Nations; yet there is a danger, as things are, that one country or another, encouraged by the support that it has gained by treaties, will see how near it can go to the dividing line between peace and war, and so promote general unrest. The Roumanian Foreign Minister will have done good service to the cause of peace, if he has been able to convince the Italian Government that Roumania will never be a party to outside interference in the Balkans, not even for the *beaux yeux* of Italy. In return, Signor Mussolini may have been able to point out that Italy, in her devotion to the maintenance of peace in Europe, could not stand by and see Hungary bullied and threatened by the Little Entente; hence the Italo-Hungarian Treaty. In these circumstances it requires little imagination to see how much more at ease the whole of South-Eastern Europe would be, if none of the States had committed itself to separate agreements, but had relied on the justice of its own policy and the existence of the League of Nations in the unlikely event of any serious aggression upon it. As soon as France and Italy abate their mutual suspicion, the smaller countries which have qualified as their satellites will be free to devote their attention to far more urgent affairs at home.

Greek Ministerial Crisis.

Once again the Greek politicians, whose only mandate from the electorate is to eschew party politics and to get on with the work of administration, have failed the country and interrupted the business of reconstruction by disagreeing among themselves. The immediate cause of the second resignation of the Coalition Cabinet under M. Zaimis is a quarrel over a contract for a big programme of road construction. As the matter is essentially a technical one, it has to be supposed that the Ministry, in spite of having been purged of its Royalist Minister of the Interior last August and now being wholly Republican, save for the presence of General Metaxas, who has loyally accepted the Republican régime for the time being, has fallen a victim to those personal considerations which have always dominated Greek politics. With the successful flotation of the recent loan the chief incentive to smooth collaboration within the Cabinet has passed, and an indication of the state of affairs which has led to the present crisis was given by the resignation of the Minister for War, who was persuaded, however, to withdraw it. The new crisis is the more to be regretted in Greece's interests, as the Coalition Government was just beginning to remove from itself the reproach of achieving little apart from the maintenance of political peace. Something in the nature of a constructive programme had been started, and the retention of M. Zaimis at the head of the Government was

Digitized by Google

a guarantee that the country would be spared extreme political partisanship. A further tenure of office on his part would probably respond to the national desire; but it is doubtful whether he can be induced to undertake the task again. One alternative is a Liberal Government under M. Kaphandaris, hitherto Minister of Finance, who has the largest following in the Chamber; but his appointment would almost inevitably call for fresh elections.

Missions in Turkey.

It is unfortunate that an incident should have arisen in Turkey which raises the question of religious tolerance. It has been formally enacted under the Republic that all who are of age are free to adopt and profess whatever religion they choose; on the other hand religious propaganda in schools has been prohibited. An announcement, therefore, to the effect that an American Mission School at Broussa had recently secured four girl converts to Christianity was calculated to place the Turkish authorities on their mettle, and they have decided to make an example of the offending Mission. The Broussa school has been closed, the teachers are to be prosecuted and investigations are to be made into the activities of other schools of the same Mission. It may be a matter of regret that the Turks, having gone so far along the road of religious tolerance, did not go the whole way, and remove all restrictions on liberty of conscience in regard to religion. The distinction in the case of minors, however, is comprehensible. The Mission in question can, no doubt, argue that it has to obey a higher mandate than that of the Angora Government; but in the circumstances it will not challenge the right of the Turks to enforce the laws of the country. Any vindictive action against foreign schools would not serve Turkey's interests, as the country is still sadly lacking in educational establishments.

Cyprus: A Jubilee Year.

Cyprus is due this year to celebrate the jubilee of its association with the British Crown. The articulate among the Greek inhabitants are much exercised in mind over the attitude that they ought to adopt towards the celebrations, and some sympathy is, perhaps, due to them in their dilemma. The Rugby boy's judgment on his famous Headmaster, that the Doctor is a beast, but a just beast, has its counterpart in the Cypriot Greek's opinion of the British, with this difference, that his verdict would be that they are beasts, but useful beasts. It is difficult to get away from the fact that it is entirely owing to Great Britain that the Island has been delivered for fifty years from the Ottoman régime; but then, altruism being an essential characteristic of the Greek and a recognised factor in international politics, no one could have imagined that Great Britain had any other object in view than to hand the island over to Greece. Even to-day the Greek islander would not wish to restrict the usefulness of the inconvenient British, for he would permit them, in the event of Cyprus being handed over to Greece, to save it from the fate of Rhodes and the Dodecanese. Little wonder in these circumstances that for the first meeting called to consider the question of the Jubilee celebrations from the Greek side hardly anybody appeared. Nor does it help to be invited to approach the celebrations from a social and economic, and not from a political, point of view. The superstitious know the efficacy of a wish when they see a piebald horse, if it can be wished without thought given to the tail—a hard enough condition. But whereas a tail is a small part of a horse and worn behind, to the Greek his politics is a very big thing and invariably paraded in front. Cyprus, therefore, it would seem, must prepare her Jubilee Celebrations with due regard to their being used as a setting for a repetition of the familiar demand for Union with Greece. Great Britain, however, cannot ignore the fact that, if more had been done for the Island in the past, less would be heard to-day of the Greek parrot-cry. Cyprus has indeed already begun to celebrate its jubilee in the best possible way by the more enlightened attention now being paid to the all-important questions of agriculture, forestry and trade.

An Arab-Jewish Brawl.

It has been said that trouble breaks out in Palestine between Arab and Jewish colonists only as the result of Press propaganda in Great Britain. If this be so, it is presumably the *Daily Express* which must be held to blame for the outbreak on January 31 at Herzliah, the colony some twelve miles north of Tel Aviv. At this place *badawin* came into conflict with Jews because they pastured their cattle on a Jewish plantation. This pretension the Jews would not brook, and promptly tried to drive the Arabs' cattle into the colony, where it was intended to hold the beasts as hostages. The table was thus nicely set for a fray, and, indeed, ten Jews were injured; but, as is so often the way in these cases, the Palestine police soon arrived on the scene, and the quarrel was at an end. Ten *badawin* of the Abu Kandil are reported to have been arrested. There does not appear to be great significance in this affair—certainly there is no need to attribute to causes outside Palestine itself—and the Jerusalem Administration knows well how to deal with outbreaks of this kind. It is perhaps a little naive to maintain that if there were no partisan taking of the Arab side in England, the Arab would everywhere be only too pleased to "lie down" with the Jewish colonist, but it is a very just boast that these brawls between old and new settlers are not more frequent.

A Murderer's Death.

It would be profoundly interesting to be able to probe into the thoughts of the eight thousand mourning Arabs who are reported to have followed the dead body of Shaikh Dhari Mahmoud, the murderer of Colonel Leachman in 1920, to the cemetery of Baghdad. This treacherous shaikh had been convicted of the murder, but in virtue of his old age had been sentenced to penal servitude for life. He had served but twenty-four hours of his sentence when swift death overtook him. He has thus paid for one of the blackest deeds in the history of modern Iraq. Who, then, were the eight thousand who publicly mourned him? Not, surely, the representatives of the new Arab State, who must have been as shocked as were the British at the nature, the essentially un-Arab nature, of the dead Shaikh's crime. Rather they were the hangers-on, the numerous "nobodies" who exist in every capital, but more abundantly, perhaps, in Eastern capitals, to make more difficult the work of upright and enlightened men. The West is not the only place where the psychology of crowds might be studied with infinite profit to the various Administrations. In Egypt and in India, of course, the problem is much more acute than it is in Iraq.

THURSDAY, FEBRUARY 9, 1928.

THE POLITICAL CRISIS IN YUGOSLAVIA.

Political unrest, which has been largely responsible for the slow progress of administrative reform since the War, continues to be the order of the day in Yugoslavia. The general election held on September 11 confirmed the Coalition Government of Radicals and Democrats in power with a substantial majority; but the situation was complicated by the fact that M. Voukitchevitch's own party, the Radicals, had lost nearly a quarter of their seats and the Democrats had gained almost an equal number. The relations between the two component parts of the Ministry were, therefore, materially altered, and the Prime Minister's position was still further weakened by the abstention of M. Davidovitch, the official leader of the Democrats, who, while countenancing the Coalition as a temporary expedient, refused to take office or to promise M. Voukitchevitch his whole-hearted support. The doubtful attitude of the Democrats helped to consolidate the Radical ranks, as the Pashitchist group had been seriously weakened at the elections and could hope to make themselves felt as a factor only by accepting the lead of M. Voukitchevitch. For the last four months the crux of the political situation has been the ultimate attitude of the Democrats. In October the Party Club decided to remain in the Coalition, but weakened the value of that resolve by according a vote of complete confidence in M. Davidovitch, who was known to be anxious to break up the Coalition. Having been accorded a free hand in the matter, the Democrat leader from that time onwards made no secret of his attempt to bring about a combination of Opposition Groups with his own party which would insure a majority against the Government in the Skupshtina. A nucleus for this scheme was provided at an early stage by the conclusion of a working agreement between M. Raditch and M. Pribitchevitch, leader of the Dissident Democrats; but, whereas the Democrats as a whole were prepared to smooth the way for a return to the fold of M. Pribitchevitch, they showed little enthusiasm for an arrangement which would bring about co-operation with the latter on a basis that gave him in a coalition the backing of sixty Raditchists in addition to his own twenty-one followers. M. Davidovitch, however, has won the day. At the congress of the Democratic Club last week the solidarity of the party was affirmed and a vote was carried against the continued co-operation of Democratic Ministers in the Coalition Government. The four Ministers concerned at once handed in their resignations, and the political situation is again in the melting-pot.

Unless there are unexpected defections on the Radical side, M. Davidovitch can hope to achieve little more than a deadlock in the Skupshtina. With the Bosnian Muhammadan group of sixteen and the Slovene Clerical Party of twenty, M. Voukitchevitch should be able to count on 148 votes; the new Concentration of Democrats, Raditchists, Dissident Democrats and Agrarians will exceed the number by seven votes, but there remain twelve delegates whose instincts may be anti-Radical, but who will no doubt know how to use their power to the best advantage for themselves. It will, however, be contrary to experience and probability than any coalition which has to rely upon the co-operation of M. Raditch should feel confident of itself when on a division the attitude of a few delegates can turn the scale one way or the other. In these circumstances M. Voukitchevitch may still think it worth while to meet the Skupshtina, to test the solidarity of the new Opposition and in order to try to pass the measure for the unification of the taxation systems of the country, which has passed its first reading. It is significant of M. Raditch's reputation that, up to the eve of the announcement that he had joined M. Davidovitch, M. Pribitchevitch and M. Yovanovitch (Agrarian) to form an executive committee for the new Concentration, the Radicals were confident that they had secured his support. The last bid for Croat participation in the Coalition Government was the conferring upon the infant Prince at his christening the name of the first Croat king, Tomislav. M. Raditch and his Croat Peasant Party were not insensible to the compliment, and the danger that had threatened of a cleavage between Serbs and non-Serbs in the Kingdom over the unwillingness of the Government to enforce the income-tax in Serbia or to abolish it in the remaining provinces, where it exists as a relic of the Austro-Hungarian régime, was averted. M. Raditch, however, remained loyal this time to his allies, the Dissident Democrats, and the Concentration group results.

For the ordinary foreign observer it may be difficult to see in these shifting combinations much more than the wire-pulling of individual politicians. The main political issue in Yugoslavia is still centralisation *versus* decentralisation, in other words, whether the Kingdom of the Serbs, Croats, and Slovenes shall be merely a Greater Serbia or whether it shall be in reality as well as in name a federation in which the component elements are on an equal footing. Even after the death of M. Pashitch the Radical Party, essentially Serb in composition, stands committed to centralisation, although of a less rigid type than that associated with the veteran leader of the Party. In the opinion of the Radicals, and presumably of those Democats who hold with M. Marinkovitch, Minister for Foreign Affairs, and his colleagues in the Coalition Government, Yugoslavia's predominant concern at the present moment, as the Budget speech of the Minister of Finance clearly explained, is, or should be, the economic condition of the country. The situation is not satisfactory, and it calls for careful handling, which is possible only with political stability. Apart from the Government's failure to deal equitably with the income-tax question—a matter in regard to which Radicals and Democrats, as Serbs, are in the same camp, both fearing to lose votes by supporting an income-tax for Serbia—there is no suggestion that the Opposition can do more to improve the general economic conditions of the country than the Coalition is doing. The Federalists, on the other hand, hold that Yugoslavia can never do justice to herself under the present system of centralisation, and that the only sound policy is to lay a good foundation first, before attempting to erect a building, however attractive the design. Whether in actual circumstances their programme can be carried through without a foreign loan remains to be seen. Certain it is that the political instability which has now characterised the country for so many years does not inspire confidence in financial circles abroad. If a further change of Government entails fresh elections, to be followed by another period of party manœuvring to enable the new Cabinet to secure a working majority, it is evident that negotiation of a loan must be still further postponed, with further prejudice to the economic rehabilitation of Yugoslavia.

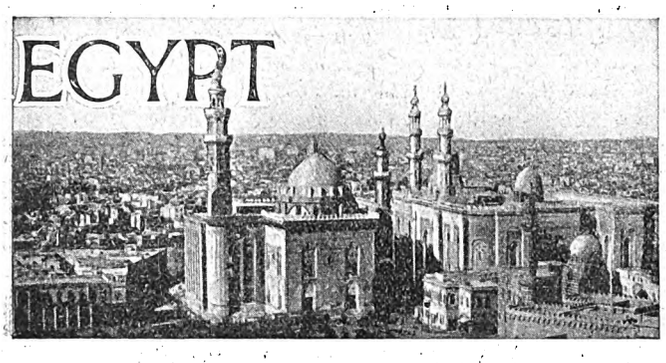
The Near and Middle East*

From Our Own Correspondents.



Cairo, January 28.

The Copts.

There appears to be considerable agitation in the Coptic community over the treatment which for some time has been accorded to the Coptic officials in the Government service. *Misr*, the Coptic organ, has been publishing a series of articles on the subject citing numerous cases confirming the general complaint of the Coptic officials, and it was currently stated a few days ago that an official inquiry had been ordered. Since then the Minister of Finance has denied that any inquiry is to be held as according to him "the complaints made were without foundation." It is difficult, of course, for an outside to judge of the merits of the case which the Copts put forward, but it does occur to one that the statement of the Minister of Finance is scarcely calculated to allay agitation in the community. As it is, the impression given is that the authorities have decided without inquiring into them that the grievances in question are without foundation. It would certainly appear to have been better policy either to have said nothing or to have ordered an inquiry and published the results. The agitation notwithstanding still continues, to judge from the articles appearing in *Misr* and the telegrams which the Press are receiving, and it is to be hoped that steps will speedily be taken by the friends of both parties to set a term to an incident which might easily lead to a serious breach in the Moslem-Copt *entente*, which has been one of the most striking features of the independence movement.

The London Legation.

No decision has yet been taken with regard to the successor of Aziz Izzet Pasha in London. There appear to be two great difficulties in the way. In the first place, there is a dearth of men suitable to represent Egypt abroad, and consequently the solving of the problem of London by the promotion of any of the other foreign representatives would simply create a similar problem in regard to the filling of the vacancy thus created. Secondly, the position carries with it a wholly inadequate salary and allowance. It is no secret that Izzet Pasha put his hand to a very substantial extent into his own pocket to keep up the position. There is nobody at present in the service sufficiently well off to stand the strain of this expense, and the one or two outside who could afford it are already tired of public life and in need of a rest. It looks very much as if Parliament will be compelled to raise the emoluments of the London post if it wants to be properly represented at the centre which is the most important of the foreign Legations in regard to representation.

The Nag-Hamadi Barrage.

The day after this letter is published, i.e., February 10, King Fuad will lay the foundation stone of the Barrage, which Messrs. John Jackson, Ltd., are erecting for the Egyptian Government at Nag-Hamadi. This barrage, which will cost just under £E2,000,000, will provide basin irrigation for an area of 600,000 feddans below its site with eventually perennial irrigation for an even larger area. The land in question suffers at present very much owing to irregular watering and this new work, the last of the series on the Nile in Egypt forming part of the irrigation system, should prove very remunerative by the increase in the productivity of the large area it will serve.

The Visit of the Fleet.

To-morrow the Queen Elizabeth and the Warspite raise anchor and leave Alexandria for Malta on the conclusion of a ten-days' visit. Special interest has attached to this cruise, since it will be the last time that Sir Roger Keyes will come to Egypt as Commander-in-Chief of the Mediterranean Fleet. As usual, great efforts were made to give the officers and men a good time. By contrast with the autumn cruise, when Alexandria is the seat of Government and the main entertainments are organised there, the chief events on this occasion took place in Cairo, where in addition to football matches between the Army and the Navy and boxing tournaments there was a big dinner at Gezira, the Chair being taken by the High Commissioner, followed by a dance at the Continental-Savoy. In Alexandria those who could not be spared to come up to Cairo were entertained at Claridge's Hotel and at the Belvedere Casino. The British community were in return entertained on the warships, and last evening an official dinner was given on the Queen Elizabeth by Sir Roger Keyes and his officers for which the High Commissioner and Lady Lloyd as also Lieut.-General Sir Peter and Lady Strickland went down specially from Cairo.

Sir Alan Cobham's African Flight.

Sir Alan Cobham, who had been delayed for two months at Malta owing to damage to his flying-boat by the rough weather and who arrived at Aboukir on Monday last, has now left on his long flight round Africa. Much should result from this trip in the matter of improvement of communications, and particularly should the Sultan and the adjoining countries benefit therefrom. So far no civil aviation enterprise, except the Imperial Airways service to Baghdad, has been set up in Egypt. But the time is not far distant when aerial communications across the Continent of Africa and between this and the other Continents to the North and the East will have to be established, and it is just as well that the pioneer work in the matter of gathering the information and proving possibilities should be done by British airmen.

Incidentally considerable improvement will have to be made with the quarantine arrangements at Aboukir before any development in civil aviation is possible. The quarantine officials were most courteous and did all they could to minimise the inconvenience, and Sir Alan and Lady Cobham were very patient, but it must be admitted that it does not conduce to good temper to find on landing that one has to go some four miles away to a quarantine office in order to accomplish formalities which never in such circumstances can be anything but formal. As an illustration of the inconvenience caused by the lack of arrangements, I would mention that in order to make sure of getting his interview with Sir Alan Cobham in time for cabling to London, the representative of *The Times* had to go into quarantine with him.

Greyhound Racing.

Arrangements have so far progressed in regard to the scheme for greyhound racing that the organisers hope to hold their opening meeting early in March. The first consignment of dogs has already arrived and the animals are quickly acclimatising themselves. A good site has been chosen beyond the Zamalek Bridge close to the old pigeon shooting grounds and special arrangements have been

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.**

Digitized by Google

made in regard to transport. Whether racing will continue after May will depend on how the dogs stand the hot weather. For the present all estimates are being based on merely a two-months' racing season this winter. The organisers are making an interesting innovation by arranging for races for "Selukis," a breed which comes down from antiquity and is greatly used in this country for "Shikari" purposes.

ROUMANIA.

Bucharest, February 1.

Political Heat.

With the re-opening of Parliament a few days ago, the political atmosphere has become more heated. The Opposition Party of M. Maniu has apparently determined on a fight to the death with the present Government, and publicly announces that it will enter into no "pourparlers" with the Liberal Party and will do everything in its power to overthrow the present Government at the earliest possible moment. The Liberals state that they would willingly retire in favour of M. Maniu's party, if only the latter would consent to give an undertaking not to upset the main lines of policy adopted by them. M. Maniu, however, is in no mind to give any such undertaking—the more so as he is widely believed to harbour designs against the Regency—though in no way against the Crown. Such a thorough upsetting of their applecart would naturally be most distasteful to the Liberals, and it is at least very doubtful whether the country would not have more to lose than to gain by it.

M. Maniu's Policy.

It remains to be seen whether M. Maniu has a strong enough section of public opinion behind him to be able to carry out his projects. One thing is certain, that a country's progress cannot be furthered by constant changes in its internal policy, and the assured continuity even of imperfect institutions will make for stability and hence for progress, whereas the brusque introduction of a new régime, even if the latter be preferable from many points of view, will upset the whole economic equilibrium of the country so that the building-up operations painfully carried out under the one régime will have to be recommenced on the new basis.

It is obviously one of the great disadvantages of Party Government that each party is apt to make the defeat of its political opponents its main object, and allow its country's interest to become a secondary consideration. Moreover, in this country, where somewhat primitive conditions prevail, the temptation to adopt such a line of action is infinitely greater than in better organised communities. But this is not a subject upon which it is profitable to expatiate.

In the present case, M. Maniu is no doubt honestly convinced that his policy is the only one to save his country, but has he sufficiently weighed the consequences of a new upheaval on the country's economic progress?

There is no doubt that Roumania has achieved much in the past five or six years, and the present slackness of trade, of which everyone complains, must be regarded as a sign that her market is gradually returning to normal conditions after the wild burst of speculation that ensued after the War, when fortunes were made in a few days or weeks. It may be anticipated that many of the superfluous new enterprises founded in that flush of excitement and speculative activity which followed the close of the War and the birth of "Greater Roumania," will now collapse under the strain of the present economic crisis, leaving the field free to older and sounder institutions. With them an unhealthy element will disappear, and saner conditions will gradually be observable in the industry and commerce of the country.

There is an old theory that a country progresses in spite of its Government rather than thanks to the administration of the latter, and Roumania might well give an example of this, considering how richly she has been endowed by nature with numerous sources of wealth. But no real progress can be attained without hard work, and unfortunately the very fact of the richness of the soil and the many natural advantages enjoyed by the country, remove one of the chief incentives to work, namely, that dire necessity which binds the hands of the northerners to their ploughs.

Of course, it cannot be said that the Roumanian peasant does not work hard, but if he can earn enough to live on by carting firewood into town he will leave his land lying fallow, quite cheerfully with no qualms of conscience. It may perhaps fairly be said that it is more this spirit than anything else which prevents the country making as rapid progress as it might. Nevertheless, the peasant element is probably the saving of the country, for on the whole they go quietly on with their productive work, taking no heed of politics.

Post-War Febrility.

The abnormal mental conditions engendered by the War, which found their expression, on the one hand, in the wave of speculative activity, already referred to, and on the other, in the frenzy of extravagant pleasure-seeking which spread over Europe after the Armistice, have been sadly exemplified by disclosures recently made in Bucharest, which show that a small group of young men and girls well-known in Bucharest society have formed a secret club, to indulge in the use of intoxicating drugs, such as opium, cocaine, morphia, and so on. All kinds of illegal and disgraceful devices have been used to obtain these drugs. The scandal was brought to light through the suicide of one of the young women, aged only 19, and it has since transpired that a number of young people whose names are familiar in smart drawing-rooms are implicated. This disclosure has come as a great shock to the public, as nothing of the kind has hitherto been known in Bucharest, and, indeed, there is no law in existence under which punishment can be inflicted. The Government, however, has immediately taken steps to have a law drawn up which will be placed before Parliament at the earliest possible moment.

General News.

A new Roumanian Consulate has been established at Alexandria, and M. Gr. Mihaescu has been appointed to the post.

M. E. Conradini, the eminent Italian writer and apostle of Fascism, is on a visit to Bucharest and has given several lectures to crowded audiences.

Professor Gaston Jèse has been invited to visit Bucharest as a financial expert, and he has made a report (not published) and gave a lecture at which all the important economists of Roumania were present. He greatly praised the British system of financial organisation even to the disadvantage of that of his own country. He was also of opinion that the financial policy of the Liberal Government is fundamentally sound.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Digitized by Google

M. Guesney, of the Banque de France, has also visited Bucharest, and it is assumed that the object of the visits of these eminent financial experts was to discuss with the Roumanian Government plans for the stabilisation of the leu and proposals for a foreign loan in this connexion.

THE HIJAZ.

Jidda, January 21.

The Iraq-Najd Frontier.

The *Umm al Qura* of January 13 publishes an article on the recent troubles on the eastern frontier of Najd, which may be regarded as giving an authoritative though unofficial statement of the attitude of the King of the Hijaz and Najd. It may be briefly summarised as follows:—

(1) The building of forts on the frontier by the Iraq Government is a contravention of Article 3 of the Uqair Protocol and indicates a hostile attitude, while causing a feeling of unrest.

(2) The Iraq papers (and those of other countries) have written about these events in terms that challenge an answer, saying, for instance, that a part of the population of Najd has risen against King Ibn Saoud and taken to raiding Iraq in his despite.

(3) The Iraq Government, having recently mended its old ways for a while, appears now to be returning to them, thus encouraging the tribes of Najd to raid it. If it continues on these lines, the recurrence of raids is inevitable and they are against Iraq not against Najd which is absolutely unaffected thereby.

(4) Some years ago Yusuf Sadun, an Iraq chief, came to live in Najd territory owing to some personal grievance against the Iraq Government and, while there, collected a Badawin gang to raid the Dhafir tribe of Iraq. Ibn Saoud immediately ordered the Amir of Hasa to send an expedition to punish Yusuf and restore the raided property. Yusuf fled to Iraq and was there received with honour and then began to organise raids into Najd under semi-official instigation. Ibn Saoud in this case took no forward action, and this whole group of cases came under review at various conferences.

(5) Quite recently one Muhammad al Turki of the Dahamisha ('Anaza) raided the Suqur tribe of Iraq. The Amir of Hail, hearing of this, immediately ordered the return of the raided goods and, being disobeyed, organised an expedition to punish the culprit. Muhammad al Turki fled to Iraq and was welcomed with honour and presents as Yusuf had been before.

(6) The moral is obvious. If the Arabs of Najd are encouraged to think that they can raid Iraq and, when punished by their own Government, flee to Iraq, sure of a friendly and honourable reception, raiding into Iraq will become the order of the day; the frontier will become a battlefield and the old days of raiding and violence will return. The wisdom of Iraq is creating unrest which has nothing whatever to do with tribal dislike of King Ibn Saoud's policy.

(7) If the Iraq Government genuinely wants peace, let it observe the Treaties it has signed; let it prevent raids by its own people across the frontier; and above all let it not welcome with open arms those who are guilty of raiding into its territory. Otherwise who can be optimistic about the prospects of peace on the frontier? Let those who are responsible be careful.

Such is a plain summary of an article which is restrained in tone.

A Camel Race.

The speed of a camel has always been a matter of controversy among the experts, and "T. E. Lawrence" has committed himself to strange estimates for which the authority of his name has gained a measure of evidence. A camel can, according to him, attain a speed of 25 miles an hour, and he vouches for the story of a journey of a messenger from Yanbu to Zilfi and back (1,000 miles approximately covered with a relay of camels) in seven days, i.e., at a uniform rate of six miles an hour without a moment's stoppage. Those who have given credence to Lawrence's estimates will be interested in the result of a camel race recently organised here for the express purpose of ascertaining whether riding camels could cover the distance between Mecca and Jidda in six hours—an average of 8 miles an hour for about 50 miles. None of the entrants accomplished this performance, the fastest time returned being $6\frac{3}{4}$ hours. It may, therefore, be assumed that eight miles an hour is an outside estimate of the speed of good Arabian camels, travelling as fast as they can for a reasonable distance. It would be interest- to collect similar information from other parts of the world, excluding freak performances over a few hundred yards.

General News.

Amin Bey Taufiq, Consul of Egypt, left Jidda on January 15 on transfer to Beyrout, and Karim Khan Hakimoff, the Soviet representative, who has been away on leave since the end of July, arrives back at his post to-day. Other arrivals include the two British Engineers referred to in my last letter, a new Director for the Netherlands Trading Society, and others. The European colony at Jidda has grown out of all recognition.

The weather continues to be delightful and there has been a slight fall of rain spread over three days—a total of .023 inch, not a very generous allowance.

The number of pilgrims is rapidly approaching 20,000, and there is an increasing activity among the motor-transport companies. The pilgrims profit by the lowered prices.

TRANS-JORDAN.

Amman, Undated.

The Rains.

Heavy rain fell in Trans-Jordan early in January, in time to save the first crop, which is well above ground, and to enable the land to be ploughed for the later sowings. The rain caused a small landslide, which blocked the Jerusalem road between Salt and the Allenby Bridge, in the Wadi Shaib. This spot gives trouble every year, but the cost of blowing up the cliff and clearing away the débris would be too great for the slender resources of

Trans-Jordan, so the annoyance will probably recur regularly until so much of the cliff has come away that only bare rock remains.

Locusts.

Much anxiety is felt owing to the expected invasion of locusts. The *fellahin* believe that they come in cycles of thirteen years, in which case one is due this year, as, though there was a slight plague from the north last year, the last serious invasion occurred in 1915. The locusts have reached Assouan, and, at their usual rate of progress, may be expected to arrive here about the end of February, probably by way of Aqaba. It is not, as is commonly supposed, the main flight of insects that does the greatest damage, but the occupants of the eggs that are left behind, who devour everything within reach as soon as they are hatched. The three most efficacious methods of fighting these pests are:—(1) by putting down poisoned crops. (2) By erecting galvanised iron barricades, too high for the young locusts to hop across, with trenches, suitably dug, into which they fall, and where they can be readily destroyed. (3) By the use of flame-throwers, which is considered to be the most satisfactory method.

General News.

A slight earthquake was felt in Amman about 8 a.m. on January 18. It did no damage, but the catastrophe of last July is so recent that some alarm was caused.

The tobacco factory is getting into its stride, and has turned out a great deal of cigarette tobacco. It is hoped that this local production, which is cheaper than that of the Syrian Régie, or of Palestine, will help to kill the present flourishing contraband trade on the Syrian frontier.

CYPRUS.

Nicosia, January 24.

The Fifty Years Jubilee.

Greek opinion is still divided over the question of participation in the Jubilee. The Governor has more than once expressed the hope that a political character will not be given to the celebrations. But how, it is asked, can such an occasion be divested of political significance and importance? A meeting convened by the Archbishop is yet to be held at which, it is believed, resolutions will be taken, which should determine definitely what line of action is to be adopted.

The *Official Gazette* of January 10, describes the Jubilee postage stamps, of ten denominations, which will be issued by the Cyprus Government on February 1. The issue is for twelve months, after which all remaining stocks will be destroyed. There should be a large demand from all parts of the world.

Government Lands on Mt. Troodos.

The Government proposes to invite offers for the purchase of valuable building sites near Pano Platres, a village a few miles below the summer military camp on Mt. Troodos. The War Office in 1879 acquired a tract of land, for the Commissariat, near the village, and since that time the neighbourhood has been largely occupied by hotels and private houses. From being a small and poor hamlet the place has become the largest, most flourishing, and fashionable summer resort for both residents and visitors.

Agricultural Outlook.

The grave anxiety caused by protracted lack of rain has been relieved, and copious showers have fallen throughout the island. Cypriot farmers, like others, are never without grievances, and crops of various kinds have been suffering considerable havoc from an increasing number of pests, which are occupying the attention of the Government Entomologist and the Agricultural Department. Conditions in Cyprus still render it difficult to find new markets. The British Empire Exhibition showed that a better market should be found in England for various island products, and the results of the Exhibition organised by the Committee engaged in seeking new outlets seem to confirm that view. Some products have indeed found their way to favour, e.g., the excellent cognac of Messrs. Hajjipavlou of Limassol; and "Cyprus cigarettes" have increasing sales. But, owing to lack of funds and other causes, efforts on a sufficient scale are not being made, and it is to be hoped that the new office of a Trade Commissioner in London will advance matters. It is true that a forward movement in sericulture is in progress, and the export of oranges should be very largely increased. Prof. H. Clark Powell, of Pretoria University, who visited the principal citrus growing areas last December considers that the oranges of Cyprus—both the Jaffa and some other varieties—are unrivalled. Fresh hopes are being raised regarding tobacco; and amongst branches of industry which call for more encouragement or energy may be mentioned those connected with raisins, dried figs, apricots, and other fruits, hazel and other nuts, *rahat lakum* (Turkish delight), and cereals. It must be mentioned that considerable discontent continues to be expressed with regard to the Agricultural Department, which, it is urged, should be entirely re-organised under a new Director. It is held that the appointment should be given to a Greek from Athens, which has sent to Cyprus its two best chiefs, M. P. Gennadius and M. Sarakoménos.

General News.

Cyprus mules maintain their reputation, though breeding appears to have been diminished. Over 120 have recently been purchased for military work in Iraq.

NEWS IN BRIEF.

The remains of a Sopwith Fighter biplane marked FSRS, with the date 15/10/25, have been found off Ithaca.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE MACEDONIAN QUESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I read with deserving care the two letters of your correspondent entitled "A visit to Macedonia and Old Serbia" and, with your kind permission, I would like to make a few remarks.

There is no doubt that the idea of a *rapprochement*, nay, even of a confederation, of the Balkan States is the soundest policy, and for the peaceful development of this part of Europe, more profitable than any other; THE NEAR EAST AND INDIA is doing great service to civilisation in advocating this idea. But I think that your correspondent was not exact in saying that he "found considerable willingness for compromise in Bulgaria," whereas, on the contrary, that "hopeful signs in Yugoslavia were few." In Yugoslavia there are entire parties whose basic ideology is *rapprochement* to and union with Bulgaria. The Independent Democratic Party under the leadership of M. Pribitchevitch; the Peasant League under the leadership of the former Serbian Minister to London, M. Y. Yovanovitch; the Croatian Peasant Party under the leadership of M. Raditch, the Socialist party and, to a leadership of M. Raditch, the Socialist Party, led by M. Davidovitch, and to which belongs Dr. Voya Marinkovitch, the present Minister for Foreign Affairs—all these parties consider that without a union with Bulgaria, based on equal rights, Yugoslavia remains incomplete. I may say that even in the governing Radical Party there are not a few of its leading members who are actively working for *rapprochement*. Union, of course, is the final ideal, based on the ethnographic principle of unity of all Southern Slavs; but until the time in which it will be possible to realise this ideal, all the political factors in Yugoslavia are content to work for the *rapprochement*. Nor does this exclude the *rapprochement* to or friendly collaboration with other Balkan States. Towards none of these has Yugoslavia any aggressive intentions and, consequently, agreement and collaboration with them is to her own interest as well as to theirs.

While on one side the Yugoslavs are being accused of chauvinism, on the other the Italian Press is assailing Yugoslavia for her *rapprochement* to Bulgaria, asserting that the *rapprochement* means the engulfing of Bulgaria, as though Serbia, Croatia and Slovenia were not already engulfed by Yugoslavia, just as Venice, Piedmont and Tuscany since long have been engulfed by Italy. Work for union cannot be called chauvinism. Both the Yugoslav Press and public, in the country's disputes with Greece, Turkey or Roumania, look with sympathy on Bulgaria, completely forgetting Bulgarian massacres during the War. The Bulgarian Press on the contrary, with but rare exceptions, in all conflicts of Yugoslavia with Italy or Hungary, ranges itself against Yugoslavia. Recently a paper very near to M. Bouroff went so far as to say that Dalmatia should belong to Italy!

The good will of the Yugoslav Government is seen clearly in the fact that it keeps as its Minister in Sofia M. Neshitch, one of the most open and declared Bulgarophils in Yugoslavia. Even Dr. Koroshetz, leader of the Slovenian Popular Party, went last year to Sofia for the purpose of *rapprochement*. It must be borne in mind also that during the War the Serbs committed no massacres on Bulgarians, whereas the Bulgarian troops of occupation left the saddest memory in Serbia, all of which means that the good will of Yugoslavia has more than double value.

There remains the question of Macedonia or South Serbia to say a few words about. It cannot be denied that the population of this region is still, to a considerable extent, without a clear-cut national conscience. The Macedonian dialect is a transition between the Serbian and Bulgarian languages. On the other hand, it is a historical fact that precisely this region has been the heart of the old Serbian Kingdom. Five hundred years of bondage under Turks had destroyed much of the national conscience. The first trace of autonomy was the Bulgarian Exarchate, which, very naturally, operated in the direction of Bulgaria. But exactly for those reasons, i.e., Turkish yoke and Bulgarian propaganda, that what remained as Serbian in Macedonia certainly has an increased value. The correspondent of THE NEAR EAST AND INDIA errs when he says that the number of Serbs in Macedonia is "small."

My opinion is that this matter should be judged coolly and practically. In old times Macedonia belonged to Serbia and to-day it belongs to Yugoslavia. Here we have both historical and virtual rights. As regards national right it speaks, both on the basis of the past and the present, in favour of Yugoslavia at least not less than in favour of Bulgaria. Consequently, there is no good reason for the change of frontiers, much less for the creation of a new tiny State. There is enough of Albania as the terrain for intrigues. The main thing is to satisfy the population.

The correspondent calls M. Pribitchevitch a chauvinist, whereas but a few days ago M. Pribitchevitch assailed the Government in the Skupshtina for its unsatisfactory régime in Macedonia and in such a strong manner that the whole Italian Press—which should occupy itself with Fascist terrors in Istria and Tyrol—took to exploiting his speech for the occult and declared ends of Italian policy in the Balkans. All the Yugoslav parties are unanimous in their criticism of the régime in Macedonia except a small clique in power, which, for partisan ends, sends to Macedonia incapable officials, against whom the population has every right to complain.

All progressive Yugoslavs demand that a régime of complete liberty, order and peace must be instituted in Macedonia; it will come to that; things are already improving, and that is all that is needed there. But though the interests of a coterie serve as no small obstacle to the realisation of this pious wish of all good Yugoslavs, the incomparably bigger obstacle to the introduction of peace and order in Macedonia is the wicked and criminal work of the Macedonian Revolutionary Organisation. The more prospects there are for peace in Macedonia the more wildly its acts, and naturally so, because peace and order deprive it of its *raison d'être*. All good Yugoslavs know that, and that is the reason why among them there is no difference of opinion that *komitajis*, who, moreover, receive inspirations from third parties, must be combatted without pardon. Yugoslavia is at least so much civilised that political fights in it are being fought without the use of knives.

I am convinced of the good intentions of the Bulgarian Government. But because it is evident that, be the conditions in Macedonia even the most ideal, the *komitajis* will not stop their sinister work, the Bulgarian Government would do a most beneficent deed, both for the *rapprochement* to Yugoslavia and for the Macedonian people, if it would help in suppressing the evil work of the *komitajis*. Thus it would deprive of their last stand those politicians who use the *komitajis* as an excuse for their partisan maladministration in Macedonia. Then the democratic elements in Yugoslavia, who form the majority in the country, would much more easily force the introduction even in Macedonia of a democratic régime and the policy of social and economic development.

This is the real policy to follow, whereas everything else is playing with fire and for the benefit of third parties.

—I am, etc., J. F. LUPIS-VUKITCH.

The provisional commercial agreement between Spain and Turkey, based on most-favoured-nation treatment, has been extended for a period of six months, as from January 1, 1928.

MODERN BULGARIA.

A series of public lectures on "Modern Bulgaria" was inaugurated on January 26 at the School of Slavonic Studies (Institute of Historical Research, Malet Street, W.C.1), by Lady Muir (*née* Stancioff) who chose as the subject of her first lecture, "Bulgaria from the Liberation to the Accession of Prince Ferdinand (1878-1887)". These studies were started under the auspices of Dr. Seton-Watson, who is anxious to bring Bulgaria more into the scope of the Slavonic School, both by publication and lectures.

Lady Muir surveyed contemporary Bulgarian history from the year of Liberation, 1878, to the accession of Prince Ferdinand. Reviewing the Treaty of San Stephano, which would have realised almost to the full the national aspirations of the Bulgarian race, Lady Muir expressed regret that this Treaty should have been obliterated by the Berlin Congress a few months later, July, 1878. She explained in full why the Treaty of Berlin—which followed—by creating an artificial division of the Bulgarian nation, sowed the seeds of all future Balkan wars. Lady Muir then reviewed the Constitution of Tirnovo and threw light on the election, as ruler of Bulgaria, of Prince Alexander of Battenberg, nephew of Tsar Alexander III. The Prince was, from the beginning, beloved and respected by his subjects; but having no political experience and no knowledge either of the true intentions of Russia, or of the customs and aspirations of his new subjects, his reign will be remembered as a failure. It included brilliant military feats—the victories of Slivnitza and Tzaribrod against the Serbians in 1885, the bloodless annexation of Eastern Bulgaria—which realised the partial union of the Bulgarian race, and the maintenance of peace and order at home; but these successes were overshadowed by hopeless political mistakes. Prince Alexander was forced, by a series of misunderstandings and intrigues, to sign his abdication on August 21, 1886. Lady Muir then described the Regency which followed, in which the prominent figure was Stambuloff, "the Warwick of the Balkans," of whom a character sketch was given.

This first lecture ended with the election of Prince Ferdinand of Saxe-Coburg-Gotha to the Bulgarian throne, his arrival and the welcome extended to him by the population—July-August, 1887.

The second lecture—on February 2— dealt with "The reign of Prince Ferdinand to the Balkan Wars (1887-1912)," starting with a description of the difficulties which confronted Prince Ferdinand, on his arrival in Bulgaria, and with a character sketch of the Prince. Prince Ferdinand was not recognised by Europe as the lawful Ruler of Bulgaria until 1896; but with the help of Stambuloff he maintained order within the frontier of Bulgaria, entertained correct relations with Turkey and the neighbouring Balkan States, developed the resources of the country and gradually transformed Bulgaria into a modern State. The Stambuloff Cabinet remained in power from 1887 to 1894, during which time the Powers took no active interest in Bulgaria; valuable concessions were obtained by Stambuloff from Turkey in regard to the Bulgarian Episcopate in Macedonia, unscrupulous enemies at home were crushed, Russian propaganda against Prince Ferdinand was successfully opposed, and agriculture, trade and industry greatly developed. Of Prince Ferdinand's character Lady Muir said: "The personality of Prince Ferdinand offers an extraordinary contrast to that of Stambuloff. The son of a German Prince and of a French mother, the descendant in a direct line of St. Louis, King of France, related to the most ancient dynasties of Europe, brought up by an adoring mother with the greatest fastidiousness . . . no-one has understood or will ever quite understand Prince Ferdinand. His great qualities, wonderful brain, unique charm and wide knowledge are so curiously blended with small weaknesses, petty jealousies, unreasoned dislikes. . . . History alone has created such types, and some are Prince Ferdinand's own ancestors! . . . As regards foreign politics at the start, he had to swing the pendulum between Russia and Austria-Hungary; grapple with the Macedonian problem . . . and he was threatened every hour of his life by premeditated assassination. That is why one must add great courage to all the other outstanding qualities of the founder of Modern Bulgaria."

Lady Muir, after reviewing all the first years of Prince Ferdinand's reign, noted his marriage in 1893 to Princess Marie-Louise of Bourbon-Parma, and the unpopular alteration of the clause of the Constitution which required that the heir to the throne should belong to the Orthodox Church. This was effected by Stambuloff through the Grand Sobranye, with the result that in 1894, the Infant Heir to the Throne, Prince Boris, was baptised as a Roman Catholic. It was not the popularity of the Prince that suffered in consequence, but that of Stambuloff.

Lady Muir then sketched the Macedonian question, which was started from the day the Treaty of Berlin severed the territory known as Macedonia and inhabited by Bulgarians from Bulgaria, comforting the population at the time with the empty promise of Reforms to be. The question still remains open and can only be solved by autonomy, on the principle of self-determination.

The lecture continued with the recognition of Prince Ferdinand by Turkey and the Powers in 1896, the achievements of the Stoiloff Cabinet (in power from 1894 to 1899), the reconciliation with Russia after the death of Tsar Alexander III. This reconciliation was sealed by the conversion of the Crown Prince of Bulgaria, Prince Boris, to the Orthodox Faith, February 14, 1896.

From 1896 onwards, Prince Ferdinand worked successfully with several Cabinets, testing his political men and never taking sides. Lady Muir alluded to the great and steady improvement of agriculture, trade, industry, in Bulgaria, and to the development of the road and railway system and of public buildings and ports. The Bulgarian Minister of Foreign Affairs, then Dimitri Stancioff, could indeed say with pride, in the Sobranye, in 1907: "Bulgaria has obtained her seat in Europe." Prince Ferdinand's political successes abroad, and the work and diligence of his people led to the declaration of complete Independence on October 5, 1908. Lady Muir pointed out that after the Gueshoff incident, and the seizure of the Southern Railway—which was fully described—"Europe had no time to intervene, or interfere." At Tirnovo, the ancient capital of the Bulgarian Tsars, his

predecessors, Prince Ferdinand proclaimed Bulgaria an independent Kingdom, and took the title of Tsar or King.

After some diplomatic arrangements, this state of affairs was accepted by Turkey and the Powers. In April, 1909, the independence of Bulgaria was officially recognised by the Powers and by Turkey.

The crisis was over, without bloodshed. Bulgaria as an independent Kingdom, feared and respected by her neighbours, negotiated the Balkan League with Serbia, Greece and Montenegro. The pioneers of this Christian union were the four Balkan Sovereigns and their Ministers: Venizelos (Greece); Ivan Gueshoff, Dimitri Stancioff and Rizoff (Bulgaria); Pashitch, Milovanovitch (Serbia); assisted by the correspondent of *The Times* in the Balkans, J. D. Bourchier, who was the friend of all. On September 30, 1912, the four Balkan States signed the Military Alliance of the Christian Nations against Turkey, which led to the complete victory of the Balkan States over the Turks, 1912-13.

Lady Muir ended her lecture as follows: "I am most gratified to end this rapid historical survey, with the wonderful picture of the Balkan Crusade, of the union of the four States, all sharing the same ideal. There have been cruel misunderstandings and blunders since; but some twenty years count but little in the history of the world, and a lasting result of as great importance as a pacific confederation of nations, cannot be obtained through one single attempt. The experience must be repeated and other ways tried.

As regards the Balkan League, the first attempt was a success, if not lasting; why should not a second prove more satisfactory, owing to the lessons of experience?

Moreover, since 1912, all countries can turn to Geneva for counsel, and one can only hope that the League of Nations will become a League of Confederations, and that Little Ententes will develop into big ones, inspired by general confidence and common interests, rather than by fear and distrust. The terrible consequences of a world-war cannot be obliterated in a day; but Europe has made a good start as regards the West, and one is entitled to hope that the Near East will soon be united and pacified by a Balkan Locarno."

Both lectures were well attended. Lady Muir impressed her audience by the masterly treatment of her subject, her rapid review never failing to hold the interest of those who followed it.

The remaining four lectures on "Modern Bulgaria" will be given by Dr. T. Tchitchovsky, of the Bulgarian Legation, on economic and social questions to-day and the three following Thursdays at 5.30 p.m.

BULGARIAN REFUGEES.

The Near and Middle East Association ask us to state that the Sale on February 14 in aid of destitute child refugees in Bulgaria which Mrs. L. Cobham is holding at 14, Hans Crescent, will be open on Wednesday, the 15th inst., also. Among those who are helping Mrs. Cobham by taking stalls are Lady Boyle and the Dowager Lady Boyle, Lady Muir, Mme. Stancioff, and Mrs. Carrington Wilde.

AN EXHIBITION OF PALESTINE PICTURES.

An exhibition of paintings and drawings of Palestine and Trans-Jordan by Mr. David Bomberg will be opened on February 11 at the Leicester Galleries, Leicester Square.

The works, numbering nearly a hundred and fifty, were all produced by the artist during a five years' stay in the Holy Land, and depict the most important phases of the new developments brought about by the Jewish settlement in the country. Several pictures will be shown of Petra, where Mr. Bomberg worked for six months. Among the paintings will also be two specially lent by the Governor of Cyprus, Sir Ronald Storrs, who purchased them when he was Governor of Jerusalem.

In the course of the exhibition Mrs. Stuart Erskine, who has written a book on her experiences in Trans-Jordan, will give an address on that country.

The Indo-European Telegraph Department.

(Continued from page 175.)

not only pay the money. The system was a very important nerve sustaining Imperialism, and unfortunately India had to pay for it.

Sir Arnold Wilson asked permission to reply to the previous speaker. The whole of the capital had been found by the Government of India, and when he had last been in the Persian Gulf and had pressed the Department to reduce rates they replied that they were not in a position to do so because the Government of India insisted on getting a commercial return for the money invested; the Government of India was receiving between 7 and 8 per cent. That was not a bad return on the money, seeing that money could be borrowed in India at less than 5 per cent. The Pandit was perhaps unaware that three out of the four of the telegraph staff were British Indian subjects.

Another point which Mr. Simpson had not brought out was that the reason why the Government of India in 1860 had undertaken the laying of the line was that the first cable laid under Government guarantee by a commercial company *via* the Red Sea and Aden to India had been a failure, and in the commercial and political interests of India it was decided to make every effort to connect India with Europe by land.

NEWS IN BRIEF.

During December, 1927, 253 immigrants, of whom 170 were Jews, entered Palestine. The corresponding figures for December, 1926, were 622 and 513.

Circulation of the *Agl el Nakl*, the organ of the International Committee for Propaganda among Transport Workers, has been prohibited in Palestine.

As the result of complaints made by three Turkish girls who are students at the Notre Dame School at Smyrna to the Director of Education there that the nuns were endeavouring to convert them to Roman Catholicism, an immediate investigation into the activities of all foreign schools in Smyrna was ordered last week.

The Roumanian Cabinet has drawn up regulations for the organised sale of cereals. The scheme for the standardisation of cereals has been established on a commercial basis, with the participation of the Government, the Chambers of Commerce and Agriculture, and of the National Bank and some private banks.

Ihsan Bey, the last Turkish Minister of Marine, whose Parliamentary immunity was suspended in January, was arrested at the beginning of last week in connexion with the recent naval contracts scandal. Ali Riza Bey, Deputy for Jebel Bezeket, who is involved in the scandal which has arisen in the financial section of the last Turkish Grand National Assembly, has also, according to *The Times*, had his Parliamentary immunity suspended and will be tried.

Surgeon Rear-Admiral Sir Percy William Bassett-Smith, K.C.B., of Aberdeen Terrace, Blackheath, S.E., an authority on tropical medicine and a past master of the Royal Society of Tropical Medicine and Hygiene, who served in the Sudan in 1884-5 with the Egyptian Expedition, afterwards Professor of Clinical Pathology at the Royal Naval College, Greenwich, who died on December 29, left £9,937, with net personalty £8,830.

The death took place in the Croydon General Hospital recently, at the age of 78, of Edward G. Arthur, of Lansdell Road, Mitcham, once a private in the 92nd Gordon Highlanders. He was one of the heroes of the march under Colonel Roberts from Kabul to Kandahar in 1880, and possessed a photograph of Lord Roberts which the Field-Marshal presented to him personally. Arthur also won commendation for his work during the cholera outbreak in the wars on the Indo-Afghanistan frontier.

THE WEEK AT HOME

London, Tuesday Morning.

The Passing of Earl Haig.

To-day the late Commander-in-Chief is being buried at Dryburgh Abbey. For a week there have been in this island universal grief, and, often enough, outward sign of the nation's mourning. Earl Haig kindled emotions which did not easily find expression, but nearly every man who was near scenes (and many who were not) connected with his passing showed mark of respect in the wearing of black ties. This sign was by no means confined to London. It was indulged chiefly perhaps by those who had actually served in the Great War, but there certainly were those too old and those too young to have served who not only realised but also felt the nation's loss in the passing of a man who was not so much a national hero as the consummation, the conglomeration of national virtues. Nothing of hysterical hero-worship has marked the great soldier's going, but deep, deep sorrow, pride and gratitude.

The Liberal Faith.

The Liberals have out-Fabianed the Fabians. In a book of 500 pages they have outlined their proposals for putting the national industries upon a sound footing, 500 very solid pages, such as no politically-minded person could possibly read. As with the Webbs' productions, this Liberal "Industrial Inquiry" will be read mainly by students, who, most probably, will begin and end in the opposite political camp.

Being neither politically minded nor having time for searching into the precise difference between Socialist, on the one hand, and Conservative, on the other, which the Liberals claim to emphasise, I have not read the "Inquiry." But from the summaries of it that have been published, it is very easy to foresee that it will provide no rallying cry to the depressed Liberal Party. Dry-as-dust proposals such as are alleged to be contained in the "Inquiry" will certainly not turn in the Liberals' favour the Northamptons, the Favershams or the Bristols of this obstinate country.

The "Westminster Gazette."

Last week there occurred another death in Fleet Street, that of the *Westminster Gazette*. True, it is being incorporated with the *Daily News*, but it can be only the corpse of the old anti-Lloyd George organ of Liberalism which will be carried by the Cadbury journal. One remembers the fate of the *Morning Leader*.

There has been considerable sadness at the *Westminster's* demise, not so much over the form which it had lately assumed—that had few merits—but rather over its achievements when it was an evening paper decked out in green. Of course, it lost money, and sooner or later had to disappear. Most people, however, and particularly its Staff, of whose fate everyone at once thought, would have preferred a later end. Now, as someone has most happily said, it is all "annihilated to a green thought in a green shade." And so we and the Liberals wag on.

Conservative Intentions.

The new Parliamentary Session begins to-day, but it is not to be the last of the present Conservative Administration. Another session will, so at least it is intended, begin next November, and will be continued until May or June of 1929, on which date we shall all be asked either to return the Conservatives or to give the Labour Party another shot.

This fact, however, has not created half as much interest as has the statement by the Chancellor of the Exchequer that no reduction is to be made in the Income Tax. Concentration is rather to be made on the reduction of the local rates. Disappointment has been caused by this utterance, although it was difficult to see on what those who hoped for an Income Tax reduction based their reckonings. The average Englishman, however, who sees with anguish the abnormal being gradually but surely being regarded by the official as the normal, will always hope against hope.

Motoring Insurance.

The announcement that owners of low-powered motor cars are to be charged heavier insurance premiums came at first as rather a blow, but apparently it may not turn out to be so disastrous after all. An increase of some 25 per cent. is expected to be levied next March on cars of up to nine horse power—for instance, the Morgan, Austin, Fiat, Triumph, Standard, Singer, and Humber.

Apparently the insurance companies think that the small car owners are inferior drivers, and that, therefore, the bigger car owners are to some extent paying the small owners' insurance. But if the premiums are increased, it seems probable that business on the small cars will be more sought after, and so the policies be made more attractive. In other words, the small owner will probably get more value for his money insurance.

A New Political Party.

Last Saturday Wales sprang a surprise on the world by beating Scotland at Rugger, but prior to that this little country had sprung a surprise on England by launching a candidate, for the Carnarvonshire Division, representing the new Welsh National Party. This Party aims, look you, at (1) a Welsh Parliament for Wales, (2) separate representation for Wales on the League of Nations, and (3) recognition of the Welsh language as the official language of Wales.

A Separatist spirit, perhaps, never completely died out in Wales, but this movement is regarded by certain Welshmen as the most striking effort in the past 400 years. These new Nationalists have already accomplished something, particularly in the sphere of education in Wales. Their aim is to stimulate traditional institutions and national consciousness.

Once more, therefore, the Celtic fringe seeks to affect the Sassenach. It would be easier to see success attending the efforts of these Nationalists if there were any proof that the Parliament at Westminster is constantly neglecting or flouting the interests of Welshmen in Wales. But in any case, any alternative to the official candidates, sent down to Wales by the caucus, is refreshing.

Liberty and Public Opinion.

Professor Ernest Barker, who is the first Professor of Political Science at Cambridge, delivered his inaugural lecture last week. It was, even from the summaries printed in the Press, stimulating, as might be expected from a man who had survived an early period at Oxford, had subsequently suffered the experience of London University, and had only now come by his deserts in being appointed to Cambridge.

In remarking that his subject was not a "science" but "Political Theory," Mr. Barker did a great service, though what the poor misguided men who heard him, remembering the preposterous dogma of Seely that History was a Science, must have thought at this, one can only surmise. Later, however, Mr. Barker made amends by declaring himself on the side of the Cambridge philosophers in the matter of individual liberty, and against the idealists of the State who used to hold sway at Oxford.

Coming to modern suspicion of Democracy, the Professor, roundly asserting that the best management of men is self-management, took refuge in explaining the necessity of educating public opinion, if democracies were not to continue to be hoodwinked. For himself, he believed this consummation possible. The problem is, however, whether it can be achieved before the traditional constitutional systems have been scrapped in disgust.

Mr. and Mrs. Murray-Philipson have left Stobo for Egypt, and will be away from home until April.

The Earl and Countess of Albemarle left England on February 4 in the s.s. Oronsay for Egypt, and will be away until after Easter.

The Hon. Harold Nicolson has left London for the British Embassy, Berlin, where he will shortly be joined by the Hon. Mrs. Nicolson.

Dorothy Countess of Cranbrook sailed on February 4 in the Orient liner Oronsay, which left Tilbury for the Mediterranean and Egypt.

Sir Alfred Mond left Palestine for Damascus on February 5 *en route* for Baghdad. He will return to Palestine in about ten days' time.

Sir Laming Worthington-Evans, the Secretary of State for War, left Cairo for London on February 5, after spending the day at the Residency.

Mr. and Mrs. Robert Williams have arrived in Cairo and are staying for a few days with Lord and Lady Lloyd at the Residency before going to Khartum.

Sir Edward and Lady Davson have returned to 15, Queen Street, Mayfair, after a tour in South Africa, the British East African Territories, the Sudan and Egypt.

The Prince of Piedmont visited Sakkara on February 4 and left later for Luxor, where he spent two days in visiting the tombs and temples under the guidance of Hassanein Bey.

Countess Grey and the Ladies Mary and Elizabeth Grey and Mr. and Mrs. Rudyard Kipling were among the passengers who sailed from Tilbury on February 4 for the Mediterranean ports and Egypt.

Wednesday, March 14, is the date appointed for the visit of the King of Afghanistan to Guildhall, when his Majesty will receive an address of welcome from the City of London and will be entertained at a State *déjeuner*.

Miss Mildred Cable will lecture to the Central Asian Society on February 15, at 4.30 p.m., on "From the End of China's Great Wall to Moscow." The lecture, which is to be illustrated, will be delivered in the Royal Society's Rooms, Burlington House, Piccadilly, W.

Mr. R. G. Vansittart has been appointed Principal Private Secretary to the Prime Minister, consequent upon the resignation of Lt.-Col. Sir Ronald Waterhouse. Mr. Vansittart, who was Private Secretary to the late Lord Curzon during his term of office as Foreign Secretary, has had diplomatic experience abroad in many places, including Teheran and Cairo.

M. Nicholas Boerescu, after a week's stay in London on an informal mission, left on February 4 for Paris to report to the Roumanian Foreign Minister, M. Titulescu, the results of the conversations which he had with Sir William Tyrrell and other representatives of the Foreign Office.

Dr. H. R. Hall (Keeper of the Department of Egyptian and Assyrian Antiquities, British Museum), will lecture to the Royal Society of Arts, John Street, Adelphi, W.C.2., on February 22, at 8 pm., on "The Excavations at Ur from 1919 to 1926." Lieut.-Colonel Sir Arnold Wilson will preside over the lecture, which is to be illustrated by lantern slides.

M. and Mme. Tsouderos entertained at dinner at the Ritz Hotel on January 30 the Greek Minister, Sir Henry Strakosch, Sir John and Lady Stavridi, Sir Gerald Talbot, Sir William Leese, Mr. and Mrs. Olaf Hambro, Mr. Charles Hambro, Comm. and Mme. Alexandris, Mr. Harcourt Rose, M. and Mme. A. Cawadias, M. and Mme. J. Romanos, M. and Mme. Sophianos, M. and Mme. E. Lambrinudi, Captain D. Papalexopoulos, Mr. and Mrs. Rowell, Mr. Quilter, and Mr. P. Freeme.

General Pangalos, the former Greek dictator, who has been in prison in Crete for some time past, was put on board a destroyer which was to have taken him to Athens on February 5 to stand his trial, but owing to the heavy weather the ship had to return to Suda Bay.

An explosion occurred on February 5 on board the steamer Avala off Shibenik (Sebenico), in the Adriatic. The Avala was carrying a cargo of calcium carbide, and so great was the force of the explosion, which occurred at water level, that the ship split in two and sank in a few minutes. All the crew were saved except a stoker, who was killed. The master and two seamen were injured.

At Hurcomb's, Calder House, Piccadilly, on February 1, an uncut copy in blue morocco of Colonel Lawrence's "Seven Pillars of Wisdom, 1926," was offered. The book is initialled "I. xii. 26, T. E. L." Bidding opened for it at £50, and ran to £480, but this was not enough, and it was withdrawn. The original price of the limited edition was 30 guineas.

A parade was held in honour of the King of Afghanistan during his visit to Saint-Cyr on January 30. After a march past of the cadets a display of horsemanship was given in the riding school. The Shahzadajan of Afghanistan is to go to Saint-Cyr when he has finished his studies in Paris.

The Turkish Government has ordered the closing of the American School for Girls at Broussa for alleged religious propaganda. This action follows the conversion to the Christian Protestant faith of four Turkish girls.

Ratifications of treaties dealing with commercial security, neutrality, fisheries, and Customs, and also a boundary protocol, between Persia and the Soviet Government were exchanged at Teheran on January 31, the Foreign Office giving a banquet to the members of the Soviet Embassy to celebrate the occasion.

The Beira Correspondent of *The Times* says that Lord Allenby, with Lady Allenby and Miss Chancellor, arrived at Beira on February 3 from Rhodesia, and later embarked on the Khandalla. They sailed the following day for Mombasa in continuation of their African tour.

The death occurred in London on February 1 of M. Demetrius George Metaxas, formerly Greek Minister in London and afterwards in Rome. He was born at Syra and had seen diplomatic service in the Greek Legations at Constantinople, Berlin and Belgrade, besides those capitals already mentioned. In London he was Greek Minister from 1895 to 1908.

THE INDO-EUROPEAN TELEGRAPH DEPARTMENT.

[We publish below the concluding section of the paper which Mr. Maurice G. Simpson, Director-in-Chief, Indo-European Telegraph Department, read before the Indian Section of the Royal Society of Arts on January 30, together with part of the subsequent discussion on the lecture.—Ed.]

Let us now turn to a consideration of the administration of the Department. Its first head was Col. Patrick Stewart, who seems to have had no fixed headquarters, but to have spent his time in the Persian Gulf, in Persia and Constantinople, with visits to India and London. He was nominally under the Government of Bombay, whence he derived his funds, but he appears to have corresponded direct with the Secretary of State and the Government of India impartially. On his death in January, 1865, Major Champain, who, it will be remembered, was in charge of the operations in Persia, was nominated by the Secretary of State to perform the duties of Director-in-Chief. Col. Goldsmid, of the Madras Staff Corps, however, who had previously been engaged on the inspection of the lines in Turkish territory and was with Col. Stewart in Constantinople when the latter died, also received orders, apparently from the Government of India, to consummate Col. Stewart's work. The confusion lasted about six months, when Col. Goldsmid was definitely appointed Director-in-Chief with Major Champain as his assistant.

There was an office in London where the general administration was conducted, an office in Constantinople under a Commissioner, while the Persian and Persian Gulf sections were under Directors with headquarters at Teheran and Karachi respectively, the whole being under the Government of Bombay. Remembering the difficulties in communications in those days, the organisation of such a scattered Department must have been an onerous task, and it was further complicated by the many delicate questions which arose both at Constantinople and Teheran requiring diplomatic action. Col. Goldsmid was for ever on the move from London to Bombay, Karachi. Teheran and Constantinople as circumstances required, but by 1870 he felt that the position had become sufficiently stabilised to enable him to recommend the abolition of the appointment of Assistant Director-in-Chief, proposing that he himself should retire and Major Champain should become Director-in-Chief, which was agreed to. Very soon after Champain's appointment the question of his headquarters arose, the Government of India proposing that these should be at Bombay. Major Champain, however, vigorously opposed this proposal; he pointed out that the interests of the line were intimately bound up with those of the Indo-European Telegraph Company, in conjunction with whom our traffic was carried, that he had constantly to consider questions that affected the Company and the Department alike, and that he had much correspondence with other telegraph administrations which could not be conducted from India without serious inconvenience and loss of time. He also referred to the difficult questions which arose with Persia in relation to our treaties, which had to be dealt with in communication with the Foreign Office. The principal traffic office must necessarily be in London, where cash was received for every message sent to India and the accounts made out for the shares due to other administrations. These arguments prevailed and the headquarters of the Department were fixed in London, but the control of the Department was shifted from the Government of Bombay to the Public Works Department of the Government of India.

Headquarters in London.

Sir John Bateman Champain, as he afterwards became, held charge of the Department till his death early in 1887, when he was succeeded by Col. Murdoch Smith, the Director of the Persian section. The question of the future administration of the Department was again taken up, and although the arguments that Col. Champain had advanced in 1871 had lost none of their force, they were now disregarded, and, in the hopes of effecting some small economy, it was decided to abolish the appointment of Director-in-Charge and transfer the Department to the charge of the Director-General of the Indian Telegraph Department. This was carried out early in 1888 when Col. Murdoch Smith retired, but it did not prove successful. Col. Mallock, the Director-General of the Indian Telegraph Department, travelled over the whole system from Karachi to Teheran, and in 1890 submitted an exhaustive report to the Government of India, in which he strongly advocated the resuscitation of the appointment of Director-in-Chief in London. He pointed out that the addition of the Indo-European Department placed an intolerable burden on the Director-General in India, who had already a very large and responsible charge, and he showed the necessity for the head of the Indo-European Department to be in London, where he could be in close communication with the commercial cable companies with whom the interests of the Department were inextricably bound. His recommendations were accepted, and in June, 1893, the control of the Department was transferred from the Government of India to the Secretary of State and Mr. Ffinch, the director of the Persian Gulf section, was appointed Director-in-Chief with headquarters in London. This organisation has continued down to the present time, Mr. Ffinch being followed by Sir Henry Kirk and Sir Rayner Barker, whom I had the honour of succeeding about three and a half years ago. It is still the case that the successful working of the Department is dependent on close co-operation between the Director-in-Chief and the cable companies in London and on the sucessful solution, through the Foreign Office, of questions arising in relation to our agreements with Persia, and in my opinion the existing organisation is the most suitable to meet the peculiar conditions of the case. The Staff under the Director-in-Chief consists of the Directors of the Persian Gulf and Persian Sections with their headquarters at Karachi and Teheran respectively, 27 gazetted officers and 47 General Service Clerk approximately equally divided between the two sections, 115 Persian Gulf Signallers in the Gulf Section and 58 Persian Section Signallers in the Persian Section. The gazetted officers with one or two exceptions are entirely recruited by promotion from the grade of General Service Clerks. The latter have been recruited as telegraph clerks mainly from England, for, although the experiment was tried, it was found that the conditions in Persia were unsuitable for Anglo-Indians or Indians. The staff serving in Persia have been subjected to conditions of existence very different from those affecting their colleagues in most other countries. Repairing the lines and keeping as close as possible on the heels of Afghan gun runners who were wrecking them, and this in midsummer in the desolate no man's land near the Afghan frontier is no child's play; nor is rebuilding a mile of line completely washed away in the Lut desert. In such circumstances it is the case of one Englishman alone with a handful of Persian labourers, drinking brackish water till he can hardly swallow, eating anything that comes his way and sleeping on the ground. The safety of our offices and staff has in many cases undoubtedly been due to the reputation which by their own conduct our officers had established. Many of them have been robbed by brigands and left almost or quite naked to struggle to the nearest village, while others less fortunate have been murdered. The winter cold of the wind-swept plateaux is intense and so is the heat in summer in the lower lying plains and deserts. It is difficult to convey an idea of the amount of suffering and hardship that the staff have endured; there is hardly a senior member who has not been through famines, epidemics, riots and other excitements in plenty. If life in the Gulf Section is not beset in the same way with alarms and excursions, it must not be forgotten that many of the staff in that Section serve in isolated coast stations and in desolate islands in what is perhaps one of the worst climates in the world. The staff have served the Government of India with unswerving loyalty in trying, difficult and not infrequently dangerous circumstances, and in regions so remote that, in the absence of any special incident, their steady and valuable work is often in danger of passing unnoticed.

Transmission of Telegrams.

The construction of the departmental telegraph system and the general organisation of the staff have now been considered, but these exist solely for the purpose of the efficient transmission of telegrams, and it is to this aspect of the matter we must now turn. The Indo-European Telegraph Department had, so far as its lines extended, the monopoly of traffic between Europe and the East from the commencement of 1865 to the commencement of 1870, while the Turkish line was the only route available. The tariff charged for a telegram from England to India was £5 for 20 words or part of 20 words, but this was reduced in 1869 to £2 17s., and the average time of transmission was rather over 5 days. In spite of the monopoly and the high charges the Department only showed a small surplus of receipts over working expenses, quite insufficient to pay the interest on the capital expenditure of £960,000 that had been incurred. When the Indo-European Telegraph Company in 1870 opened their route to Teheran and the Eastern cable route to Bombay was also established the traffic was divided between the three routes, the charge by each being the same, viz., £2 17s. for 20 words. There was not enough traffic to make any one of the three routes remunerative and the Indo-European and Eastern Companies gradually raised their rates till in 1871 the charge was £4 10s. for 20 words, Turkey still working at the £2 17s. tariff. At this lower rate the Turkish route was able to attract a considerable proportion of the traffic in spite of working as a much slower speed, the average time for a message being about a day and a half as against 6 or 7 hours only by either of the other routes. The two companies then complained that their lines, paid for and maintained by private capital, were being undersold by a line which, supported by State revenues, continued to work at a dead loss. A Sub-Conference met at Berne, and the Turkish administration was induced to raise its rate also to £4 10s. At subsequent Turkish Conferences it was arranged that the tariff by the Turkish route should always be slightly lower than that by the others, but the difference was never again sufficient to attract more than a very small percentage of the traffic. In 1876 the system of charging by the word was introduced, the charge from Europe to India being fixed at Frs. 5.50 per word *via* Teheran or Suez and Frs. 5.00 *via* Turkey. From time to time as the traffic increased and advances were made in the science the rates have been reduced and cheaper classes of messages introduced, so that it is now possible to send what is called a "Daily Letter Telegram" of 20 words for the very modest rate of 4½d. a word.

Lines in the War.

In 1878 the Eastern Telegraph Company, the Indo-European Telegraph Company and the Indo-European Telegraph Department entered into a working arrangement with a view to the avoidance of the serious fluctuations in receipts caused by the interruption of the one or the other route, and to the attainment of as high a stability of revenue as possible. This co-operation enabled certain other economies to be effected and placed the companies in a position to offer the public a greatly improved service.

From this time onwards to the outbreak of the Great War the Department carried a steadily increasing number of messages, thus:—

Year.	No. of Messages.
1879-80	42,487
1889-90	106,702
1899-00	152,837
1900-10	274,092

At the outbreak of war in August, 1914, the Company's lines through Europe were of course immediately put out of action, and it seemed at first that the Department would have little work to do. Sir Rayner Barker at once saw the danger of Russia being cut off from telegraphic communication with her allies by any of the direct routes to the west, and he realised that the roundabout route *via* Bombay, Karachi and Teheran might become of vital importance. There were already two routes available between Karachi and Teheran, *via* Bushire and *via* the Central Persia line, but a third could be made available *via* Mashad and Seistan by completing the link between Seistan and Robat. An agreement was quickly reached with Persia, who authorised the construction of the line in September, 1914, and it was completed the following month. This alternative line, of which it will be remembered the section Mashad to Seistan was worked by the Russians, proved of invaluable service, especially when enemy activity interrupted the Teheran-Bushire line.

When Turkey entered the War and a campaign in Mesopotamia started it was quite clear that the single cable between Fao and Bushire was quite inadequate to meet telegraphic requirements. Fortunately a sufficient length of suitable ready-made cable was available in London, and this was purchased and sent out; it escaped attack from the enemy's submarines and was successfully laid in June, 1916. It was also found impossible to maintain the land line between Jask and Charbar, owing to the turbulence of the tribes in the interior, and a short length of cable was laid between these places. Thus the Department was able to provide two comparatively safe lines which carried the whole traffic between Mesopotamia, the Persian Gulf ports and Persia on the one hand, and India, England and all parts of the world on the other. This traffic was extremely heavy, amounting in 1918-19 to 660,000 messages containing over seven million words, in addition to a very large number of messages relating to the sick and wounded which were carried free of charge. The traffic was carried without any serious breakdown or even undue delay, and the Department is, I think, justified in claiming to have rendered a very important service to the campaign in Mesopotamia.

At the end of the War the Indo-European Telegraph Company at once took action to restore their line through Germany, Poland and Russia. A great deal of work was entailed in this restoration, but it was successfully accomplished, and the Indo route was once more established in August, 1923, having been interrupted exactly nine years. The Department again resumed the work for which it mainly exists, the transmission, in conjunction with the Company, of messages between Great Britain and India and countries beyond. To this is now added the traffic with Iraq which before the War was transmitted *via* Constantinople, the total number of messages dealt with by the Department in the year ended March 31 last having been just under 400,000.

I cannot conclude this account of the Department without some reference to the "Beam" wireless service recently opened with India, which has proved very successful and has attracted a considerable share of the available traffic. This new service has only been working for four months, and it is too early to say yet what the outcome may be, but I think it is probable that the cheap rates now available will so stimulate the telegraph habit that the volume of traffic will increase to dimensions which a few years ago would have been thought impossible, and that there will be ample work for all.

Comment on the Lecture.

Lieut.-Colonel Sir Arnold T. Wilson remarked that after listening to Mr. Simpson's description of the arrangements of the Indo-European telegraph system, his audience would have come to the conclusion that the Athanasian Creed was a simple formula compared with the Department's arrangements, with its works in one country, its administration in another country, and its headquarters in a third; itself a Government Department, it relied for its communications with the United Kingdom by land on the Indo-European Telegraph Company, which at all events before the War was under Russian protection, though its Chairman was invariably a British subject with his headquarters in London; financial stability was ensured by the device of a joint purse which it shared with at least one other company, and by half-hour conferences every three months—at which, he hoped, the interests of the public were as carefully safeguarded as those of the companies appeared to have been! It was an interesting, but clearly an exceedingly complicated, state of affairs.

Not much had been said about the Persian Government in the matter, except as the recipients of considerable revenue. The Persian Government was one of the first to enter the International Postal Union. They were also one of the first Governments to adhere to the International Telegraph Conventions, which they could scarcely have done had not the Indo-European Telegraph Department been at their disposal to enable them to carry out the rather complicated arrangements ancillary to international conventions. They had had, ever since the 'seventies, a thoroughly sound system of telegraph communication provided partly by the Company and partly by the Department, covering, as the map showed, all the principal centres of Persia, and which had been of inestimable value. Had those lines been owned and controlled by the Persian Government, in early days, they would have been treated perhaps with less respect by the local residents.

He had been in Persia for about 20 years and he believed he knew personally between 1907 and 1920 at least half the General Service Clerks and the Superintendents of the Department, both in the Persian Gulf and in Persia, and he was glad to have the opportunity of expressing his admiration and respect for them. There was no more efficient Government Department in India or out of India. He had known I.E.T.D. men at Muscat, at Charbar, at Jask, at Henjam, at Bushire, at Bahrein and at Fao, and all up the line from Bushire to Teheran. They had always been helpful and cheerful. By the courtesy of Reuter's Agency and of the Department British Consular officials received Reuter's news free every day and were not ungrateful to the staff, on whom fell the burden of transmitting the often lengthy summaries of English weather and English football results.

He had visited practically every land station shown on the map, and he could never be sufficiently grateful for the courtesy and the generous hospitality he had received from the superintendents and their wives. Nor could he refrain from mentioning the Persian linesmen, on whose shoulders the welfare of the lines had rested since they were first started; they were very near to his heart, and half a dozen of them had been friends of his for the past twenty years. They were a very loyal lot of men, loyal alike to their own Government and to the Department, who paid them. They had been attacked numberless times by brigands, and his recollection of the treatment of their claims was that they were not always treated as liberally by the Department as they should have been. He did not think there was any other parallel for a Department of a foreign Government, such as the Government of India or the India Office, controlling two or three thousand miles of land line in a foreign country with its own staff, and yet maintaining perfectly harmonious relations over a period of 50 years with the national government, in this case the Persian Government, and at the end of that 50 years getting a renewal of their concession for another 20 years—the best possible proof, if any proof was needed, of the ability with which the Department had been administered. When the Conventions were last renewed the Persian Government did not appear to have attempted to strike a hard bargain, but to have been well content to have the services of the Indo-European Department for a further period of 20 years. That reflected very high credit not only on the administration in England, but on the tact and discretion which must have characterised the action of the staff at all the various centres on the spot, each one of them a centre of intrigue at one time or another; the Telegraph Office at each place had contrived in times of difficulty to remain friendly with and indispensable to the party which was in power without antagonising the party which was outside the gates and ready to cut the telegraph lines.

The light-hearted nomad marksmen had always been a difficulty; insulators were an irresistible target. The white porcelain variety were found to offer such temptations to young marksmen that brown had been substituted in the hope that the duller colour would reduce their losses, but with moderate success, and later on on certain stretches insulators were devised of cast-iron with a porcelain insulator inside. Even that, however, had proved insufficient; the riflemen had got underneath and shot upwards! The posts, too, were invaluable rubbing posts for mangy camels and made serviceable poles and roof beams!

Residents in Persia and the Persian Gulf had every reason to be thoroughly satisfied with the speed and accuracy of the services at present existing. He could entirely confirm what Admiral Grant had said as to the immense value of the cables during the War to the Navy and to the British Army. During the War in Mesopotamia they were absolutely indispensable. The staff in all offices was heavily drawn on for war purposes, which meant that those who were left had to do twice as much work as they did before, and as they had always had a full day's work, it had been extremely hard on those who remained, without extra pay, or the stimulus of war service, and he would like to place on record his appreciation not only of those who joined up but of those who had to remain behind.

He could not speak about telegraphic rates. That matter had been dealt with fairly fully by the lecturer, but he thought there was still room for improvement from the point of view of the public. Although the remark he was about to make was not strictly germane to the subject, as several representatives of telegraphic interests were present, he desired to express the hope that the next international conference would be induced to dispense with the bugbear of the pronounceable word. He suggested that the international conferences were still dominated by the tradition of the longhand telegraphist, painfully taking down a group which he caught up by ear and recorded, whereas to-day practically all relaxation of arbitrary rules would help to increase the purely commercial traffic, and perhaps the friendly D.L.T.'s would follow.

He wished Mr. Simpson would write a book. He himself had a shelf as long as his arm of books about the Indo-European Telegraph Department, by Sir Frederick Goldsmid, Sir J. Bateman, Sir Robert Murdoch Smith, and others. There were stories in almost every book on Persia of the deeds of heroism of members of the staff, which well deserved to be put together into a single volume, and would make an epic. There was not a station from Bushire to Teheran which had not half a dozen graves of men of the Department who were killed in the execution of their duty—Major Wells, Sergeant Collins (killed at Khan-i-Zinian), Sergeants Hockey and Hamilton and Smith, Lieut. Wittkuge (killed whilst with the S.P.R.)—to mention only a few. In their details no less than in their lives they had shown themselves worthy representatives of the country of their birth and true friends of Persia.

Pandit Ahluvalia Gopalji said the audience had heard a very interesting and instructive story of a wonderful adventure, with a lot of chronological data, but the most noticeable point in the whole venture was that the thrills were British and the money was Indian. He thought that the Indians should have more of the thrills, and

INDIA AT THE CROSS-ROADS.

In concluding his opening address to the two Houses of the Indian Legislature last Thursday the Viceroy said that the advice which he gave was dictated by his wish to dissuade India "from mistaking the path at one of the cross-roads of her destiny." This was no overstatement of the case, for India at the present time is indeed at the cross-roads, and a false step taken now may be irretrievable. Recognising this, Lord Irwin with characteristic frankness and sincerity made an eleventh hour appeal to the Indian leaders to be reasonable. He again emphasised the fact that the British Government have adopted full and unprecedented means of placing Indians in a position to take an ample share with them in the evolution of India's future. Those who criticise the broad framework of the plan of the Commission cannot, he thought, have reflected on what is implicit in the idea of appointing Select Committees of the Central and Provincial Legislatures. Nor did they seem to him clearly to understand that the Central Legislature will be at liberty after the Commission has finished its work to sit, through its chosen representatives, with Parliament itself acting in its turn through its own joint Select Committee. The argument that the exclusion of Indians is an affront to India cannot be maintained. British statesmen of all parties have stated in terms admitting of no misconception that the appointment of a Parliamentary Commission was in no way intended as an affront to India. "By what right," continued Lord Irwin, "do the leaders of Indian opinion who are as jealous as I am of their own good faith and would resent as sharply as I any refusal to believe their word, impugn the good faith and disbelieve the plain word of others" He recognised that there are some who wholly deny the moral right of Parliament to be the tribunal in the cause. But he could not reconcile this view with the actual situation as it exists. The Commission would go through with its inquiry even if the assistance of Indian opinion should unfortunately be denied to it. The final decision in Indian political affairs at present rests with the British Parliament. The Parliamentary debates show clearly that the responsible spokesmen of all British parties are animated by good will towards India. But an agitation fostered and promoted by methods which have led to grave occurrences in the past must breed serious misgivings in the mind of Parliament. What then is to be gained either in India or in Great Britain by a policy of boycott?

The supporters of the boycott policy have no adequate answer to this question. Their policy has already resulted in riots at Madras, Calcutta, Amritsar, and to a small extent at Bombay. It has therefore justified the Viceroy's warning. The *hartal* which they organised or tried to organise was not indeed a conspicuous success. Nevertheless it enabled them to stir up strife. For it led, as similar movements have always led in the past, to breaches of the peace and to loss of life. In the meantime the Commission has begun its preliminary work. Immediately on his arrival Sir John Simon announced that at the earliest possible moment he would issue a statement which would, the Commissioners hoped, dispel suspicion and misunderstanding. For our part we have thought from the beginning that the Indian people will not be so ill-advised and unmindful of the real interests of the country as to persist in the foolish policy of boycott. For the leaders of all parties must realise—as they at last realised in regard to the Reforms scheme—that non-co-operation cannot possibly achieve anything to the advantage of India. It is true of course that at the moment the boycott is supported not only by the extreme section of the National Party, but also by the Liberals. The Liberal Party has not hitherto been a governing factor in Indian politics. It has been too disposed to sit on the fence; and now that it has departed from this tradition it has nothing better to offer to India than the sterile and discredited policy of non-co-operation. Within the last week the Bombay Liberals have vigorously re-affirmed their condemnation of the Commission. But even so it seems to us that, taking the country generally, support for the boycott is by no means solid. The Muhammadans are largely in opposition to it, and the non-Brahmins and other minorities also support the Commission, and intend to put their views before it. The Hindus are the principal upholders of the policy of boycott, but even among them it would appear that there are large classes who take the opposite view.

Among these classes may be mentioned the landholders. According to a recent utterance of the Maharaja of Darbhanga, who is himself one of the largest landowners in India, the landlords, both Hindu and Muhammadan, of the three provinces of Bengal, Bihar and Orissa and Assam, are all opposed to the boycott. For at a conference of landowners which was lately held in Calcutta the Maharaja said that, although they regretted the absence of Indian members from the Commission, they would nevertheless submit their case to it. He added that the landlords have numerous important proposals to bring forward. Among other things they want more extended representation in the Legislatures; and the establishment of an Upper House in each of the provincial Legislatures. Their interests in the country are great, and they recognise that a sincere spirit of co-operation between Indians and Europeans is essential. They have no hostile feelings towards the Europeans; and they deplore the tendency to predatory legislation which is nowadays displayed by members of the Indian Legislatures. It is evident from the Maharaja's speech that the boycott will get no encouragement from the landholders. They favour the orderly progress of the country on constitutional lines: "disruptive movements," said the Maharaja, "have never had our countenance and support and never will have."

There is one point in Lord Irwin's speech, admirably phrased and unmistakably sympathetic, to which we would invite particular attention. Of recent weeks, as

Digitized by Google

the time of the Commission's arrival approached, there have been signs on the part of some of the most responsible organs of the Press in India of irresolution amounting almost to a reversal of former policy in their attitude on the boycott question. This change of front, as the *Pioneer* pertinently remarks, "is plainly responsible for the uncertainty colouring the attitude of sections of opinion inclined by tradition and an appreciation of their real interests to give an uncompromising negative to the boycott demand." The Viceroy's statement will, we hope, dispose of such fears. The Commission has been set up with the assent and wholehearted co-operation of all three British Parties. It hopes to carry through its inquiry with the help of all shades of Indian opinion but, "whether such assistance is offered or withheld, the inquiry will proceed and a report will be presented to Parliament, on which Parliament will take whatever action it deems appropriate." The warning, delivered with all the weight and sincerity which characterises Lord Irwin's utterances on such occasions, cannot be ignored.

CURRENT TOPICS.

The Reserve Bank Bill.

The story is told of a highly-placed State official, mainly responsible for a protracted correspondence which had effectually delayed the introduction of a long overdue reform in local administration, who explained to the harassed local authority that the Department's sole desire had been "to avoid being pedantic in its treatment of the issue in question." We are forcibly reminded of the incident by the President of the Legislative Assembly's ban on the introduction of the new draft of the Reserve Bank Bill. Happily Sir Basil Blackett has now made it clear that Mr. Patel's action does not mean the abandonment of the share capital principle for which the Government will presumably fight again when the present measure goes to the Council of State.

The present situation is the more unfortunate in that a survey of the main features of the new Bill, the text of which has only just reached this country, shows that the scheme has clearly benefited from the delay involved in the postponement of the original measure in September and the Finance Member's official and unofficial conversations with the India Office and other authorities on the occasion of his recent hurried visit to this country. Though the bank is to be constituted on a share capital basis the attempt to combine the essential features of the scheme adumbrated by the Currency Commission with all that was best in the various alternatives discussed during the ensuing two years has brought about many important changes, in points of detail rather than of principle, several of which are undeniably an improvement upon the original plan. Legitimate Indian objections to the latter have been met by the introduction of provisions which, while not excluding the opportunity for that co-operation of European business experience which is essential to the rapid and favourable development of Indian trade and industry, and in particular of Indian banking, ensure that Indian interests in the widest sense shall be adequately safeguarded. The relative clauses are complicated, but ingenious. The distribution of shares is to be as wide-spread as possible. An upper limit of shareholders, of Rs. 20,000, is proposed and each shareholder, whatever his holding, is to have only one vote; this provision is more strict than that in the original scheme which would have allowed a maximum of ten votes to a single holder. The problem of popular representation, as opposed to that of particular interests, is to be met by the adoption of the device of the electoral college suggested by the leader of the Congress Party on an earlier occasion. For this purpose each of the five districts into which the country will be divided for share registers will elect delegates—ninety-two in all—who will constitute an electoral college, which will in turn elect eleven directors who will co-operate with thirteen nominated directors, the majority of whom again will be directly representative of Indian interests in the management of the bank. The discarded Bill thus represents in the matter of the constitution of the Bank an ingenious compromise between the claims of the Indian critics on the one hand and the vital necessity of upholding central banking principles on the other.

The Delhi Session.

Seldom has it been more difficult to forecast the probable course of the proceedings of the Central Legislature than in the case of the new session which opened at New Delhi last week. One thing, anyhow, can be confidently asserted—that it promises to be one of the most interesting of recent years. Certainly the opening was sufficiently dramatic to satisfy the wildest desires of those members of the Congress party to whom such incidents make a far greater appeal than solid and constructive work for the country whose interests they so vociferously profess to serve. With the probable fate of the Reserve Bank measure and the procedure regarding the Statutory Commission we have dealt in another part of this issue. But although, in one way or other, indirectly of course in the latter instance, these two questions are likely to monopolise a very large amount of the available time, they are far from constituting the only important subjects for debate. There is the Railway Budget, usually introduced in the middle of February, and last, but not least, the General Budget, the discussions on which, and the demands for grants, generally take up the remainder of the session. Apart from the fact that the forthcoming statement is Sir Basil Blackett's swan song, a variety of circumstances combine to make this year's Budget more than ordinarily interesting and correspondingly provocative. So far as outward appearances go there is every reason to believe that the Finance Member will be able again to show a substantial surplus and mark the end of his successful tenure of office by further reduction of taxation. On the other hand, it must be remembered that nearly three crores of any recurring surplus is already earmarked for the final abolition of provincial contributions. And nearly another crore is required to make up the loss of Customs revenue involved in the decision to remove the import duty on cotton mill machinery and stores, etc. Meanwhile, pending the completion of their programme for the remission and final extinction of provincial contributions, the Government have had to withhold action upon the majority of the Taxation Inquiry Committee's recommendations, and it is reasonable to suppose that the forthcoming statement will embody some, if not all, of the suggestions of Sir Charles Todhunter and his colleagues to which the Finance Member has already indicated his assent. One important recommendation of the Committee which may considerably affect the revenue receipts of the future, is known to have been adopted during the past year, namely, the institution of an expert inquiry into the incidence of the import tariff with a view to readjustment in the general interest.

Other important official legislation which is likely to be brought up during the current session will be Bills to give effect to the recommendations of the Auxiliary and Territorial Forces Committee. As announced in the issue of the NEAR EAST AND INDIA of September 22, the Secretary of State has at last accepted the Committee's proposals, with two important modifications, and the Army Department are bringing forward separate Bills dealing respectively with the Auxiliary Force and the Territorial Army. The findings of the Shea Committee must not, of course, be confused with the drastic scheme propounded by the Skeen Committee for the gradual Indianisation of the Indian Army, which, we understand, has met with little support from the Committee of Imperial Defence and is unlikely to be proceeded with during an already overcrowded session. But another important measure for which the Army Department is also responsible is the complementary legislation to the Indian Navy Bill passed last year by the British Parliament.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 19.

The Political Welter.

It grows. The All-Party Conference, strangely so called, met on Sunday evening at Benares, and decided to boycott the Statutory Commission. It has asked the people to observe *hartal* on February 3, the day the members of the Commission land at Bombay, and on that day to hold protest meetings all over India. It has also decided that a Swaraj constitution should be drafted at a meeting of the All-India Congress Working Committee, with representatives present of other political organisations. This meeting will be held in Delhi on February 12, and a special convention will be called later. Among the resolutions that it is proposed to discuss at this Delhi meeting is one demanding that the Constitution of India should be framed by Indians.

That is how I put it. In the newspapers it is put differently. There it is said that one of the resolutions that it is proposed to pass is one demanding, etc. No-one sees anything reprehensible, because childish, in a body calling itself the All-India this or the All-India that passing resolutions that the organising parties are so certain will be passed (naturally, all opposition excluding itself, or being excluded), that they do not announce beforehand what they are going to *discuss*, but what they are going to *decide*. One would have thought that Mr. Bepin Chandra Pal for one had more self-respect than to lend his name and authority to such proceedings. Three months or so ago, he tried to convince his countrymen that the new Constitution, from the necessity of things, must be one that the European body politic agreed to; now we shall see him holding up his hand in favour of a resolution which declares in effect that the European party is not even to be consulted.

The names of those who met on Sunday at Benares are impressive, one may admit, if the political designations appended are dwelt on; but if you started weeding out all those of whom an Akbar would deny that they possessed constructive statesmanship, you would have few men left. And those men are not to be compared with the best that India can show.

The New Reserve Bank Bill.

The situation created by the decision to frame the new Reserve Bank Bill on the lines that will have been cabled to your side, and with which all those at all deeply interested in the question must be already familiar, is a serious one. The two leading European papers in Bengal have announced that the revised Bill has met with a very favourable reception, and that there is general approbation of the spirit of compromise which Sir Basil Blackett has shown. The point of view would seem to depend on the degree of knowledge of banking questions and a capacity rightly to apprise the expressed opinion of bankers and students.

Professor Batheja was interviewed by one newspaper representative. There is a whole column of his views. It ends with these words: "Perhaps Indian public opinion would have desired still more stringent precautions *against* (the italics are mine) the danger of European predominance. . ." Anyone deeply conversant with two things, joint stock banking and the record of Indians in joint stock banking activity, would want to ask some leading British banker or merchant whether the precautions *to secure* European predominance were sufficiently stringent.

He probably would get the answer from the European banker or merchant that European predominance is amply assured; but then the European bankers and merchants of Calcutta all quietly assume that the Reserve Bank will be controlled by Britons of the proved capacity and tried integrity of English and Scottish bankers. I do not myself see what justifies that confidence.

Another reported interview was with "the Head of a leading Exchange Bank" in the city. I am certain that I can tell by the wording of the matter which local Exchange Bank Manager was the man they interviewed. His words deserve all weight imaginable. Among other things he said: ". . . the views urged by what I may call the politically-minded classes have been given careful consideration by the authorities while drafting the revised Reserve Bank Bill; but the views of the banking world have not counted in any way. . ." Any conversant man, reading that, instead of reporting that the Bill had been favourably received, would have said that at least one of the very few men in the country competent to speak had damned the Bill outright in the first sentence he uttered. That is the fact: I know it, who have had the requisite experience almost in as full measure as a professional banker; but I should not expect any newspaper man to take in the full significance of the words spoken. There are other things in the report of the interview that to me would equally be eye-openers, but space lacks in which to set them forth.

I have not yet read the Bill clause by clause. What the newspapers have picked out for publicity are sections on the right to hold shares, the allotment of the shares when the bank is established—the first allotment—the right of voting (one vote per man, no matter how many shares are held), and so on. No share may be allotted to a foreigner, and among foreigners are included all British subjects not ordinarily domiciled in India or Burma. The sections on the importance of which we have been asked to witness stress laid are all such. It is as if the Press had had the cue to say: "See how carefully, and to the last crumb, this good cake is to be divided." I care not for myself how it is divided: what I am concerned to secure is that there is a cake to divide. If the management of the bank is not in, first, competent hands, secondly, utterly trustworthy hands, there will come a day when there will be nothing to divide, unless the State should have intervened in time, and have taken the whole thing out of the hands of shareholders, directors, etc.

My concern and fear are not for the shareholders, and lest they lose their money. If they could lose their money without the whole country being as nearly ruined as any human mismanagement can ruin a country, I should see it as not mattering very much. After all, no single man is to be allowed to hold shares of a greater value than Rs. 20,000. (I do not see how that is to be worked in practice, but never mind that.) What makes the matter so grave is that, if the Reserve Bank is badly managed, it will be a far worse thing for the country than anything else that could happen to it.

SIR JOHN SIMON'S MESSAGE.

In a statement to the Press on his arrival at Bombay last week the Chairman of the Statutory Commission said:—

"My colleagues and I set foot in India deeply impressed with the responsibility of our task, and resolved to devote all our energy and good will to its discharge. Constitutional progress in British India essentially depends on the friendly and sincere co-operation of the Indian and British representatives; but it is manifest that there exists at the moment in some quarters widespread misunderstanding as to what the Commission is setting out to do, and uncertainty respecting the methods it proposes to employ.

"We shall make it our business without delay to remove misapprehensions, and, after reaching Delhi and becoming more acquainted with the actual situation, we intend to make a statement of the proposed procedure which should leave no ground for the suspicions which have unfortunately arisen. We mean to take the fullest opportunities open to us for consultation with Indian representatives who are willing to meet us, both during our preliminary visit and when we return for our longer visit in October."

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, January 20.

The Boycott Question.

Now that the fight for ascendancy between the pro-boycott and anti-boycott leaders is nearing conclusion, the Muslim community is gradually settling down to a recognition of the fact that the opinion is really divided on the issue of the Reforms Commission. Those who favour the boycott have thrown in their lot with the Congress and the Liberal Party, while those who have decided to appear before the Commission are endeavouring to get together and concentrate their attention on some constructive programme. In this connexion Mr. A. M. K. Ghuznavi has been in close touch with the Aga Khan. It is suggested that a body should be formed of all the Muslim representatives in the Legislatures with a view to focus Muslim opinion and to enable Muslims to enter into compacts with other communities and Government. There is no doubt that this is very necessary, if the Muslims intend to place their case with any semblance of authority before the Commission. Mr. Ghuznavi has suggested the inclusion of prominent ex-members of the Legislatures who are recognised leaders of the community, and there is every indication that a conference of such persons will be held in the immediate future. The difficulties in the way are obvious. Mr. Ghuznavi and others who are against the boycott declare that the decision of this conference should be based on the Lahore resolutions, while those who have decided on the boycott—they have not yet declared their intentions—will, I have not the slightest doubt, try to influence a decision in favour of the Calcutta resolutions. How it is proposed to bring these two conflicting elements under one banner it is difficult to say, but there is every likelihood of the boycott section keeping out; thus leaving the responsive section to arrive at a unanimous decision. Another obstacle is the attitude of the Aga Khan. It is not quite clear whether he will accept the presidentship of the conference, when he finds that there is no chance of the community as a whole arriving at a unanimous decision; as the position will be materially the same after the conference as it is now, the Aga Khan's desire to bring the leaders together on this vital issue will remain unrealised.

The Anglo-Indian Community.

In powerful contrast to the attitude of Muslims is the united stand of the Anglo-Indian Community, whose leaders are busy preparing their case to be submitted to the Simon Commission. A tentative basis on which the community should frame its claims is embodied in a memorandum drawn up by the Madras Association. It states: "The community, whose members are natives of India, claim all the rights and privileges of Indian citizenship. We are natives of India in the literal sense of the term. This has also been recognised by Statute." For the protection of these rights the community demands direct communal representation on the Councils of the country and the right to equal treatment with its fellow-Indians in regard to recruitment to the Services. That is a succinct statement of the Anglo-Indian claims, and it must be admitted that the remarkable unanimity in the community is largely responsible for the clearness with which the demands are put forward. In this connexion reference must be made to the important pronouncements made by the two Governors at the annual dinners of the European Associations in Bombay and Madras.

Lord Goschen's Advice.

Lord Goschen, in his address before the European Association in Madras, emphasised the need for seeking points of agreement between the Anglo-Indians and the other communities in the country. It should be our duty, he said, to find out in how many respects we agree and not in how many we differ one from the other, and I am confident that, if we pursue this inquiry frankly and sincerely, we shall discover to our surprise that there is much more in common between us than we anticipated. . . . There seems to be so much on which we can agree. Let us hold fast to this and keep this before us when we are discussing those points on which we may differ. If we do this, we shall have created an atmosphere of good will and respect in which we can enter into a discussion." A great deal will have been achieved when all the communities in India realise that this is the only solution to the numerous dissensions that have arisen within the past few years, and it is to be hoped that Lord Goschen's words will reach beyond the limits of the Madras presidency and farther than the confines of the Anglo-Indian community.

The Bombay Dinner.

At the dinner given by the Bombay branch of the European Association, once again the reluctance of the Governor of Bombay to make any reference to the Reforms or to the Simon Commission was clearly brought out. Having once let himself in for it, however, Sir Leslie Wilson gave a clear summing up of the situation. There has been some apprehension in political circles that the findings of the Simon Commission will result in a setback rather than an advance on the road to self-government. Sir Leslie Wilson's speech throws some light on this question. He said:—"We are committed to a policy of reform, bound by Parliament's pledged word to advance on the difficult path of self-government for India—a path always difficult in any country—a path not necessarily thorny, but one which must be strewn with the boulders of difficulty and the crevasses of disappointment. Equally, of course, we cannot, as you say, turn back nor, in the nature of constitutional development, can we stand still. Therefore, I fully agree with you that we must go forward helped, as we must be on our way, by all those who have at heart the real prosperity of this great country." Continuing Sir Leslie Wilson pointed out at the same time that any change in the present form of government in India must necessarily depend entirely on sincere co-operation between those who have to take a part, however great or however small. As this co-operation, which is so essential for any further measure of self-government, is not forthcoming the conclusion is obvious.

The All-Parties' Decision.

The Conference of All-Parties which was held at Benares has taken a decisive step in favour of boycott, *hartals*, i.e., mass demonstrations, and all the methods which have hitherto come under the programme of non-co-operation. I will just mention the names of some of the Liberals who were present to show how strong feeling is in the country. Sir Tej Bahadur Sapru had already declared himself in favour of the boycott although he was not very definite on the question of *hartals*; Mr. Sachidananda Sinha, is an ex-member of the Executive Council of the Bihar Government; Mr. C. Y. Chintamani and Mr. Bepin Chandra Pal have made no secret regarding their attitude on the question; the others are Mr. J. N. Basu of the Liberal Federation, Calcutta, and Maulvi Masud Ali Nadvi and Babu Gaurishanker Prasad of the All-India Liberal Federation. The protest raised by the Liberals of Bombay against the decision of the Congress to organise *hartals* throughout the country has been ignored at Benares, and the Bombay Liberals do not seem to think it necessary to insist on a mere detail. I understand on good authority, that the Liberals were invited to meet Sir John Simon privately, but they declined; the members of the Commission and Sir John Simon will not, therefore, stay in Bombay for two days as previously arranged, but will go straight to Delhi.

THE VICEROY'S APPEAL.

Apart from brief reference to India's relations with neighbouring States, to the visit of the King of Afghanistan, and to the position of the Indians in South Africa and East Africa, practically the whole of the Viceroy's address at the joint session of the Legislative Assembly and the Council of State last week was confined to the Statutory Commission and its work.

After describing the circumstances in which the decision to antedate the holding of the inquiry and to appoint a Parliamentary Commission was reached and the differences of opinion which have arisen in India respecting its propriety, Lord Irwin proceeded:—

"I do not propose to enter far into the lists of controversy, but there are two points to which I think it is right to refer. It has been freely said that his Majesty's Government have done Indians a real injustice in denying them adequate means by which Indian opinion may influence and affect these proceedings. Such charges as these arise in part from the genuine failure of some critics to appreciate the features of the scheme, which I thought had been sufficiently plainly stated.

"It has, for instance, been assumed that the representatives of India would not confer with the Joint Parliamentary Committee in London until after Parlament had reached the main decisions of principle upon the second reading of a Bill. That this is not the case is clear from my statement of November 8, in which I said it was not the intention of his Majesty's Government to ask Parliament to adopt any proposals which, as the result of the Commission's report, might be put forward without first giving an opportunity for Indian opinion, by personal contact, to exert its full weight in shaping the view of the Joint Parliamentary Committee in regard to them. I was careful to point out that at this stage Parliament will not have been asked to express any opinion on particular proposals, and that, therefore, so far as Parliament is concerned, the whole field will still be open."

Remarking that there was a real danger in some quarters of mistaking shadows for reality, the Viceroy said he doubted whether those who criticised the broad framework of the "very full and very unprecedented" plan for enabling Indians to take an ample share in the evolution of their country's future had reflected upon what was implicit in the idea of Select Committees of the Central and Provincial Legislatures. In the earliest stages there was the association of these Committees with the Commission "through whatever procedure the Chairman and members of the Commission, after placing themselves fully in touch with Indian opinion, may deem best calculated to enable them to discharge the duty entrusted to them."

And when the Commission's work was completed and the matter passed into other hands the Central Legislature had, if it so desired, through chosen representatives of its own, perhaps the greatest and most powerful means of influencing the further current of events. It was, that was to say, invited, through some of its members, to sit with Parliament itself, acting in its turn through its own Joint Select Committee. Lord Irwin proceeded:—

"Let us picture to ourselves the Joint Select Committee of Parliament and the Select Committees of this Legislature, sitting together in one of the Committee rooms of Westminster to consider the proposals of his Majesty's Government. These proposals will deal with the vast problem on which Parliament indeed has to decide, but where it is no more to the interest of Great Britain than it is to that of India that issues should be clouded by avoidable difference or disagreement, and in regard to which, therefore, Parliament will naturally seek to reach decisions that command as great a measure as may be of reasoned Indian political support.

"Is it not fair to conclude that both the Joint Parliamentary Committee, charged with the function of making final recommendations to Parliament, and, earlier, the Commission, each being masters, within very wide limits, of their own procedure, will desire to go to the farthest point they deem possible in order to carry along with them the convinced assent of the representatives of India with whom they will, under the plan proposed, be working in close and intimate relations?

"It is surely obvious that what will be of supreme importance to India will be the quality of the men she has chosen to represent her, and it is difficult to conceive of any way in which Parliament could have given more clear indication of its desire both to give full weight to Indian opinion and to recognise the dignity and position of the Indian Legislature . . . Whatever men may be tempted to think at the present moment, I dare to predict that the searching verdict of history will not fail to return a judgment against those who sought to use their power to hinder when it was in their power to help."

Dealing with the other main point in the argument of the critics of the proposals, namely that his Majesty's Government have deliberately offered an affront to India by the exclusion of Indians from the personnel of the Commission, Lord Irwin remarked:—

"Let me make it very plain, that I expect Indians, as I would myself, to be sensitive of their honour. None, whether individuals or nations, can afford to be otherwise, for honour and self-respect lie at the foundation of all social life. But honour and self-respect are not enhanced by creating affronts in our imaginatieon where none in fact exists, for the essence of any such offence, as of rudeness in private life, lies in the intention behind the act, and no reasonable person would dream of blaming the conduct of another where intention of discourtesy was lacking.

"In the present case British statesmen of all parties have stated in terms admitting of no misconception, that the appointment of a Parliamentary Commission was in no way intended as any affront to India. Time and again this assertion has been repeated, and I would ask in all sincerity by what right do the leaders of Indian opinion, who are as jealous as I am of their own good faith and would resent as sharply as I any refusal to believe their word, impugn the good faith and disbelieve the plain word of others?"

"It is in no spirit of argument or lack of sympathy with Indian aspirations," Lord Irwin continued, "that I repeat that India, if she desires to secure Parliamentary approval to political change, must persuade Parliament that such change is wisely conceived and likely to benefit those affected by it. She has now an opportunity of making her persuasion felt through the means of a Commission statutorily established . . . with the assent and co-operation of all the British parties. They will carry through their inquiry with, it is hoped, the generous assistance of all shades of Indian opinion, but whether such assistance is offered or withheld, the inquiry will proceed and a report will be presented to Parliament, on which Parliament will take whatever action it deems appropriate." And here Lord Irwin laid great stress on the spontaneous good will towards India with which the speeches of the responsible spokesmen of all parties were instinct during the debates on the motion for the appointment of the Commission and pointed out that an agitation fostered and promoted by methods which had led to grave occurrences in the past was bound to breed serious misgivings in the mind of the British Parliament, "with whom at present lies the final decision in Indian political affairs."

"What then," he added, "in India or Great Britain is to be gained by a policy of boycott? Neither I nor anyone else can predict the effect upon the Commission's report or, later, upon the mind of Parliament, if many of those who claim to speak for India decide at every stage to stand wholly aloof from the task in which Parliament has solicited their assistance and collaboration."

Lord Irwin concluded by expressing the hope that even at this hour his words might induce some of those who aspired to guide their countrymen in India to desist from a line of action which at best could only lead to negative results and disappointment.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslav Bank Amalgamation.

The interesting information is forthcoming from Yugoslavia that an agreement has been concluded for the amalgamation of the Croatian Discount Bank and the Croatian-Slavonian Land Mortgage Bank. The Boden Creditanstalt of Vienna, the Pester Commerzial Bank of Budapest, and the Banca Commerciale Triestina are associated with the former institution, while the latter bank is an affiliated institution of the Anglo-International Bank. The new bank resulting from the amalgamation—for that is in effect what the development means—will be in a position to play a much stronger part locally than was possible for the institutions separately. The departure thus marks a definite stage in the movement to strengthen banking institutions in Yugoslavia, and the new bank will no doubt have an important influence in helping to link up banking interests in Croatia with those in other parts of the country.

Economic Crisis in Roumania.

It is to be regretted that the economic situation in Roumania shows as yet small signs of improving. In almost every direction of the country's activities, except trade, the position is disquieting, and while the trade statistics for the first nine months show a favourable trade balance of more than twice what it was for the corresponding period of 1926, commercial progress is in the case of Roumania rather a misleading guide. Internally the situation is one of extreme difficulty. Take the railways for example. For the first ten months of last year there was a deficit on the working of 2,529 million lei, and this despite the heavy freight rates, which, as has often been pointed out, constitute one of the great handicaps on the development of the country's commerce. One reason, perhaps the principal one, for the adverse showing made by the railways is the competition of motor transport, in which respect Roumania is simply sharing the experience of other countries. Then the petroleum industry, which should be Roumania's great stand-by, has been going through a severe crisis which has been due to the cost of production, and has, of course, been greatly accentuated by the fall in world oil prices. A significant effect of the crisis has been a sharp reduction in the number of active wells which totalled 568 as at September 30 last out of a total of 1,321 productive wells as against 786 out of 1,334 productive wells as at December 31, 1926. It is obviously no use increasing production without having the markets available to absorb it, and unfortunately Roumania has paid too much atention to output and too little to the organisation of the selling part of the business, and so the period of fluctuations in oil prices has had a more pronounced effect than would otherwise have been the case.

The Need for Capital.

The imperative need of Roumania at the present time is for capital. The policy of the late Prime Minister was to avoid having recourse to foreign assistance at all costs, not because he had an inherent objection to foreign loans, but because he was simply looking forward to and working for a time when he hoped and believed it would be possible to obtain assistance from abroad on much less onerous terms than those on which he felt help would be forthcoming in the last few years. The idea was admirable, but in practice the scheme has not worked out in accordance with anticipations. It presupposed the steady development of Roumania as far as possible with its existing resources; but adverse factors such as bad harvests and oil crises have a habit of upsetting calculations such as this. In any case it is difficult to see how Roumania without outside help could possibly have been in a position to utilise the necessary funds for the great extensions and improvements required by the transport service, for instance. Certainly so far the railway situation is little, if at all, better than it was years ago, and in some respects it is even said to be worse. I have referred above to the deficit on the working of the railways. As a matter of fact, the lines are not only directly but also indirectly a handicap to the progress of the country. The amount owed by the railways to Roumanian industries for material and repairs—most of it dating between 1920 and 1925—is put at 1,500 million lei. The industries concerned have been seriously affected by these debts, and have had to have recourse to overdrafts at heavy interest, the net result being the further curtailment of the country's credit resources. It is satisfactory that despite the existing difficulties the currency should have remained fairly stable, but if it is to continue to do so and if the leu is to be stabilised at a reasonable figure it is obvious that drastic alterations will have to take place in the internal economy of the country.

The New Greek Loan.

The success which attended last week's Greek loan issue had about it nothing of the unexpected. The fact that it

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Digitized by Google

was issued under the auspices of the League of Nations was of itself sufficient to ensure an adequate response to the offer. On Monday dealings were opened in the new loan, and a small discount was established despite the low allotments, but subsequently the loan was quoted at a small premium. There is no question that previous reconstruction loans were issued at too low a price, which explains, of course, why substantial premiums were quickly established. In the present case it looks as if the loan was issued at a fair market price, and in that case those who looked for a quick profit on it are likely to be disappointed. Now that this loan is out of the way it may be some time before another Near Eastern issue makes its appearance. For reasons which I have already explained the prospective Bulgarian loan is postponed *sine die*, and there seems to be small prospect of a loan for one of the Balkan countries in the next few months.

The Coming Budget.

The long-suffering British taxpayer will find small encouragement in Mr. Churchill's recent references to the financial situation. It appears that there is to be no reduction in the income tax, and in the light of what the Chancellor said it would seem to be very doubtful if there will be any reduction in taxation of any kind. While it is too soon, however, to give up hope with regard to the present year, it has to be admitted that it is difficult to see how any important reduction could possibly be justified on the existing financial position. Yet it goes without saying that if the present trade revival is to be encouraged there must be some relief from the overwhelming burden of taxation. If Mr. Churchill has reasons to believe that the ensuing financial year is likely to show a great improvement he may possibly decide to take advantage of that prospect to afford some slight relief in taxation. I am convinced that if he did so the result in encouraging trade development would show that the step was well worth taking, but I fear that it is not to this Budget but to the last that the present Government will introduce that we must look for reduction in taxation. It is a long time to wait for relief; we must hope the relief when it comes will be worth while.

The Rubber Position.

The past week has witnessed further interesting developments in regard to rubber. It was expected that as soon as the fourth quarter, in which the restriction figure is 60, had commenced there would be an improvement in the price of the raw commodity. As always seems to happen in connexion with this commodity, however, anticipations were not realised, and instead of the commodity firming up it slumped badly and at one time the price was as low as 1s. 5d. There had been no development in the situation to account for it, and the movement is attributed in some quarters to American selling by way of registering a protest against the continuance of the restriction scheme. Since the initial fall prices have firmed up somewhat, and at the time of writing the figure is 1s. 6d. There was this week a small reduction in London stocks, and with the stricter working of restriction it is most likely that the ensuing week will see slow but steady reductions in stocks. If that is the case, and there seems every reason in favour of it, the price will not long remain at anything near its present level, though I think we can discount the possibility of any recurrence, at present at any rate, of the prices that ruled in 1925.

COMMENTATOR.

EGYPTIAN FLAX AND LINEN INDUSTRY.

Considerable attention has been devoted in recent years to the improvement of the grade of flax grown in Egypt (says an American Consular report). Government and private experiments with Belgian flax have proved so successful that efforts are being made to introduce this variety to replace the native flax, which is of very poor quality. The two flax factories in Egypt put the fibre through only the first processes of its preparation for spinning. All of the flax is then sent to Europe for hackling, spinning, and weaving. It is estimated that there are between 10,000 and 15,000 hand looms upon which the peasant women weave cotton, silk, and linen goods from imported yarns. The establishment of a linen textiles company has been authorised by the Government and is now in the course of organisation.

For the first eight months of 1927 Bulgaria had a favourable balance of 13 million leva, as against an adverse balance of 370 millions for the corresponding period of 1926. The improvement is due to increased exports, which attained a value of 3,983 million leva as against 3,564 millions in 1926. The principal exports were tobacco, attar of roses, and sheep's hides, the value of the exports of tobacco being 1,166 million leva. The chief countries of destination were Germany, Greece, and Austria.

Motors and Motoring.

By G. B. B.

One of the most annoying troubles which a driver can experience is wheel-wobble, and it is the more annoying in that the cause is so obscure that although there are many suggestions being made as to how it should be overcome, these differ considerably from each other. A further fact which is disconcerting is that one may take two identical cars, turned out on the same day by the same maker from the same factory, and one may give trouble from wheel wobble and the other may not. It is also true that an engineer may take two cars, giving this peculiar trouble, and overhaul them, and he may, and frequently will, find that what will put one right will have no effect upon the other.

Wheel wobble, or rather its cause, is still a profound mystery; a mystery which certainly should not exist in this engineer's eye. There is one point which has to be considered when we are seeking a remedy, which is that this trouble has only become manifest during recent years. The inference is that it is due to one or other of the recent "improvements" that have been made, and that being granted the only thing left is to find out which improvement is causing the trouble. That should then render it a comparatively easy matter to find a remedy.

Brakes on Tyres.

The more recent improvements made have been precision works during manufacture, improved brakes, and balloon tyres. There are others, of course, but battery ignition, wind screen wipers and cellulose finish could hardly be looked upon as possible causes of wheel wobble. Precision working, which was a necessary preface to mass production, must, I think, also be held guiltless. The finishing-up of bearings and wearing parts to a greater degree of accuracy should certainly tend to reduce rather than increase any tendency of parts to wobble or move without it being intended that they should.

Quite a number of owner-drivers who have experienced wheel wobble have blamed balloon tyres. The trouble, they say, was unknown until balloon tyes were introduced; a fact which to them seems proof sufficient. One might just as well argue that the trouble was unknown before a proportion of the Road Fund money was taken by the Chancellor of the Exchequer; one could be quite as logical even though not quite so plausible. Wheel wobble is most frequently experienced when swinging round a right or left handed curve at a fair pace, and in that case it will generally be noticed that it stops as soon as, or almost immediately after, the road straightens out. Once or twice, anything of the kind might be regarded a mere coincidence. Repeated, it becomes more than a coincidence, and materialises as something that must be investigated. Now, tyre pressure, or the area of tyre in contact with the road could not possibly operate under such conditions, and only under such conditions, to cause our trouble. Were the fault due to either of these causes we should find a similar wobble when going round a curve in the opposite direction. But my contention is that if one finds this wobble on a right hand curve one does not find it on a left hand curve and vice versa. The trouble, if my contention be correct can only be due then to brake designs and front wheel brake design in particular. It seems that the setting of the front wheels, where front wheel brakes are in use, is the dominant factor. These wheels are set at an angle to the road and are further apart at the top than the bottom. This makes steering harder, because one really lifts the whole weight of the car for a mere fraction of an inch every time the steering wheel is moved. In other words, when front wheel brakes are used, every time the steering wheel is moved, the car is lifted up and put down again. Very slightly, it is true; almost microscopically in fact, but see what it means! It means that every time the car is lifted up and down the steering wheel is moved. Then as soon as curvature or inequality of the road gets to work on the springs and jolts the body up and down or weighs it over, the tendency must be for the steering wheel to be moved. There, at once, is wheel wobble and the remedy would seem to be to try varying the pressure in the front tyres, increasing or decreasing it until the wobble is eliminated and should that remedy be only partially effective, attention may be directed towards varying the tension in the front springs.

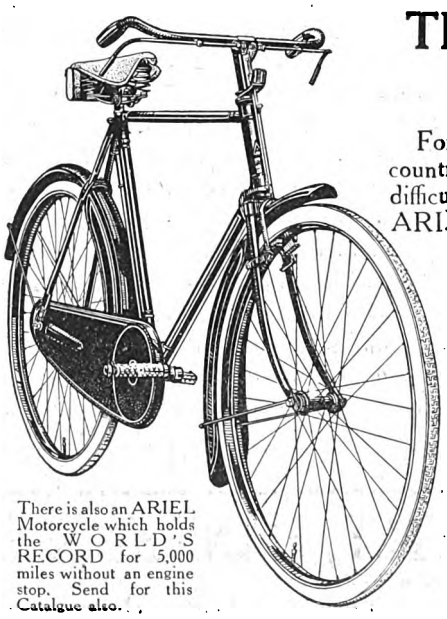
JAFFA ORANGE EXPORTS.

The Empire Marketing Board in its report dated February 1 states that further shipments totalling about 86,000 boxes of oranges from Palestine have been notified during the past seven days. Total shipments this season now amount to about 812,000 boxes, or rather less than at the corresponding date last year. The season's total exports are not expected to exceed 1,400,000 boxes. Shipments of oranges from Spain to the United Kingdom showed a decided increase last week.

Total shipments to United Kingdom ports up to January 29 amounted to 811,876 cases, as compared with 863,598 cases at the corresponding date last year. Shipments to the Continent up to the same date have amounted to 47,500 cases, as compared with only 12,500 cases last year. It is estimated that total shipments during the season will not exceed 1,400,000 boxes. More than half this quantity has now been shipped.

The Bicycle for the hardest wear

ARIEL



The Good Cycle

For rough and hilly country and under difficult conditions, the ARIEL is the cycle you must ride. It is far ahead of all others for easy, effortless riding, unfailing reliability and comfort. The finish is smart and enduring, the splendid specification and reasonable prices will surprise you.

There is also an ARIEL Motorcycle which holds the WORLD'S RECORD for 5,000 miles without an engine stop. Send for this Catalgue also.

THE BALKANS IN 1927.

The current issue of the Monthly Review of the Anglo-International Bank, Ltd., contains an interesting review of European conditions in 1927, from which we take the following :—

The system of high tariffs which were introduced during the past nine years and to which the industries of the Succession States have been forced to adapt themselves cannot be altered by a stroke of the pen without a serious dislocation of trade and industry. It is, however, a matter for congratulation that, in spite of all nationalist and political bias, the business men of Central Europe have begun to realise the necessity of closer economic co-operation between the various Succession States and to recognise that no State, which forms part of what even to-day still constitutes a single natural economic entity, can afford to prosper at the expense of its neighbour. During 1927 there has been a further development in the the policy of rationalisation and in the formation of cartels by the leading industries of the various States, and it is possible and, indeed, probable that the movement towards free, or rather freer trade between the Succession States will develop along these lines. A striking testimony to the growing stability of the Central European States is provided by the high prices which ruled throughout 1927 for the various Government loans of the different States. During 1927 the Austrian 6 per cent. League of Nations Loan reached a highest level of 104 as compared with a lowest price of 92 in 1925. The Czech 8 per cent. loan now stands at 112 as against the issue price of 96½. The Hungarian 7½ per cent. Reconstruction Loan reached a highest price of 106 as compared with a lowest price of 91⅜ two years ago, while the 8 per cent. Yugoslav Blair Loan which at one time had a very flat market has remained very steady at a price round 100.

Of the Balkan States Yugoslavia is still suffering from the economic crisis produced by the deflation policy of the Ministry of Finance. The year, however, may be characterised as one of reconstruction in private enterprise. Many of the mushroom creations of the inflation period have gone under during the crisis. Although for this reason there has been an increase in the number of bankruptcies as compared with 1926, the disappearance of these uneconomic industries must be regarded as a necessary consequence of healthy economic reconstruction.

The foreign trade figures for 1927 are not yet available, but they are not likely to make as favourable a showing as those for 1926. For these unfavourable prospects the failure of the maize harvest is largely responsible. On the other hand, the timber industry, which is one of the most important industries of the country and which in 1926 was severely depressed, has shown a welcome improvement and may be said to have surmounted the crisis. At present, Yugoslavia is suffering from too high a budget and too heavy taxation, both due to a large extent to the all-too-frequent change of Government and to the political instability which has characterized the country ever since the Armistice. Greater economies must be effected in the budget, and, although the dinar has been stabilized *de facto* for more than two years, legal stabilization and a proper consolidation of the State finances are essential concomitants to permanent economic recovery. That the Yugoslav Government is fully alive to the necessity of currency stabilisation and of a thorough consolidation of the State finances is proved by the settlement in 1927 of the Yugoslav debt to Great Britain and by the various financial reforms which have been initiated by the Minister of Finance.

The resources of Yugoslavia are so great and the Yugoslavs themselves, in spite of certain internal differences, are such a compact and energetic race that a complete economic recovery can be only a question of time. A feature of 1927 in the economic life of Yugoslavia has been the remarkable increase which has taken place in the tourist traffic to the Dalmatian Coast. With the development of Yugoslav transport and the increased stability of Central European conditions, this traffic is likely to assume very considerable dimensions and should provide a fruitful source of revenue.

The past year has proved a somewhat anxious one for those responsible for the guidance of the Roumanian State, as it has seen the death of the founder of Greater Roumania, and the emergence of the difficulties regarding the succession, which have so far fortunately proved more apparent than real.

The four main economic problems which Roumania has to solve in the near future are the legal stabilization of her currency, the compilation of a new customs tariff which will act as a basis for Trade Agreements with other countries, the flotation of a considerable foreign loan for productive investment purposes and the re-organisation of her transport system. The customs tariff must be accepted by the National Parliament and not be subject to alteration with every change of Government, while the foreign loan should help to link up economic circles inside the country with the international capital market and thus reduce the rates of interest.

When these four problems have been dealt with, Roumania's economic life will be able to embark upon that great future to which the abundance and richness of her natural resources so fully entitle her.

Bulgaria, which has had to bear a greater War-burden than perhaps any other country, has also benefited to a certain extent from the improved conditions prevailing in Central Europe during 1927. Exports show a substantial surplus over imports, and, although the tobacco crop was much smaller in quantity than the 1926 crop, the reduction was compensated by the improved quality and by the better prices realised. Bulgaria, however, requires a foreign loan before she can proceed to a proper consolidation of her economic situation. It is, therefore, earnestly to be hoped that the negotiations which are at present proceeding with the Finance Committee of the League of Nations will be brought to a successful conclusion.

No better advice could be given to Bulgaria by her friends than to recommend her to co-operate wholeheartedly with the League, which has already done such a great work for the economic reconstruction of Central Europe.

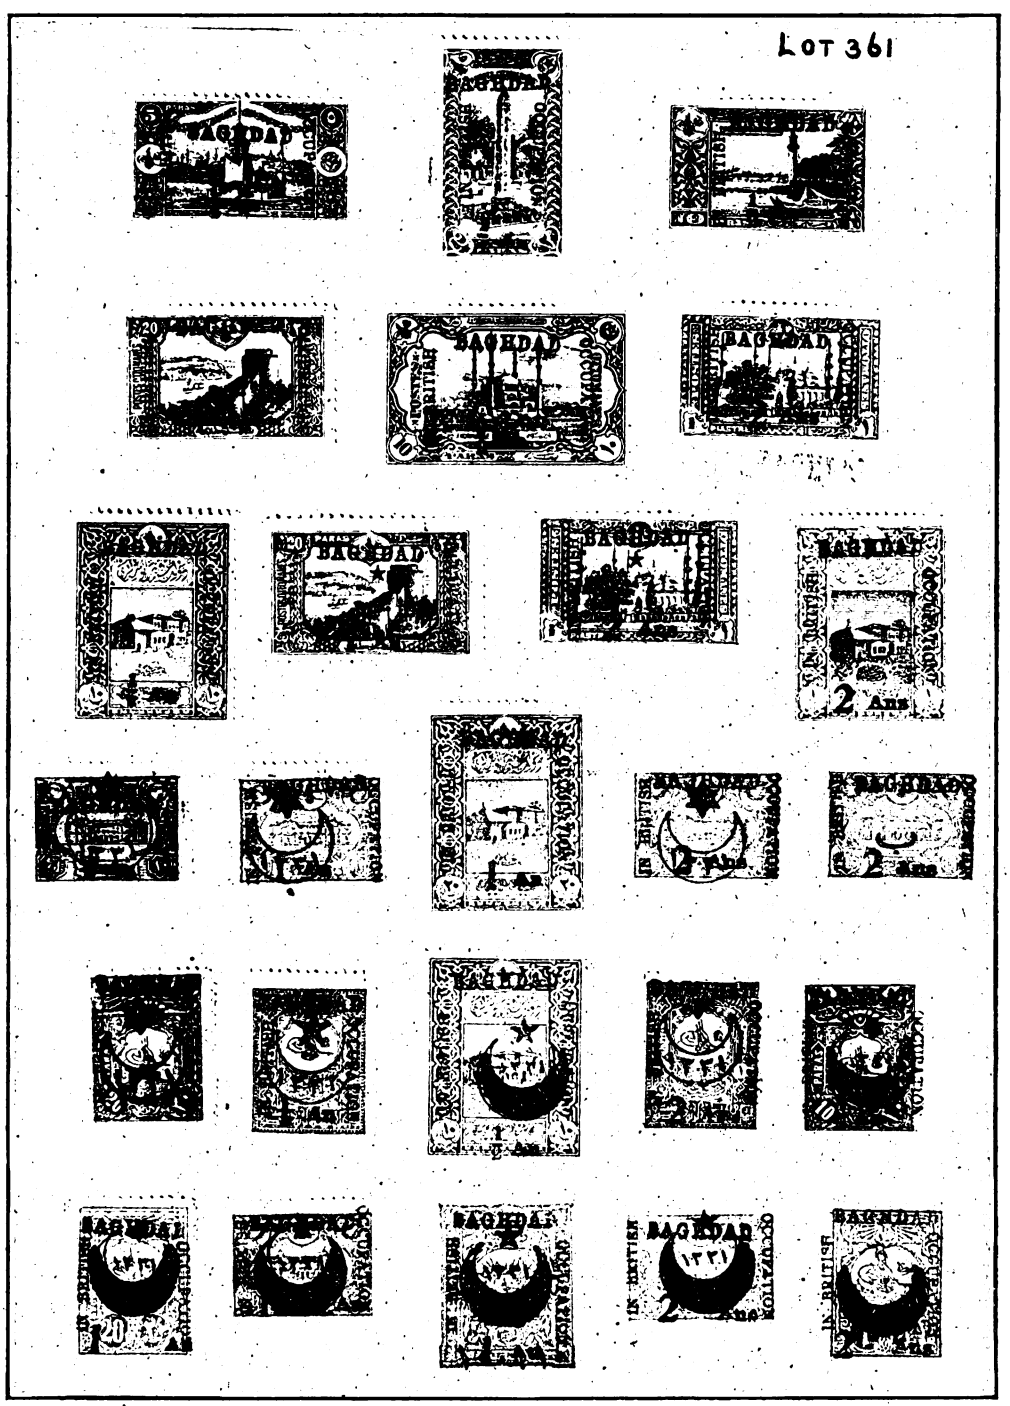
APPROACHING AUCTION OF BAGHDAD STAMPS.

Reminiscences of the British capture of Baghdad are revived by the announcement by Messrs. H. R. Harmer, 6-8, Old Bond Street, philatelic auctioneers, of the auction on March 5 of a complete unused set of Baghdad stamps (shown in the accompanying illustration) in addition to two practically complete sets and a pair of the 1 anna on 10 paras on 20 paras claret, one of which has part of the overprint omitted.

The history of these stamps is interesting. When General Maude's force occupied Baghdad after the victories around Kut-al-Amara it was necessary to start a postal administration. No British stamps were available, however, and the Turks, when evacuating the city, had done their utmost to destroy everything at the head post office. A general sweep of the town for unused Turkish stamps was ordered, resulting in the discovery of about 14,500 stamps, some printed by Messrs. Bradbury, Wilkinson and Co., others crude Constantinople productions; of these a number were surcharged with a large red crescent containing an inscription to the effect that "those who fell in the War were martyrs of the Faith" and that a surtax on the price of the stamps would be employed to maintain their children. Needless to say, the British Government did not encourage "Jehad" propaganda, and had the inscription blacked out. Irrespective of their original value, these stamps were utilised for four denominations in Indian currency—the quarter, half, one, and two annas. As no machinery was available in Baghdad and European type was very scarce, the surcharging of Turkish stamps for British use had to be done by hand, and occasional variations occur. The official figures published by Sir Percy Z. Cox, then High Commissioner, show that in one case as few as 65 stamps were issued, whilst in other cases between 100 and 150 copies only exist.



(Reproduced by courtesy of Messrs. H. R. Harmer.)

Despite the decreased popularity of War stamps during the past few years complete sets of these stamps are sufficiently rare to excite considerable competition and good prices are anticipated at the pending auction.

NEAR EAST PETROLEUM.

In a circular to the shareholders the directors of the Near East Petroleum Company, Ltd., state that in accordance with the company's development programme for sinking 12 further shallow wells upon their property at Zante, Greece, the field manager states that well No. 3 is now down about 230 ft. in limestone, with gas and oil. This boring is about on the top of the shallow oil stratum and requires only a little further deepening, indications being most encouraging. The 1,000-ton storage tank, in course of erection, will be completed within a month, when pumping of the old wells will be recommenced. It will be remembered that upwards of 50 tons of oil a day were produced by these old wells and that pumping was only suspended pending the provision of storage accommodation, which the new tank will provide.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Paper, Printing and Binding Material.—The Egyptian Ministry of Finance invites tenders for the supply of paper and printing and binding material required for the year 1928-29. March 29. (D.O.T.)

Pumping Equipment.—Tenders are invited by the Egyptian Ministry of the Interior for the supply and installation of centrifugal pumps, electric motors, etc., for the water supply works at Keneh. February 28. (D.O.T.)

Pumping Equipment.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the supply and installation of centrifugal pumps and electric motors, etc., required for the water supply works at Luxor. February 25. (D.O.T.)

Paper and Stationery.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery, etc., required by this Ministry during the year 1928-1929. April 12.

Pumping Units.—The Director-General, Mechanical Department, P.M.M., Cairo, invites tenders for the supply and erection at Mex Pumping Station of two Diesel pumping units and accessories for the Public Works Ministry. April 14.

Bunting, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required during the year 1928-1929, as per list and conditions of tender obtainable from Stores Department, Arsenal. April 4.

Timber.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of timber of different kinds, approximate cost £E6,800 to £E7,200 (March 3), and for the supply of Swedish deals of different sizes, approximate cost £E10,000 to £E12,000 (March 10).

INDIA.

Gur and Mohwa Seed Distilling Plant for Jaipur.—Tenders are invited by the Indian Stores Department, New Delhi, for the supply and delivery of a distilling plant capable of distilling 350 London proof gallons per day of 12 hours from wash obtained from Mohwa seed or from Gur. February 16. (D.O.T.)

Shipping Intelligence.

SHIPPING AT CONSTANTINOPLE IN 1927.

The number of vessels visiting or passing through the port of Constantinople in 1927 was 6,658, the tonnage being 10,966,235. Of these vessels 2,679 carried out operations at the port. Italy was first from the point of view of tonnage with 2,624,822 tons, Great Britain being second with 2,080,180. It is interesting to note that there was a further decline in the number of foreign vessels visiting Constantinople, the total being 1,492 as compared with 1,572 for 1926 and 3,259 for 1908. Besides reflecting the extent to which circumstances have deprived Constantinople of much of its former trade, the figures indicate the concentration by Turkey of the local carrying trade in its hands. As regards the nationality of the ships at Constantinople in 1927, 397 were Italian as against 450 in 1926, 268 were British as against 227, Roumania was third with 165 as against 200, France was fourth with 152 as against 202, while Germany was fifth with 107 as against 102. From the British point of view the statistics are not unencouraging, for they suggest that while our chief rivals in the Near East were losing ground last year we were more than holding our own.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, February 21).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 22).

British Indian Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, February 11); s.s. Manela for Bombay and Karachi (London, February 18).

Cunard Line.—S.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, February 18; s.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool March 3, and Swansea March 10).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 11); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 25).

P. and O. Line.—S.s. Ranpura for Bombay (London, February 17); s.s. Padua for Colombo, Madras, and Calcutta (London, March 3).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, February 17); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, February 25).

Ellerman and Papayanni Lines.—S.s. City of Milan for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool February 11, Glasgow, February 10); s.s. Bavarian for Algiers*, Malta, Syra*, Smyrna, and Constantinople (Liverpool, February 11); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool February 18, Swansea, February 23); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 25); s.s. Algerian for Gibraltar, Algiers, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 3, Swansea* March 3. * Subject to sufficient inducement. Cargo taken on through iBlls of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The American Agricultural Department estimates the cotton crop of the United States, Egypt, the Sudan, Bulgaria, Syria, Tanganyika, and Algeria for 1927-28 at 14,463,000 bales, against 19,789,000 last year.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 7.

The rise in the New York Federal Reserve Bank's rate of rediscount from 3½ to 4 per cent., which occurred last week, though largely unexpected at so early a date, has to some extent been discounted in advance in so far as the change in the monetary situation in America had banished hopes of a reduction in the Bank of England's rate. Whether American balances will now be withdrawn from London remains to be seen. In the meantime the Bank of England is in a strong position, as witnessed by the recent weekly returns, and further additions to the gold stock are expected shortly. The monetary outlook is thus by no means simple to divine, and it is not surprising, therefore, that investment markets have shown a somewhat halting tendency during the past week, though there has been nothing in the nature of a set-back, except in rubber shares, which have been flat on a sharp decline in the price of the raw material.

A Change in Investment Fashion.

There have been a number of interesting changes of fashion in the investment world in recent years. One of these has been the steady return to favour of property, and especially shops and business premises, as one of the staple forms of investment. According to a leading property authority, one of the two outstanding features of the past year has been the keenness of the demand for shops and business premises. The reasons for this demand are summarised thus: the supply of this property is restricted; the multiple-shop companies create formidable competition; and the profits of the retailer are higher than before the War. The demand is expected to continue, with the result that "shop property of the right kind will remain almost a gilt-edged investment." Discriminating investors, says a prominent firm of London agents, are frequently prepared to transfer capital from industrial and other securities to a first-class investment in the shop property market, the latter giving a higher return and greater stability of capital value. Our point in drawing attention to these facts is less to encourage the investor to take up such investments himself than to emphasise their favourable bearing upon the fortunes of the property owning companies. Indeed, the investor, and especially the investor of modest resources, would do well to take advantage of the favourable tendency of the business property market exclusively through the medium of the property-owning companies' shares.

Motor Trade Prosperity.

Events during the past week suggest that the motor industry is passing through a period of prosperity. The Rolls-Royce Company has announced a substantial increase in earnings for the year ended October 31 last, the profits being £56,272 larger at £156,818. The distribution to ordinary shareholders is raised from 8 per cent. to 10 per cent. by the addition of a bonus of 2 per cent.; 8 per cent. has been paid since 1920. This company is one of the soundest undertakings in the industry, but its ordinary shares have long discounted this year's bonus, the present price being 36s. At the meeting of Guy Motors, which manufactures commercial vehicles, the chairman referred to the company's prosperity in the past year. This, he reminded the shareholders with justifiable pride, had enabled the company to return to the dividend-paying list with a distribution of 10 per cent. Apparently the directors intend to pursue a conservative financial policy, and this is praiseworthy. The outlook for the current year, according to the chairman, is very favourable. The ordinary shares are quoted at 30s. Speaking at the meeting of Swift of Coventry, the chairman said that the loss last year had been reduced from £45,722 to £2,231, and that there was considerable ground for believing that next year the balance brought forward from the trading account will appear on the opposite side of the account. The chairman of Bluemel Brothers, the manufacturers of accessories, likewise faced the future with tempered optimism.

Attractive Shipping Investments.

A reader asks us to supply a list of prior charge stocks issued by the leading shipping companies. The industry certainly offers attractive fare in this respect, so that one readily complies with our reader's request. The Cunard Steamship Company inspires confidence, as may be seen from the fact that its ordinary shares return no more than approximately £4 10s. per cent. The company's 5 per cent. debenture stock, redeemable 1941-46, is practically a gilt-edged investment, the yield being £5 1s. per cent. The 5 per cent. cumulative preference stock, perhaps, offers greater attractions, since the return is £5 10s. per cent. A yield of £5 4s. per cent. is obtainable on the P. and O. Company's 5 per cent. cumulative preference stock. The P. and O. Company, it is scarcely necessary to say, occupies a position of great financial strength. The Furness Withy Company, another undertaking with an excellent record, has outstanding 5 per cent. cumulative preference shares in denominations of £10 each which give a return of £5 8s. per cent. A higher yield, at £5 17s. per cent., is obtainable on the White Star Line 6½ per cent. cumulative preference shares. It may be added that well-informed opinion is moderately hopeful regarding the shipping outlook: the expanding tendency of world trade is a particularly favourable factor.

The production of oil in Roumania by the principal companies in 1927 was about 3,650,000 tons, as against 3,241,329 tons in 1926.

Company Meetings.

CREDIT FONCIER EGYPTIEN.

Conditions in Egypt.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 12:—

In conformity with Article 36 of our Statutes we have the honour to submit to you the results of the past year which ended on October 31, 1927.

We pointed out to you last year the sharp fall in the price of cotton, which declined to 24 talaris for Sakallaridis, and the measures taken by the Government to remedy the situation. Prices were rapidly raised to a marked extent following the reduction of the acreage decided upon in America and also the damage resulting from the Mississippi floods. At the end of the 1926 season Sakellaridis reached a price of 40 talaris and has moved since round about 35. The crop of 1926 having amounted to the record of 8,634,851 kantars, the year thus ended better than it commenced, and the final result has been satisfactory.

The 1927 crop, affected by the reduction of acreage, will be in the neighbourhood of 6¼ million kantars, according to the official estimates. But it will benefit by the improvement in prices, and it is necessary to add, from the point of view of the general position of the country, that the cultivation of rice has naturally benefited by the decrease of that of cotton.

The Government finances continue to make a favourable showing. It was anticipated that the year 1926-27 would close with an appreciable surplus, bringing the general reserve to the higher total of £E36,000,000. The Speech from the Throne on November 17 last expresses satisfaction in these results, and wisely insists on the need for the development of the country's resources to assure the well-being of the public finances. In this connexion the Government expresses the hope of being able this year to take a decision regarding two important projects for the extension of irrigation and the utilisation of the falls of the Aswan reservoir for the production of electricity. The realisation of this project would favour the bringing into cultivation of new lands, attracting part of the surplus population which is believed to stand at a mean figure of 150 to 200,000 people a year. It would procure for agriculture easy means of irrigation at a small cost, for the population in general best conditions of comfort and hygiene, for the Government a considerable economy in the working of the railways, and for local industry particularly advantageous facilities for development.

Country's Increased Wealth.

The increase in the wealth of Egypt in recent years has taken a double form: the development of personal wealth arising from purchases of shares previously held in Europe and the growth of urban estate in most of the towns, especially at Cairo and Alexandria.

The abundance of disposable capital is indicated by a lowering of the rate for the capitalisation of property, which has increased the value of our portfolio.

The construction of new properties has continued, and still goes on without exercising up to the present a marked influence on the price of rents despite so many empty dwellings. You know that as a measure of prudence we impose on our borrowers on city property short periods of amortisation.

The position of our establishment reflects exactly the preceding data. Despite the rapidity of the amortisation of our new loans which have notably increased the total of our annuities and in consequence the importance of the repayments of our mortgage loans, the excess of our realisations over the repayments has reached this year £E229,852. To indicate the full significance of this total we would point out that it is necessary to go back to the year 1912-13 to find so favourable a position, and that in thirteen years our mortgage balance has only been positive three times in the form of a surplus of £E131,150, while the ten other years have shown a total mortgage decline of £E10,524,318.

The balance of the account for annual and half-yearly payments and interest due was at October 31, 1926, £E1,270,886. Adding the maturities of the year £E2,015,604, we obtain a total sum of £E3,286,490. At October 31, 1927, we had collected £E1,940,402. The amount of our arrears was thus reduced to £E1,346,088, an increase of £E75,202 on the corresponding total at October 31, 1926. The curve of our arrears during the twelve months of the year rose up to the month of March, when the deficit compared with the previous year exceeded £E300,000. The rise in the price of cotton has progressively reduced this total up to the end of the year.

These results have been obtained with a relatively small number of forced sales, the account of third party purchasers wherein figure our claims on the acquirers of expropriated properties stands in the balance-sheet at £E87,809 as against £E79,508 in the previous balance-sheet. It is to be noted that those properties expropriated have immediately found a purchaser, so we have not had to reopen the domains account.

The modifications which the composition of our portfolio has undergone arise from the realisation of National War Bonds for the amount of £E1,218,750. The yield of these sales has been invested in Egyptian State securities to the extent of £E525,068 and in bonds of the Suez Canal Company to the extent of £E72,844. The balance has been allocated to the purchase of our own bonds and to the needs of our treasury.

The appearance of our balance-sheet differs very markedly this year from those of previous years. We have, in effect, amortised the premium on our bonds without prizes of the 3 and 4 per cent. series.

It was in 1904 that there was opened in the balance-sheet, with a view to a remote eventuality which is partly realised to-day, the account entitled "provision to serve for the reduction of the premium on bonds" intended to receive the receipts realised by the issue above par of our prize bonds. These premium assets appeared as before, with their slow accumulation, to allow one day of the total or partial offsetting of the premium liabilities on the bonds without prizes issued below par. The total of these liabilities exceeded four million pounds. Freed from this, their amortisation has been redistributed over the whole of the duration of the bonds without prizes and has continued to be safeguarded by the relatively heavy annual deductions on the profit and loss account. One of the consequences of the purchases of these bonds with which we have proceeded and which have been brought to a total of 346,073 shares of which 337,522 are still in existence has been already to render the service less onerous, since, to make the annual charge for the amortisation of the premiums of these bonds disappear, it has sufficed to enter the bonds repurchased at their nominal value in the assets and liabilities of the balance-sheet. But the service of the amortisation of the premiums of the bonds in circulation continues. The success which has for so long attached to the investment of our prize bonds has enabled us this year to place to the account for the provision for the amortisation of bonds a sum equal to the amount of the premiums not yet amortised on the 3 and 4 per cent. bonds without prizes. The same transaction will be undertaken in respect of the 3½ per cents. of which the premiums remaining to be amortised stand at £E912,359, when the funds of the reserve account for the service of the reduction of the premiums on the bonds, of which the present total is £218,470, permit.

At the present time this operation obtains for us a double advantage: there is the disappearance from our balance-sheet of a confusing factor which affects its clearness, and the profit and loss account is relieved from a relatively important annual charge.

Net Profits.

The net profits of the year stand at £E1,743,951. The corresponding expenditure was £E992,205. The amount of distributable profit stands thus at £E751,746, enabling the allocation of P.T. 150 to the ordinary shares and P.T. 3,900 to the founders' shares, subject to deduction of French taxes, or P.T. 38 for the shares which circulated in France, or on which the coupon No. 53 has been paid in France. The founders' shares presented in France will be subject to the retention of the tax affecting uncompounded shares.

If you agree to these proposals the position of the various reserve and provision accounts will stand as follows on November 1, 1927:—Statutory reserve, £E1,044,510.101, or 27,077,384.34 frs.; extraordinary reserve, £E970,773.067, or 25,165,860.45 frs.; provision for the reduction of the premium on bonds, £E218,470.070, or 5,663,514.46 frs.; provision and reserve for sundry contingencies, £E1,304,249.373, or 35,366,153.55 frs; provision for dividend on

shares, £E275,482.422, or 7,141,475.62 frs.; total at November 1, 1927, £E3,873,485.033, or 100,414,388.42 frs. For the account "Provision for the amortisation of bonds," £E2,855,093.272, or 74,014,083.52 frs. We have decided to raise from 4 to 5 per cent. the interest which we pay to the provident fund of the staff, happy in giving to them a testimony of satisfaction for their keen and devoted collaboration.

Resolutions of Meeting.

The general meeting (1) approved the accounts for the year ended October 31, 1927; (2) adopted the division of profits proposed by the board of directors, and decided in consequence on (a) the distribution for the year on the 400,000 shares of a dividend of P.T. 150 per share, £E600,000, or 1,554,115.36 frs.; on the 2,000 founders' shares of P.T. 3,900 per share, £E78,000, or 2,022,035 frs.; (b) the allocation to the statutory reserve of £E52,029.568, or 1,348,789.84 frs.; to the board of directors, £E26,014.784, or 674,394.92 frs.; (c) to carry forward for the account of the ordinary shares, £E7,032.493, or 182,307.01 frs.; for the account of the founders' shares, £E309.681, or 8,028.02 frs.; total, £E763,386.526, or 19,789,670.15 frs., representing the amount of the profits of the year and the sums brought forward from the previous year; (3) decided that the dividend on the ordinary shares and on the founders' shares should be payable at the date fixed by the board. The dividend on the ordinary shares will be payable in Paris and in London in sterling at the rates of exchange fixed by the board, less French taxes, which correspond to 7s. 9d. per coupon; in Cairo in piastres tarif less the same French taxes or P.T. 38 per coupon. There will be exempted from this retention coupons on shares which have not circulated in France since November 1, 1926, and of which the previous coupon has been paid out of France. The dividend on the founders' shares will be payable under deduction, for the shares liable to French taxes, of the tax on the revenues from uncompounded securities. (4) Re-elected in accordance with Articles 15 and 36 of the statutes as directors for five years, M.M. R. Rolo, P. Boyer, and G. Griolet; (5) confirmed in accordance with Article 17 of the statutes the nomination as director made provisionally by the board of S. E. Adly Pasha Yeghen; (6) re-elected as auditor for one year M. H. Boinet; (7) elected as auditor for one year M. Ralph Harari. These resolutions were carried unanimously.

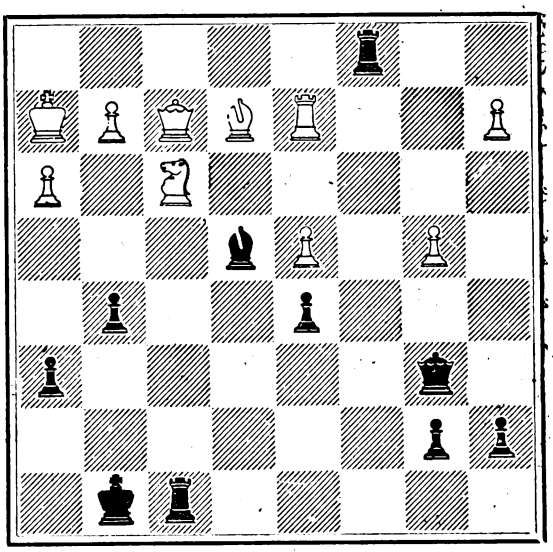
SECOND HELLENIC CORPORATION.

The Second Hellenic Corporation, Ltd., has been registered as a private company, with a nominal capital of £5,000 in £1 shares. The objects are to carry on business as bankers, capitalists, financiers, concessionnaires and merchants, etc. Hambros Bank, Ltd., of 41, Bishopsgate, E.C., and the National Bank of Greece, of the City of Athens, are the bankers and financial advisers of the company in the United Kingdom and Greece respectively, with remuneration for their services in each year a sum equal to 5 per cent. of the accretions to capital annually raised by the sale of investments after deducting losses incurred in the same way. As such financial advisers, Hambros Bank, Ltd., and the National Bank of Greece are to appoint and remunerate out of the above sum two or more persons who in the United Kingdom and Greece shall devote special time and attention to matters concerning investments of the kind which the company is formed to acquire or hold, and to such matters forming part of the company's objects as such financial advisers may request them to undertake.

CHESS.

By "CARO-KANN."



I give this week the conclusion of a game played in a recent London League match. Its interest lies in the incisive nature of the conclusion. Black who played the Caro-Kann Defence, has gained the exchange, and at the stage shown in the diagram has a forced win. Play proceeded 1 . . . Q—Q3(ch)!; 2, P—Kt3 (if Q—Kt3 then, of course, R—KR8(ch) winning the Queen), R—B6; 3, K—Kt2, Q—KB3 winning a piece and the game. Black, it will be observed, first removes the one real support of the Knight, and then proceeds to bring every piece to bear on it in a deadly concentration.

The solution to last week's end game is as follows:—1, P—Kt4, K—K3; 2, K—Kt4, K—B3; 3, K—Kt5, K—K3; 4, K—B6 and wins.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E9,124, making the total from April 1 £E241,606. For the corresponding periods of the previous year the totals were £E10,139 and £E263,851.

A Medical Exhibition is to be held in Cairo from December 15 to 22, in connexion with the International Congress of Tropical Medicine and Hygiene, on which occasion it is proposed to lay the foundation-stone of the new wing of Kasr-el-Aini Hospital. This Exhibition is to include microscopes and laboratory equipment, X-ray and electric apparatus, surgical appliances, drugs, chemicals and foods, and sanitary appliances.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 1 :—

Egyptian Futures.—Sakel Contract.—The downward tendency recently in evidence has failed to be arrested during the course of the week. Periodical minor reactions, principally owing to the strength displayed by the Alexandria market, have occurred, but on the whole attention here has concentrated mainly on the lack of trade support and the weakness prevailing in the American markets. These latter considerations outweigh all other factors at the moment, and have been responsible for the gradual unloading of "long" cotton bought higher up and have also encouraged minor "Bear" operations. Practically throughout the period since our last report, a nervous and unsettled undertone has been displayed, and we close to-night at about the lowest of the season, the level on the week being 52 to 69 points lower for near and 40 to 52 points for more distant and new crop months. Near cotton has been subject to more pressure than distant positions, the bulk of the liquidation falling on the March option causing this month to go to 20 points under May. In the present circumstances it is difficult to account for the continued strength shown by the Alexandria market, as from all accounts practically all consuming centres are purchasing very sparingly and stock figures are heavy. We consider the tendency there must be due to speculative activities on reduced crop estimates and to the fact that up-country holders are still awaiting more favourable selling conditions. The disposition of local spinners to operate more freely on the decline last week proved of very short duration, as the further recessions since have curtailed trade activities to the minimum. Failing a reaction in the American departments values have the appearance of working lower.

Upper Contract.—This market has shown a very poor tone throughout the past week, as in addition to the sharp decline in American values trade support has been more or less negligible. Judging from reports from Alexandria heavy liquidation of the February position has been taking place during the past few days and this has depressed the whole market and caused general liquidation both at this side and in the local market. Trade reports have been very disappointing, and, judging from the offtake for both spot and forward cotton, the demand for the coarser counts must recently have gone right off. Since we last wrote prices have declined 67 to 81 points for near and 30 to 62 points for distant positions.

Egyptian Spot.—At the time of writing last week we remarked that there was then some indication that trade buying on the decline had commenced. This movement proved to be of short duration only. Further weakness in the futures market supervened almost immediately and all trade interest (apparently) evaporated. A series of dull sagging markets has since ensued, and at the moment prices look like falling still further. We are now at the lowest level reached so far this season—with F.G.F. Sakel quoted at 16.80d. and F.G.F. Uppers at 12.70d., which figures represent respectively a fall of 440 points and 420 points since the high level touched last September. After such a drop, it is only reasonable to assume that a turn cannot be far off. It is indeed surprising that more buying on the down scale has not developed recently. Egyptian buying of forward cotton is difficult to trace at all times, but we again offer it as our opinion that more buying of cotton for forward delivery has been going on than is generally believed to be the case. A number of people on this side have been waiting confidently for a sharp break in Alexandria to occur, but up to date the overseas market has maintained an unexpectedly firm front. Should such a break in due course occur, it may well be the signal for buying on an important scale to commence. In the meantime we can only await developments.

There has been little change to speak of in the daily inquiry except that on most days it has assumed very meagre proportions, with low cotton at from 7d. to 11d. a comparatively prominent feature. The inquiry for Sakel still continues to show some very slight progressive improvement and the quality mostly in favour during the week has been "Good" Sakel at round about 18d. to 18½d., but purchases have been of only a very modest character. Uppers at pass price March contracts to 25 on have continued in fair request. Some inquiry has been in evidence for Pilion cotton at from 13½d. to 14d., but with little tangible result we fear. A few resales of Sudan Sakel at about 300 on March contracts have again been noted. Only a moderate inquiry for White Sudan has existed.

Forwardings to spinners for the week ending the 27th ult. were returned as 4,156 bales Egyptian and 1,332 bales Sudan. Estimated sales, 1,700 bales Egyptian and 1,000 bales Sudan. Quotations of Sakel show a fall on the week of 30 to 40 points, Uppers are 60 points lower, and Pilion 45 to 55 points lower. F.G.F. Sakel to-day, 16.80d. F.G.F. Upper to-day, 12.70d. F.G.F. Pilion to-day, 13.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 26, state :—

The market has been fairly active during the week, and while Sakel has kept firm, Uppers have shown a weaker tendency. The week's summary of price movements is as follows :—Sakellaridis : March, 33.92 dollars, 0.66 dollars down; May, 34.22 dollars, 0.58 dollars down; July, 34.52 dollars, 0.58 dollars down; November, 34.65 dollars, 0.52 dollars down. Ashmouni : February, 24.88 dollars, 1.40 dollars down; April, 25.27 dollars, 1.13 dollars down; June, 25.47 dollars, 1.08 dollars down; October, 25.25 dollars, 0.52 dollars down.

Sakel.—The week opened firm, but on the 23rd inst. the American ginners' report giving the quantity ginned to January 15 was published, the figure being 12,502,000 bales against 16,610,000 bales same time last year. The figure was considered slightly bearish and the market reacted substantially. At the low levels local speculators intervened with heavy purchases, as a result of which most of the lost ground was recovered. Speculative interests continue to hold to their bullish views and there is no doubt that the firm tone of the market at the latter end of the week has been mainly due to their influence as the market has had very little commercial support.

Spinners' demand since the Christmas holidays has been fairly good, but in order to keep the existing difference between Sakel and American, especially in new crop, which has at times touched as much as 100 per cent. during the past week, this demand should not only be maintained but appreciably increased. At the third January tender, 1,000 kantars dockets were issued, making a total for the month of 3,750 kantars.

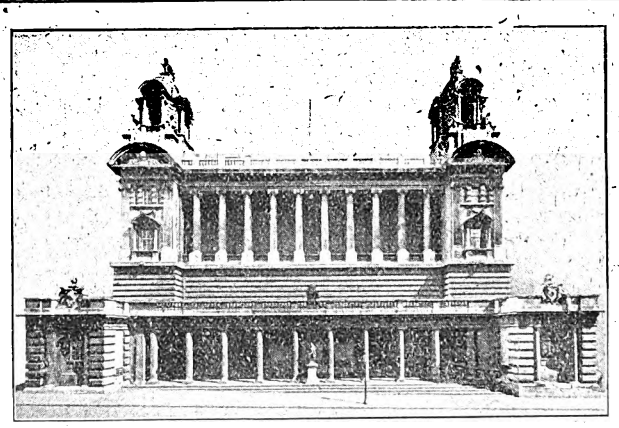
Uppers.—The Uppers market has not shown much activity and in sympathy with New York has registered lower prices.

The week's receipts amount to 117,549 kantars against exports 149,864 kantars; the stock in Alexandria stands at 3,197,344 kantars.

The official figures of arrivals and exports for the period September 1 to January 18 are as follows :—Arrivals : Sakellaridis, 1,622,122 kantars; Ashmouni and Zagora, 2,128,193 kantars; Pilion, 203,966 kantars; Various, 165,806 kantars; Scarto, 88,352 kantars; total, 4,208,739 kantars. Exports : Sakel, 1,170,002 kantars; Ashmouni, 1,387,394 kantars; Pilion, 112,977 kantars; Various, 89,293 kantars; total, 2,759,666 kantars.

Spot : We have had a week of quiet markets at Minet-el-Bassal and sales amount to about 12,550 bales, of which we estimate 6,500 bales Sakellaridis, 5,000 bales Ashmouni and Zagora, 830 bales Pilion, and 220 bales other varieties. Holders of spot cotton are generally difficult to deal with and there is no pressure to sell.

Sakellaridis : A fair business has been done covering all grades, but medium and lower qualities have absorbed the bulk of the demand. Spot differences are firm and unchanged.



THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION OFFER FACILITIES FOR THE SALE, PURCHASE AND FINANCE OF EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Digitized by Google

Ashmouni and Zagora: A moderate business has been done, chiefly in the medium qualities. Spot differences are firm and unchanged.

Pilion: A good business has been done in all grades at about last week's differences.

Other Varieties: A small business has been done in White at last week's spot differences. A good business continues in Nahda at high premiums. A few bales of Maarad have been done.

Up-Country: Spot business continues on a very small scale. Climatic conditions on the whole have been favourable and land preparation is continuing normally with the exception of the North Delta, where there has been a slight delay in starting. Nile gauges show a slight improvement.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date January 31:—

Currants.—The outstanding feature has been the continued strength of the Greek market. The firm undertone shown during the closing days of December has been well maintained, and business for the New Year has been marked by increased trading in the lower qualities, offerings being well absorbed. Although there is no apparent indication of any weakening of the fundamentally strong conditions experienced for some time past, the declining days of the month show a slight reaction from the recent strength, holders being willing to make slight concessions to effect quay sales of the last arrivals. Otherwise the position remains unchanged. Quotations:—Pyrgos, 51s. 6d.; Amalias and Patras, 52s. to 53s.; Zante, 52s. 6d. to 53s.; Zante (bags), 51s. 6d.; Gulf, 54s. to 56s.; Vostizza, 55s. to 64s.

Sultanas.—As usual business fell off considerably after Christmas, and up to the present there is little sign of any improvement. Merchants think this is only a passing phase and believe there is a prospect of better trade in the near future. The Smyrna market is steadily rising, and with more spot inquiry for the rain-damaged fruit, any sign of a renewal of activity will be sufficient to impart a more optimistic tone with advancing prices. Sales were:—Rain-damaged, 40s. to 41s.; Ordinary to Fair, 50s. to 54s.; Good, 56s. to 60s. Greeks, 60s. to 62s.; Old Crop, 44s.

Figs.—Slow and dragging. Choice Natural Bags, 29s. 6d.; Genuines, ordinary, 30s. to 32s.; best up to 36s.

The traffic receipts of the South India Railway Company for the week ended January 7 amounted to Rs.11,11,461, making the total from April 1 Rs.4,77,23,659. For the corresponding periods of the previous twelve months the totals were Rs.10,90,443 and Rs.4,53,84,625.

Phonographs are used all over Palestine, since radio reception is still negligible (says the American Consul at Jerusalem, Mr. Oscar S. Heizer, in a recent report). Practically every café possesses a machine, which is usually of the large horn type, and most of the records used are recordings of Oriental music, popular Arabic songs, etc. Western music is gradually being appreciated by the population and consequently more such records are being imported annually. The imports of phonographs and records into Palestine in 1926 were valued at £14,250, of which £7,160 is credited to German goods, £3,323 to British, and £1,022 to American.

Notes of the Week.

The Political Crisis in Yugoslavia.

After the four Democrat Ministers had tendered their resignations from the Coalition Cabinet, the Yugoslav Prime Minister met the Skupshtina and with the help of the Democrats passed the Unification of Taxation Bill. On the following day (February 8) M. Voukitchevitch tendered to the King the resignation of his attenuated Ministry. He was invited to form another Coalition Cabinet, but, after a brief attempt, had to announce his inability to do so. King Alexander then turned to M. Raditch. To the credit of the latter it has to be said that he formed no hopes of being able to be Prime Minister himself. His efforts were directed to bringing together a Coalition Ministry; but on finding that the Radicals insisted of retaining the direction of the Government in their own hands, he abandoned the attempt. When M. Davidovitch in turn had refused to form a Cabinet, an attempt was made by the Opposition *bloc*, led by M. Davidovitch, M. Raditch and M. Pribitchevitch, with whom are associated Dissident Radicals, for the moment without a leader owing to the death of M. Liuba Yovanovitch, to overcome the deadlock by announcing their readiness to co-operate with the Radicals under any other leader than M. Voukitchevitch. As a result of this action, M. Ninko Peritch, President of the Skupshtina and a former Minister of Foreign Affairs in the sixth Ouzounovitch Cabinet, was invited by King Alexander to form a Coalition Ministry, but he would seem to have been as unsuccessful as the others, and according to the latest reports the King has requested M. Voukitchevitch to make one more attempt to form a Ministry.

Bulgarian Unity.

More fortunate than some of her neighbours Bulgaria appears to have surmounted a political crisis without any ministerial changes. The Democratic Entente, or union of Democratic parties from which the Government is formed, has been passing through a stage which has threatened the unity of the Coalition. When M. Liaptcheff took over the post of Prime Minister from M. Tsankoff, it was understood that the harsh régime inaugurated by the latter after the Communist outrages had served its day, and that the time had come for a Government which would seek by conciliatory methods to detach the more moderate of the Agraro-Communist Group from the extremists. Much good work has been done in this direction, but not unnaturally an attempt has been made by the extremists to profit by the abandonment of the more drastic methods previously employed. At the same time the recrudescence of the Macedonian unrest and the necessity under which M. Liaptcheff's Government has found itself of grappling more seriously with the problem has made it easy to rouse popular feeling on behalf of the Macedonians . The main challenge to M. Liaptcheff came from M. Tsankoff, who may quite conscientiously have persuaded himself that the country's interests were suffering under a régime which combined mildness and rigour, but in directions the opposite of those associated with his Premiership. Conditions in the Democratic Entente were working up for a cleavage, but before any serious damage was done a congress has been held, and a straightforward statement by M. Liaptcheff on the situation, both domestic and foreign, has sufficed to restore the unity of the Group. M. Tsankoff would seem to have dropped his rôle of critic and to have pleaded as eloquently as anybody for the maintenance of unity. There can be little doubt that Bulgaria's interests have benefited.

The Role of Peacemaker.

It is gratifying to find that the British Government has taken advantage, with signal success, of its unique position in the Balkans to improve the relations between Yugoslavia and Bulgaria. Timely representations in the two capitals not only achieved the desired result, but also left both parties well satisfied with the service rendered by the peacemaker. Encouraged by this success, the British Government might well turn its attention from the particular to the general, and, instead of restricting its activities to preventing an open breach between the two neighbours, take the lead in bringing about a permanent understanding among the Balkan States.

"Sub Judice."

The reform of the judicial system in Turkey has been undertaken with characteristic thoroughness, and already some notable verdicts have been given by the Courts, which testified to the independence of the tribunals and must have disappointed the Public Prosecutor, if not the Angora Government. Side by side, however, with this satisfactory development there would seem to linger a strange disregard of the need for outside abstention from interference with the course of justice. Recently a parliamentary commission was appointed to inquire into the conduct of Ihsan Bey, as Minister of Marine, in connexion with the award of certain naval contracts. At the head of the commission was Yunus Nady Bey, who is also editor and proprietor of a newspaper, *Jumhouriet*. Both before and during the proceedings of the commission the *Jumhouriet* gave evidence of its "inside knowledge." On Ihsan Bey's appearance before the commission no sense of incongruity seems to have been felt when the President informed him that he need not think that he would receive a less impartial hearing because he had been denounced in the President's paper over the President's name. Immediately after the inquiry, when Ihsan Bey had been cited to appear before the Supreme Court, Yunus Nady Bey published a series of articles over his own name, passing judgment on the ex-Minister of Marine on the strength of the evidence that had come before the Commission over which he had presided. In view of the very strict control kept in Turkey over what the newspapers publish, it would be well if the idea of keeping the judiciary free from all interference from outside could be inculcated into the nation. Ihsan Bey, it may be mentioned, recognised at the outset that he had been condemned beforehand by the Commission, and expressed his desire to come before a judicial tribunal in order to have a fair trial.

Congresses in Egypt.

Egypt has discovered a happy way of placing her attractiveness at the service of the scientific world by offering hospitality to numerous international conferences. During the last three years the country has provided a meeting-place for four congresses — the Geographical Congress in April, 1925, conferences on Cotton and Navigation in 1926, and the Statistical Congress in 1927. For the end of the current year invitations have been sent out for an International Congress of Tropical Medicine and Hygiene on the occasion of the centenary of the Cairo Faculty of Medicine. The programme of the Congress, which is to last for a week from December 15, will include two general sessions on Egypt's two scourges, Ankylostomiasis and Bilharziosis, and separate sections will deal respectively with tropical medicine, tropical surgery, tropical ophthalmology, tropical hygiene, parasitology and bacteriology. During the Congress an Exhibition of medical and surgical instruments and appliances will be open in Cairo. At the close of the Congress arrangements will be made for the delegates to visit Upper Egypt.

Arabs and Zionism.

Few people can have imagined that the hostility of Arabs in general to the Zionist experiment, now being conducted in Palestine under immediate British and general League of Nations auspices, had survived in such a degree as was manifested towards Sir Alfred Mond last week in Baghdad. Sympathy will be felt for this eminent apostle of Jewish colonisation in Palestine that resentment in Iraq should so offensively have fallen upon his unoffending head. He had proceeded from Palestine and Syria to Iraq in order, it is said, to investigate the nature of the soil in Iraq (Sir Alfred being interested in the development of cotton-growing in Iraq and in the concession known as the Latifiyah Estates) and also the probable alignment of the projected Iraq-Mediterranean pipe-line. It was by virtue of neither of these subjects, however, that the Baghdadis, to the number, it is said, of 10,000, greeted his arrival in so inhospitable a manner —a greeting which is emphatically a matter for regret. Whether these Arabs had been told by propagandists that it was intended to impose "Zionism" on Iraq or not, it is certain that it was as one of the most active supporters of the Balfour Declaration and of the policy of colonising Palestine with Jews that Sir Alfred Mond was treated in this way. From the official point of view, this new manifestation of Arab hostility to Zionism in Palestine will seem the more regrettable in that there have lately been faint but increasing signs in Palestine itself of Arab willingness to co-operate with the Government. This riot may, however, have the effect of recalling memories of Lord Balfour's unhappily conceived visit to Palestine and Syria, and of emphasising the fact that, in dealing with the Arab problem in Palestine, the British authorities have to deal with a problem which far transcends artificially-constructed boundaries.

The Iraq Diplomatic Agency.

The announcement that Jaafar Pasha al Askari has been re-appointed to the post of Iraq Diplomatic Agent will surprise no-one who realised that the ex-Prime Minister of Iraq relinquished his London post only after very heavy pressure had been brought from Baghdad to bear upon him. It was in the nature of a sacrifice that Jaafar Pasha consented at the end of 1926 to assume control of politics in Baghdad. In returning to London, therefore, Jaafar Pasha is in a sense returning to his "first love." Nor, it may be assumed, will Muzahim Beg Amin Pachachi, an extremely able and intelligent Iraqi, who has filled the Agency in London for nearly a year, experience much regret at the opportunity now afforded him of cultivating the political soil in Iraq. Muzahim Beg's main interests have always been political interests, and in Baghdad he will enjoy a freedom to pursue the ideals which he holds for his country that was denied him when acting in an official capacity in London.

Persia and Iraq.

Repeatedly in these columns the anomaly has been pointed out of the stubborn refusal of Persia to recognise Iraq. Suggestion after suggestion has been thrown out by Baghdad for improvement in the relations between the two countries, but, after an implicit promise by the Shah to accord official recognition to the new Arab State,

Teheran has positively refused to treat it as much more than an ignorant and untutored Amirate. With the advice of the British Mandatary, however, the attitude of the Baghdad Government towards Persia has been uniformly correct, and it seems just possible that this forbearing attitude may at last reap its reward. For the Teheran Government has just appointed as its Acting Consul-General in Baghdad Mirza Hassan Ali Khan Hadayat, the Nasr al Mulk, formerly a Cabinet Minister in Teheran. It is thought that the appointment of so distinguished a man to a post which has no existence in law may result in his sojourn in Baghdad ending in being *de jure* as well as *de facto*. Certainly it is high time that Persia, in the interests of her own nationals, whose allegiance to the Shiah shrines in Iraq is constant, recognised the existence of a neighbour whose prosperity, for the time being, at any rate, is so intimately linked up with her own.

Progress in Syria.

Something at last appears to be happening politically in Syria, although the policy of the French Mandatary still is a little obscure. Ahmed Namy Bey, who as President of the State of Syria has served very faithfully the idea of Franco-Arab co-operation, has resigned, preparatory to the forthcoming elections which, apparently, are to inform the High Commissioner's general policy. Without doubt there has been a move in Syria on the part of the Arabs to throw over the demands of the extremist Nationalists; for the time being, indeed, the publicists who stood firmly for an absolutely uncompromising policy towards the French are under a cloud, their efforts during the late rebellion being now conceived to have been mistimed. It is doubtful, however, whether the recognition of Syria as a unity is not the bedrock conception of even the most reasonable Arab. But it would appear that M. Henri Ponsot will allow the elections to govern the exact shape of the Organic Statute which, after all these years, is now definitely promised for Syria.

Parliamentarism in the East.

We have referred more than once to the problematical efficiency of the Western system of Parliamentarism as applied to the East, although most countries in the Middle East still continue to pay at least lip-service to the institution. In Persia, for instance, great pride is taken in the Majlis, although how far it is a check to, and how far an instrument of, the wishes of the Shah may be variously interpreted. In Turkey the system of Parliamentarism exists in name only, for every Deputy at Angora is a professed supporter of the Ghazi. Whatever opposition to the Kemalist régime there may be in Turkey can find no constitutional outlet. In Iraq, again, there is a significant tendency to disparage the Majlis as a useless clog upon the Executive, and it is not unreasonable to expect that a move to alter the Constitution in the direction of increasing the powers of the Executive may be manifested in the future. But the most notable revolt against the system of Parliaments which has so far been raised in the East derives from Syria, or, rather, from the Lebanon Republic. There a petition has been widely signed in favour of nothing less than the abolition of Parliament. It may be worth while briefly to summarise the points of this significant document.

Government and the Lebanon.

Partly, of course, the Lebanon's anxiety for more efficient administration is the product of fear that Palestine, which enjoys direct administration, should outstrip her northern neighbour in prosperity. But the petition begins by stating that the Lebanese Parliament has shown itself utterly incapable and that, in fact, it is impossible, in a Mandated country, for the people to dictate its will to its representatives in Parliament. The country needs, it goes on, a simple and inexpensive form of Government. The dilatory conduct of the Lebanese deputies is contrasted with the swift activities of the Palestine Administration, which is embarking upon economic schemes that may ultimately ruin the Lebanon. This, indeed, appears to be the crux of the petition: that political activities be suspended in favour of economic activities. To the outside observer, this petition would seem to contain several points of considerable interest and weight: readers of THE NEAR EAST AND INDIA will certainly not need reminding, with the example of Balkans before them, of the danger of political and party interests taking precedence over the economic interests of the whole country.

A YUGOSLAV BUREAU OF INFORMATION.

(From a Correspondent.)

A Yugoslav Bureau of Information *(Bureau Yougoslave pour l'Information de l'Etranger)* has just been started at Split (Spalato), thanks to the insight, no less than the generosity of a group of Yugoslav patriots in South America. It is not the first time that these men have come forward to place their experience and their wealth at the service of Yugoslavia; their latest gift is well-timed. It is all to Yugoslavia's advantage to cultivate the acquaintance of the older world outside her, especially the countries representing the civilisation of the West—France, Great Britain, the United States—and it is to further this acquaintance that the Bureau of Information has been founded.

The management of this Bureau has been entrusted to M. Lupis-Vukitch, a genial and cultured Dalmatian, whose long residence abroad, in the United States, England and France, has given him, in addition to a wide knowledge of his own people and country, experience of the ways and points of view of foreigners. He is in every respect qualified to give reliable information concerning Yugoslavia to anyone desirous of knowing more about the country, whether for business, scientific interest, or pleasure.

The Yugoslav Bureau of Information proposes to establish branch offices in Belgrade, Zagreb, and Liubliana; at present it has agents in these capital cities of the country, who are prepared to give local information. Their addresses can be obtained from the head office in Split.

The Bureau deals exclusively in information. It is in no sense a propagandist institution.

All inquiries and correspondence should be addressed to:—*Bureau Yougoslave pour l'Information de l'Etranger*, post. pret. 99, Split, Yugoslavia.

POLITICAL TROUBLES IN GREECE.

The simple and satisfactory solution of the latest ministerial crisis in Greece is a matter for congratulation, and with the elimination of the second weak spot in the Cabinet it might be thought that the Coalition under M. Zaimis would now enter upon a stage of greater stability than it has achieved hitherto. First it had to shed M. Tsaldaris, the extreme Royalist, and now it has freed itself of M. Papanastassiou, the extreme Republican. There is left a Coalition of Middle parties, comprising the two republican groups led by M. Kaphandaris and M. Michalakopoulos, and the Party of Free Opinion that follows General Metaxas, who, although royalist at heart, has accepted for the time being the national verdict in favour of a republic. It is hardly to be expected, however, that the political stability of the country as a whole gains by the detachment from the Government of two political parties with a comparatively strong representation in the Chamber. Greater unanimity may have been obtained in the Ministry itself, and for this reason the Government may be able to accomplish more in the way of constructive legislation than it has done in the past, when its efforts in this direction seemed to be hampered by internal disagreement. The one considerable achievement to its credit is the negotiation of the Second Refugee Loan, that has followed on the sound financial policy with which M. Zaimis's régime has been identified. No greater service, it is true, could have been rendered to Greece at the moment; but, unfortunately, it has not been accompanied by any success in dealing with political matters on which Greece's ultimate peace of mind depends. It is unlikely, therefore, that M. Zaimis's third Coalition Ministry has any long lease of life ahead of it. Various details in the economic programme for which the Prime Minister and his able Minister of Finance have received the definite mandate of the Chamber remain to be settled; and as soon as these have been carried into effect, the demand for bringing to an end the present truce in Greek politics may well become too insistent to be ignored, even if it is put forward by the leaders alone, despite the feeling of satiety which the nation as a whole seems to experience in regard to politics.

Nothing, perhaps, illustrates better the relative ineffectiveness of the Coalition administration than the fact that General Pangalos has not yet been brought to trial. Arrested in August 1926, he has been detained in prison without a hearing until now. Three months have passed since the parliamentary commission appointed to inquire into the conduct of the ex-Dictator presented its report, in which it appeared that the long list of crimes laid to the charge of the General and his supporters had been whittled down until the main charge was that of having made retrospective the death penalty for malversation of public funds. Bad weather, while the ex-Dictator has remained on board the man-of-war waiting to be conveyed from Crete to the Piræus, has played its part in the further delay in his impeachment, but in this respect has done what the ministerial crisis must in any case have brought about. Even now General Pangalos is being transferred to Athens only to meet the parliamentary commission, because he refused to submit his case at second hand through the President of the Court of Appeal in Crete, and it may be inferred that some time may yet elapse before he meets his judges. There can be only one explanation of this delay, which is accompanied by the periodic arrest and subsequent liberation of the ex-Dictator's supporters or relations—that the Government has not felt strong enough to bring to a head a matter which is likely to rouse latent political feeling in the country, whichever way the verdict goes. General Pangalos will probably be the gainer from the unconstitutional delays, as it is unlikely that his punishment after twenty months' unconstitutional imprisonment without trial will be as severe as it would have been, if he had been sentenced immediately after the overthrow of the dictatorship.

In the general weariness of politics the country's main troubles are of an economic character. The recent outbreak in Crete was due to financial stringency and unsympathetic handling by local officials, and had no political aspect until the inevitable attempt was made to fish in troubled waters. In presenting their demands to the authorities the islanders have evidently been able to enlist expert political and financial advice; but, while adopting a firm attitude towards the stirring up of disorder, the Government has acknowledged that the Cretans have legitimate grievances and is taking steps to meet them. The disturbances, which follow close upon grave discontent throughout the Civil Service, that found vent in an abortive strike, suggest that the pre-occupations of the Cabinet, in trying to maintain harmony in its own ranks and in grappling with problems of international importance, have interfered with the attention that ought to have been given to pressing domestic questions. The Government has promised that in March, as soon as it has been able to form an opinion on the budgetary results of the current financial year, it will arrive at a decision regarding the amelioration of conditions for the Civil Service; but the seriousness of the position is indicated by the concurrent threat to deal mercilessly with all strikes and with those who participate in them. As for the immediate cause of the ministerial crisis—the award of a contract for the construction of roads—a way out of the difficulty has been found in agreement that the matter shall be submitted to the free vote of the Chamber, a solution that tends to confirm the belief that the question merely served to bring to a head the differences of opinion that had long characterised the deliberations of the Cabinet, and that the elimination of M. Papanastassiou will be followed by an accession of ministerial activity, to the benefit of Greece.

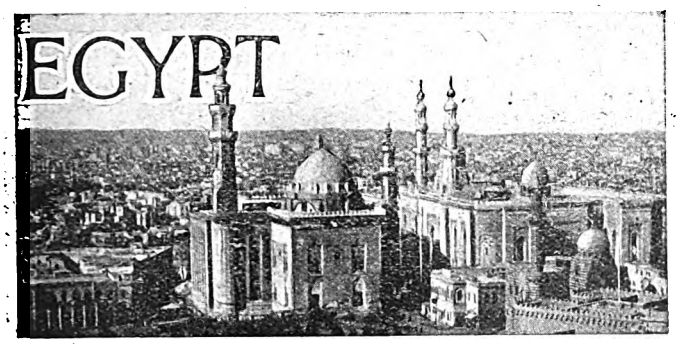
The Near and Middle East*

From Our Own Correspondents.



Cairo, February 4.

The Wakfs.

The Chamber of Deputies is being called upon to consider a proposal for a drastic modification of the system of Wakfs. The proposal has come up in the form of a draft law presented by Mohamed Aly Pasha, former Minister of Wakfs, a leading lawyer and secretary of the Liberal Constitutional Party. Both in the Chamber and in the course of a conference given recently to the junior bar of the Mixed Courts in Cairo, Mohamed Aly Pasha has explained the reason for his proposal. What he wants is to limit the area within which property can be made into Wakfs so as to avoid the abuses which have been going on for some time now, and to avoid the serious effect on the social and economic future of the country of a continuation of a system which is completely out of date.

There are two kinds of Wakfs: *Khairy,* which are entirely charitable, and *Ahly* or family Wakfs, to which a charitable turn has been given to enable the testator to comply with the *Sharia* while carrying out his own wishes. According to the proposer the system of Wakfs has no religious origin. There is no mention thereof in the Quran and it is wholly erroneous to regard them as having a religious nature. They are, in fact, a purely lay institution, and so there is no reason why there should be any religious objection to a reform of the system.

There is no intention of touching the purely *Khairy* Wakfs; it is the *Ahly* Wakfs that it is sought to amend. Mohamed Aly Pasha points out two serious consequences of the *Ahly* Wakfs. First, the system of *Ahly* Wakfs has assumed such an extension that, if the rate at which the area affected increases in the future as it has done in the recent past, it will not be long before all the land in Egypt will be in the hands of the Wakfs. Secondly, owing to the regular increase in the number of beneficiaries in each Wakf their individual share is gradually decreasing until in some cases it has attained an amount which is not worth administering. Generally speaking, *Ahly* Wakfs are constituted to enable the testator to carry out his own ideas on the disposal of his property—often, as the lecturer pointed out, to the detriment of the lawful heirs and against the interests of modern ideas.

His proposal is that the *Khairy* Wakfs should be left as they are but that *Ahly* Wakfs should be authorised only so long as the law as regards legacies is respected provided that the property is indivisible and that the Wakfs will not extend beyond a given period or a given generation. Further, all Wakfs which have been in existence for a certain period or have attained a certain generation should be cancelled, and in both cases the beneficiaries should receive the share corresponding to their portion of the revenue. Where a charitable institution has benefited a portion corresponding to its share in the revenue should be reserved for it and made into a Wakf. The proposal is sure to arouse considerable controversy, since interests are involved which cannot be expected to surrender without a stern fight, and there is a considerable element which sides with the *Ulema,* who declare that Wakfs are part of the Islamic religion and that any interference with the system would be tantamount to disobeying the Prophet's injunctions.

The Financial Secretary.

An important change is about to be made in the higher British personnel of the Ministry of Finance. Mr. James Baxter is vacating the post of Financial Secretary, formerly held by Mr. L. G. Roussin, and is being succeeded by Mr. J. I. Craig. Mr. Baxter has done excellent work in this important post, and his departure is keenly regretted by his colleagues, British and Egyptian, as well as by a large number of the younger Egyptians who have come to regard him with affection and esteem.

His successor is no stranger either to Egypt or to the work which he is being called upon to take over. Mr. Craig, who is a statistician of international repute, was for many years a valued member of the Survey Department, and on the outbreak of the War was Director-General of State Statistics, eventually becoming Controller of Supplies. He was responsible for the census held in 1917, which, in spite of the difficult War conditions, proved a complete success. Disagreeing on certain questions of policy with the Financial Adviser of that time, Sir William Brunyate, Mr. Craig resigned from the service in 1918, and was immediately appointed to a responsible post in the Ministry of Food at Home, eventually going to Silesia as one of the Food Controllers. When it was decided to hold the decennial census last year the post of Controller-General was offered to Mr. Craig, and he has for the past two years been occupied in this work.

Although a mathematician by inclination and a statistician by training, Mr. Craig possesses an incredible amount of knowledge of the most unexpected nature on all manner of subjects, which has stood him in good stead in the work he has hitherto had to do, and has enabled him to render invaluable service to the various Governments he has been called upon to serve. In his new post his wide knowledge will prove of even greater value. His appointment has been received with universal approbation.

The Italian Crown Prince.

There has been great enthusiasm in the Italian colony over the visit of the Italian Crown Prince, who has spared no trouble to establish contact with the important communities which his fellow-countrymen have established in Egypt. His visit has been an entirely unofficial one, a break in his journey to East Africa made, it is understood, at the personal request of King Fuad, and it was undoubtedly a good idea to afford the future King of Italy on his way to his country's African colonies an idea of the development which this country and the Sudan are undergoing, and the part which his future subjects are playing in the Valley of the Nile.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

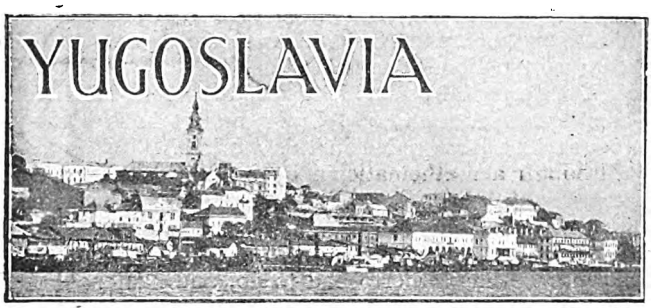
A Pen Club of Egypt.

On Monday evening the Rotunda at Groppi's was the *venue* for a most interesting gathering. For some time there has been much talk in Egyptian literary circles of the formation of a Pen Club in Egypt, to be affiliated to the International Federation of Pen Clubs, and some of the moving spirits conceived the idea of giving this movement an impetus by holding a dinner in honour of the three great poets of Egypt, Ahmed Bey Shawky, Hafez Bey Ibrahim, and Khalil Bey Mutran. It took place under the presidency of the Minister of Education, Aly Shamsy Pasha, and was attended by a large number of Egyptian and European residents interested in the subject. Messages of sympathy with the movement were received and read out from M. Herriot, M. Huysmans, M. Destre and Mr. John Galsworthy, and several poems by Egyptian masters were recited. The evening was a splendid success and no fear should be felt for the future of the Pen Club movement in Egypt.

The "Prisoner of Zenda."

The Cairo Amateur Dramatic and Musical Society are to be congratulated on another success in the shape of a production of the "Prisoner of Zenda," which has held the boards at the Ramases Theatre during this week. The performance went well from start to finish. The whole cast had evidently spared no pains, and great praise is due to Mr. Hewlett Brook, who, in addition to doubling the parts of Rudolph Rassendyl and King Rudolph, was responsible for the production. The Bursary Fund of the English School, in aid of which the performance was given, should benefit materially from this very successful effort on the part of Cairo's amateur element.



Belgrade, February 2.

The Political Crisis.

The internal political crisis which has been steadily growing in intensity for some months, has, at long last, come to a head with the resignation of Dr. V. Marinkovitch and his three Democrat colleagues in the Radical-Democratic Coalition Cabinet. This marks the victory of M. Davidovitch's policy over that of Dr. Marinkovitch's in the Democrat Party and the end of a most uneasy Coalition.

The beginning of the end was to be seen during the Democrat Party Congress on the 15th of last month, when M. Davidovitch took so strong an attitude against the Coalition and demanded a Concentration Government. Immediately after this conversations were begun between MM. Davidovitch, Raditch and Pribitchevitch with a view to the formation of a Peasant-Democrat Coalition which could bring about the overthrow of the present Government and make a bid for power. These negotiations were greatly hastened by the attempt of the Premier, M. Voukitchevitch, to undermine the Democrat position by inviting M. Raditch to join the Government, which would have enabled him to drop the Democrats whenever he wished. For a while it was believed that M. Raditch, out of gratitude to the Crown, would desert M. Pribitchevitch and the proposed Coalition with M. Davidovitch and join the Cabinet. But, as usual, he succeeded in completely surprising Belgrade political circles by refusing M. Voukitchevitch's offer. In a strong letter to the Premier, M. Raditch pointed out that the offer made to him ignored his statement that the Croatian-Peasant Party and the Independent Democrat Party were one in their dealings with other political parties and factors, by refusing to accept M. Pribitchevitch in the proposed Coalition, that changes he asked for in the ranks of the *Veliki Jupani* (provincial Governors) were not conceded, that his condition that his party should be given the Ministry of Finance was refused and that it was apparent, therefore, that his position in such Coalition would be more difficult, weaker and more harmful for his party and the national than had been his position in the Government of the late Nikola Pashitch or those of Nikola Ouzounovitch.

After his interview with the Premier, when his offer was made, M. Raditch conferred with MM. Pribitchevitch and Davidovitch and using, it would seem, this offer of a place in the Government as a lever, forced M. Davidovitch to promise to take definite action for the breaking up of the Coalition and the formation of a wider Peasant-Democrat *bloc*. A meeting of the Democrat Club was called for Monday the 30th, and for three days the matter was thrashed out in debate. It was at once obvious that the points of view expressed by M. Davidovitch and his friends on the one side, and of M. Marinkovitch and the Democrat Ministers on the other, admitted of no compromise. Yesterday afternoon attempts to find another solution having failed, a resolution condemning the work of the Coalition Government during its ten months of office and calling for the formation of a Concentration Government based on a coalition of the Democrats, Croatian Peasant Party and Independent Democrats was put to the vote and carried by 36 votes to 21. M. Marinkovitch and the Democratic Ministers, who had argued for a Concentration Government based on the present Coalition, at once handed their resignation to the Premier on the grounds that this resolution showed a lack of confidence in them and in their work in the Coalition Government.

The situation thus created is a difficult one. The Government has not yet been defeated in Parliament, and it is possible that with the support of M. Marinkovitch and his 21 followers such defeat might be staved off for some time. But it is impossible for such a Government to carry through the urgent and vitally important legislation awaiting it. On the other hand, if the Democratic Party remains united and the Bosnian Muslims remain with the Radicals—as would now seem probable—there will be two parties of almost exactly equal strength, and a deadlock will result. M. Davidovitch seems to think it possible for the Democratic Peasant *bloc* to form a Concentration Government and secure a sufficient majority, but the Radicals nearest to M. Voukitchevitch state that if it comes to such a pass the only remedy will be new elections.

The Trans-Sava Opposition.

The Coalition Government, which would now appear to be doomed, had one grave disadvantage. It was composed almost entirely of men representing the pre-War Kingdom of Serbia and South Serbia. This gave rise to the growth of an Opposition which formed what was freely styled a "*Pretchanski* front" of those from over the Sava. This development was one which presented grave dangers and this led to steps being taken by the strongest constitutional factor of this Kingdom to break the Serbian and trans-Sava fronts and bring about a concentration of all the forces of the country.

Thus it was that at the christening of the young Prince

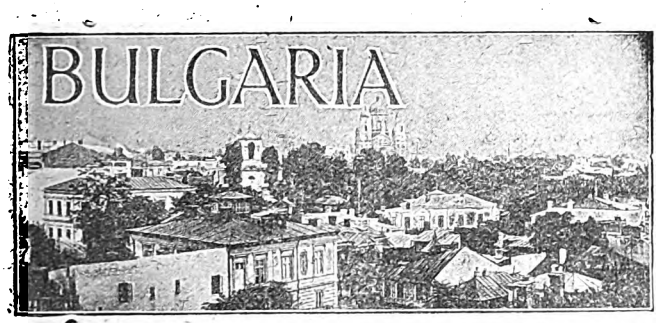
born on the 19th ult., Mr. W. H. Kennard, representing King George V., the child's *kum* or godfather, gave the King's second son the name of Tomislav, a name famous as that of the First Croatian King, the 1,000th anniversary of whose reign was celebrated last year throughout the whole of the S.H.S. State. It was when M. Stephen Raditch was at the Court, overjoyed by this mark of respect for the history and traditions of his people, that the suggestion was made that he should enter M. Voukitchevitch's Government and break down the provincial fronts. Indirectly the same result has been achieved in a different way, for M. Davidovitch represents old Serbia in the Coalition with MM. Raditch and Pribitchevitch, who represent the trans-Sava provinces.

M. Pribitchevitch's Speech.

The difficulties in the way of the formation of the Peasant-Democrat Coalition were enormously increased by a somewhat tactless speech made by M. Pribitchevitch during the joint congress of the Croatian Peasant and the Independent Democrat Parties in Zagreb on the 22nd of last month. In the course of a long tirade against the Serbs, M. Pribitchevitch stated that the volunteers from the trans-Sava provinces, of whom he stated that 28,000 were present on the Salonika front, did as much as the Serbs in freeing the occupied Serbian lands and bringing about the union of the Serb, Croat, and Slovene peoples. This called forth incredibly fierce protests from all parties in Serbia, where the traditions of the Serbian Army breaking the enemy front at Kajmaktchalan and freeing their own lands and their enslaved countrymen is most sacred. This is why M. Voukitchevitch would not hear of M. Pribitchevitch's joining the Government and why many Democrats voted against the formation of a common club with MM. Raditch and Pribitchevitch. On Sunday 29th ult., a meeting was called to protest against M. Pribitchevitch's speech but, as the meeting was constantly interrupted by M. Pribitchevitch's friends, it soon developed into a free fight, paving stones lying handy were thrown, ten people were seriously injured, and the police had to intervene to disperse the rioters.



Sofia, February 1.

Congress of the Democratic Entente.

In these last few days there has been a sitting of the Supreme Council of the Democratic Entente, from which the Government derives its support. This gathering, comprising more than three hundred persons, was really—and particularly in view of the difficulties within the Governmental Party, difficulties which were inevitably reflected in political discussions of the moment—in the nature of a Congress.

The Internal Situation.

In fact, this Council assembled at a time when the situation of the country appeared to be particularly delicate, both abroad and at home. At home there is visible a strange inertia among the *bourgeois* parties but, on the other hand, an intense activity, which is somewhat alarming, on the part of the Agrarian Party in spite of superficial divisions, and of the "Labour" Party, just established as a screen to the old Communist Party, the official existence of which, it will be remembered, was forbidden in virtue of a special law. This state of affairs was made worse by the dissensions among the groups in the Democratic Entente, dissensions which threatened to impair the solidity of the Government and the authority of the central power. Above all there was a certain antagonism manifested between M. Liaptcheff and M. Tsankoff, who accused the former of insufficient firmness in dealing with subversive elements.

Bulgaro-Yugoslav Relations.

The delicacy of the situation is even more apparent in regard to foreign affairs. The frontier with Yugoslavia is still closed—it has been closed for four months now. Yugoslav-Bulgarian relations, officially correct, are suffused with constant and increasing mistrust, owing to the revolutionary troubles reported in Macedonia. These same troubles have produced painful repercussions in Bulgaria. So far from exhausting the Macedonian reserves, they have provoked among the revolutionaries, and even among Macedonians in general, an explosion of unsuspected energy. Since the last outrage, which was upon the life of a Serbian magistrate at Skoplye (and after which the assailant, a young woman, committed suicide)—a deed which produced an enormous impression upon the Macedonian population and emigrants abroad—it became apparent here that the struggle of the Macedonians against the Yugoslavs had ceased to be simply political, that it had become fanatical, and that this fanaticism would not allow the revolutionaries to lay down their arms until at least some of their rights had been extracted. And since similar fanatical feelings have been aroused on the Yugoslav side—as witness the appointment of military men to the office of *jupan* in Macedonia, and especially the declarations of Lt.-Col. Naoumovitch to the effect that henceforth Macedonia will have to pay in the old Biblical coin, an eye for an eye, a tooth for a tooth, and so forth—it is not surprising that the situation remains full of emotional feelings which may at any moment become tragic.

It was to prevent such occurrences that the British representatives at Sofia and Belgrade intervened, giving counsels of moderation to Belgrade and of firmness to Sofia. Here it was suggested that the individual Macedonians suspected by the Yugoslavs of being revolutionaries (*troika* or *petorka*, i.e., groups of three or five, as they are called in Macedonia) should be removed from the frontier districts. The Government, which had had already the courage to declare martial law in the two border districts of Petritch and Kustendil, yielded in face of British insistence, although an inquiry did not confirm altogether the Yugoslav fears which had prompted this *démarche*. M. Liaptcheff ordered the internment of the persons appearing on the list which had been handed to him by the British Legation. But in doing so he exposed himself to bitter criticism on the part of public opinion, always sensible to the fate of Macedonian revolutionaries, and it was even questionable whether his own party would follow him in this step.

Meeting of the Council.

In short, stormy scenes were expected, and it was problematical whether ruptures between the different groups of the Democratic Entente would be avoided. To the honour of the delegates, however, it must be said that they not only avoided ruptures but also stormy scenes. Representatives from the provinces showed themselves more reasonable this time than representatives from the capital.

The Council listened first of all to a frank *exposé* of the external and internal situation by M. Liaptcheff, in which he dwelt on the difficulties, without exaggerating them—notably in connexion with the question of the reconstruction loan in regard to which the Government still hopes to arrive at an understanding with the Financial Committee at Geneva, as it is also desirous of assuring the independence of the National Bank as a Bank of Issue, but counts on obtaining it by means more suited to the economic structure of Bulgaria and to the mentality of

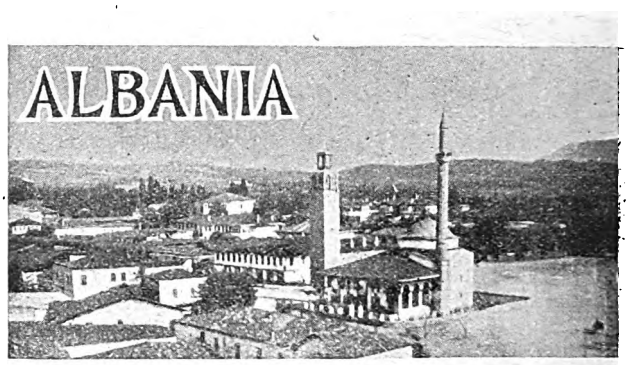
Digitized by Google

the Bulgarians than those suggested by the League of Nations.

Afterwards M. Tsankoff delivered a moving speech in which he anathematised all those who dared to infringe the unity of the Democratic Entente—in view of the dangers, which were not yet completely dispersed, to the security and the tranquillity of the State. Following upon this M. Bouroff, Foreign Minister, the third leader in the Democratic Entente, giving an account of his conversations with the foreign representatives, and repeating the encouraging words which he had received from them upon the subject of the policy of the Liaptcheff Cabinet, addressed a stirring appeal to his audience to demonstrate their decision to remain strong and united in the grouping of the Democratic Entente, the maintenance of which was a vital necessity for the peace and the future of Bulgaria —there being no other political force as powerful or as well organised to assume the responsibilities of office. This appeal had its effect, and the Government was thenceforth sure of the unreserved approval of the Council.

The Council's Resolution.

This approval was manifested in the passing of a resolution which, in proclaiming the unshakable unity of the Democratic Entente, endorsed the whole Governmental policy. The Council in this resolution states that the Government, acting in full agreement with the people and with the party, is directing the foreign policy of Bulgaria in the path of peace and of good relations with her neighbours, as with more distant countries, and at the same time is ensuring the independence of the country and its peaceful development, thus gaining for Bulgaria foreign sympathy. In regard to the internal situation the Council affirms that Parliament, as a result of the last consultation with the electorate, is supporting the Government of the Democratic Entente. Although the country is still suffering the hard consequences of the War and of the régime of destruction, public order and discipline have been established, and the people rightly look for better times. The Council is of opinion that the Government must unswervingly pursue its efforts to stifle all things tending to hinder the peaceful development of the country. In the accomplishment of this task the Government can count upon the unreserved support of the Democratic Entente, and also upon the help of all citizens who stand solidly for the Constitution.



Tirana, February 3.

The British at Valona.

From January 20 to January 30 the port of Valona was decked with flags of a British flotilla, consisting of nine torpedo-boats and a supply ship, the Sandhurst. The ships were under the Command of Captain Cyril Benson, D.S.O. of H.M.S. Broke.

This visit was a grand event for Valona. Spontaneous and very hearty welcome was given by the population of the town, which was charmed at the sight of British flags flying over Albanian waters. The authorities provided a banquet at the town hall in honour of the British officers, and a big fête was held at the house of the deputy Sadik Shaska, in the village of Kotsul, where the guests

had been invited to join in a boar hunt—an invitation repeated at Dukat.

Captain Benson gave a dinner on board the Broke, and afterwards a *thé dansant* on the Sandhurst. Further, a football match was arranged between the Englishmen and Albanians, the former winning by seven goals to five. Then the officers went to Patos, to look at the oil workings of the Anglo-Persian Oil Company.

The Captain told the Albanian authorities that on February 3, Friday, at noon precisely, he would stop his flotilla and gather the ships together for a minute as a gesture of good wishes for the future of Albania. This was done as a souvenir of his visit to Valona.

The Concordat.

The mission which went to Rome to endeavour to settle the question of a Concordat with the Holy See has just returned to Tirana. The Vatican makes objections on the score of the new Civil Code which is projected for Albania. This Code makes provision for cases of divorce, and submits applicants to the jurisdiction of Albanian tribunals. The Holy See, of course, rejects civil marriage and divorce, holding to the strict usage of the Catholic Church. Albania replies by pointing out her lay character and the absence of a State religion, and the impossibility of her having a State religion in view of the different faiths to which her varied people belong.

It is to be hoped that the Secretariat of the Vatican, which has a very real political sense, will address itself to the realities of this situation, and that the understanding so much desired in Albania will not be long forthcoming.

Civil and Penal Codes.

Up to the present Albania has been using Turkish laws, with modifications, but two years ago she instituted a commission to elaborate new laws. The Penal Code is modelled on the Italian Code, almost without variation, and it was put into force on January 1 of the present year. According to the Code polygamy is absolutely prohibited.

The Civil Code, which is already drawn up, is based on the French Code, with variations necessitated by the differences of Albanian life. In accordance with this new Code, marriage in Albania is civil and divorce is possible. The application of a new Civil Code will have a great effect in unifying the social life of Albania, and will eliminate numerous inconveniences arising from the observance of contradictory laws, as under the Turkish régime. This new Civil Code has not yet been submitted to Parliament.

A Delegation in Greece.

M. Khafer Villa, Secretary-General to the Ministry of Foreign Affairs, and M. Tutulani, a deputy, have left for Athens. Their purpose is to arrive at a settlement of two grave and very thorny questions between Albania and Greece. These are, first, the rights of the Albanian minorities in Greece, who not only do not enjoy any of the rights which minorities are guaranteed but are also deprived of their possessions, in order that the Greeks arriving from Asia Minor may benefit. This state of affairs has lasted for five years, in spite of the promises made at different times by different Governments in Greece. And secondly, there is the question of the property of Albanian subjects in Greece, who are threatened with expropriation without compensation in contradistinction to the treatment awarded to the property of British, French, Italian and Belgian subjects, whose properties have been purchased at their present value.

The Famine.

The mountainous regions around Dibra and Skutari have, as a consequence of the poor harvests, been afflicted with famine. A Commission under Senator Hafiz Khemal is organising help in kind and in cash. The prospect for this population is very sad, in view of the fact that we are now only in February, and it will have to secure the wherewithal to live until next August and possibly September.

THE CYPRUS JUBILEE YEAR.

As the actual date of the British Occupation of Cyprus—July 12, 1878—falls in the middle of the summer heat and of the vacation season, it has not been considered practicable to commemorate the jubilee of that event this year by formal celebrations restricted to one specific date. The Island will, rather, commemorate the year as a whole, in a variety of ways suited to its circumstances and planned to promote its interests, without exceeding its narrow financial limits.

On February 1 a new issue of postage stamps, of ten denominations, took the place of those previously in use, and shortly a crown piece is to be put into circulation. From the beginning of March, until the hot season sets in, a variety of sporting events, including three race meetings, football, hockey and cricket matches (to which teams are being invited from Palestine and Egypt), will be held. An open Golf Tournament is fixed for March 17 and 18. April should see the finals of the football and hockey competitions, and the Athletic Sports, which have been fixed for the 23rd. On May 24 there will be a cricket match, between, it is hoped, a Cyprus XI. and a team from Egypt or Palestine. During June there will be inter-club tennis matches, to be followed in July by an Open Tennis Tournament at Troödos.

During the course of the spring a small Mediaeval Museum will have been completed and opened. The Victoria Turkish Girls' School will by the summer have added an extension to its premises, thanks to the generosity of some Egyptian Muslims, who gave to the Governor the necessary funds for the purchase of the land and the erection of the new buildings. By the middle of March a new hotel is expected to have been opened in Nicosia—by no means an unimportant event in view of the anticipated increase in the number of visitors to the Island this year.

Finally, a publication will be issued giving a general comparison between the state of affairs, administrative, economic and general, in 1878 and in 1928; and it is hoped that it will be possible to publish in the course of the year new and revised editions of the Handbook and of the Bibliography of Cyprus, together with a detailed Chronology from the earliest ages to the present day.

In this programme of commemoration, it will be noticed, there is nothing of a political character, calculated either to hurt the susceptibilities of the Greek inhabitants or to provide them with an occasion to intrude propaganda for the union of the Island to Greece. The people of Cyprus are being invited to celebrate a landmark in their history, and they can for once concentrate attention on economic matters and social amenities, without raising the question whether they hold different views regarding the political future of this particular British Colony.

Courtesy calls were paid at Portland naval establishments on February 10 by the officers of two Yugoslav submarines which arrived last week in the harbour from Devonport. The submarines, which were built at Newcastle, are remaining at Portland for two weeks. They are accompanied by the depôt ship Kr Brod Svar, which is commanded by Captain R. V. Sahlar. The submarines Srabri and Nebojsa have crews of 38 and 39 respectively.

The death occurred on February 10 of M. Liuba Yovanovitch, a former Professor of History at the University of Belgrade and leader of the Dissident Radicals in Yugoslavia. He was last a member of the Cabinet as Minister of Public Worship under M. Pashitch from December, 1922, to March, 1924, and was afterwards President of the Skupshtina for some time.

THE WEEK AT HOME

London, Tuesday Morning.

The Liberal "Revival."

The event which during the last week has seemed to loom the largest, but which is certainly not the most important, was the victory of the Liberals in the Lancaster by-election. This triumph has been regarded as a sure sign that the alleged Liberal corpse is not only alive but also kicking, and, too, as a personal victory for Mr. Lloyd George.

The election itself was enlivened by a personal attack, by Lord Ashton, on the leader of the Liberal Party in the Commons. This Lancaster employer of labour advised people not to vote Liberal, because of the post-War record of Mr. Lloyd George. It was sound enough advice, but, quite rightly, no Englishman likes being told how to vote, whether it is by Lord Ashton or by Lord Rothermere. The fact remains, however, and will remain until Mr. Lloyd George is dead, that Mr. Lloyd George has ruined the Liberal Party. To assert the opposite is to forgo the use of one's senses.

There are literally thousands of Liberals in Great Britain who distrust Mr. Lloyd George, not only on account of his personal fund. But that it is which is the main stumbling block. Under Mr. Lloyd George's ægis the Liberal Party will never sweep the country. At the moment it is in high jinks, because of Lancaster (and possibly, the memory of distant Bosworth), but it is not, if I may be pardoned for saying so, in hygienic condition.

A Robot Railway.

It is claimed—and some boast of it—that England has got ahead of the world in underground traffic mechanism. Last week a new underground railway, between Whitechapel and Paddington, was completed. It is to take the place very largely of the thousands of horse mail vans which used to delay traffic in the streets. The extraordinary thing about this line is that the trains have no drivers. The guiding and stopping are done by operators and switch-boards.

When the mails arrive at Paddington, they emerge through trap-doors on the platform, and reach the station of the Post Office trucks by means of chutes, lifts, and travelling bands. It is all very, very wonderful, and one only hopes, with the Chinese philosopher whose trans-Atlantic steamer broke the "record" by three seconds, that we shall know what to do with the time saved by this remarkable invention.

"Little Tich."

The stars of our music-halls have tended to fade away in face of the dazzling profusion of revues. One or two however, survived, to glimmer on in this strange post-War time, and of these one of the brightest was "Little Tich," who has just died.

Any man who causes real laughter over a number of years deserves commendation, but "Little Tich" did more than that. He was in a miniature way something of a genius, not that the obvious things—the long boots, the bending walking stick, and so on—were part of this. Emphatically he belonged to our civilisation. "Don't know Johnny? Why you must know Johnny!" Such words as these of "Tich" we keep and, Heaven knows why, never forget.

Weddings and Crowds.

Everyone has noted the ease, the eagerness, with which a crowd gathers in London. No matter what time of the day, or in what district, Londoners are always available for a spectacle.

It happened that last week the King and Queen were due to attend at a wedding in St. Martin's-in-the-Fields. Apart from observances of national importance, I have never seen such a crowd. The National Gallery was thronged; so was Trafalgar Square; girls had actually climbed on to the railings about the Church.

For a period in which romance is supposed to have died this show was quite extraordinary. Human nature must be changing a little more slowly than our advocates, especially our female advocates, of advanced ideas, appear to think.

The Army of To-day.

"The Army of to-day," we used to sing, "'s all right." But that was when we measured casualties in men, not in days.

In the Report on the Health of the Army for 1926, it is stated that in that year 421,557 working days were lost, chiefly owing to the "common ailments" which, apparently, respect khaki no more than they respect black cloth. In other words, all these colds and coughs and headaches and the dreary rest of it to which we civilians imagine ourselves, poor weak, untrained mortals, peculiarly susceptible, also and equally afflict our fit and trained soldiers. The old salt will probably attempt to make capital out of the fact, revealed in this Report, that soldiers drink cocoa and tea where in the good old days they drank beer. But that is too big a subject to argue upon here.

Controversial Broadcasting.

I have already referred to the absurd ban which the British Broadcasting Corporation has placed on the treatment by means of the wireless, on political, religious, or industrial affairs. But until now protests against this exclusiveness had come merely from the thinkers of the nation—Shaw, Chesterton, and so on.

Now, however, a politician has chipped in, so that something may eventually be done about it. Mr. Winston Churchill (*toujours l'audace*) has just used the B.B.C. in order to ridicule the B.B.C. He described the existing ban as "absolutely idiotic," and suggested the broadcasting of party politics, the time allotted to be in accordance with the numerical strength of the Parties in the House of Commons. This last condition, as Mr. J. H. Thomas has immediately pointed out, would enable Mr. Churchill to be speaking nearly all the time—a prospect fuller, perhaps, of variety than of profundity.

Hoardless Devon.

Those who go into esctasies at the very mention of the word "Devon" will, for once, find themselves justified by the recent action of Devon County magistrates. For these officials have just had the all too rare courage of fining a firm of motor dealers who had, with the insolence common to the breed, disfigured the countryside by means

of a hoarding. The offensive hoarding was not only removed forthwith, but the motor dealers were "stung" for their barbaric daring.

This is emphatically the kind of spirit for England. Some time ago various advertising firms took great credit to themselves when, as a result of exhaustive experience of the system, they resolved to forgo the practice of erecting landscape hoarding advertisements. But one fancies that things have gone back in the last year or so. Certainly there are districts near London which are a positive eyesore owing to the machinations of advertisers. If only all advertisers could be persuaded of the truth that newspaper advertising is the best kind of advertising!

ALTER EGO.

PAINTINGS OF PALESTINE.

The exhibition of Mr. David Bomberg's paintings of Palestine and Trans-Jordan which is now being shown at the Leicester Galleries, Leicester Square, is not the representation of Zionist activities in the Holy Land that was, apparently, expected. Instead, however, we have a representation, or a presentation, of things in the life of Palestine which transcend any racial or special interest. It is as if Mr. Bomberg, having been set, under the auspices of the Zionists, to depict the work of reconstruction in Palestine, had found himself irresistibly called away to the older, larger things in the Holy Land. There was, it seems, no tying down such an artist.

Whatever be the explanation of this surprise, there are only two or three representations of actual colonising endeavour by the new immigrants. Nor are these few sketches of pioneer work among the more notable paintings.

But there can be no question of Mr. Bomberg's skill both in reproduction and in interpretation. The first is a gift which is very patent in such works as "Pool of Hezekiah, Jerusalem," or "Jerusalem City and Mount of Ascension," or, even better, in "The Holy City," which is cinematographic in its fidelity of detail. The other side of his talents is apparent in the "Mount of Olives," a very remarkable study in green and white, a thing of hot, almost stifling beauty.

It is curious to find emotion not only creeping into, but actually informing some of the paintings of this artist, who for the most part maintains an unbending attitude to the sanctified land. These are of moonlit scenes—"Hills in Moonlight," a sketch of mysterious hollows, and of almost awful note, the "Road to Bethlehem," in which all his modern technique of simplification has been summoned, with the utmost effect, or the starlit, haunting, "Convent of the Clarissine Nuns."

Yet the greatest attraction in this exhibition will probably be made by Mr. Bomberg's paintings of Petra. Here his brush establishes direct contact with Nabataeanism, with the rugged cliffs out of which the strange Nabataeans carved such wonderful monuments. There is nothing of the "pretty-pretty" about Mr. Bomberg in Trans-Jordan; scraps about the "rose-red city" never interfered with his vision of Petra. And so we get the depth and the age of the sand-stone rather than its form and colour. His picture of the N.E. Wall at Petra, a rock façade facing the sky, is not only the product of consummate technique but is also a work of memorable and stark beauty. Another indication of his spurning of generally accepted theories in the viewing of Petra's beauties is made in his "Temple of Isis" at Petra, a strange monument made even more remote in its moonlight setting. Something of the hard spell of Petra—in a way opposed to the soft spell imposed by Palestine itself—is felt through these admirable paintings of the rock city.

This is an exhibition which holds considerable interest apart from its subject matter; to those who know intimately the scenes where Mr. Bomberg worked it will be the more stimulating. Both Sir Ronald Storrs, who has impatiently loaned two large works, and Sir Alexander Kennedy contribute brief forewords to the Catalogue.

PERSONAL AND GENERAL

TO-DAY

February 16, 1928 (New Style).
February 3, 1928 (Old Style).
Shaaban 24, 1346, A.H., of the Muslim Calendar.
Shebat 25, 5688, of the Jewish Calendar.

Prince Ali Khan arrived last week at the Ritz Hotel from the country.

Lady Archer, wife of Sir Geoffrey Archer, arrived in this country last week from Aden.

Admiral Sir Berkeley Milne left London on February 9 for Marseilles, en route for Egypt.

Mr. and Mrs. Robert Williams arrived in Khartoum last week on a visit to the Governor-General of the Sudan and Lady Maffey.

Sir Hugh Bell has returned to Mount Grace Priory, Yorkshire, from the Sudan. He celebrated his 84th birthday on February 10.

The Swiss Minister and Madame Paravicini, who are visiting M. Emile Paravicini in Cairo, will return to London early in March.

Sir Laming Worthington-Evans, Bt., M.P., and Lady Worthington-Evans were due to return to London yesterday from India.

Viscount Elibank left 187, St. James's Court on February 10 to join Viscount Elibank in Egypt. She will not return to London until after Easter.

Admiral Sir Berkeley Milne, Bt., Sir Robert and Lady Black, and Lady Beauchamp joined the P. and O. Kaiser-i-Hind at Marseilles on February 10 for Port Said.

Mr. Rowland Sperling was received in audience by the King at Buckingham Palace on February 8, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Sofia.

The Hon. Sir William Erskine was received in audience by the King at Buckingham Palace on February 9 and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Warsaw.

M. Doumergue, President of the French Republic, has made a present of a thoroughbred horse to Ghazi Mustapha Kemal Pasha.

The specially constituted Turkish High Court of Justice at Angora on February 9 began the trial of Ihsan Bey, ex-Minister of Marine, and thirteen others, in connexion with the contract for repairs to the warship Yawuz Sultan Selim, formerly the German battle cruiser Goeben.

The Rev. C. T. Bridgeman, American chaplain in Jerusalem, has discovered, according to *The Times*, a fragment of an Egyptian basalt stele, ten inches by eight, on the surface of a mound at Tabgha, between Tiberias and Capernaum, in Galilee, containing three broken lines of hieroglyphic text describing how a Pharaoh had annihilated the army of the Mitanni, a race which used to live in North-East Syria. Experts attribute the stele to Pharaoh Thothmes II., and the date is about 1470 B.C. It is thus the oldest of the 14 Royal Egyptian steles hitherto found in Palestine.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

HUNGARY AND ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A recent letter (by Mr. J. S. Barnes in THE NEAR EAST AND INDIA of October 6, 1927), upon minority and boundary questions in Hungary and Roumania, evidently sympathising, to some extent at least, with the interesting proposals of Lord Rothermere, impels me to write a respectful dissent to many of the propositions therein laid down.

The letter bears clear evidence that its writer is filled with admiration for the Hungarian model of government. I have long understood that many Englishmen had fallen under the spell of Magyar adulation, not realising (as they did not) that superficial and false imitation is not sincerest flattery. Yet those inhabiting the same islands as Dr. Seton-Watson ought long ago to have recovered from such influences and have comprehended how far apart liberal England and reactionary Hungary actually are. A journalist might make such mistakes as Lord Rothermere, but not a scholar who is a true student of history and of political atmospheres.

The suggestions that the union of Hungary and of Roumania is prevented only by the recent friction (for which he, with most unconscious humour, makes the Roumanian the scapegoat) is one of decided interest. Possibly he expects that this projected dual monarchy would result even more in Magyar domination under a Hohenzollern King than there was under a Hapsburg. One cannot find warrant in history for the belief that these two peoples—whatever racial stock they may share in common—would ever amalgamate or live in the close communion of even a federation. As for settling the Transylvanian matter by such a union the remedy is worse than the disease and would be more deadly to both.

As well have united France and Germany to settle the Alsace-Lorraine question, or Austria and Italy to end the Tyrolese oppression (both Italian and Austrian have some German blood), or Germany and Poland to avoid the trouble over East Prussia and the Polish Corridor. The adviser of such a remedy cannot qualify as a physician for the ills of the European body politic. Besides the Roumanians have had their fill of "dual monarchies." *Requiescat Austria-Hungaria in pace!*

One would like to ask the writer of this letter what evidence he has, not of Magyar manufacture, that the Slovaks desire a return to Hungarian domination? What genuine leader of the Slovaks can he quote? What resolution of a Slovak body? Again, what conditions in Hungary does he find so much bettered by the War as to be inviting to the Slovaks and Ruthenians? If he cannot give more convincing arguments than those of his letter, arguments that run throughout the Hungarian propaganda now in my possession, then let him not talk about anyone being deceived into imagining that the present situation can long endure!

The present remonstrant has many friends among the Slovaks. Not one of them but resents most vigorously the idea that they would consider returning under Hungarian rule. Mr. Barnes hardly realises what his programme entails. It would mean the withdrawal from Prague as well as from Slovakia of many and many a Czechoslovak high in Government service. It would leave the President of the Czechoslovak Republic isolated (theoretically) at the Hradcany without kinsmen (the Czechs who made him their President being barred) unless he followed his fellow-Slovaks meekly back to the rule of the Horthys and Bethlens. But the possibility of such a move is absurd, as the recognised leaders of the Slovaks in Czechoslovakia have demonstrated time and time again with sufficient loudness to confound all who did not voluntarily clog their ears. There is no conceivable motive to-day strong enough to induce the great mass of Slovaks to contemplate such a move. Such grievances as arose in the first days of Czechoslovakia have been softened greatly. They were never more than family quarrels and they are on the road to settlement. Like that between Croats and Serbs (which showed its shallowness with dramatic suddenness some two years back), the Czechoslovak trouble has sadly disappointed the ill-wishers of the Czechoslovak Republic by losing instead of gaining in intensity. The pages of Dr. Seton-Watson, of Mr. Street and even of Mr. Colquhoun, to say nothing of others, give ten strong reasons for the Slovaks turning to their Czech brethren to one feeble excuse for their turning against them.

Lord Rothermere and those like him might first find time to be thankful that if this age sees oppressed minorities, it is one of oppressed *minorities* not of oppressed *majorities*. That is one of the salient changes in Europe brought by the World War. Another is that these oppressed minorities do not suffer anywhere near as flagrant oppression as those whom *they* oppressed before 1918. If Magyars in Transylvania and in Slovakia and in Ruthenia, Austrian Germans in Czechia, Magyars again in Yugoslavia, Germans in Alsace-Lorraine, to-day chafe under alien rule, they possess in schools, language, in their privileges, political, social and economic freedom far superior to that once "enjoyed" by those they formerly oppressed.

"Business" (of a kind) might well be better if Austria-Hungary had been continued. But how hard it is for those who saw ruin only in the dissolution of that medieval anachronism to contemplate the essential soundness of the commerce and finances of Czechoslovakia to-day. A people who sell freight cars and Pullmans to South America and British India, beet-sugar and beer to the world (etc., etc.), are not in a position to worry over tariff barriers. In fact the worst of the worrying over the high tariff walls of Central Europe and of the Danubian Valley are outside those regions. Bear in mind that these Central European peoples do not have to have these "barriers" unless they choose. Their policies are for their own good, not for that of Englishmen!

The geographical formation of Czechoslovakia has served for an excellent text upon which foes and critics have been ready to expound by the hour. They criticise it for lack of natural boundaries and for lack of communications. On the first score, Bulgaria, Poland, Russia, even Holland and France, might be subject to the same criticism. But the fact is that your other correspondent still thinks in terms of the past; he still predicates everything political on a potential state of war, whereas we are gradually arriving, if not already arrived, at a time when aggressive and unjust wars will be worse than crimes, will be blunders. As things are now in fact, wars make light of the old natural boundaries, even the Pyrenees will not save Spain; the Alps, Italy, from invasion. The geographical argument on this side loses its value entirely or nearly so.

One would think that before Europe was "Balkanised" the States had no high tariff walls and were actuated by broad and liberal policies in their external commercial relations.

"Geographically and orographically our Republic* forms a more organic whole than the former Austria and Hungary ever formed. Assuredly it is no less organic than they were. Nor are geographical conditions decisive in the world to-day. Modern technique has robbed natural frontiers of much of their former importance unless they are high mountains, the broadest streams, or seas or deserts. Economic necessities, the need for security, the differences of culture have become stronger factors. Indeed, the disintegration of Austria-Hungary must be explained in the same way as its formation; and if historians explain how naturally the Hapsburg Monarchy was formed, they should also explain how naturally it went to pieces."

THE CYPRUS JUBILEE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Sir Ronald Storrs was quite justified in declaring to the Cyprus community of Egypt during his recent visit to that country, that in spite of all his efforts to promote the welfare of the Island, the Cypriots themselves brought some opposition. The Governor must have had in mind previous opposition when he made that statement. But he never dreamed of the new opposition that was awaiting him. "The Cyprus Jubilee Celebrations" is the pretext for the present opposition. The Cyprus press unanimously urges all Christian Cypriots to abstain from participating in the proposed celebrations of the fiftieth anniversary of the British Occupation.

It is very obvious that such an attitude will create serious friction with Government circles. The saddest thing, still, is that the anti-Jubilee movement has been the creation of a series of misunderstandings and premature conclusions. The expenditure for the festivities has been one of the main points in support of the abstention. Next is the question of the political significance of the celebrations. But neither of these contentions is well-founded. The money required for the purpose will be obtained from the English community; as for the nature of the festivities, the Governor himself has emphasised the fact that the celebrations will have no political colour whatever. In contrast to these Cypriot conjectures the event will be really a source of revived economic prosperity for the Island as a whole. Should the proposed boycott be insisted upon to the end, we shall have nothing to gain and a great deal to lose.—I am, etc.,

Larnaca, Cyprus. February 1. TIMOTHY FITIKIDES.

MISSIONARIES IN ISLAM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I commented last week on the Church Missionary Society in Persia. I now see that the Turks have shut the American Mission school at Broussa for having converted four Muhammadan girls to Christianity.

I said last week that Christian Missions were, in my opinion, useless in Muhammadan countries from a religious point of view, and I think that this paltry number of converted girls proves my contention. At the same time, however, it proves how foolish the Turks are, both in being alarmed at this spread of the brother faith, and at assuming that Christianity is not as good as Muhammadanism for their girls!

But this is not the place for entering on a religious controversy; nor is it my intention to try to correct a religious bias (a hopeless task!). Only a political sense, of which Turkey is so much in need just now, causes me to reprove the Kemalist Government's action.

Rightly or wrongly, Europe, which leads our modern civilisation, is committed to Christianity, and as the Turks are now aiming at being in harmony with that civilisation, and have need of its support, it is a bad policy to antagonise it, or at least to mistrust it. I doubt whether the Turks are mindful of their souls in proscribing Christianity; and if mindful of their economical existence, they might, in my judgment, do well to barter even a few thousand souls of their Muhammadan subjects for the good will and brotherhood of Europe!

Christians are in Palestine nowadays co-operating even with their irreconcilable Jewish antagonists, on the ground of the Brotherhood of Man, and Jews are coming to think that the day when Christianity and Muhammadanism are no longer believed in their old Bible authority will be torn to shreds. In fact, though all reasonable men now agree to differ in matters of faith, they also feel that to look upon this world with loving eyes and heart alone is good and the true attribute of godliness—and, I may add, of statesmanship also.—I am, etc., A. SEFI.

February 8.

[We do not follow Mr. Sefi (whose point is a good one concerning the contradiction between the wish of the Turkish Government to be drawn into the Christian civilisation of the West and its recent actions) in his last sentence, wherein he identifies the best practical course with the inner consciousness of man. Not a neglecting of religious differences, but tolerant explaining of them, is what is most needed in the East.—ED.]

NEWS IN BRIEF.

A large cloud of locusts has appeared at Kerak, in Trans-Jordan, covering 6,000 acres.

At Amman on February 9 the Amir Abdullah of Trans-Jordan opened the Church Missionary Society's new women's hospital.

The resignation is announced of Ahmed Namy Bey, chief of the Damascus-Aleppo State. He is a son-in-law of the late Sultan of Turkey.

Captain Lord Stanley, M.C., M.P., has been appointed a member of the Imperial War Graves Commission in succession to the late Sir Robert Hudson.

The death has taken place in the Piræus of a woman named Daphne Michaelides, at the age of 117. She could remember the fighting in Athens in 1826.

King Fuad on February 7 laid the foundation stone of the new State University in Cairo, in the presence of Lord Lloyd, the members of the Cabinet and the Diplomatic Corps.

The arrival of Sir Alfred Mond at Baghdad on February 10 was marked by a demonstration of 10,000 Arabs, including students, against Zionism. The mob had to be dispersed by mounted police.

M. Jean Doutchitch, Chargé d'Affaires for Yugoslavia in Egypt, left Alexandria at the beginning of February for Europe, on leave. M. Godjevatz, Secretary to the Legation, is acting as Chargé d'Affaires during his absence.

Dr. Boetzke, the German expert, who has been studying the condition of Persian finances for some weeks, will soon present his report to the Government. The Minister of Finance, with Dr. Boetzke and the Mansur-es-Saltaneh, is elaborating a scheme for the opening and working of the new bank.

That the locust danger to Palestine is still imminent was shown by the appearance of a fresh flight of these destructive insects at Hismeh, in the eastern part of Trans-Jordan, on February 8. Fortunately, as in the case of the previous week's visitation, the wind blew the locusts back into the desert.

The Turkish Government has informed the International Labour Office that it has agreed to prolong by one year the time allowed to Russian refugees in which to leave the country. The original date fixed was August 1, 1927. This was extended to February 6 of this year, at the request of the International Labour Office. The object of the new extension is to give time for the placing of refugees in other States according to a well-considered plan.

A stone has been found in a cemetery about sixty miles north-west of Erivan, which is believed to throw new light on the extent of the Chaldean conquests. The stone bears the inscription of King Russ I., who reigned in 733-714 B.C., and refers to his having captured the King of the Melikuhi, whose domain is identified with the present-day Georgia.

After MM. Voukitchevitch and Raditch had in turn failed to form a Cabinet, and M. Davidovitch, the Democrat leader, had declined even to try to do so, the King of Yugoslavia sent for M. Ninko Peritch, the President of the Skupshtina. M. Peritch also failed, and the King then sent again for his outgoing Prime Minister, M. Voukitchevitch.

Colonel Cathcart Garner, late R.A.M.C., died on February 5 at Southsea at the age of 66. In 1896 he was seconded for service in Egypt, and was successively president of the International Quarantine Board of Alexandria, Deputy Director-General, Public Health Department, Cairo, and Under-Secretary of State (Health), Ministry of the Interior, receiving the orders of the Osmanieh, the Medjidieh, and the Nile. On the outbreak of the War he rejoined the Army and served in Gallipoli, Egypt, and Palestine. In 1917-19 he was A.D.M.S. of Occupied Enemy Territory in Palestine, and was created C.M.G. and C.B.E. in 1919.

The King and Queen of Afghanistan arrived in Brussels on February 8 and were received by the King and Queen of the Belgians. King Amanulla and his Queen had previously been greeted at Mons by Prince Leopold, who had travelled there specially by the Royal train.

After various distinguished persons, including the Presidents of the Chamber and the Senate and the Cabinet Minister, had been presented to them at the Royal Palace the King and Queen of Afghanistan, accompanied by King Albert and Queen Elizabeth, went to the Tomb of the Unknown Soldier, where they were received by the Minister for National Defence.

In the evening their Majesties attended a gala dinner at the Palace. King Amanullah visited Antwerp on February 10. On February 11 the King and Queen left Brussels for Switzerland, arriving at Caux the following day.

Book Review

LEGAL REFORM IN TURKEY.

"THE ANGORA REFORM." By Count Léon Ostrorog. (University of London Press. 4s. 6d. net.)

This instructive little book consists of three lectures which Count Léon Ostrorog, late Judicial Adviser to the Ottoman Government, delivered at the Centenary Celebrations of University College, London, in June last year. Count Ostrorog is Lecturer in Muhammadan Public Law and Turkish Land Law in the University of London: his exposition may, therefore, be taken as authoritative.

"By their fruits ye shall know them" remains as true of nations as of individuals, but in the case of the former the fruits usually take a longer time to develop. The legal reform with which the author deals was carried through only in October, 1926. The interval that has elapsed since then is too short to enable judgment to be formed of the way in which the new Turkey will live up to the reform, but already there have been judgments in Turkish Courts which have certainly not responded to the *sic volo sic jubeo* of the executive authorities.

Whatever, then, the future may hold in store, it is well worth while for anyone who is in any way concerned with or interested in Turkey to read and ponder the remarkable analysis that the author presents of what he terms "The Angora Reform." Angora can claim to be responsible for many reforms, but Count Ostrorog confines the expression to the adoption of a new legal code. The titles of the lectures illustrate the method of treatment. In the first, "The Roots of the Law," the lecturer explains the origin of Muhammadan Law. There are, he points out, two fundamentally different conceptions of Law, the Aryan (i.e., Greek, Roman, Celtic, Germanic), which views Law as something made by man for the welfare of men in a particular country as it appears to the majority of men in that country; and the Semitic conception, that Law is the Science of Good and Evil, based on absolute ethical certitude as revealed to men—by, of course, Muhammad through the Quran. The Quran, however, does not contain a systematic set of legal provisions.

> Out of the seven thousand and sundry verses of the Quran no more than about five hundred can be considered as presenting legal import, and no more than about one thousand out of the thousands and thousands of sayings of the Prophet admitted as forming part of genuine Tradition, and even those tests very seldom have the aspect of a formal legal provision. To use a somewhat prosaic expression Muhammadan Scripture and Tradition provided the raw material with which to build the legal fabric, but the fabric remained entirely to be built.

The intention of the Prophet in regard to this fabric may be supposed to have been embodied in a conversation transmitted in Tradition. One of his Companions, in answer to questions, said that in lack of Scripture and Tradition of the Messenger of God he would judge according to the interpretation his reason would dictate, and the Prophet recorded his satisfaction. This "fundamental liberal position," however, lasted less than two centuries, when there appeared the great Muhammadan lawyers, founders of the Four Orthodox Doctrines of Islam, who laid down rules of interpretation, "an elaborate and complete system of Hermeneutics that was adopted, acknowledged as perfect and final, and ultimately extolled to the supreme degree of a test between Orthodoxy and Heresy." That system entirely closed the door on independent legal thought, on criticism and even on interpretation, for all apart from those who have been accepted as "the Doctors Builders of the Law."

It was with this rigid fabric that the Turks were confronted when they embraced Islam.

> The Turks do not possess, like the Arabs, tendencies towards a metaphysical conception of the universe, neither are they characterised by any distinctive impulse to consider things primarily under the aspect of the eternal and the divine; they are endowed with no special taste for logical subtlety and flowery rhetoric; they are seldom improvisers of poetry. They made their first appearance on the stage of Muslim history as excellent mercenary troops. . . .
>
> The Turks originally conceived men as soldiers and officers in a regiment, and based on that notion a system of hierarchical interdependence and discipline which, working upon the results of another of their racial gifts, that of remarkable military valour, caused them to build up and maintain the most lasting sovereign power ever known in the Muslim world. . . . This does not mean that the Ottoman Turks, who had adopted Islam, made light of the tenets of Muhammadan creed when building up their Empire, nor that they professed independence towards the Doctors of the Law. Quite the contrary. It was to be expected of their psychology that they should strengthen the authority of those divines by hierarchical organisation. They organised them into a regiment, instituted ranks. . . .

In spite, however, of the power and prestige of the Muhammadan clergy, Turkish psychology soon made itself felt in the province of legislation. From the outset the Turkish rulers asserted their right to enact regulations and thus appeared in Muhammadan Legal History law originating, not in a revelation granted by God, but in a decision expressed by man, written Law, in precise binding texts. This Turkish tendency to man-made Law did not at first manifest itself as anything opposed to the Muhammadan conception; but the Sultans did not remain within the earlier limits of their innovation, and with the necessity of political reforms in the nineteenth century appeared actual Codes, written, man-made laws, drafted on the model of the purely rationalistic Codes of Christian West, some of them laying down provisions in direct opposition to rules expressed in clear texts of Muhammadan Scripture. There was no revolt, no serious opposition in the ranks of Doctors of the Law. What the latter regarded as the very marrow of the Law, Family Law and the Law of Inheritance, were left subject to the Revealed Law, and within the jurisdiction of their own Courts as established in pure Muhammadan Law. With the 1908 Revolution the issue between the new trend of thought and the Hojas came into sight; but the champions of Muhammadan Law were still in a strong position in Turkey when the Great War broke out. Their power was brought to ruin by the "ugly political blunder" of the indictment of the Kemalists. The latter never forgave.

Count Ostrorog closes his second lecture with the following words:—

> Intense national pride, inflamed by historical publications where the Turks appear as the racial aristocracy of Asia, an innate tendency towards a purely rationalistic conception of legislation enhanced by the feeling that reforms on the Occidental model were an indispensable factor of revival, finally a recently acquired but deep feeling of rancour towards the Dynasty and the clerical hierarchy of the Doctors of the Law—such were the ultimate psychological factors operating in the souls of the Turkish leaders when, returning triumphant to Angora from Lausanne, they set to their work of Legal Reform in 1923.

In the third lecture are set out the details of the Reform which in regard to a code consisted in the adoption *en bloc* of the Swiss Code, to replace not only the Muhammadan Law of Contracts and Evidence, but also the whole fabric of Muhammadan Private Law which had formed the basis of Muslim family life and Muslim economics in all Muslim countries. Yet Republican Turkey has not introduced separation of Church and State; Islam is the State religion, and the Muhammadan clergy are State-paid. What has been introduced is the laicisation of Law and Justice. Islam, it is true, does not allow of such a separation between Religion and Law; but, Count Ostrorog concludes, the question may be put:—

> "Is this new conception apostasy, heresy, or is it not rather a return to the pure primitive liberal conception of Islam as it stood when unaffected by the subtlety of scholastic logicians? It is not for Occidental students of Islam to answer."

THE SIMON LETTER—AND AFTER.

"The inquiry contemplated by the Act will be a genuine and an impartial inquiry. Nothing will be prejudged. It will proceed upon the facts of the situation as ascertained upon the evidence produced to the tribunal. And here I must remind you of the words of the preamble to the Government of India Act, which have already been quoted by the Secretary of State: 'And whereas the action of Parliament in such matters must be guided by the co-operation received from those on whom new opportunities of service will be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility.' If those are to be the principles to guide the Commission to its judgment, I cannot think, as a friend of India, that it should commence its inquiries immediately. But I have not abandoned hope that as the days proceed evidence of a spirit of co-operation may yet be forthcoming from that large section of public opinion which has hitherto stood aloof, and that it may be manifested that the attitude of those who have hitherto declined to shoulder any responsibility may undergo a change." The speaker is Lord Reading; the occasion, his first pronouncement on matters of public policy after his visit to this country, in the early summer of 1926, to discuss with the Secretary of State and the Cabinet the best time and means of implementing the undertaking now consummated in the appointment of the Statutory Commission itself. We need not apologise for the length of the quotation. Neither the warning nor the message of hope with which it concludes was, we feel, ever more timely. Then, as now, there is a school of thought in India which preaches incessantly that nothing is to be won from England save by force or threats. There was never a more profound mistake nor one, if persisted in, more calculated to embitter the relations of the two countries. The Reformed Constitution, to the working of which Sir John Simon and his colleagues are now addressing themselves, was born of a spirit of goodwill, not of fear, of optimism, not of political opportunism. The history of the past eight years, and especially of the last few months, has damped the hopes and intensified the misgivings of many of those who, with Lord Reading, can justly claim to be devoted to India and her interests. But nobody who has followed closely the well-nigh unprecedented attention devoted in Parliament, and outside, and in the Press, to the Commission's task, can but be impressed on the one hand by the sympathetic goodwill manifested towards India and Indians generally, and on the other, by the determination not to be hurried by threats into premature and unwise concessions.

We have felt it right to emphasise, perhaps unduly, this particular aspect of the present confused and complex political situation in India, because there is more than a suspicion that those who are still so vociferously professing their intention to boycott the Commission are animated by what an Anglo-Indian contemporary not inaptly terms the "bazaar" spirit. "They hold that if they decry the profferred article they may eventually procure it at a price more favourable to their purse. Or, seeing that they possibly consider that their co-operation is the article for sale they are vaunting their reluctance to dispose of it in the hope that the final offer, after much haggling, will be a better one." Others there are, and they probably constitute a not inconsiderable minority of the politically minded—to adopt a phrase which we do not specially admire—in India as in Western Countries, who are ready to offer co-operation at its fair market value, but they want to be sure that they will not eventually find themselves and their cause prejudiced by an eleventh-hour deal with others whose interests are not the same as theirs—indeed are just the reverse. In view of the assiduity with which the alleged parallels of Egypt and Ireland are quoted in the extremist Press the attitude of the Congress party as a body, whose avowed aim is now complete independence, would certainly seem to be coloured by some such reflections. To those holding such views it was scarcely to be expected that Sir John Simon's letter would make any appeal. But the unseemly haste with which the leaders of the party sought to reiterate their monotonous plaint showed clearly their anxiety lest those for whom they claim to speak might prove more amenable to sincere and reasoned argument. In his letter to the V'ceroy, Sir John Simon has proposed that all the evidence should be examined by a "Joint Free Conference" consisting of the seven British Commissioners and a corresponding body of representatives chosen by the non-official members of the Indian Legislatures in exactly the same way as the British Commission was chosen by the British Parliament. He points out that the Commission itself is purely an advisory body. It has no executive or legislative functions and it is in no sense an instrument of either the Government of India or of the British Government. He invites the closest and most authoritative co-operation from the very first effective stage of the inquiry "not only because we should welcome the assistance of colleagues from Indian Legislatures, but because we think it only right and fair, and in the truest interests of India and Britain alike, that opportunity should be provided for such memoranda and testimony to be scrutinised, and if necessary elucidated, from the Indian side on free and equal terms." The Joint Committee of the Central Legislature will have the right to pursue its own investigations, collect evidence, either in conjunction with or apart from the Conference as a whole, and will make its recommendations to the appointing authority to be forwarded and made available to the British Parliament either through the recognised channels or, at its discretion, as an annexure to the Commission's own report. Besides securing due recognition of equal status the method of joint conference "provides," in Sir John Simon's considered opinion, "the opportunity for that free exchange of views and mutual influence which are best calculated to promote the largest measure of agreement that is possible."

Digitized by Google

We have already suggested a probable explanation of the Congress leader's unequivocal rejection of these proposals in making which, the Commission add, "we are confident that we are correctly interpreting the intentions of the British Parliament." That a section at least of the Muhammadan members, under the lead of Mr. Jinnah and Mr. Muhammad Yakub, the Deputy President, would probably ally themselves with the Swarajists on such an issue was foreseen from the beginning. The suggestion that their moral courage is weaker than their political vision possibly explains the inclusion among the signatories of the statement of Mr. Kelkar and Mr. Jayakar, the leaders of the Responsivist party, which, as Sir Frank Nelson points out, "has made no secret of the fact that it regards the exclusion of Indians from the Commission as of less consequence than the equal status of the Indian Committees"—a claim which Sir John Simon's proposal is expressly designed to concede. But none of these considerations seem to apply in the case of Sir Tej Bahadur Sapru, who, in a statement issued on his own authority but ostensibly voicing Liberal opinion, characterises Sir John Simon's letter as an attempt "to put a specious case of equal opportunities before the Indian Committee" which does not "alter the character of the Commission or make it acceptable to Liberals." On the other hand, an increasing number of thoughtful and distinguished Indians, as well as large and powerful communities, have declared themselves in favour both of the Commission's constitution and of the general principles by which it is proposed to be guided, and to give it all the assistance they can. We leave out of account for the time being those also, not an inconsiderable number, who regard the composition of the Commission with some misgivings, but who nevertheless have sufficient faith in the method of co-operation as distinguished from non-co-operation as a means of solving differences and who, therefore, regard the boycott idea as wanting in the elements of mature judgment and political capacity. The recent negotiations between Sir Sankaran Nair's Parliamentary Committee and the Commission encourage the belief that to-day's debate will show that the position of the Opposition is not nearly so secure as its official spokesmen would have us to understand.

CURRENT TOPICS.

The Reserve Bank Bill.

The decision of the Government of India not to proceed with the Reserve Bank Bill, in the face of the wrecking tactics pursued by the opposition was in the circumstances clearly inevitable. Faced once again with the embarrassing alternatives of either sacrificing a laudable personal ambition to place the Indian currency system upon a stable and permanent basis, or allowing to pass into law a scheme of control diametrically opposed to the dictates of sound finance, and his own declared policy, Sir Basil Blackett has undoubtedly chosen the wiser course. Between the proposals of the opposition parties for a State bank under the indirect, at any rate, control or influence of directors elected by the legislature and the Government's scheme for an independent shareholders' bank no compromise, as the Finance Member has at least found, is really possible. The present position is therefore that the establishment of a modern reserve bank is within the power of the Indian Legislators if they so desire. The revival of the project depends upon the attitude of the Assembly. Meanwhile the stability of the 1s. 6d. rupee is of course in no way affected. The improved gold exchange standard introduced by the Currency Act of 1927, will continue in operation and the opponents of the measure will thus be responsible for the indefinite perpetuation of precisely that feature of the existing system against which they have so vociferously and continuously inveighed.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

Tradition and personal inclination combine to make the opening day of a new session an occasion on which the essential points of agreement rather than of difference between the various parties are brought into clear relief by the general air of good-fellowship which prevails. It is in effect a political armistice or, to employ the not inapt simile of one Parliamentary correspondent, a time when "the rivals greet one another and the courtesies preceding all well-conducted duels are exchanged."

Be that as it may, a variety of circumstances served to make the proceedings of a "non-party" character in a very real sense. Since the House last met the country and the Empire have sustained an irreparable loss in the death of Field-Marshal Earl Haig, and the Prime Minister's announcement of his intention to move a suitable Resolution echoed the feelings of every individual member of each party. Although the late Commander-in-Chief's acquaintance with India was confined to two relatively brief periods of service in that country, it is no exaggeration to say that in no part of the Empire will the sense of loss be more acutely felt than among those who were privileged to serve with him in India.

There was the same absence of partisan spirit when, at the close of his reply to the debate on the Address, Mr. Baldwin made an exceptionally complete and satisfactory reply to the Leader of the Opposition's inquiry as to whether he was in a position to make any announcement respecting the procedure to be adopted by the Statutory Commission. The answer, as is now well known, took the form of a summary of a long letter addressed by Sir John Simon, on behalf of his colleagues, to the Viceroy, the full text of the communication being read later "in another place" by Lord Birkenhead.

As this very momentous document will no doubt be reproduced in some detail in another part of this issue, I shall not repeat the terms here. That the statement of policy, admirably phrased and unmistakably sincere and sympathetic in tone, carried conviction was abundantly evident from the respectful silence in which it was heard. Beyond reiterating the House's confidence in the Commission and its earnest hope that the members may be successful "in their difficult and arduous task," the Prime Minister wisely allowed the letter to speak for itself.

History repeated itself the next morning when alongside the text of Sir John Simon's letter in the Press we found, over the signatures of a number of prominent Indians of all parties, a brief statement summarily rejecting the proposals and reasserting the determination of the signatories to have nothing to do with the Commission at any stage or in any form. That the signatures of Mr. Srinivasa Iyengar, Mr. Mohamed Ali, Dr. Ansari and other Swarajists should be put to such a document is not surprising. But the addition of the names of Mr. Lajpat Rai and Mr. M. A. Jinnah, of the Independent groups, Mr. M. R. Jayakar, the leader of the Responsivist Party, which from the first has made no secret of the fact that it regards the exclusion of Indians from the Commission as of less consequence that the equal status of the Indian Committees, Sir Purshotamdas Thakurdas and Mr. Yakub Khan is more difficult to explain except, as a Delhi correspondent shrewdly remarks, by "the known uncertainty of almost any Indian politician when faced with a decision on which normally his attitude should be in no doubt." And to this number, though his protest is more dignified, must now be added Sir Tej Bahadur Sapru.

Writing in this column on the proceedings in the House on the motion for the appointment of the Commission, I observed that while I looked back upon the debates with feelings of gratification at the breadth of vision displayed by home politicians of all parties, I could not altogether divest my mind of an undercurrent of misgiving in respect of the threatened boycott. "The names," I continued, "of those who have already identified themselves—seem-

Digitized by Google

ingly without leaving any opening for retreat—with the movement cannot be characterised as anything if not influential in the particular spheres of activity in which they are severally engaged." Sir T. B. Sapru, Sir Chimanlal Setalvad, Sir Phiroze Sethna, Sir Abdur Rahim, Sir Purshotamdas Thakurdas, Sir Sivasasawny Aiyer, Sir M. Ramji and Mr. M. A. Jinnah, I pointed out, were all men of authority and influence whose evidence could not be allowed to go by default. "If even a tithe of this opposition matures and co-operation is refused, what weight will the Commission's report have?"

With the possible exception of Sir Abdur Rahim none of the foreging has resiled in any way from the attitude, rightly or wrongly, they then thought fit to take up. These are men, I repeat, whose ability, position and past services give their views an irrefutable claim to consideration. What will happen if the inquiry is proceeded with in the face of the active protest of such men? The Commission will secure a considerable weight of evidence. It may evolve "peerless recommendations." But will any British Parliament give legislative effect to them, in such circumstances, or if it does, will the revised constitution, however liberal, have the driving force of public opinion in both countries behind it which alone will make it permanent and acceptable? As the *Times of India* observed, in a challenging leading article on the eve of the Commission's arrival, "It is almost inconceivable that any such end can be attained. It is almost certain that the infant will be still-born. And the inquiry may be punctuated with the *hartals* and disturbances which racked India in the worst days of the barren non-co-operation movement." But, I frankly confess, the problem is immeasurably easier to state than to solve.

Clause 29 of the Government of India Act runs constantly in my mind in connexion with the Commission's task. Based on that clause, their duty is to recommend to the House of Commons of probably 1930 whether the degree of self-government conferred upon India by the 1919 Act should be "extended, modified or restricted."

If the best that so-called responsible Indian politicians can do is to sulk like naughty children and refuse to place before the Commission their quite legitimate aims and aspirations—and this in regard to a country which for the purposes of this argument they must anyhow be *presumed* to love and the interests of which, despite years of evidence to the contrary, they must also be presumed to have at heart—I can see no course open to any British Parliament but to decide that this great Dominion of ours, so far from being ripe for an extension of self-government, tends more towards a restriction of responsibility which so far has been wielded with a conspicuous lack of accuracy, forethought, common sense and political honesty.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 26.

The Boycott.

The men who have been most in evidence this week have been Mr. Jayaker, Leader of the Responsivists in the Legislative Assembly, and Sir Abdur Rahim, a leader with a considerable following of Bengal Muslims. Mr. Jayakar has tabled a resolution on behalf of the Responsivist Party. It asks for a clearer definition of the status of the Joint Committee to be composed of members of the Indian Legislatures, and that it should be stated in particular whether the Committee will be entitled to cross-examine witnesses and test evidence. Mr. Jayakar has expressed the opinion that Lord Birkenhead's speech to the Associated Chambers of Commerce in London had given Sir John Simon and the Viceroy "that liberty of action which would enable the initial mistake to be rectified." One of his most striking statements was that a few leading promoters of the boycott had written or expressed to him, under the seal of secrecy as to their names, that they would be satisfied if the Government accepted his resolution; that is, the resolution of which I have spoken above. He also said: "I am entirely against the present Commission, but having passed through a previous triple boycott, I am more cautious, because I am afraid that the employment of a weapon out of the armoury of non-co-operation, even in a single instance, is likely to draw in its wake many other forms of protest, like the boycott of the Councils and other methods." Mr. Jayakar, as well as being leader of the Responsivist Party, is Chairman of the Roads Development Committee, which is at present taking evidence. That has given him an even more influential posiiton than he would otherwise have held. Two other Mahratha Responsivists, Mr. Kelkar and Dr. Moonjee, have put down resolutions identical with Mr. Jayakar's; so it seems to have support. In well informed quarters the opinion is strongly held, that, should Sir John Simon and his colleagues be prepared to meet Mr. Jayakar's views (and one does not see why they should not; indeed, I should say they certainly ought to), there will be few boycotters left outside the ranks of the extreme Swarajists.

Hartal on February 3.

Sir Abdur Rahim was chiefly concerned with the proposed *hartal* on the day the members of the Royal Commission are due in Bombay; but one can see that he had the boycott of the Commission also in mind. He said: "I consider that the proposal to organise a *hartal* on February 3 is an unwise step, as it may only tend to harden the situation. Sir John Simon ought to be given a fair chance to propose a procedure for securing effective co-operation of the best Indian minds in an inquiry which will so greatly mould the future of India and the relations between this country and England. Lord Birkenhead's last speech shows that Sir John Simon and his colleagues have been given almost absolute discretion in the matter, and, certainly there is nothing in the terms of their appointment which should stand in the way of their asking the Government of India to support a Committee of representative Indians to participate in the inquiry, having full opportunity to examine the documents that may be submitted by the Indian and the Provincial Governments and other public bodies, and the witnesses that may be called to throw light on th eposition under investigation. The Indian Committee's report may then either be incorporated in the Report of the Royal Commission, or forwarded by the Commission or the Government of India to the British Parliament." One can foresee in what way things are going to develop. The signs are most encouraging.

Walk In, Walk Out.

Even the Swarajists seem not to be wholly at one about the boycott. Their boycott, it must be understood in England, was not just to boycott the Royal Commission, but it, the Indian Legislatures, the Provincial Legislatures, and it might be other bodies. We were given this to read on Sunday, the writer being some shrewd but anonymous observer of passing events. As regards the policy to be pursued in the Bengal Legislative Council, the Bengal Congress Committee seems to have decided that they will participate only on certain occasions; for instance, in the discussion on the Bengal Tenancy Bill, the Bengal Primary Education Bill, and also in support of the no-confidence resolution on the Ministers, if it is brought forward. On all other occasions the Congress members will abstain. Here also there appears to be a strong divergence of opinion, and it is possible that a small minority will break away on this issue. It is stated that staying away on some occasions and attending on others would only be a repetition of the "walk in, walk out" policy that was attempted in 1926, and covered the Congress Party with ridicule. All that need be said in comment on that is that the members of the Bengal Congress Party have to be covered very deeply in ridicule for them to be aware of it.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, January 28.

The fight for ascendancy between the two Muslim factions reached a climax early this week when a monster meeting was held in the Muhammadan quarter of the city. The meeting was notified several days before it was held and both the pro- and anti-boycott leaders carried on a vigorous propangada with a view to influence the decision of the meeting which was accepted by both sides as the final verdict of Muslims in Bombay on the Simon Commission. The meeting was held under the auspices of the Central Khilafat Committee and the organisers were frankly anti-Commission, but a special appeal was made to the Muslim public to give the other side a patient hearing. Moreover, those in favour of the Commission issued no less than fifteen handbills urging their followers to muster strong and carry the decision. All these preparations, however, proved in vain and the newspapers in their anxiety to forward one cause or the other, gave such garbled accounts of the proceedings at the meeting that it is very difficult to say what actually happened there. The *Times of India* declared that the anti-boycott leaders were not given a fair hearing and that they left the hall under protest, the majority of the audience following them. The rump is then said to have passed the resolution. The *Bombay Chronicle*, on the other hand, maintains that the result of the meeting shows clearly that the Muslims of Bombay are overwhelmingly in favour of the boycott. The paper refers to the anti-boycotters as disturbing elements who received the treatment they deserved at the hands of the audience. Not content with this the *Bombay Chronicle*, on the following day, published a long statement by Maulana Shaukat Ali roundly accusing the *Times of India* of perversion of facts. Whatever the truth may be—and I think it lies somewhere between the *Times of India* report and the *Chronicle* version—it takes us to the first position, namely, that the Muslim community is irreconcilably divided on the issue. It is because neither party is willing to recognise this that all the trouble arises. That it is so throughout the country is clear from the stormy scenes at the numerous Muslim meetings held in the principal towns. Delhi went through the same ordeal as Bombay and there, too, conflicting reports have clouded the issue. But, like Bombay, the anti-boycotters there were forced to leave the hall.

Protest against Hartals.

There is another aspect to the Royal Commission which has been attracting attention; it is the decision of the Congress to organise *hartals*, i.e., mass demonstrations accompanied by total suspension of business. The first person to protest was Mr. Jayakar, the leader of the Responsivist Party in Bombay. He says: "Although we are at present the butt of ridicule and derision in some quarters, I am sure our critics will find the Responsivists worthy of their salt at the right time. . . The resolution for a walkout and for hartals and other forms of popular demonstration which I know are opposed to many of my friends in Bombay, who have taken a prominent part in the boycott agitation, are the necessary implications of the boycott movement." Almost on the heels of this declaration, Sir Chimanlal Setalvad, in an interview, expressed his desire to dissociate himself from the Benares resolution on the subject of hartals. The third and most unequivocal condemnation comes from Calcutta. Sir Abdur Rahim in a statement to the Press declares: "I consider that the proposal to organise a hartal on February 3, when the Simon Commission arrives, is an unwise step, as it may only tend to harden the situation. Sir John Simon ought to be given a fair chance to propose a procedure for securing the effective co-operation of the best Indian minds." This brings me to another point which is becoming increasingly evident—namely, a lurking hope in the minds of some leaders that Sir John will find a way out of the impasse. But time alone can show how far that hope is justified. As an example of the uncertainty which prevails at the present moment, I will quote Sir Basil Blackett's statement before the Standing Finance Committee on the question of the expenses of the Royal Commission, which will, it is estimated, amount to Rs. 8,73,000. Sir Basil announced that Britain had decided to make a lump contribution of £20,000, and added, for the information of the Committee, that no provision had been included in the estimates for the Joint or Sub-Committees which it may be necessary to constitute, as no detailed information was available as to the Commission's requirements in this respect. This may mean one of two things—either Sir John Simon may have, and exercise, powers to conciliate Indian opinion, or as a boycott seems to be a foregone conclusion he may decide to do without the help of the Committees of the legislatures.

The Back Bay Defamation Case.

After a protracted trial lasting over a year, the Back Bay defamation case was concluded on Friday. The case arose from certain statements made by Mr. K. F. Nariman before the Mears' Inquiry Committee, charging certain members of the Development Department with corruption. Although Sir Arthur Grimwood Mears assured protection to Mr. Nariman and the statements were made on a privileged occasion, a suit was filed by the Superintending Engineer of the Bombay Development Department. The hearing of the case started on December 4, 1926, and it was stated that the Government of Bombay had given an undertaking that if Mr. T. Harvey, the Engineer, won the suit, his expenses would be paid by them; while, if he lost the suit he would have to pay his costs. Besides the hearing being a protracted one, both the plaintiff and the accused found it a great strain and suffered a breakdown at different stages in the case. The Magistrate, in his judgment, held that although Mr. Nariman had failed to prove any justification for making the allegations he did against Mr. Harvey personally, he had produced sufficient evidence to prove that he acted in good faith. The Magistrate further maintained that the charges had been preferred before a competent authority. Mr. Nariman's acquittal has a two fold implication: first, it establishes the right to protection of public leaders in exposing evils in State departments and, secondly, it brings into relief the gross mismanagement of the Development Department which has set back the clock of progress so far as this Presidency is concerned.

A "JOINT FREE CONFERENCE."

In his address to the joint session of the Central Legislature, extracts from which were reproduced in last week's issue, the Viceroy laid renewed emphasis on the "full discretion as to the methods" which has from the beginning been left to the Statutory Commission in the prosecution of its inquiry. In a statement to the Press, on his arrival the following day, Sir John Simon referred to the existence of "widespread misunderstanding as to what this Commission is setting out to do, and uncertainty respecting the methods it proposes to employ" and announced the Commission's intention of making an early statement of the proposed procedure, "which should leave no ground for the suspicions which have unfortuntaely arisen."

As the Commission is not holding any formal sittings during its present visit, which is of a purely preliminary nature, the Chairman has embodied the proposals in a letter to the Viceroy, the text of which, according to an India Office *communiqué,* is as follows:—

"We understand that the Government of India and the Local Governments have been engaged for some time past in preparing material which they might put before the Commission. We have not seen these documents, and do not know how far they may consist of matters of fact and how far of matters of opinion, or whether they deal with past events or with suggestions for the future. But, whatever they are, instead of dealing with them by ourselves we wish to propose that they, and evidence given in explanation or amplification of them, should come before a 'Joint Free Conference,' over which I should preside, consisting of seven British Commissioners and a corresponding body of representatives chosen by the Indian Legislatures (just as we ourselves have been chosen by the British Parliament).

"We put forward plan of a 'joint free conference,' not only because we should welcome assistance of colleagues from Indian Legislatures, but because we think it is only right and fair, and in the truest interests of India and Britain alike, that opportunity should be provided for such memoranda and testimony to be scrutinised, and if necessary elucidated, from Indian side on free and equal terms. We suggest, therefore, that the two Houses of Central Legislature should in due course be invited to choose from their non-official members a Joint Committee, which might conveniently be seven in number, and that each Local Legislative Council should be asked to constitute a similar body. The Indian side of the Conference would consist, when Central subjects were being dealt with, of those first named; in a province, the Indian wing would primarily consist of provincial members, but, in order that the Central Joint Committee may not have a partial view of the material put before it, we should be glad if arrangements could be arrived at which would enable its members, or some of them, to be present as an additional element at provincial sittings.

"We have no wish to dictate the composition of the Indian wing of the Conference in more detail, and we should greatly prefer that precise scheme should be reached by agreement between the different elements in India concerned. Our main object will be met so long as arrangement is one which secures that the Indian side of the Joint Conference includes, on appropriate occasions, those who are able to speak for Provincial Councils just as the Joint Committee would speak for the Central Legislature, so long as members representing India and sitting with us do not amount to an unwieldy number. We assume, of course, that just as we ourselves are a body selected from all the British parties and both Houses of Parliament, so our Indian counterpart would be, so far as may be, truly representative.

"Two matters remain to be dealt with—the question of evidence other than that above referred to, and the question of Report. I wish to deal candidly and clearly with both.

"Some of us have had considerable experience of the method of joint conference as applied both to industrial and political questions, and it is quite clear to us that each side of the Conference will require from time to time to meet by itself. We see no reason, however, why evidence from public and representative bodies and from individuals should not normally be given to the Conference as a whole, just as evidence presented by or on behalf of various Governments would be. If a case arises when this general plan cannot be followed, I should make no secret of it, and should ask my colleagues in Joint Conference, when, as I hope, they learn to have faith in my sense of fairness, to accept from me such account of the matter as I can give them on behalf of the Commission, with due regard to the reason why testimony has been separately received. I imagine that the Indian side may find occasions when they would think it well to act in the same way.

"As regards report it is, I feel, necessary to restate the true function of the Commission and its place in general scheme which you announced last November. The Commission is in no sense an instrument either of the Government of India or of the British Government, and enters on duty laid upon it by the King-Emperor as a complete independent and unfettered body composed of Members of Parliament who approach Indian legislators as colleagues. It is not an executive or legislating body authorised to pronounce decisions about the future of government of India. Before these decisions can be reached, full process, of which present investigation is a first step, must be completed, including opportunity for views of the Indian Legislature among other bodies being presented by the delegations in London to the Joint Parliamentary Committee. The present Commission is only authorised to report and to make recommendations, and in this report we desire to include a faithful account of the opinions and aspirations prevalent in India, and of concrete proposals for constitutional reform as far as they are put before us. The British Commissioners therefore are bound to be solely responsible for the statement of the effect upon their own minds of the investigation. We shall report to the authority by which we have been constituted just as (if the Conference is set up) the Joint Committee would, we presume, be entitled to report its conclusions to the Central Legislature. It is obvious that these documents should be prepared and presented simultaneously. There are well-known constitutional means by which documents emanating from Joint Committee and presented to the Central Legislature can be forwarded to and made available to British Parliament. But if the Indian Joint Committee would prefer it, we would make its report an annexe to our own documents, so that both might be presented to the King-Emperor and made public at the same moment.

"Above all, I would urge that one of the merits of the method of Joint Conference is that, besides securing due recognition of equal status, it provides the opportunity for that free exchange of views and mutual influence which are best calculated to promote the largest measure of agreement that is possible.

"Our present visit is preliminary, and sittings of the Joint Free Conference, if it is set up, would not begin till October. But we make public our suggestions at once, not only in order to clear the air, but in order to show ourselves available for any conference about any matters of procedure which this statement does not adequately cover.

"The Commission is, of course, bound to carry through its task in any event and discharge to the full the duty cast upon it, but we are undertaking this duty only after having made it known that the method of collaboration on honourable and equal terms is open, and that we put it forward in all sincerity and good will. We will only add that in making these proposals we are confident that we are correctly interpreting the intentions of the British Parliament.

"The carrying out of our proposals will require at a later date that the Council of State, the Legislative Assembly, and the local Legisaltive Councils should be moved to elect their representatives who would take part in the Joint Conference, and the Commission will be glad if the Government of India will take such steps as seem appropriate for this purpose in due course."

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The Ottoman Debt Negotiations.

The position with regard to the Ottoman Debt negotiations continues unfortunately to remain obscure. The irony of the situation is that it is now not Turkey who is responsible for the delay in achieving a final settlement; on the contrary Angora is anxious to get this question out of the way so that the path may be clear for negotiations for the loan of which the country is in need. The obstacle is now of a political nature. France for reasons of her own is desirous that her representation on the Debt Council should be increased to four members, urging in support of this view the point that the bulk of the bonds are held in France. Even if it be granted that French interests now predominate in the bonds it is difficult to see what practical advantage can be gained by increased representation on the Council. At the time of the Decree of Muharrem British interests predominated, but we did not ask for proportionate representation on the Council. To demand anything of the kind would indeed seem to be an indefensible departure, seeing that the ownership of the bonds is constantly fluctuating. If it were allowed, in fact, it would entail frequent changes in the Council. However it is a point which France, probably because she wishes to establish her importance in the eyes of the Turks with a view to future developments, takes very much to heart, and she has gone so far as to make an official *démarche* on the subject, couched, it is understood, in extremely plain language. The complaint on the part of France that the British and Italian representatives initiated negotiations with Angora without the knowledge of the French bondholders must be interpreted in the light of the French attitude. It is to be hoped that a settlement of the question of the Debt Council satisfactory to all the countries interested will be arrived at, for the last thing to be desired is an agreement which will make the Council simply the scene of national rivalries.

A Yugoslav Loan.

It appears probable now that the next Near East loan to be issued here will be one for Yugoslavia. Details are now available of a preliminary agreement for a loan of the large amount of £50,000,000 made with a group of London and New York bankers comprising Messrs N. M. Rothschild and Sons, Baring Bros, Hambros, and Henry Schroeder and Co., of London, and Messrs. Kuhn Loeb and Co., Blair and Co., and the Chase National Bank, of New York. Naturally such a large loan is not to be issued all at once, and it is understood that the first instalment will be £12,000,000, and that it will be secured on the surplus of the receipts allocated in respect of the Blair Loan. In this connexion it is reported that Blair and Co. have agreed to the annulment of their loan of 1922, the unissued balance of which amounts to £13,000,000. The proceeds of the forthcoming loan, which will very possibly not be issued until it has received the approval of the League of Nations, is to be utilised for works of development, notably the railway to the Adriatic.

Credit Insurance.

At the meeting of the Trade Indemnity Company, a report of which will be found elsewhere in these columns, Mr. C. E. Heath gave some interesting details of the year's working which make it clear that credit insurance continues steadily to make progress in this country. The underwriting profit for 1926 was just over £20,000 as compared with £12,500 for 1925, and Mr. Heath explained that the effect of the strikes, though they occurred in 1926, was felt more on the policies of the previous year. The premium income in 1926 represented a turnover of about £15,000,000, whereas the corresponding turnover for last year was about £20,000,000, so that, as Mr. Heath pointed out, the company's operations can be said to have been of increasing value to the trade of the country. It is a significant fact that owing to the improvement in conditions abroad the company was able last year to lower its rate of premium, bringing the average premium materially below the one per cent. basis which represented the normal rate a few years ago. As indicating the progress of the company, it may be pointed out that for every five policies issued in 1926 six were issued in 1927, while for the present year, so far as it has gone, progress has been satisfactory. It is interesting to note that credit insurance is making headway abroad, particularly in France and Italy, and that the International Congress of Credit Insurers, which was held last year in London, is to be followed in April by a similar meeting in Paris. These meetings will no doubt do much to further the business of credit insurance at this stage of its development.

Palestine and Syria.

The interdependence of markets in the Near East has been well illustrated in the last year or so in the case of

Palestine which has been seriously affected by the economic depression in Egypt, one of the country's main outlets. From its position and the nature of its products Palestine is bound to be particularly sensitive to any changes affecting the neighbouring markets, and it is therefore not a matter of surprise that a proposed change in the trade agreement with Syria, another very important outlet, should, have occasioned considerable anxiety. Free trade has existed between the two countries in local products, a state of things from which both have benefited, but it is alleged that there has been a pronounced tendency for the Syrian exports to be swollen by foreign textiles which have purported to be of local origin. Hence the original proposal that goods which contained 25 per cent. of local raw material should be regarded as local products and admitted free into both countries. As raw materials are imported into Palestine and are made up there the effect of this proposal on the country's trade would naturally have been marked, hence the opposition to it. The new proposal is that commodities 25 per cent. of the value of which is represented by local materials and local labour shall be deemed to be local products. From the Palestinian point of view the new proposal is better than the old one, though it is bound to have its effect on trade, and seems to introduce unnecessary complications into commerce. The most satisfactory outcome would be to leave the *status quo* untouched, for there is no doubt that anything which interferes with free commercial intercourse in the case of countries at the commencement of their development must be particularly harmful. The fact that the responsibility for the change, if it be found necessary, must rest with the French who have taken an unfair advantage of the lack of Customs barriers to introduce their textiles into Palestine, will be small consolation to Palestinians faced with a diminished market for their products.

The British Industries Fair.

Within a few days the British Industries Fair will open its doors at the White City and at Birmingham. It is no exaggeration to say that it will be held on this occasion in the most promising conditions that have obtained since the Fair was inaugurated. Abroad the position in the majority of countries is steadily becoming more favourable, and this is the case particularly throughout the Near East, where the countries are now devoting themselves to the work of reconstruction. Hence there is a certain amount of justifiable optimism as to the trade outlook, for the movement towards the normal abroad indicates more orders for this country, and already, except for the cotton, iron and steel, and coal industries, the position is much better than it has been for some time. In the circumstances it is reasonable to anticipate that the Fair will give valuable assistance to the trade revival in this country, as buyers are coming in large numbers from abroad and it is known that there has never been more interest displayed in foreign countries in this event than on this occasion. An indication of this is to be found in the publication by a foreign newspaper of a special suppliement devoted to the Fair.

The Rubber Outlook.

I had not intended to touch on the rubber position this week despite the market vicissitudes of the past few days, but a Manchester correspondent asks me to deal with the situation in the light of its latest developments, and with some reluctance, therefore, I return to an arena which seems to grow steadily more dangerous for the prophets. It is evident now that the worst effects of the untimely announcement by the Government of an inquiry into the workings of the restriction scheme have been seen; it is equally certain that settled market conditions are unlikely until the outcome of the inquiry is known. There is not much point now in asking why the announcement of an inquiry could not have been made in a proper manner, and why, seeing that a statement had to be made with regard to the current quarter, the two announcements could not have been combined as would have been the practice of a business organisation. It is the future alone that is of vital import to shareholders whose attitude is no doubt represented by the inquiry of my correspondent as to the outlook for the industry. As readers of my comments will have gathered, my view has been that the restriction scheme would justify itself this year, and developments since the end of October have supported that view. With the exception of the few weeks after Christmas the tendency has been for the London stocks to fall, and just when the curve of stocks is again turning downward there comes the announcement of this inquiry. I do not propose at this juncture to deal with the immediate course of the rubber market—I shall have occasion to return to the subject in a month or so—but I would advise shareholders, failing a revival in prices, to keep their holdings. The point I wish to emphasise now is that this inquiry brings us face to face with the prospect of the abandonment of restriction at an early date—let us assume in 1929. That must entail, whatever happens in the meantime, low prices for rubber and a poor time for the companies, but while that is the outlook my advice to those interested in the market is to hold on and if the abandonment of restriction results in a slump to take advantage of the situation by averaging at the low prices with a view to the recovery that is inevitable even if it is a matter of a few years.

COMMENTATOR.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

Engineering Topics.

By G. B. B.

The increased activity in British trade has extended to the engineering industry, greatly to the relief of some of the larger firms who were beginning to display anxiety for orders. Cammell, Laird and Co., Ltd., one of the most progressive concerns in the British engineering world have secured an order for 1,500 all-steel bogie wagons for the Central Argentine Railway. These are to be built at the Nottingham works of the company and whilst 750 of the wagons will be of the high sided open type, the others will be covered. The Great Western Railway have recently placed a large order for lorries which are to be built by Thornycrofts, at Basingtoke, and the London and North Eastern Railway have ordered 700 sets of wagon ironwork from Craven's Railway Wagon and Carriage Co., Ltd., of Sheffield, and the Midland Railway Wagon and Carriage Co., Ltd., which is controlled by Cammell, Laird. These orders in themselves mean a large amount of work, but as they have been supplemented by others almost as large, that particular section of the engineering industry which deals with railway rolling stock will be really busy, for a change, during the next few months.

Amongst these supplementary orders I may mention about 700 open spoke and nearly 7,000 disc type railway wagon wheels and axles which have been ordered by the London and North-Eastern Railway, the orders being divided up between the Leeds Wheel and Axle Co., John Baker and Co., of Rotherham, and the Newley Wheel Co. The Great Southern Railways of Ireland have also placed a substantial order for steam railway coaches with Clayton Wagons, Ltd., the well-known Lincoln firm.

Waste is deplored, so we are told, by all right-minded people, but from what I can gather, there is a feeling in responsible shipbuilding circles that what the ordinary man would call "grievous waste" may yet be to the benefit of all concerned. Mr. J. T. Batey, who is the President of the Shipbuilding Employers' Federation, threw out the suggestion and his idea has been rather well received. It is, in effect, that British ship-owners should come to some mutual arrangement regarding compensation and then set to work to scrap old ships, which still had plenty of use in them, but which were not economically workable, instead of selling them to foreign buyers, who would use them to compete against us and so to bring down freights. It is an idea that might be closely examined, to make certain that it is sound, and if it were found to be so it might be extended in many other directions.

Electricity from Tidal Waters.

The belief in the possibility of obtaining vast quantities of cheap electric power from tidal waters by means of barrages still survives in many circles. The Exe Power Experimental Association have held a conference at Exmouth, to discuss the possibilities of harnessing the waters of the Exe Estuary, and "funds are needed to demonstrate whether power can be supplied from turbines placed in positions where they will not interfere with navigation.

As it happens, I can give the answer without the slightest hesitation, as it was once my far from arduous task to go very closely into the pros and cons of the immense and chimerical project, the Severn barrage. The answer is that it is a simple matter, comparatively speaking to generate electricity, by means of turbines, in practically any tidal waters. It is equally impossible, in the present state of our knowledge, to transmit that power economically over any appreciable distance. That's all. The power can be generated, but nothing, on an economical scale, can be done with it when it is generated.

The Sukkur Barrage.

Whilst on the subject of engineering activity, reference is called for to the contract received by Messrs. Ransomes and Rapier, Ltd., of Ipswich for the big sluice gates for the Sukkur barrage, which is to be built across the Indus. This, baldly so stated, does not sound of great importance, but actually the barrage will be the largest work of its kind in the world. It will have sixty-six spans and each of these will be fitted with a Ransomes and Rapier "Stoney" gate, 10 ft. 6 in. deep by 60 ft. wide. The magnitude of the order can easily be imagined when it is mentioned that each gate will be built to withstand a working water load of over 300 tons. The gates will all be counterbalanced, for lifting, by means of concrete blocks, and each gate, which will be suspended by steel ropes, will weigh 40 tons. The raising and lowering of the gates will be by means of spur gearing actuated by electric winches with an alternative hand-operating gearing. The whole of the metal work, including the gates, the rollers, the operating mechanism and the fixed parts which are to be attached to the masonry will be made by the firm at their Ipswich works.

Major-General Sir James Maher, K.C.M.G., C.B., of The Moorings, Boundary Road, Worthing, formerly Director of Medical Services in Egypt, who died on January 7, aged 69, left estate of the gross value of £10,039, with net personalty £8,685.

Yugoslavia's exports in 1927 amounted to 4,251,450 tons of the value of 6,400,000,000 dinars as compared with 4,904,709 tons of the value of 7,828,000,000 dinars for 1926. There was thus a decline of 1,428 million dinars in the value of the exports.

POSTAGE STAMPS
AT AUCTION

We shall be pleased to give free advice and valuations to vendors of stamp collections, stamped letters, etc., desiring to realise.

Next Sales:
Feb. 27th, Mar. 5th, 12th, 19th, 26th
At 2.30 p.m.

Serious collectors will find our auctions the most satisfactory method of completing their collections.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Steel Bars, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for 5,730 kilos cast tool steel bars, round, square, flat, octagon and hexagon, of different dimensions, and for two double and two single legged sling chains for crane to drawing. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Coal.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 340,000 metrical tons of colliery screened Welsh steam coal. March 6.

Stationery.—The General Management, Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of stationery articles for 1928-1929. Approximate cost £E4,000 to £E6,000. April 19.

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of linen for schools, comprising tulle for mosquito-nets, bed sheets, towels, napkins, blankets; table materials comprising metal spoons, forks and knives, china plates, salt cellars, glass and aluminium tumblers, copper dishes and articles for cleaning comprising canvas cloth, liquid metal polish, carbolic soap, bag blue, e c., required for the schools during the school year 1928-1929. March 28.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year commencing on May 1, 1928. March 29.

Clothing, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of clothing required during the year 1928-1929 (March 29), and for the supply of bunting, ropes, canvas, hose, etc., required during the year 1928-1929. April 9.

Proprietary Articles, Etc.—The Department of Public Health, Cairo, invites tenders for supplies for the year commencing May 1, 1928, to end April 30, 1929, as follows:—(a) Proprietary articles; (b) sundries (including bottles and jars, filter paper, medicated soaps, etc.); (c) dressings; (d) drugs and chemicals; (e) galenicals and packed articles. March 29. (D.O.T.)

Wood Naphtha.—The Egyptian Customs Administration invites tenders for the supply of 150,000 kilos of wood naphtha. February 29. (D.O.T.)

Pure Alcohol, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of pure alcohol, medical brandy and rum, sherry wine and malaga wine required for the period of one year commencing on May 1, 1928 (March 28); and for the supply of drugs required for the period of one year commencing on May 1, 1928. March 29.

Various.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of materials and metals required by the Government Press during the year 1928-1929. March 29.

Tin Sheets, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for (1) 4,450 tin sheets double of six sizes different and 42,000 tin sheets single 17 in. by 13 in., (2) 10 copper sheets 6 ft. 2 in. by 5 ft. 2½ in. by ½ in., (3) 43,000 kilos open hearth steel plates, equal angles and flat bars to specification, (4) 10,800 kilos bolts and nuts black, hex. heads and nuts, standard Whitworth thread of different dimensions, (5) telegraph and telephone materials at an approximate cost of between £E2,800 and £E3,200, (6) 300 white metal die cast bushes for metallic packing 3½ in by 1¾ in. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Shipping Intelligence.

ROUMANIA'S SHIPPING PROGRAMME.

Some time ago the Roumanian Government appointed a Commission to inquire into the question of reorganisation of the two State river and maritime shipping companies. The Commission has now reported to the effect that new vessels are urgently required for the development of the country. It is understood that the Government has now approved of the construction or purchase of a number of vessels, including two passenger steamers of 700 h.p. each, without cabins, for traffic between Braila, Galatz, and Sulina; two passenger steamers of 800 h.p., with cabins, for service between Galatz and Turnu Severin; two paddle steamers of 700 h.p., with cabins, for service on the Danube; two tugs of 450 h.p. each; four tankers with a capacity of 60 wagons each; and 20 tugs. It is proposed also to order five new vessels of 6,000 tons each and a minimum speed of 10 knots, and three new passenger steamers for the Constantza-Constantinople-Piræus-Alexandria and the Constantza-Constantinople-Jaffa-Haifa lines adequate for the demands of the service. The cost of the whole scheme is estimated at over 1,000,000,000 lei.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, February 21).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 22).

British India Line.—S.s. Madura for Colombo, Madras, and Calcutta (London, February 23); s.s. Mundra for Bombay and Karachi (London, March 3).

Cunard Line.—S.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool March 3, and Swansea March 6); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, March 24).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 25); s.s. Jessmore for Galatz and Braila only (Liverpool, March 10).

P. and O. Line.—S.s. Ranpura for Bombay (London, February 17); s.s. Padua for Colombo, Madras, and Calcutta (London, March 3).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, February 25); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, February 28).

Ellerman and Papayanni Lines.—S.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool February 18, Swansea February 23); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 25); s.s. Algerian for Gibraltar, Algiers, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 3, Swansea* March 3. * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Vickers-Armstrongs have received an order for four "O" Class submarines for the British Admiralty.

Roumania's Customs receipts for the first eleven months of 1927 amounted to 6,199,904,884 lei on imports, 2,190,702,261 lei on exports, and 323,986,816 lei from other sources, the total being 8,713,783,962 lei as against 8,039,679,314 for the corresponding period of 1926.

A Palestine Government Notice announces that the following articles have been added to the list of goods exempted from payment of Customs duty under the provision of the Customs Duties Exemption Ordinance, 1924, viz.:—Spare parts of the running gear of the coaches of the International Sleeping Car and European Express Company, and all classes of animals.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 14.

The stock markets have enjoyed a more active week, there having been a distinct recrudescence of activity in the industrial sections. The gilt-edged market still displays a halting tendency owing to the uncertainty of the monetary outlook, but there has been no marked relapse in prices. Two of the home railways have announced their dividends. The London, Midland and Scottish pays 4¾ per cent. on its ordinary stock for the year, as against 3 per cent. a year ago and 6 per cent. for 1925, while the Southern pays 2 per cent. on its deferred ordinary stock against 1¼ per cent. a year ago and 3½ per cent. for 1925. In neither case was any withdrawal from reserves necessary to pay these dividends, this being the first time for several years that the companies have earned as much as they have distributed, a fact which is not lost sight of in the home railway market, which marked up prices a little after the declarations. It is obvious, indeed, that both companies have been able to achieve substantial economies in working expenses. The Great Western and London and North Eastern dividend announcements are due on the 15th and 17th respectively. We refer below to the heavy slump in rubber share prices which followed the announcement that a Government Committee is to consider the restriction scheme.

The Rubber Inquiry.

The holders of rubber shares may have been disturbed by the events of this week, but we do not see any grounds for anxiety. The Prime Minister has asked the Committee of Civil Research to consider the effects of the rubber restriction scheme and to consider the question whether the restriction should be continued in its present form, modified or removed and to submit recommendations. This announcement was followed by a fall of 2d. per lb. in the price of the commodity and rubber shares were dealt in with great difficulty, even at substantially reduced prices. It is most difficult to find the justification for this attack of "nerves." There is an increasing body of opinion in the industry which believes—and with good reason—that the restriction scheme has failed. The inquiry, therefore, cannot be regarded as inopportune. Nor can the competence of the investigating body be readily questioned, and, this being so, it is inconceivable that it would recommend such an ending of the restriction scheme as would be disastrous to the industry. In short, it seems likely that, taking the long view, the shareholder stands to gain rather than lose by the inquiry. The Rubber Growers' Association, indeed, shows the right spirit in welcoming the investigation and offering every assistance. The shareholder should possess his soul in patience until the Government has received the report and announced its policy.

Prosperous London Stores.

Apparently the London stores had a more favourable year in 1927 than in the preceding twelve months. The first two companies to publish their results—namely, Dickens and Jones and Harrods—both show higher earnings and increase their dividend distributions. Harrods, in fact, return "record" profits, the figure being £726,007, against £705,958; the ordinary dividend is raised from 18½ per cent. to 20 per cent. But even on the basis of the 20 per cent. dividend the shares return no more than approximately £5 per cent., thus clearly pointing to expectations of a further windfall. These expectations are probably well-founded, for last year the company made a large profit on the sale of the business of Swan and Edgar. The profits of Dickens and Jones, which is controlled by Harrods, rose from £110,233 to £123,133. Though the ordinary shares are not available for the investor, the company provides excellent prior charge investments. Thus the 6 per cent. first mortgage debentures yield £5 16s., while the 5½ per cent. cumulative preference shares return £6 13s. per cent. The ordinary shares of a number of the big stores appreciably discount the future and there is undoubtedly considerable confidence in the future of these undertakings. This confidence was further demonstrated this week by the heavy over-subscription of the new capital issue made by Debenhams Securities. Among the more attractive of the moderately-valued ordinary shares are John Barkers, yielding £5 16s. per cent.

The Dealings in Daggafonteins.

The outstanding feature of the Kaffir Market just lately has consisted in the activity in the shares and options of the reorganised Daggafontein Mines. It may be recalled that the capital was scaled down by nine-tenths; additional ground was secured; and fresh working capital was provided by an issue of 205,185 shares at par. The subscribers of these shares, the guarantors and the other allottees of the new capital, received an option upon a corresponding number of shares at par for a period of three years. The property of the Daggafontein, of course, adjoins that of the prosperous Springs Company, from whose area two drives have been extended into Daggafontein ground. Results of the small amount of work performed here during the December quarter proved moderately encouraging. On the strength of this—and possibly of information not yet available to the general body of shareholders—the shares have been put to a premium and the options run up to over 9s. Undoubtedly, much may happen in three years. But the company has a long row to hoe. Speculators should not forget the experience of the Geduld East, where drives continued from Geduld Proprietary have not maintained their original promise.

EMPIRE COTTON GROWING CORPORATION.

Prospects in the Sudan.

A meeting of the Administrative Council of the Corporation was held in London on February 9. The Chair was taken by the President, Lord Derby.

The quarterly report of the Executive Committee was received and adopted. In presenting the report, Lord Derby, in dealing with the crop prospects for the current year, said that it looked as if the Gezira were again to be favoured with an excellent harvest. All concerned, however, realised that that area presented problems which, though successfully surmounted up to the present, afforded much food for thought and study.

Some modifications had been made in the constitution of the London Supervisory Committee which co-ordinated agricultural research work in the Gezira. Their Director continued as Chairman. The other members were Lord Lovat, Mr. Arthur Huddleston, who took Sir George Schuster's place, Major Archibald and Mr. Hewison, representing the Sudan Government. The technical side of the Committee had been considerably strengthened by the addition of representatives from Cambridge, from Rothamsted, and from the Imperial Bureau of Mycology. Under the ægis of that Committee some remarkable work, work that was probably unique in the sphere of tropical irrigation, had been carried out. The Sudan Government, he was glad to say, was having a collection of its reports published.

He felt bound to allude to the great loss that cotton growing and, he would add, social and material progress in the Sudan had suffered from the retirement of Sir George Schuster from Sudan Administration. Their Corporation owed him a great debt. They wished him all good fortune in the great office he would shortly assume, that of Financial Member of the Viceroy's Council, and they hoped that it might be possible for him to establish some points of personal contact with the immense irrigation projects which the next few years would see established in India.

The foundations of rainfall cotton growing in the Sudan were being well and truly laid. The new Governor-General, Sir John Maffey, said something about them in his first annual report, which some of them might have seen. A rainfall somewhat under the average might militate against a big crop this year, but given a continuation of that good administration which was the Sudan's birthright, a very bright future was assured.

Lord Derby, in conclusion, made a powerful appeal to the cotton trade of Lancashire to support the Bill which would be introduced into the present session of Parliament for the renewal of the Cotton Industry Act, which provides for the Spinners' Levy, from which the greater part of the Corporation's funds is drawn.

The following extracts are taken from the report :—

It will be remembered that the London Supervisory Committee which co-ordinates agricultural research work in the Gezira is composed at present of Lord Lovat, representing the Sudan Plantations Syndicate, Sir George Schuster, Major Archibald and Mr. Hewison, representing the Sudan Government, with the Director of the Corporation as Chairman. At their last meeting, on the suggestion of Sir George Schuster, it was decided to strengthen the technical side of the Committee by the addition of Mr. Engledow, of the School of Agriculture, Cambridge; Dr. Butler, of the Imperial Bureau of Mycology; and Dr. Crowther of Rothamsted, who through the assistance of the Corporation was enabled a short while ago to spend some months on soil investigations at the Gezira Research Farm. The Supervisory Committee were greatly impressed by the able reports submitted to them detailing the work of the past year, and the Sudan Government have decided to print the reports in full for general circulation.

While problems connected with the Gezira soil and conditions still present many difficulties, it is satisfactory to be able to record that the research work has advanced considerably since the formation of the co-ordinating committee. The work that has been done attracted considerable notice at the recent Imperial Agricultural Research Conference, and the claims of the Gezira Research Station to be converted into a Central Station for dealing with irrigation problems generally, under the proposal for the establishment of a chain of research stations in different parts of the Empire, were referred by the Conference to a sub-committee for consideration.

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report of the Imperial Bank of India for the half-year ended December 31, 1927, states that the half-year opened with the Bank Rate standing at 5 per cent. but monetary conditions becoming easier it was reduced to 4 per cent. on July 28. From August 9 onwards the Government's issue of Treasury Bills helped to absorb floating supplies of money, and with a fair demand on jute account setting in towards the beginning of September, the Bank Rate was raised to 5 per cent. on the 8th of that month. Towards the end of November demand on cotton account began to be felt and the Bank Rate was accordingly raised to 6 per cent. on December 8 and the bank's cash resources were strengthened by borrowing Rs. 1 crore from the Paper Currency Department against Trade Bills on the 16th idem. Demand continued to strengthen throughout December, necessitating a further borrowing of Rs. 3 crores on the 21st of that month: the Bank Rate being raised to 7 per cent. the following day. The half-year closed with money in strong demand. The average rate for the half-year was 4.956 as against 4 per cent. for the corresponding period of 1926. The net profit of the bank for the half-year amounted to Rs. 34,81,731-11-0 which, with Rs. 30,14,831-2-5 brought forward from the half-year ended June 30, 1927, made a total of Rs. 64,96,562-13-5. This amount the Governors of the Bank disposed of as follows :—(1) In payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income-tax, Rs. 45,00,000; (2) transferred to reserve fund, Rs. 5,00,000; (3) transferred to pension funds, Rs. 3,40,000; (4) carried forward to the profit and loss account of the current half-year, Rs. 11,56,562-13-5; total, Rs. 64,96,562-13-5.

The commercial treaty concluded between Belgium and Yugoslavia comes into force this month.

The Greek Government has under consideration offers from various foreign concerns for draining the valley of the Struma and the plain of Kavalla and Thessaly.

The directors of the Manchester Ship Canal propose a dividend of 5 per cent. on the ordinary shares, placing £25,000 to reserve for contingencies and carrying forward £29,043.

The Yugoslav Budget estimates for the year 1928-1929 are as follows:—State expenditure and revenue show total expenditure 7,497,942,000 dinars, and receipts 7,460,942,000 dinars, leaving a deficit of 37,000,000 dinars.

It is officially announced that a fusion of interests has been arranged between Messrs. Thomas Cook and Son and its associated companies, including Thomas Cook and Son (Bankers) and the Compagnie Internationale des Wagons-Lits and des Grands Express Européens.

Near East Markets

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that shipments of Jaffa oranges now on the way total some 180,000 boxes. It is estimated that over 70 per cent. of the season's total exports have already been shipped.

Total shipments to United Kingdom ports up to February 2 amounted to 905,412 boxes as compared with 928,390 boxes at the corresponding date last year. Shipments to all destinations amount to 952,912 boxes as compared with 937,390 boxes. This year's figures do not include transhipments, and it is reported that the addition of these would bring this season's total to over one million boxes, out of a total for the season estimated at about 1,400,000 boxes. Last season at this date little more than one-half the whole season's exports had been shipped.

NEAR EAST MARKET REPORTS.

The Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

The optimistic feeling which prevailed during the latter part of October last, when there seemed to be some definite prospect of a trade revival, was not justified by events. The previous cotton production estimates had subsequently to be increased, and with the demand from abroad running on quiet lines, there has been a gradual decline in quotations. During the earlier part of the season, owing to the remunerative prices then ruling, business was brisk in the interior and cotton was rushed to Alexandria for sale. The demand from abroad, however, was of a very restricted character and as the daily sales were far from keeping pace with arrivals, a very large stock of 3¼ million kantars was accumulated. Merchants, cultivators, and other holders who were unable to find a ready market for their cotton, sold contracts against a large part of their holdings. These contracts, for the greater part, were taken up by speculative interests and a "bull" position of considerable proportions was established. Hopes of a renewal of demand on a much broader scale formed the basis of the speculative buying movement, which has been the main support of the market.

Business in Manchester goods has not been so good as was anticipated early in the season, but prices have been very steady during what may be considered a dull period. Merchants have been working to a greater extent on a commission basis with home suppliers, and in certain quarters there has been a diminishing tendency to harbour large stocks. Seasonal demands, however, have caused an increase of stocks at the bonded stores, and the gradual elimination of old stocks has been proceeding, thus engendering a greater feeling of confidence in the market generally.

In Colonial produce, Egyptian crops of wheat, maize, and rice have been exceptionally good and in great demand, with the result that importation has suffered. The good crop of Egyptian rice has lessened the usual demand for Burma supplies, and shipments have been made to the Balkan States. Maize has been exported in large quantities. Owing to considerable stocks of flour, the demand for foreign supplies has been small, and exports are being made to the Greek Islands and Syria. The market in gunnies has been bad generally, but there has been a constant demand for onion bags, owing to the good crops of onions in Upper Egypt.

The Sudan.

The situation in the Sudan has shrown a very decided improvement during the last three months. The expectations of a good dura crop have been realised, and the estimate for Blue Nile, White Nile, and Fung provinces amounts to 168,000 tons, but it is unlikely that export will be permitted, as the past two lean years have emphasised the danger of allowing stocks to become low. It is expected that there will be a large increase in the export of this article in future years, as the Gedaref Railway will open a very fertile area and, with improved transport facilities, dura growing for export should be profitable. The Government is encouraging as much cultivation of dura as possible, in order to minimise the risk of a recurrence of famine prices. The increased supplies of this commodity have been reflected in the groundnuts crop, which is estimated at the most to amount to about 1,000 tons only. The sesame crop, however, is estimated at 13,000 tons, a figure which is considered satisfactory.

Cotton prospects are good. The Gezira crop is healthy and the previous estimate of 424,000 kantars is likely to be maintained. Tokar crops are very satisfactory, and the estimates have increased from 38,000 to 53,000 kantars. Boll worm is reported from Shendi and northwards, but it is stated that private cultivations around Khartoum are free from the pest. The total estimated crop is Sakel 140,000 bales and American 21,000 bales, of 400 lb. each.

The import market is showing signs of improvement, but the progress is less than was expected. About £E100,000 per month is paid out to the natives working in the Gezira, but nothing like this sum reaches the local markets, although business in Medani is undoubtedly increasing. There is evidence of an improved standard of living in the Gezira area, although it appears likely that the additional wealth is being spent largely on cattle and so does not find its way back to the local markets, but into the interior. The prospects for the import market are, however, encouraging and the local situation, as a whole, is hopeful.

The railway is being extended from Kassala to Gedaref and there is every probability that the connexion between Gedaref and Makwar will be completed by the end of 1929. It is thought that the present line from El-Obeid to Port Sudan, passing through the Gezira, will be seriously overcrowded before the new line is available, but eventually the latter should enable the gum and other traffic from El-Obeid to be railed to the Port, without interfering with the Blue Nile cotton. The new route will open up a very fertile area, and increased production of dura, gum, and sesame should result.

Palestine.

The success of the Palestine Loan has revived the hope of an early commencement upon the Haifa Harbour works and Government buildings, and such operations should assist considerably in the alleviation of the present state of unemployment.

Import and export statistics now available show that imports for the first half of 1927 amounted to £E2,994,106, a decrease of £E274,989, compared with the corresponding period of 1926. This decline is chiefly due to the stoppage of immigration and to general economic depression. Exports in the first half of 1927 amounted to £E1,046,657, representing an increase of £E368,310, mainly owing to larger exports of oranges and soap. Exports of oranges this season have so far totalled 559,500 cases, of which 504,000 cases have been dispatched to the United Kingdom, while a new feature is the shipment of consignments to Germany and Holland, to which countries 55,000 cases have, up to the present, been sent. Prices obtained in England have usually ranged between 12s. 6d. and 14s. 6d., but recently sales at from 16s. to 18s. per case have been reported, these prices being considered very satisfactory.

The figures of Government finances for the last seven years show a marked upward tendency, and revenue has increased by 75 per cent. during the years 1924 to 1926. The Government returns as at January 1, 1928, showed an accumulated surplus of £E1,404,724, whereas on April 1, 1922, the surplus was only £E313,565.

The production of the Anglo-Egyptian Oilfields for the week ended February 3 amounted to 4,331 tons.

The production of the Dacia Romano Petroleum Syndicate for January amounted to 2,107 tons.

The net profits of the National Bank of Roumania for 1927 amounted to 199,427,713 lei as compared with 157,814,463 lei for 1926, and the proposed dividend is 440 lei as against 388 lei for the previous year.

The traffic receipts of the South India Railway Company for the week ended January 14 amounted to Rs.11,31,872, making the total from April 1 Rs.4,88,55,531. For the corresponding periods of the previous twelve months the totals were Rs.10,14,232 and Rs.4,63,98,857.

Company Meetings.

TRADE INDEMNITY COMPANY.

Increased Underwriting Profit.

Mr. C. E. Heath's Speech.

The tenth ordinary general meeting of the Trade Indemnity Company, Ltd., was held on February 8 at the Cannon Street Hotel, E.C. Mr. C. E. Heath, O.B.E. (chairman of the company), presided.

The Secretary (Lord Francis Hill) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—Last year, when I had the pleasure of addressing you, I said that we hoped, in spite of strikes, to present you with a fair report of the results of 1926 underwriting. Those are now before you.

If you by any chance have brought with you last year's accounts, you will see that the underwriting profit for 1925 was just over £12,500. For 1926 it was just over £20,000. It was explained at the time that the effect of the strikes, though they occurred in 1926, was felt more on the policies written in 1925. This is easily explainable by the fact that a very large amount of the 1925 risks expired in 1926, and so came in for the hurricane.

The year 1926, as you will also see, has reaped the benefit of the improvement in trade which followed the strikes. During 1927 we have received nearly £8,000 in additional premiums and so on in respect of 1926 policies. During 1926, so far from receiving additional premiums, we actually had to make returns of £240 on 1925 business. This fact alone largely accounts for the improvement in our figures.

Although we are now dealing with 1926 figures, you will quite understand that we have not yet dealt with all the claims which have arisen in respect to the policies of that year. We know what losses have occurred, but are not able to tell exactly what they will cost. Mr. Spain has, however, given a very full estimate of what the final amount will be, and has reserved £33,000 for the unsettled losses on 1926 and previous years.

The exact underwriting profit is £20,186 for 1926, against £12,582 for 1925. To this has to be added interest on investments £17,763 (£1,000 more than last year), and the amount brought forward, £7,052. After deducting commission and income-tax, it leaves the £39,435 to deal with, as against £29,552 this time last year, so we are just £10,000 better off.

Such being the state of affairs, we are sure you will all approve of the directors proposing a 6 per cent. dividend, as against 5 per cent. previously, and we hope that you will also approve of putting £15,000 to reserve, as against £10,000, and carrying forward £9,445, as against £7,052 last year. That deals with 1926 figures.

The Year 1927.

As regards 1927 underwriting, it is true we have made progress, but not the progress we should all like to see. I say we have made progress, though the figures do not show it. Our gross premiums are, indeed, actually down by £3,000, although our net retained premiums are practically the same.

The fact is that though up to the end of November we were well ahead of 1926, in December of 1926 there was one very large premium which did not recur in 1927. It was one of those isolated cases which crop up every two or three years. Had it not been for that, 1927 would have shown a satisfactory increase on 1926.

Apart from this exceptional addition to the premiums of 1926, another factor affecting the comparison of the premiums of 1927 with the previous year is that in consequence of the improved conditions in many countries abroad the company has been able to lower its rate of premium. This has reduced the average premium materially below the 1 per cent. basis which represented the normal rate a few years ago. In 1926 the premium income represented a turnover of about £15,000,000, whereas the smaller premium income for last year represents roughly a turnover of £20,000,000. It can, therefore, be truthfully said that our operations have been of increasing value to the trade of the country.

After all, the best test of progress is, I think, in the number of policies issued. In that respect we have nothing to complain of in that for every five policies issued in 1926 we issued six in 1927. The loss ratio on 1927 is quite normal. It is too early to say much about 1928, but, as a matter of interest, the premiums to date show a good increase over last year at the same period. There is one other satisfactory point, though it does not affect our accounts—the depreciation on our investments, which was about £5,000, has now practically disappeared. So much, gentlemen, for the accounts.

I should now like to say something about the general prospects of the business. Within the last two weeks I have had the pleasure of seeing two of our old friends from France and a new one from Italy. Credit insurance is going ahead fast in France with satisfactory results to the insurers—results in which we share. In that country the bankers have taken up the idea seriously and are finding out more and more that finance and insurance can be very usefully connected. They are making increased use of the facilities offered by credit insurance.

In Italy, after a good deal of preliminary hesitation, due probably to the want of cohesion and rivalry between different interests, I am glad to say that a strong company has been formed by the leading insurance companies and bankers for the purpose of insuring credits. As the result of a very cordial interview with its chief, we look forward with confidence to the association we shall have with this new company, not only because we shall receive re-insurance from it, but because of the advantage it will be to us in estimating Italian risks and assisting to adjust difficulties which might arise in respect of claims.

In other directions we continue to increase the number of our friends abroad. Other companies will most likely be formed, and formed as in the other cases after consultation with us, and their help will be, as in the existing cases, of the utmost value.

International Conference.

At our last general meeting we described to you the International Congress of Credit Insurers which took place in London, and which was attended, as you know, by representatives of many nationalities. This year a similar assembly will take place in April in Paris at the invitation of our French associates. We shall not only hope to cement the friendships already formed, but to add to them. Problems which have arisen will be discussed, and we anticipate that much good may come of the conference.

We have had many talks already with those responsible for the foreign credit insurance companies, and I have been very much struck with their enthusiasm and the predictions they make as to the scale of operations we may look to in the future. The time, they anticipate, may even come when, by common agreement, this band of brothers may be so powerful as to force reforms in directions where they are needed and bring very strong pressure in those places where commercial ethics are other than they ought to be.

At home we have been engaged for some time in negotiating with the banks. Our endeavour has been so to regulate our policy as to make it acceptable to the banks as security, while retaining our rights against the insured. It has been difficult, but we hope the problem has now been solved. I am very hopeful, now that the perfectly legitimate requirements of the banks have been met, that a good increase in business may result.

I, for one, have always maintained that it is for the banks to finance and that we should not encroach on their business. Our part is to take a risk and a premium for it. By making the banks safer

we can help them to help their customers, with advantage to all concerned and to the trade of the country.

The Directorate.

During the year we have had changes in our board. To our great regret Mr. Lewis, the very able manager of the Liverpool and London and Globe Insurance Company, found that he was unable to continue his valuable services to the company. The board accepted his resignation with much reluctance and thanked him for all the good work he had put in.

In Mr. Lewis's place Mr. Connew, fire manager of the Royal Exchange Assurance, has kindly consented to join the board, and I am sure you will welcome him as much as we do.

We have also received a recruit in the person of Mr. Eric Fraenkel, manager of the Anglo-International Bank. Mr. Fraenkel's knowledge of Continental affairs has already been of much use to us, and, representing as he does a large interest in our company, we feel we have had a very valuable addition to our strength.

I cannot sit down, gentlemen, without again saying how much we have been indebted to Mr. Spain and all his staff for the work they have done during last year, and very hard work it has been. (Hear, hear.) It is an anxious job this taking of risks and the strain is very great. Sometimes I think Mr. Spain is almost too cautious, but it is the worst possible policy to interfere with the man at the wheel. Certainly he has weathered many storms and brought us safely to port, and I am sure I can thank him not only in our names but in yours as well.

Mr. Herring, Mr. Patrick, and Lord Francis Hill have fully done their share. Quite apart from the ordinary routine of the office, these gentlemen have never hesitated to make suggestions for the improvement of the business, and have helped it along considerably. To these, too, I would offer our thank. (Cheers.)

I now beg to move: "That the directors' report and the statement of accounts for the year ended December 31, 1927, be and they are hereby accepted."

Mr. James Hamilton, J.P., seconded the resolution, which was carried unanimously.

The Chairman then moved:—"That a dividend of 6 per cent., subject to income-tax, on the issued capital of the company, as recommended by the directors in their report submitted to this meeting, be and is hereby declared payable to the shareholders standing on the register at this date."

Mr. A. G. M. Dickson seconded the motion, and it was unanimously approved.

Mr. Eric Fraenkel, who had been appointed a director since the last general meeting, was re-elected; the retiring directors, Mr. James Hamilton, J.P., Mr. Charles Hendry, and Mr. Henry Mann, were re-elected; Mr. Robert Connew was elected a director; and the auditors, Messrs. Deloitte, Plender, Griffiths and Co., were reappointed.

Mr. S. Gordon Clark moved a vote of thanks to the chairman and directors and to Mr. Spain and his staff, which was seconded by Mr. Ernest Stephens and was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

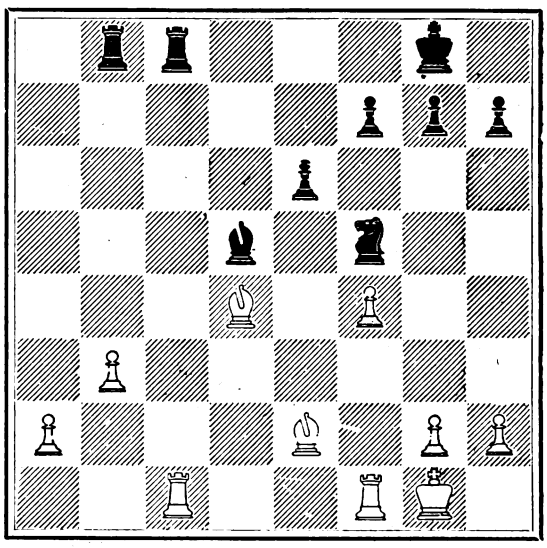
CHESS.

By "CARO-KANN."



I give this week an interesting position from a game played last week in the championship of the Metropolitan Chess Club. White, who won a pawn at the eighth move and was occupied in consequence for the next fourteen moves in evading a strong attack, is now, at the 27th move, in a position to take the offensive. Play continued as follows:—27, B—R7, R—R; 28, B—R6, RxR; 29, RxR, P—Kt3; 30, R—B7, R—Q; 31, R—B8, RxR; 32, BxR, Kt—Q3; 33, B—R6, Kt—K5; 34, B—Q4 (effectively preventing incursions with the Knight), K—B; 35, K—B, K—K2; 36, K—K2, Kt—Q3; 37, P—Kt3, Kt—Kt2; 38, K—Q3, K—Q3; 39, P—QKt4, K—B2; 40, P—QR4, P—B4; 41, P—R5, B—K5; 42, K—B3, K—Kt; 43, B—B4, B—Q4; 44, B—K5(ch), K—B; 45, BxB, PxB; 46, K—Q5, resigns.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for January was 47,800 tons.

The area sown in Roumania during the autumn of 1927 was as follows (in hectares):—Wheat, 2,824,898; rye, 253,220; colza, 32,995; barley, 109,897. The 1926 figures were as follows:—Wheat, 2,839,636; rye, 258,206; colza, 36,949; barley, 100,770.

An official circular which has just been issued, dealing with the export of currency from Roumania, states that there is no prohibition on the export, either by persons travelling or through the post, of cheques and letters of credit bearing the visa of the Exchange Control Office (Office Centrale de Contrôle des Devises). The amount of foreign currency which each person may carry out of the country without a permit, whether or not the same person carries cheques or letters of credit bearing the visa of the Control Office, is increased from 5,000 to 10,000 lei. The export of lei is still prohibited without special authorisation. The importation of all lottery tickets in any currency and of shares and obligations, etc., whether foreign or Roumanian, not authorised by the State and not quoted on the Exchange is prohibited.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 8 :—

Egyptian Futures.—Sakel Contract.—During the sessions immediately following our last report values in this market continued to meet pressure both from further liquidation of stale long cotton and some local speculative selling of near positions. At this period the persistent decline in the American markets and the withholding of trade support contributed to the general depression, and as far as our own market was concerned prices would have fallen further had it not been for the resistance shown in Alexandria. The fact that the local contract stands well below parity has been disregarded throughout the recent decline, and the temporary over-sold state of the market became emphasised just prior to the week-end when some Continental short covering found a scarcity of contracts and quickly forced a reaction. More recently, somewhat firmer American advices have influenced a further recovery, which, however, has not been held in full, to-night's close showing gains of 14 to 19 points for near and 17 to 31 points for distant positions on the week. So far there are no indications to prove that the turn round is of anything but a temporary character, whilst certainly it has stimulated a certain amount of trade inquiry. This has not been backed up by any increase of support from this quarter, and it appears likely, should prices start to droop away again, that spinners will continue to show their recent lack of confidence in the situation and keep out of the market as long as possible. The approaching Sudan crop, arrivals of which will probably reach here from the middle of next month onwards, is certainly restricting business in Egyptian Sakels and it remains to be seen whether Alexandria can continue to remain indifferent to the prevailing apathy of consumers in Lancashire and other parts of the world. We understand that much of the strength recently displayed by the overseas market is due to increasing anxiety regarding the low state of the Nile, and this has evidently led to general speculative purchases of new crop options in anticipation of a serious water shortage during the summer. It seems rather early yet, however, for any acute alarm on this point, and the situation for the next two or three months or so, at any rate, is more likely to be governed by factors in closer relationship to the immediate future. Although prices have shown rather more stability during the past two or three days, the undertone still remains nervous and unsettled, and we would not have faith in any further recovery unless directly attributable to a definite change in the present trade attitude or, alternately, in the event of the American markets taking a pronounced upward swing.

Upper Contract.—The heavy liquidation to which we referred in our last report continued during the early days of the present period and caused a further sharp relapse in values. Recently, under the influence of improving Alexandria advices and steadier American markets, a moderate reaction has been experienced, with the result that at to-night's close values show gains of 4 to 5 points for near and 5 to 15 points for distant positions. There has been no improvement in the trade offtake and the demand for yarns spun from the cotton covered by this contract remains on a very poor scale.

Egyptian Spot.—Immediately following our last report further weakness developed and for a short time it looked as if there was no bottom to the market. However, resistance was encountered when March Sakel broke through 16d., and about the same time a firmer tone in the American markets helped to bring about a change of sentiment, and so, although spot business was still absent, prices hardened. Over the week-end, cables were received from Egypt to the effect that the Government had issued an official warning to cultivators regarding the possibility of a low Nile this season. This caused a spurt in Alexandria, which was reflected in our market, and spot quotations again conformed. Nevertheless, the trade, which has stood aside during the recent decline, showed no inclination to "come in" on these signs of recovery. If anything, the spot inquiry actually fell away instead of increasing, as might have been expected. This attitude has caused some surprise here, as the recent low level of 16.20d. for F.G.F. Sakel, and 12½d. for F.G.F. Upper, appeared very reasonable, particularly the latter. Also, it is believed that many spinners of Egyptian (who, incidentally, are reported to be doing quite well) were allowing their stocks to run down to an unusually low margin. Bearing in mind the relative cheapness of Liverpool as compared with Alexandria, this surprise is easily understood.

To-day, lacking trade support, prices showed a tendency to ease again, and curiously enough it was to-day that, for the first time, the inquiry for spot Egyptian began to show signs of revival. There was indeed quite a healthy list on the inquiry abroad, and it is interesting to note that here and there were indications that certain users of American cotton were also inquiring for Egyptian. This is something we have not seen here for quite a long while. Of course, this larger inquiry may merely "fizzle out" again, as has so often happened in the past, but at the worst it gives us a sign that the trade is ready to move after its period of inactivity and, if only prices will remain reasonably steady for a while, there is every prospect of some good buying resulting. Reports from up country are to the effect that there is "plenty of business about."

The feature to-day was a recrudescence in the demand for spot Upper at from 25 off, to 25 on, March contracts. Sakel at from 200 to 400 on has also received rather more attention. The demand for low cotton (8d. to 11d.) is still comparatively prominent. Sudan cotton has been in moderate request. Sudan Sakel is now unobtainable and some concern is being evidenced by spinners who have run short, owing to the rumoured lateness of this season's crop. A brisk inquiry is expected for the early shipments which are now expected here about the end of March. In the meantime, there is here a fairly large stock of Sakel cotton, mostly just shy F.G.F., which is on offer at from 50 to 100 on contracts. The bulk of this, unfortunately, is of mixed staple, and is not attractive to spinners at the price.

C.i.f. business has ruled quiet. Forwardings to spinners for the week ending the 3rd inst. were returned as 7,595 bales Egyptian and 842 bales Sudan. Estimated spot sales, 1,300 bales Egyptian and 350 bales Sudan. Quotations of Sakel have been advanced 30 points; those of Upper and Pilion are 5 points higher on the week. F.G.F. Sakel to-day, 17.10d. F.G.F. Upper to-day, 12.75d. F.G.F. Pilion to-day, 13.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 2, state :—

Since our last report the market has been very active but the tendency has been weak and prices show a considerable decline. The week's summary of price movements is as follows :—Sakellaridis : March, 32.40 dollars, 1.52 dollars down; May, 32.66 dollars, 1.56 dollars down; July, 32.91 dollars, 1.61 dollars down; November, 33.25 dollars, 1.40 dollars down. Ashmouni : February, 23.25 dollars, 1.63 dollars down; April, 23.63 dollars, 1.64 dollars down; June, 23.95 dollars, 1.52 dollars down; October, 23.95 dollars, 1.30 dollars down.

Sakel.—The continuous weakness of the New York market has disheartened local operators and induced some heavy liquidating of bull positions. The drop in prices has been rather pronounced owing to the liquidations falling in a market already technically weak. The market at the close to-day showed up a little firmer as a result of some commercial buying and an increased turnover of business on the spot market.

The recent drop in prices has undoubtedly put the market in a healthier situation, but for a real improvement to take place, New York must recover the ground lost and spinners' purchases must greatly increase. Unfortunately, present prospects in that respect are not, in general, satisfactory; during the last few months, in many cases mill production has exceeded consumption, and as long as excess stock is not disposed of, purchases of raw material must of necessity be limited, the more so as the financial situation is generally somewhat tight.

Uppers.—The market for this variety has shown great weakness and February touched 23.05 dollars, this being the lowest price quoted for Ashmouni since last September. We are of opinion that present levels of price for Ashmouni are reasonable and a rise is, we think, probable on the first signs of an improvement in the demand from spinners.

At the first February tender, 14,250 kantars dockets were issued. The week's receipts amount to 101,849 kantars against exports 162,009 kantars; the stock in Alexandria stands at 3,137,184 kantars.

Spot : The past week has seen another series of quiet markets, demand from abroad continuing on a very moderate scale. Sales amount to about 13,400 bales, of which we estimate 4,650 bales Sakellaridis, 7,900 bales Ashmouni and Zagora, 550 bales Pilion, and 300 bales other varieties. The spot situation presents no new technical feature of interest and holders continue very difficult to deal with. Only in the good grades is it possible to buy any growth fairly readily.

Sakellaridis : A poor business has transpired but all grades have been dealt in. Spot differences are unchanged for Fully Good Fair and better, but below Fully Good Fair they are rather stiffer and cotton is hard to buy at a commercial basis.

Ashmouni and Zagora : A considerably improved business has been done, principally in the medium qualities, though all styles have been dealt in. We doubt, however, if the increased turnover really reflects to any extent an improvement in spinners' demand. Spot differences are generally appreciably stiffer.

Pilion : Has met with a fair demand for all qualities. Spot differences are very steady and inclined to stiffen. Good staple cotton is difficult to find.

Other Varieties : A fairly good business has been done in White at about last week's differences. In Nahda a fair business continues, and a few bales of Fouadi have changed hands.

Up-country : Business in spot cotton has been almost nil this week. The small amount of cotton still in the villages is firmly held and the probability is that it will not be offered for sale until prices pick up again. In several districts of Upper Egypt sowing has started; in Lower Egypt land preparation is being actively pushed forward under favourable climatic conditions.

Mr. F. R. S. Balfour has been elected a director of the Indian and General Investment Trust, in place of Mr. F. M. Ogilvy, who has resigned his seat on the Board.

Notes of the Week.

Roumanian Politics.

With the reopening of the Roumanian Parliament the struggle between the National-Peasant Party and the National Liberals has been transferred from public platforms to the Chamber. The point at issue is still the legality of the position of the Government, which the Opposition refuses to recognise owing to the methods by which, it is alleged, a majority at the general election was secured. From the stormy proceedings that have taken place it is clear that Government nerves are on edge and that the National-Peasant group is relying on guerilla tactics rather than on any definite plan of campaign. The Opposition appears to imagine that, if the trumpets of denunciation are blown loudly enough, the walls of the Government Jericho will fall of their own accord. It may be so; but there is always the danger that denunciation, when indulged too bitterly, may lead to the overstepping of the boundary of constitutionalism. Mere abuse, in which each side is sure to receive as much as it gives, is hardly likely to make a Government resign; on the other hand, a display of constructive ability on the part of the Opposition may well undermine the Cabinet's position and bring about its defeat in the Chamber, when resignation would follow as a matter of course. Apparently, however, the National-Peasant Party imagines that by attacking the Government violently enough it will be able to short-circuit constitutional procedure and bring itself immediately into power. Two field-days devoted to this object in the Chamber have led to the suspension of a number of deputies, including Dr. Vaida-Voevod, whose main offence seems to have been an interruption charging the Government with having stolen electoral urns. As a protest against the suspension the Party is to absent itself from the Chamber's deliberations—a recognised, but none the less singularly ineffective, procedure. To the onlooker it seems probable that a Government capable, as alleged, of obtaining power by electoral abuses will know how to hold its own against verbal attacks. A carefully conceived scheme of electoral reform, however, would rally public opinion to the Opposition, and, apart from its contribution to the future well-being of the country, prepare the way for the transfer of the reins of office to its own hands.

The Yugoslav Political Crisis.

Difficulties, at the moment of writing, continue to beset the path of settlement that is being sought for the ministerial crisis in Yugoslavia. After King Alexander had called in vain upon each of the chief leaders of the Opposition to form a new Government, his Majesty had no alternative than to entrust M. Voukitchevitch once more with the task of reconstituting his Cabinet. As no other way out of the deadlock had commended itself to the politicians, it seemed natural that, in spite of protests from the other leaders that they could not serve under M. Voukitchevitch, they would sink personal considerations and combine once more for the good of the country. M. Voukitchevitch's task, however, has proved beyond his powers. The general situation, both domestic and foreign, is held to require a Coalition Government on the lines of the last, but the question of personnel is found to be a stumbling-block. The Democrat Club is divided in its allegiance between M. Davidovitch, the titular head, and M. Marinkovitch, who has represented it in the Government as Minister of Foreign Affairs. The two leaders, apparently, cannot agree on the question of M. Marinkovitch's colleagues in the new Cabinet. Owing to this and other difficulties, M. Voukitchevitch has been obliged to hand back his mandate to the King, and M. Marinkovitch has been asked to try to form a Ministry. As the latter's health is reported to be indifferent, and he had been ordered to take two months' rest, the appeal now made to him reflects King Alexander's difficulties. Save for the fact that the season of the year is unsuitable, the simplest solution of the problem would seem to be a dissolution and a fresh appeal to the electorate. In those circumstances the Democrat Club might be called upon to explain its attitude in forcing a ministerial crisis when it was quite unable to form a Government itself. The resignation of M. Voukitchevitch's Cabinet was brought about by the

Digitized by Google

withdrawal of the four Democrat Ministers virtually at M. Davidovitch's behest. It is difficult for the outside observer to understand how the country has profited by the political uncertainty of the last three weeks.

Turkey's Naval Contracts Scandal.

The trial of Ihsan Bey, ex-Minister of Marine, on the charge of having received bribes in connexion with the award of naval contracts, dwarfs for the time being all other matters of domestic politics in Turkey. A suggestion that behind the prosecution of Ihsan Bey may be found to lie political disagreements in high places is rendered the more plausible by the curious setting that has been given to the trial. Ihsan Bey was arraigned first before a parliamentary commission, at the head of which was placed the editor-proprietor of a Turkish newspaper, noted for its eulogies of the President to a degree of abject fulsomeness hitherto unassociated with the Turkish character, which has always contrived to maintain a certain dignity and self-respect. No better way could have been found for attempting to prejudice public opinion against the ex-Minister than by the appointment of the journalist-deputy, whose papers proceeded to pre-judge the case. When Ihsan Bey was sent by vote of the National Assembly to stand his trial before the Supreme Court, these papers published a series of articles on the naval contracts case, written by the President of the Commission, which in any other country would be regarded as gravely prejudicial to the cause of justice, and in Turkey, where the judicial sense appears to be well developed, though held under tight rein, could not have been tolerated if the writer had not been sure of the President's support. In these circumstances there would seem to be a reasonable possibility that any indiscretions on Ihsan Bey's part might have been hushed up, if it had not been necessary either to make an example of those who do not fall into line unquestioningly with the policy of the day, or to smooth over differences in the Cabinet by offering a sacrifice to a powerful section. Possibly, therefore, at the back of the whole affair is a healthy tendency in Turkish political life to break away from subservience to ready-made opinion. Uniformity may have been desirable and necessary at one stage of Turkey's development, but, if carried to unreasonable lengths, will handicap continued progress in a country which has made such an excellent start.

The League Council Meeting.

The session of the Council of the League of Nations that opens in Geneva on March 5 will be called upon to discuss several matters of particular interest to South-Eastern Europe, among the twenty-five items on its long agenda paper. The States of the Little Entente have asked for an inquiry into the circumstances of the clandestine importation of machine-guns into Hungary, and it is clear that the question raises delicate issues. The guns were imported from Italy, and while the Italian Government can be relied upon to view an investigation with disfavour, France will probably support the motion, regardless of the adage that those who live in glasshouses should not throw stones. Another item for discussion will be the interminable Roumano-Hungarian conflict over the property of Hungarian optants in Transylvania. Both sides have marshalled a formidable mass of legal opinion in favour of their conflicting contentions, and it may be supposed that the League of Nations' Council will be as little anxious to take sides between the contradictory jurists as it is to side with one party or the other when France and Italy find themselves in opposing camps. The Bulgarian request for a refugee loan will also be discussed, when possibly a settlement of the differences of opinion between the Bulgarian Government and the League's representatives over the question of a Bulgarian Bank of Issue will be announced. Finally, the Mandates Commission is due to present its report on Iraq, and the British Government will, no doubt, find occasion to refer to the recent Treaty concluded between Great Britain and Iraq.

Progress in the Sudan.

Recent news from the Sudan records progress in two very different spheres. In the Bahr el Ghazal province the operations against the Nuers undertaken to bring to book the murderers of Captain Fergusson and a Greek merchant are reported to have been practically concluded. Some of those known to be implicated are still at large, but it is believed that they will ultimately be arrested by loyal tribes. In the meantime it has been brought home to the Nuers that it does not pay to deliver unprovoked attacks on white men. As the murder was connected with the efforts of witch doctors to resuscitate their waning authority, special attention has been paid to this aspect of the outrage, and during the punitive operations the earthen pyramid of Dengkur, in the eastern part of the Nuer country, which commemorated a witch doctor, was blown up and destroyed. A more immediate contribution to the spread of civilisation has been made in the construction of a railway line from Kassala to Gedaref, and in the decision now reached to extend this railway from Gedaref to Makwar, where it will connect with the direct line from Khartoum. The importance of the line from Makwar to Kassala lies in the fact that it will serve to open up a large district of considerable fertility, which should add materially to the country's production of foodstuffs and rain-grown cotton. Moreover, when the time comes for the construction of the dam at Lake Tana the existence of the railway at Gedaref is likely to be of considerable advantage for the conveyance of material and personnel to Abyssinia.

Fear of the Wahhabis.

Like the Bolshevists in Europe, Shaikh Faisal ud Dawish, chief of the Mutair, appears to be in way of becoming the scapegoat for all the troubles arising in the Arabian deserts. Now he is reported as having raided in Iraq; now in Kuwait; and finally in Trans-Jordan. Unfortunately for the accuracy either of the Basra or of the Jerusalem report, Shaikh Faisal was stated, from Iraq, on February 16, to have been definitely located by the Royal Air Force, and from Palestine, on February 17, to have raided the Bani Sakhr! This curious lack of synchronisation, or, rather, of a lack of

Digitized by Google

a sense of time and place values, makes it very necessary to observe caution in dealing with these statements from the desert. That, however, is no reason for doubting the existence of wide-spread unrest in the desert as between various Wahhabi tribes and the tribes of such countries as Iraq, Trans-Jordan, or Kuwait. Whoever it be that has attacked the Bani Sakhr (or their sub-tribe, called Al Fanda) or has been attacked by them near Jauf or at "El Beer" (probably the watering-place called Bair which, some fifty miles south-west of Qasr al Azraq, was well-known during the Arabs' revolt in the War), and whoever it be that has attacked Kuwait or has been attacked by the followers of the Shaikh of Kuwait, it is perfectly obvious that fear and dislike of the Wahhabis is by no means confined to the inhabitants of the districts near the so-called "neutral zone" between Najd and Iraq.

King Ibn Saoud's Authority.

Among the uncompromising apologists of the Wahhabi régime it is something more than heresy to presume that King Ibn Saoud's authority is not everywhere paramount in his vast domains. Nor is this attitude confined to those who look with uncritical eyes at all the acts committed by one, or by the followers of one, who is indubitably the greatest figure whom Arabia has produced for many a day. There are, of course, numerous observers in Iraq and in Trans-Jordan who deny the possibility of Shaikh Faisal's acting in despite of his King's orders, and who assert that the chief of the Mutair is but a loyal instrument of the Wahhabi régime, personified in King Ibn Saoud. As a matter of some historical interest it should be noted that the official defenders of the Wahhabis' actions as against Iraq (the defence of the reported raids against Kuwait and Trans-Jordan is not yet available) still base their main justification on the construction by the Iraq authorities of the fort at Busaiya. But we cannot help feeling that that pretext—for, as we have pointed out already, the location of Busaiya is 46.10 E. by 30.50 N.—is too thin to warrant the whole series of actions subsequent to the violent destruction of the fort. At the same time it requires imagination to believe, as has been confidently reported from Basra, that King Ibn Saoud is still "mustering troops" in Riyadh, Buraida, and Anaiza for the purpose of demonstrating his authority over the Mutair and their bogey-man, Shaikh Faisal ud Dawish.

Anglo-Persian Relations.

To judge by the extreme reticence of the replies by official spokesmen in the House of Commons to questions concerning Anglo-Persian relations, one is perhaps justified in assuming that the desired respect for the British point of view in certain problems in Persia which also affect Great Britain has not yet been fully attained. On February 15, for instance, although it was freely admitted that the question of Bahrain (in regard to which the Persian Government sent a protest to the League of Nations) was not the only one outstanding with the Persian Government, no opportunity was taken to enlighten the British public upon the precise points of difference as between Persia and Great Britain. We cannot help feeling that wider publicity of British claims on Iraq and of Persian claims on Great Britain would result in both countries in realisation of the necessity of resolving the outstanding difficulties; sympathy is there, but can in the existing circumstances find little outlet. As we have said before, Anglo-Persian relations must be viewed comprehensively, not piecemeal. The prevalent uncertain atmosphere may easily give rise to unjustified suspicion that Great Britain is attempting to "score off" Persia, a suspicion that could as easily be dispelled were a round-table conference to be summoned, at which British representatives might meet Persians in a mood at one of generosity and of firmness.

Elections in Syria.

We referred last week to the resignation of Ahmed Namy Bey, head of the Damascus Government, in view of the forthcoming elections. His successor has now been announced: it is the Qadi of Damascus, Taj ud Din. The new Prime Minister is reported already to have expressed his intention to realise the national aspirations within the terms of the Mandate, that is, with the co-operation of the French authorities. This statement, coming after Ahmed Namy Bey's previous declaration that the French had resolved to honour the conception of national unity in Syria, is a significant indication of the tendency which is expected to be manifested in the elections. Another indication of how completely ready the scene is in Syria for definite and far-reaching action is the announcement that, with the elections, martial law and the Press censorship will be abolished by the French, and that a generous amnesty will be granted to most of those who hitherto have irreconcilably opposed the Mandate. It may be that Syria has many furrows to plough before she attains even such unity and self-government as are possessed by Iraq, but at least a workable basis of Franco-Arab collaboration seems at last to be in way of finding. The results of these elections in Syria will be watched with more than ordinary interest by those Arabs in Palestine who still are hesitating whether to co-operate with the Jerusalem Government or to maintain their *non possumus* attitude.

BULGARIAN REFUGEES.

The Bulgarian Minister opened the sale in aid of women and children refugees in Bulgaria arranged by Mrs. L. Cobham, at 14, Hans Crescent, under the auspices of the Near and Middle East Association, on February 14 and 15. M. Haji-Mischeff warmly thanked Mrs. Cobham and the Association for the welcome help given to enable the work of caring for the necessitous refugees to be carried on. After a few words had been said by Sir Edward Boyle who, as Chairman of the Balkan Committee, endorsed this effort of the Near and Middle East Association to aid women and children who were existing in conditions of grave want, Mrs. Cobham thanked the Minister for his presence and expressed her gratitude to Lady Boyle and the Dowager Lady Boyle; to Lady Muir, Mme. Guépin, and Miss Stancioff; to Mme. Lessinoff; to Mrs. Carrington Wilde, Mrs. E. N. Bennett, Miss Coleman, Mrs. A. C. Dickins, and Mme. Ivan Stancioff, for the valuable support they had given as stall holders. A feature of the sale was a number of attractive example of Bulgarian art and handicraft, and among those who attended were Frau Sthamer, the Hungarian Minister and Baroness Rubido-Zichy, the Persian Minister, the Latvian Minister and Mme. Vesmans, Sir Ian and Lady Hamilton, Sir Edward Boyle, Sir Kay Muir, Lady Edgar Bonham-Carter, Sir Harry and Lady Lamb, M. and Mme. Dimitri Stancioff, Edith Lady Bradford, and Miss Haldane of Cloan.

OBLIGATIONS IN IRAQ.

Of all the obligations which were thrust upon Great Britain in the Middle East as a result of the dismemberment of the Ottoman Empire, none was plainer, more urgent, and, happily, more realizable, than the moral obligation to substitute in Iraq good governance for the Turkish régime which had obtained prior to the War. That moral interest transcended any political, military, or commercial interest which may or may not have been inherent in the establishment of a unified and prosperous State in the Land of the Two Rivers. Whether inevitably or not all existing forms of government in Mesopotamia were destroyed by the British, or rather, by the War; it was, therefore, clearly incumbent upon Great Britain to construct, according to her lights, a system of government which should allow the latent or depressed abilities of the Arab race once more free play in Iraq. Such construction is, to the impartial observer, naturally a slow process, for, although it may not be true to say that the strength of the Iraq chain lies in its weakest link—that is, that the abilities of the nation must be generally judged by its poorest intellect—it is true that Iraq is a nation, not of equals, but of men of very varying intelligence, of development, and of probity. For one thing, it was obvious that when an enlightened Power like Great Britain, who, if she did not whole-heartedly accept Occidental academic notions of the "rights of minorities," certainly was unwilling to allow majorities to suffer, came to supervise administration in Iraq, the old antagonism between Sunni and Shiah would become more patent, if only because the Shiahs knew that they could on occasion appeal, and be sure of some effect, to the British as against the dominant Sunnis. For another thing, it was obvious that the old antagonism between the towns and the country—between the city-men and the tribesmen, or, more loosely still, between the Sunnis and the Shiahs—would on the slightest provocation assert itself, if only because all parties, under the new régime of British tutelage, could be assured such a fair hearing as they never had hope of enjoying under the exclusively Sunni régime of the Ottomans. That such divisions have manifested themselves, is, however, by no means to the discredit of the supervisory Power, impatiently as hostile critics may declaim to the contrary; it is merely the inevitable result of the application of a Western *spirit* of justice, as opposed to the application only of a Western *system*, to a country steeped in Oriental traditions.

We have recalled this recent history of Iraq in order the better to be able to gauge the immediate future of Iraq, and wishing to emphasise the reciprocal obligations of both British and Iraqis in Iraq. Those obligations cannot, in our opinion, be fulfilled on either side by listening to or by raising the cry of the immediate evacuation by the British of Iraq. One can sympathise, indeed, with those able Iraqis who are convinced that the time has already arrived when foreign tutelage can be dispensed with in Iraq, without being convinced of the justice of their claim. Why was it, for instance, that in the recent negotiations in London between King Faisal and his Prime Minister, Jaafar Pasha, on the one hand, and the British Government, on the other, the demand that Iraq be granted immediate entrance into the League of Nations and the right to impose conscription had to be refused? Was it not simply this: that King Faisal's demand was not echoed, but rather frowned upon, in the country at large, and that on the particular question of conscription, in fact, it had been indubitably shown that the country itself would be split? The British "interferers" were, in short, during these negotiations, in a quite unassailable position, seeing that it was their prestige which was highest in Iraq and their sense of the necessities of the situation which Iraqis in general were fain to follow. It is, of course, easy to say that final control by the British is an unwarrantable assumption, but it is warrantable on the very argument of moral obligation to which we have referred. British Advisers are not in Iraq merely to give to Iraq the right to ruin itself; they are there to ensure that self-ruination is practically impossible, while rendering self-expression possible. Suppose that Iraq had been promised complete independence in 1928, and that the Baghdad Government had imposed conscription in 1927—would Iraq itself have been stronger, freer, more united? On the contrary, there is considerable evidence that Iraq as a whole would have been sharply resentful at the unfettered domination of a Government clique and at the betrayal by the British of their promise to respect rights. Theoretical justification for Iraq's demand to "run her own show in her own way" there was in abundance, but practical justification was pathetically lacking. In other words, the majority of Iraqis at once deplore but realise the necessity of British advice, especially in regard to impetuous or schismatic action on the part of Iraqis in authority.

On the whole, therefore, Iraq's obligations towards Great Britain—the obligations, that is, in its own interests to accept her advice—may be said to be generally, that is, popularly, realised. Friction may arise from time to time as between adviser and advised—as indeed, is almost inevitable in a country which has never in its history experienced anything resembling this system; but so long as the national, as opposed to the individual aim, is preserved by the Iraqi, there is every reason to suppose that ultimate success will be attained. There is all the more reason, then, why British Advisers should act according to their highest national tradition, with knowledge, with sympathy, and with firmness. From the combination of these three qualities and their application to the young Arab nation may result in time such a leader as may lead it, in a way analogous to that in which Arab and Persian and Turkish leaders of lands neighbouring Iraq have led their respective charges, to such a pitch of Orientalism, based on this Western régime of Englishmen, as will astonish and be an example to the whole Islamic East. That there are difficulties existing in the present situation in Iraq is freely admitted, and not the least of them reposes in the fact that there may from time to time appear to be two voices therein in contradictory authority. In time, however, that duality must resolve itself, and Iraq, like its neighbours, find a strong genius to work through, not against, the system set up by the British. And in the meanwhile it will be far the best if both sides in this Anglo-Iraqi question, the Arabs and the British, work up to, and try neither to circumvent nor to neglect, their manifest obligations one to the other.

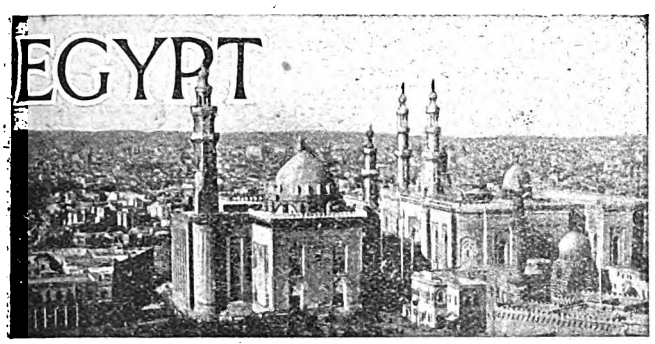
The Near and Middle East*

From Our Own Correspondents.



Cairo, February 11.

The State University.

On Wednesday last the King laid the foundation stone for the State University, which replaces the old Egyptian University founded in 1908. The ceremony, which was a quite simple one, was performed in the presence of the High Commissioner, the Cabinet, the Diplomatic Corps and the senior Government officials. Two speeches were made, one by Aly Pasha El Shamsy, Minister for Education, and the other by Loutfi Bey El Sayed, the Rector of the University. And after a small box containing a collection of Egyptian currency and copies of the newspapers of that day had been placed in the stone the King declared it duly laid. It was more than fitting that King Fuad should perform this initial ceremony, for not only has he always taken a very deep interest in all matters pertaining to the educational and social welfare of his country, but he was also, as Prince Fuad, one of the founders and the Chairman of the first board of directors of the institution to which the State University is now to succeed.

The Budget.

The Budget for the new financial year, which has just been submitted to Parliament, reveals a far more satisfactory state of affairs than existed a year ago. Thanks to the recuperative powers which the country traditionally enjoys and to a recovery in the cotton market both trade and State finances have regained what they appeared to have lost a year ago.

It is true that the Budget has to be balanced by a draft of £E4,000,000 on the general reserve. But this is not a thing that should cause any anxiety to those who are interested in the progress of Egypt. To a great extent this sum represents capital expenditure of a remunerative nature for which credits have been inserted in the Budget for the new financial year. The reserve, it should be pointed out, has been built up to its present very large figure of £E34,000,000, partly from the normal excesses of revenue over expenditure, but in large measure owing to the fact that Departments for one reason or another have not been able to spend the credits for new works allocated to them, with the result that the reserve has annually been swelled by these unexpected credits. Consequently the budgeting for a draft on the reserve to cover capital expenditure, which had been really provided for in previous budgets but which, not having been expended, has been carried forward to successive budgets, is fully justified.

The report gives in great detail the efforts which are being made by the Government to increase revenue, reduce expenditure and develop the resources of the country. The activities revealed reflect great credit on those responsible for the direction of the finances of the country, but the test will be whether and to what extent they give effect to the recommendations of the various experts and commissions who are investigating the problems in question.

Incidentally the report makes three interesting statements. The first is that with regard to the question of controlling Insurance Companies, which has aroused a certain amount of controversial discussion in European circles; the Commission, which is dealing with the matter, will very shortly initiate meetings with the representatives of those Companies in order to ascertain their views and discuss those of the Government with them.

The second point is in regard to the increase in the tourist traffic which the report states is prevented from attaining larger proportions owing to the high charges of the hotels. This is a feature which has aroused adverse comment for some time, and it is to be hoped that those controlling the hotel interests will take these remarks to heart before it is too late.

The third interesting statement is that a new arrangement has been made with the National Bank of Egypt for a substantial increase in the share of the Government in the profit on the Banknote issue, and that, of the reserve of £E34,000,000, £E21,000,000 is invested in Government stock of which £E7,500,000 in Unified Debt, £E7,750,000 in three-months British Treasury Bills and £E5,750,000 in British War Loans.

Cotton and Manures.

Fuad Bey Abaza, Secretary General of the Royal Agricultural Society, left at the end of last week for the Continent and England on a special mission on behalf of his own Society and of the Government. He is a member of the Special Committee representing Egypt which, according to the suggestion of the International Cotton Congress, is to meet with a similar Committee representing the spinners to discuss matters affecting the interests of both parties and to endeavour to maintain friendly relations. Fuad Bey is going to Zurich and Manchester in order to discuss various questions pending, and also to settle where the joint Committee shall meet this summer. It is possible that Zurich will be selected as the venue.

On his way to London he will make a short stay in Berlin in order to investigate the question of the manufacture of synthetic manures which, in view of the large quantities of chemical manures used annually by Egypt, is of peculiar interest to the country since the artificial article is so much cheaper than the natural. Apropos of manures little more has been heard of the proposal, put forward some years ago and recently resuscitated, for utilising the power at the Aswan Dam in order to make nitrogenous manures and so save importing the large quantity at present purchased abroad every year. It is a pity that some move has not been made in this connexion and also that so little use is apparently being made of the phosphorous deposits which this country possesses, for between nitrates and phosphates Egypt imports well

over two million pounds worth of manures every year and the manufactures on the spot would not only keep this money in the country but would also be a considerable saving for the cultivator.

The British Commercial Community.

What was undoubtedly a land-mark in the history of the British commercial community occurred last Friday when the Cairo section of the Chamber of Commerce entertained at its monthly luncheon Lord Inchcape, Sir Archibald Boyd Carpenter, M.P., Mr. Samuel Samuel, M.P., Mr. Pybus, a Director of *The Times* and of the English Electric Company, Mr. H. C. Field, ex-President of the Birmingham Chamber of Commerce, and Mr. Mulock, British Commercial Secretary in Egypt. There was a large gathering of members for the occasion at the Continental Savoy Hotel where the luncheon was held and after the loyal toasts had been proposed by the Chairman, Lieut.-Colonel Gray, very interesting speeches were delivered by Lord Inchcape, Mr. Pybus, Sir Archibald Boyd Carpenter, and Mr. Field. It was a happy inspiration of the Chamber to institute these monthly luncheons, which are attended by a number of Alexandria members, and the Chairman and the Secretary, Mr. Trimen, are to be congratulated on the successful turn which these gatherings have taken during the past six months.

Forensic Medicine.

Very soon Egypt will lose one of the most able men she has had in her service of late years. I refer to Dr. Sydney Smith, who has been Principal Medico-Legal Expert and Professor of Forensic Medicine at Kasr El Aini since 1917. He has resigned in order to take over the Chair of Forensic Medicine in Edinburgh University, which is regarded as the blue ribbon of the profession and the offer of which at such an early age—he is only forty-four—may be regarded as a tribute to his exceptional qualifications.

Dr. Smith had already had a distinguished career before he came to Egypt, and during the ten years he has been here he has gained further laurels, both from the manner in which he has completely re-organised the Medico-Legal service of the Native Courts and also the ability which he has displayed in the various important cases of political and other crime which have occurred during the past few years. There is no secret that it was mainly on his very conclusive evidence that the assassins of the Sirdar were convicted. Dr. Sydney Smith will indeed be a serious loss both to the service and the British community, for he had not only outstanding ability but also the courage of his convictions and a very attractive personality. It can with truth be said that Edinburgh's gain is Egypt's loss, and it is a thousand pities that it has not been found possible to keep Dr. Smith here in Egypt.

The Crown Prince of Italy.

The Crown Prince of Italy concluded his visit to Cairo last week-end and went to Upper Egypt, where, in the company of Ahmed Bey Hassanein, specially delegated by King Fuad, he visited the Valley of the Kings and the other historic sights at Luxor and the Dam at Aswan. He is now en route for the Sudan where he will make a stay of a few days before rejoining his cruiser at Port Sudan.

Belgrade, February 16.

The Political Crisis.

After over a week of intrigue and feverish activity the political crisis in Yugoslavia is still unsettled and an almost complete deadlock would seem to have been reached.

In the Press the crisis was hailed as an attempt to return to really parliamentary government and to make the Parliamentary Clubs once more the real centres of political life. This was considered necessary as M. Voukitchevitch had never consulted the Radical Club before taking office, and as both the Radical and the Democrat Clubs were not fully in support of the Coalition Government. The fact that the most strictly constitutional procedure has been followed throughout the crisis has creaed a very good effect, especially in Croatia, where the granting of the mandate for the formation of a Concentration Government to a Croat, M. Stephen Raditch, for the first time in history, aroused enthusiastic demonstrations. On the failure of M. Voukitchevitch, the Radical leader, to form a Government, M. Raditch, as leader of the second largest homogeneous party in the State was given a mandate to form a Concentration Government which should include all parties. Even though he failed, M. Raditch made an excellent impression during the 24 hours during which he held the Royal mandate, and, when they were over and he handed back the mandate to King Alexander, he declared to the journalists who encircled him: "This has been one of the happiest days of my life." His attempts to form a Concentration Government failed, because the Radicals refused absolutely to take part in any Government of which their party was not in command. M. Raditch tried to win the support of the so-called Pashitchevists and to split the Radical Party, but this only drove them together again. The negotiations he carried on had, however, the effect of unifying still further the Democrat-Peasant Union, which combines the Democrats under M. Davidovitch, his own Croatian Peasant Party, M. Pribitchevitch's Independent Democrats and the Serbian Peasant Party led by M. Yovan Yovanovitch, a group which controls 156 of the 315 members of the Skupshtina.

Seeing from the Radical reply to M. Raditch that it was hopeless for him to attempt to form a Concentration Government, M. Davidovitch asked the King to spare him such vain effort, and the mandate was entrusted to M. Ninko Peritch, the Radical President of the Skupshtina. M. Peritch's chances of success appeared greater than those of M. Voukitchevitch since the Democrat Union announced that in principle they were not against the formation of a Concentration Government led by a Radical, provided that it was not M. Voukitchevitch. But when it came to the discussion of details and the distribution of portfolios, negotiations soon broke down. The Radicals wanted to keep all the important Ministries in their own hands and refused to consider the Democratic claim that, since they had the Premiership, the Democrats should be given the Presidency of the Skupshtina, and M. Raditch's demand that his party should be given the Ministry of Finance.

As it was now obvious that no one could hope to form a Concentration Government, M. Voukitchevitch was entrusted with the mandate for the formation of a Coalition working Government. Here the same difficulties arose. While he appears to have succeeded in winning

Digitized by Google

the support of the Bosnian Moslems, this gives him, with his own Radicals and the Slovenian Clericals, only 150 seats in the Skupshtina, so that his success depends on his winning over one of the groups of the Democratic Union. All attempts to win over again the Democrats who followed M. Marinkovitch seem to have failed, M. Marinkovitch himself having been too ill to take a very active part in recent developments; and the conditions on which the Democrats are willing to enter a Coalition Government with the Radicals, that they should be given the Ministry of Interior, has been flatly refused by the Radical Club, which, faced by outside danger, has become more and more solidly behind M. Voukitchevitch.

Many compromises have been tried—the latest of these was the suggestion that Dr. Koroshetz should be Minister of the Interior, with one Radical and one Democrat Under-Secretary to check him. But this the Democrats seem to have decided to refuse, as it would leave them with two to one against them in that most important Ministry, as it was violently opposed by M. Raditch, who dare not allow his greatest rival in the Catholic provinces to be in charge of a Ministry which is of such immense importance in case of elections. And much as there is to be said against them just now, elections seem more and more certainly the only solution for the present crisis—although it is possible that a makeshift Government could be formed to get the Budget passed and to carry on the administration until the season is more suitable for elections to be held.

Belgrade-Zagreb Air Line.

Yesterday, February 15, the commercial air service between Belgrade and Zagreb was opened. The normal train service takes twelve hours to complete this journey, whereas the aeroplane which left here at 9 o'clock yesterday morning arrived in Zagreb at 10.50. It is such improvements in the communications between the different provinces which will do more than anything else to eradicate the differences due to centuries of isolation and make their union more real and solid.

Loan Mystery.

On his return from London on February 8, Dr. Bogdan Markovitch, Minister of Finance, stated definitely that the preliminary agreement for a loan of up to £50,000,000 had been signed. He said that this loan annuls the Blair Loan and is to be guaranteed by the income from the State Monopolies, Railways and other taxes and undertakings which were set aside as a guarantee for the Blair Loan contracted in America in 1922. London would appear to know nothing of this matter. Nevertheless the announcement certainly had considerable effect on the political situation at a time when negotiations were proceeding for the formation of a new Government and greatly strengthened the Radical position.

Communist Trial.

Despite the political crisis during the last few days, great interest has been shown in a Communist trial staged by the Belgrade police. Twenty-five prisoners, mostly young students and professional men were accused under the Defence of the Realm Act, which makes Communist propaganda illegal. Counsel for the Defence and all the prisoners agreed that the signed statements brought by the police as evidence against them were obtained by methods not in accordance with the Constitution, that no citizens were present at the inquiries, as the law demands, and that even physical ill-treatment was not spared to secure their signatures. The Public Prosecutor and the Court both put on one side the evidence furnished by the police and dealt only with the statements made by the prisoners publicly in the Court. Most of the prisoners admitted being members of the Young Communist League, but denied having taken part in propaganda work. The bearing of the Public Prosecutor and the Judges was generally considered extremely fair and objective, and the sentences passed to-day, while heavy enough to Western minds, are light when the severity of the law which they had to administer is considered. Five young students were sentenced to five years' imprisonment, nine to six months', four to three months', and seven were set free.

ROUMANIA.

Bucharest, February 15.

Political Storms.

In the previous letter on the political situation in Roumania reference was made to the determination of the National-Peasant Party, under the leadership of M. Julius Maniu, to make every possible effort to depose the Liberal Government. It was not to be expected, however, that a serious political party would adopt the tactics to which the Opposition have had recourse in the last few days. On Friday, February 10, the Chamber of Deputies was prevented from taking up the business of the day by a succession of disgraceful scenes of disorderly altercation between deputies of both parties, and of attacks in the most violent and unparliamentary language, made by the leaders of the Opposition party and a few of their most influential supporters against the Government.

The Opposition deputies unfortunately descended to personal insult, resulting even in a challenge to a duel. From every point of view such tactics would appear to be a vast mistake. For it is a well-known fact that the man who loses his temper (and incidentally his dignity) in a quarrel almost infallibly plays into the hands of his adversary. Thus the Liberal Press is now jubilant, because, as it says, the Opposition leaders have made a ludicrous exhibition of themselves and have thereby given an unmistakable proof of their lack of serious statesmanship. One cannot help feeling that every patriotic Roumanian, who has his country's good at heart and is not blinded by party interests, must be filled with a profound disgust when he reads of such scenes in the Chamber of Deputies at a time when so many serious questions relating to the country's organisation and economic as well as political development are waiting the attention of the legislative

bodies. Moreover, such bitter discussions in the Chamber of Deputies and neglect of the serious affairs of the country are not calculated to increase the respect of Roumania's friends abroad. How can the country hope for foreign financial support for her schemes of reconstruction and the stabilisation of her currency so long as her whole internal policy is subject to constant and violent changes and her politicians fail to inspire confidence?

The country is in the throes of a great economic crisis. Daily reports come in of bankruptcy of old and respected firms which have been unable to weather the many difficulties of the last few years—high taxation, money scarcity, yearly increasing cost of living, and the consequent falling off of the purchasing power of the population. A great and united effort is required towards the creation of more normal economic conditions, and it seems a thousand pities that some basis of compromise cannot be found by all the political parties in order that they could work together to this end, in the interest of the country as a whole.

Apparently, after failing to induce M. Maniu to join them to form a Coalition Government, the Liberals have attempted to persuade M. Yorga to join forces again with the National-Peasant Party in order to introduce into it some more moderate elements, but here again they have had no success so far, and after the scene of last Friday M. Yorga is doubtless less inclined than ever to take such a step. And so the country's affairs are postponed from day to day.

Stabilisation of Currency.

In the report of the National Bank for 1927 the statement is made that the Government has authorised the stabilisation of the currency. The French economist, M. Quesney, is still in Bucharest and it has lately been reported that the new Vice-President of the National Bank, M. Chirculescu, will shortly visit London and Paris on a mission in this connexion.

German-Roumanian Relations.

M. Titulescu is reported to be meeting Dr. Streseman in the South of France for the purpose of trying to find a basis for the settlement of the oustanding questions between Germany and Roumania, and it is hoped that this time some agreement will be reached.

Miscellaneous News.

The Italian Minister to Bucharest, Marquis Durazzo, has been transferred as Ambassador to Brussels.

The French Minister, M. Clenchant, has also left, and his successor has not yet arrived in Bucharest.

Prince Valentine Bibescu is reported to have accidentally shot himself while cleaning his revolver. The ball entered the tip of the lung but the wound has fortunately not proved fatal. Prince Bibescu is now at a nursing home and is said to be progressing favourably.

TRANS-JORDAN.

Amman, February 10.

Trans-Jordan's Independence.

The recognition of Trans-Jordan as an independent principality will shortly be an accomplished fact, though the terms and conditions have not yet been published, and the Treaty will probably not be signed until the High Commissioner returns from the Sudan, where he is on a visit, during his change of residence to a new Government House. The earthquake of last July rendered the original Government House in Jerusalem unsafe, and the recent premises have not proved suitable.

Crops, Rain, and Locusts.

Heavy rain has fallen in Palestine and Trans-Jordan during the first half of February—a matter of the utmost importance in an agricultural country which depends on seasonal rainfall for its water. The locust peril still remains serious. Flights have already arrived in Trans-Jordan, but fortunately have been blown eastward by a gale, and so missed the crops, which are now some inches above ground. Flame throwers are being used to destroy the insects and are proving very effective. The fact that the locusts have arrived abnormally early seems to show that they must exist in great quantities this year, and grave fears are entertained for the safety of the crops. Rain does not appear to affect locusts, and the temperature is not low enough for them to be destroyed by cold, as sometimes happens.

Women in Amman.

On February 9 the new C.M.S. Women's Hospital in Amman was formally opened by the Amir Abdullah. Proceedings were begun by short services in Arabic and English, conducted by the Rev. C. Webb, of Jaffa, and the Rev. H. Tudor Craig, Secretary of the C.M.S. in Palestine. The Amir Abdullah then arrived, accompanied by the Chief Minister, Hassan Khalid Pasha, and other notables. The British Resident, Lieutenant-Coloned Cox, C.M.G., D.S.O., made a short speech, describing the work of the C.M.S. in Trans-Jordan. The Amir then expressed his appreciation of the work done by Dr. Purnell, the resident lady doctor, whom, he said, he had known for many years. Dr. Purnell described how her Hospital, at first an offshoot of the Mission being carried on at Salt, had grown. It originally consisted of a tent, for the use of patients who refused to be treated as out-patients, until three years ago, when a building was obtained in Amman. This was found to be inadequate, and at last funds had been raised to build the present hospital. It was hoped that later on it would become the centre of a scheme of midwifery for all Trans-Jordan. She expressed gratitude to many who had helped her in her task, and also to His Highness and all those present for having come to wish the work Godspeed. The Amir Abdullah and the British Resident then inspected the hospital, which was declared open.

General News.

Quarantine against Iraq, in consequence of the late cholera outbreak, has been removed.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

HUNGARY AND SLOVAKIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Allow me to comment briefly on Mr. Arthur Andrews' letter in THE NEAR EAST AND INDIA of February 16, dealing with the Hungarian problem, in which he particularly questions certain statements made by Mr. J. S. Barnes in a previous letter in your paper.

The chief burden of his remonstrance is that Mr. Barnes is absolutely misinformed with regard to the state of Slovak feeling, and that any grievances which this people originally entertained in the first days of the new Republic have been greatly softened. Mr. Andrews is evidently of the opinion that, while a journalist "may make such mistakes as Lord Rothermere" . . . and myself, no scholar "who is a true student of history and of political atmospheres" could ever believe that the Slovaks desire a return to Hungarian domination. I have probably as many friends among the Slovaks as Mr. Arthur Andrews, and contend that the contrary is the case, the unnatural union which has been forced upon the Slovaks having proved such a mixed blessing that the majority of this nation would certainly welcome the restoration of Hungarian rule.

Taking the various points which he has raised, I would point out:—

(1). That the enormous progress which the one Slovak party (Jehlicka's Party of Independence) which is openly

Digitized by Google

in favour of a reunion with Hungary, subject to autonomy being granted to them, has made since the signing of the Hlinka-Benesh pact, when Hlinka (leader of the Slovak Populist Party) went over to the Government side, is highly significant. In the elections of 1925, Jehlicka's adherents had contributed 35 per cent. of the votes recorded by Hlinka (hitherto the Independents and Populists had worked hand in hand). After Hlinka's betrayal, however, the Party of Independence severed all connection with their allies, this example being subsequntly followed by 25 per cent. of Hlinka's own party. This is a fact that Hlinka himself has acknowledged in his paper the *Slovak,* where he accounts for losing 200,000 of the 479,000 votes hitherto recorded by his Party, by saying that neither his protests against the Rothermere action nor the pact that he signed with the Czechs had found any real favour with the people. It is interesting to note that, as another resultant of the same compact, a *rapprochement* is being projected between the Hungarian Christian Socialists and the Slovak Populist Party, with the view of presenting a united front of all those who were living in common in Slovakia before the War. According to the terms of this project, one fundamental principle has been laid down: the Slovaks are to remain Slovaks and the Magyars, Magyars, while the paper, *Lidove Noviny*, informs us that this action is directed in the main against the Czechs living in Slovakia.

(2). That Dr. Jehlicka, leader of the pro-Magyar Slovaks, though living in exile, is as "genuine" a leader of the Slovaks as Hlinka himself. He was one of the four Slovaks representing the Autonomous Party appointed by the Czechs to sit in the first Czechoslovak National Assembly, and his influence is so generally acknowledged by the Government of Prague that emissaries have repeatedly approached him, not only in Poland, but in Vienna, on behalf of Dr. Benesh, with a view to negotiating with his Party. As Hlinka himself declared, when he was last in America (1926): "Although we have not always followed the same route, we have one common end in view—the welfare of our people." Dr. Jehlicka is a fanatical lover of the Slovak nation.

(3). That the *rapprochement* to which I have just made allusion, and the general refusal on the part of the Slovaks themselves to take any part in the manifestations of protest that were organised last year against Lord Rothermere's campaign, hardly bear out Mr. Andrews' contention that "not one of the Slovaks but resents most vigorously the idea that they could consider returning under Hungarian rule." I was in Slovakia at the time these "spontaneous manifestations" were taking place, and, having attended several of these meetings, found in every instance a poor attendance and one, incidentally, in which the Czechs constituted a majority. There were only 3,000 present at the August meeting in Bratislava, and though every attempt was made to induce the Slovaks to attend, only those members of that nation who had always belonged to Czech political parties showed any interest in the proceedings.

(4). That the fact that conditions in Hungary (which Mr. Andrews, incidentally, cannot claim to know any better than recent visitors to that country) have perhaps remained much as they were before the War (and I only assume they are for argument's sake) hardly bears out Mr. Andrews' contention that they cannot, therefore, be sufficiently inviting to the Slovaks, inasmuch as the latter have certainly not been bettered by their change of régime. I travelled all over Slovakia and found everywhere the same discontent with economic and other conditions. And whereas Slovak industry in particular was in a highly flourishing state before the War, it is now almost moribund. The explanation of this depression, it may be interesting to note, is due to the fact that while Hungary, which is an agricultural country, had concentrated 65 per cent. of her industries in Slovakia, where all the essential conditions for the development—mountains, rivers, woods, mines, etc.—abounded, the consequence of linking Slovakia to the more highly developed industrial Czech State has been to make Slovak industry superfluous. (As Dr. Masaryk and the Finance Minister, M. Englis, have repeatedly declared.) Unable to compete against their stronger and artificially supported Czech rivals, the Slovak industrialists were gradually ruined, while the Czech Government dumped all their surplus population in the Slovak provinces, thereby materially increasing the difficulties of a nation which could hardly feed its own population. The burden of Slovak grievances is not, however, confined to industrial matters, and columns of paper could be filled with a description of their sad plight. I must content myself, therefore, with saying that the present disaffection and the undoubted increase in separatist and pro-Magyar feeling which I have lately noticed in Slovakia are directly traceable to the fact that the country has been economically exploited, as colonies used to be in previous centuries, all its resources being utilised for the benefit of the Czechs alone; this fact is so generally recognised in Slovakia that one Slovak farmer compared the Republic to "a cow that is grazed in Slovakia but milked in Prague," while even the Land Reform has only benefited the Czechs and Moravians. The following illuminating passage in the Slovak paper *Obrana* should be quoted here: "From the very beginning . . . laws and ordinances were created by which the estates which were partitioned out must fall into Czech hands, so that these new landowners should bring to Slovakia Czech officials, Czech workmen, Czech farm-servants. Several buyers were directed to take exclusively Czechs into their service, in order to create new Czech centres in these Slovak circles. The Slovak soil, mixed with the ashes of our forefathers, is shared out amongst non-Slovaks."—I am, etc.,

DUDLEY HEATHCOTE.

London, February 18.

ARABS AND ZIONISM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be permitted, through the columns of your paper, to make a few remarks in connexion with the hostile demonstration against Sir Alfred Mond on his arrival in Baghdad from Palestine?

It seems to me, Sir, that you have attached to this matter too great importance. For had the Arabs sincerely meant to demonstrate against "Mond the Zionist," their hostility would have started in Palestine, where the Zionist work is carried on.

The facts are, however, that Sir Alfred has been cordially welcomed in Palestine, not only by the Jews, but also by many notable Arabs. At Haifa Sir Alfred was visited by the Mayor and his deputy, both Arabs, who welcomed him on behalf of the municipality and expressed their hope that his visit will be a blessing to the country.

In Baghdad, as in other Eastern cities, the cafés are always crowded with people—sitting on little chairs and smoking nargilehs—who would only be too pleased to participate in any exciting event. It is but natural that these people, on being told that a certain Sir Alfred Mond was coming to deprive them of their country, should greet his arrival in so inhospitable a manner.

Unfortunately, the neighbouring countries of Palestine (with the exception of Egypt, which country Sir Alfred had visited prior to his arrival in Palestine) know very little about Zionism. In Palestine itself the Arabs are gradually realising that the aim of Zionism is to develop the country in co-operation with the Arabs for the benefit of all its inhabitants.

Judging, however, from the rapid development of the said countries in recent years, one may anticipate that in the near future such a hostile demonstration as that of Baghdad will not take place, even in spite of various agitators.—I am, etc.,

MOSHE KOURIANSKY.

London School of Economics, W.C.2.
February 18.

Owing to disturbances in Khuzistan, the Persian Government has appointed General Farajullah Khan, late Director of Conscription in Teheran, to be the new Governor-General of the province.

Dame Georgina Elizabeth Cowell, of Clifton Castle, Bedale, Yorks, widow of Sir John Clayton Cowell, Master of the Household during many years of Queen Victoria's reign, and Lieutenant-Governor of Windsor Castle, left estate of the value of £159,539, with net personalty £84,294. She directed that gifts of jewellery made by the Khedive of Egypt, the Sultan of Turkey, the King of the Belgians, the Shah of Persia, the Queen of Holland, and all pictures and plate presented to her late husband and herself by Royal personages should devolve as heirlooms with the Clifton Castle estate.

THE WEEK AT HOME

London, Tuesday Morning.

A Gentleman Politician.

The time is full with the sound of mourning, for yet another national figure is gone. De Robeck, Hardy, Haig, and now Asquith: have there ever been, in time of peace, such despoiling weeks as England has lately suffered?

Lord Oxford had elements of greatness—such is admitted by his least generous critics. His character was a noble character, and has not inaptly been compared with the traditional Roman character. Like Haig, he was a man who, however attacked or criticised, never winced, never sought refuge, never stood but four square to whatever winds might blow.

And, as everybody knows, they did blow. Asquith was fortunate in this, that at a time when politicians in the eyes of many observers were becoming a contemptible class, he retained his essential gentlemanliness. "The last gentleman in the House of Commons," I think he has been called. He was unfortunate in this, that the ideals which he so firmly represented have now suffered eclipse, if not extinction; it is curiously difficult, therefore, to "place" him in our national life. For myself—it is purely a personal view—I should not be surprised if historians a century hence find in him one of England's most notable Prime Ministers.

Newspaper Trusts.

The recent success of the Berry group of newspapers in acquiring the *Daily Telegraph* has been followed by the announcement that the Northcliffe groups are to establish a chain of evening newspapers throughout the provinces. This is a new development, and has caused immense interest, particularly among those who deplore the increasing trustification of our Press.

These changes constitute one of the most remarkable metamorphoses in the national life. Formerly, newspapers served to inform, or to interpret public opinion. Their owners took personal pride in their possessions. Now, they are become primarily financial, money-making concerns. Many of those who obtain riches from newspapers know nothing of, and care less for, what those papers stand for or contain. This fact is so widely accepted that people have ceased to wonder at it: it is none the less deplorable.

To give to a man who, say, has lived outside England since 1914, some idea of the growth of these trusts, one need only mention that the sole surviving "independent" newspapers are *The Times*, the *Morning Post*, the *Daily News*, the *Star*, and the *Daily Herald*, in London; and in the provinces, the *Manchester Guardian*, the *Yorkshire Post*, the *Birmingham Post*, the *Glasgow Herald*, and the *Scotsman*. There are, of course, others, but those I have given are the most important.

And so we progress. The more the news is syndicated, the more the views (of Lord or Mr. So-and-So) are vindicated!

Indiscretion and Irony.

Recently Lord Wolmer, Assistant Postmaster-General, said that "if the Post Office were managed by private enterprise there would be a more economical and more efficient service." It was rather an extraordinary indiscretion, and it received rather an extraordinary commentary.

In answer to the inevitable question in the House of Commons upon this assertion of individual conviction, the Prime Minister said: "When Lord Wolmer has attained years of discretion, he will speak with that caution which characterises every one of our utterances." This was irony answering indiscretion with a vengeance. Everyone smiled when reading that a sprightly young boy of over forty years had been chaffed by Mr. Baldwin on the grounds of his babbling youth.

Some Conservatives have defended Lord Wolmer by asserting that his statement is true; but unless the Conservatives intend to abolish the Post Office as a public institution and to let the work be done by private contract, the fact remains that Lord Wolmer's speech was wholly unjustifiable.

Ecclesiastical Frenzy.

Such scenes have lately been witnessed in St. Cuthbert's Church, Darwen, as will certainly cause amazement to outside observers who imagine that England is a country in which religious toleration has reached absolute limits. For in this Church, which is presided over by an enthusiastic Anglo-Catholic, service after service has been wrecked by the congregation, and actual violence has been offered to the Vicar.

The issue between the alleged "Roman" Vicar and Curate and the protestants seemed to come to a head last Sunday, when for two and a half hours hymns were sung in Church in order that the authorities' voices might not be heard, when the Vicar was hurled by a yelling crowd into a clump of bushes, and when the police had to intervene in the interests of public order.

This sort of thing is wholly lamentable, but there is as yet no sign that either side is prepared to yield. There is nothing noble about it, for it is only a sordid struggle for the dominance of one religious belief over another, and the sorriest spectacle for those who too often are prepared to scoff at the conduct of professing "Christians." It does show, however, how near we are still to the primitive man, and how essentially acquired the virtue of true tolerance is.

Cup-Tie Fever.

The Cup-Tie fever, which appears to smite every other Englishman in whatever part of the world he be, is now at its height, for there are now left only eight teams from which to choose.

This year the so-called "London" teams, Tottenham Hotspur and Woolwich Arsenal, appear to have an excellent chance of being in the Final at Wembley—all Londoners are praying that they may not be drawn against each other before the Final; and metropolitan excitement is intense.

It is really amazing how crowds, and partisan crowds at that, flock each Saturday to see these professional Soccer matches. Local patriotism is very keen, inexplicably so, seeing that all professional teams now draw their players from many different localities. That fact, however, has absolutely no effect upon the whole-hearted supporter or "fan," who for the next weeks will be bathing body and soul in the magic waters of the Cup-Tie.

Oxford and Cambridge.

He would have to be an Oxford man who could remember without an effort the last time (excluding the Soccer match) on which Oxford considerably beat Cambridge at anything. Last Saturday at hockey the prevalent superiority of Cambridge was once again shown, the Light Blues winning by five goals to one.

It is an extraordinary run of success that Cambridge has been having during the past few years. Of course it is only a cycle, and there is nothing much—unless it be fashion—to account for these cycles.

February's Promise.

February, as everybody knows, can behave like an angel. Until this last week-end it has behaved like a demon; but now it has made amends.

However bogged the ground may be, no one on Saturday and Sunday could but delight in the burgeoning hedges, the promise of may and crab-apple by the roadside, of lords and ladies by the ditches, the songs of lark and thrush, giving us, as Meredith (whos centenary has just been celebrated) says, "the rapture of the forward view," and the soft, sun-laden air. It was an uplifting experience to be out this week-end in the fields, and to watch slow cottage-smoke curl steadily through the clearer air, with the blue haze of distance beyond.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

February 23, 1928 (New Style).
February 10, 1928 (Old Style).
Ramadan 2, 1346, A.H., of the Muslim Calendar.
Adar 2, 5688, of the Jewish Calendar.

Sir John Langman is joining the P. and O. s.s. Maloja on February 17 for Egypt.

Sir Alfred Mond left Baghdad for Rutbah by air on February 15.

Lady (Frederick) Lewis left London on February 17 for Egypt and will be away until after Easter.

The Earl and Countess of Albemarle, who are spending a holiday in Egypt, are not returning to London until after Easter.

The Yugoslav Minister gave a reception on February 21 at the Legation in Queen's Gate for members and friends of the International Theatre Society.

Mr. William H. Taylor, formerly Secretary to the American Embassy in London, has been transferred to the American Embassy, Constantinople, and last week left London to take up his duties.

The Afghan Minister will hold a reception next Tuesday (the 28th inst.) from half-past four to half-past six o'clock, at the Legation, 31, Prince's Gate, on the occasion of the anniversary of the Independence of Afghanistan.

Mr. F. Lammot Belin, formerly First Secretary at the American Embassy in Constantinople, arrived last week with Mrs. Belin at the Ritz Hotel, and has taken up his new duties at the American Embassy in London.

Brigadier-General Sir Frederick Meyrick, Bt., Lady (Oscar) Warburg, Lady Lewis and Lady Scott were passengers in the P. and O. Ranpura, which sailed on February 17 from London for Tangier and Port Said.

Viscount and Viscountess Devonport joined the Maloja at Marseilles on February 17 for Egypt, where they will be staying for a few weeks before proceeding to Palestine and Syria. Mr. T. M. Healy, late Governor-General of the Irish Free State, is accompanying them.

The Hon. Sir Wiliam and Lady Erskine left 70, Lowndes Square, where they have been staying with the Hon. Mrs. Dudley Ward, for Scotland on February 19, to stay with the Earl and Countess of Mar and Kellie at Alloa House.

Sir Thomas W. Haycraft (late Chief Justice of Palestine) will lecture to the Central Asian Society on February 29 on "Palestine under the Mandate." The lecture, which is to begin at 4.30 p.m., and to be illustrated with lantern slides, will be delivered in the Royal Society's Rooms, Burlington House, Piccadilly, W.

The Rt. Hon. Sir Ronald Lindsay, who has been appointed to succeed Sir William Tyrrell at the Foreign Office, has served, among other places, in the British Embassy at Teheran, and acted as Under-Secretary of State for Finance to the Egyptian Government from 1913 to 1919. Following a term as Counsellor of the Embassy at Washington, he became Minister Plenipotentiary at Paris, and in 1924-5 he acted as British Ambassador in Constantinople.

The Index to Volume XXXII (July–December, 1927) is now ready. Copies will be sent to subscribers gratis on application to the Manager, "THE NEAR EAST AND INDIA," 170 Strand, W.C.2.

M. Constantin M. Laptew, Roumanian Chargé d'Affaires, returned to London on February 14 from Paris, where he had been visiting M. Titulescu, Roumanian Minister for Foreign Affairs.

Lieutenant-Colonel Sir Francis Henry Humphrys, Sardar-i-ali of Afghanistan, had an audience with the King at Buckingham Palace on February 17. Sir Francis, who was First Envoy Extraordinary and Minister Plenipotentiary at the Afghan Court, is in London in connexion with the coming visit of the King and Queen of Afghanistan. He recently saw King Amanullah in Rome to arrange the details of the latter's stay in this country.

The King and Queen of Afghanistan will visit the City on March 14 to receive an Address of Welcome from the Corporation and to be entertained at a State *déjeuner* in Guildhall. The Duke and Duchess of York, Prince Henry and Prince and Princess Arthur of Connaught will be present and there will be a representative gathering of statesmen and citizens. The arrangements are being made by a Special Committee of which Sir Percy Vincent is chairman. Sir Austen Chamberlain, the Secretary of State for Foreign Affairs, will give a dinner in honour of the King of Afghanistan on Wednesday, March 14, at the Foreign Office.

THE Y.M.C.A. IN BELGRADE.

(From a Correspondent.)

The Young Men's Christian Association in Belgrade was greatly honoured on January 24, when Princess Olga (Princess Paul of Serbia), together with her sister, Princess Elizabeth of Greece, visited its headquarters. The distinguished visitors were received by the Hon. Montagu Waldegrave, Mr. P. H. Sitters (National Advisory Secretary of the Y.M.C.A. in Yugoslavia), Mrs. Sitters, Mr. R. C. Taggart, and Dr. J. D. Stoyanovitch (head of the Student Department). The Y.M.C.A. Scouts, under the leadership of Scoutmaster Z. Panitch, formed a guard of honour, one of their number presenting the Princess with a bouquet of violets. Among the assembled guests were the British Minister and Mrs. Kennard, the American Minister and Mrs. Prince, M. Alexander Yovitchitch (ex-Serbian Minister to London) and Mme. Yovitchitch, M. Vasa Lazarevitch (representing the Mayor of Belgrade), Mlle. Helene Lazarevitch, and M. Kovanjitch.

The work of the Y.M.C.A. in Belgrade lies chiefly among University students and boys, and in the latter department there is a section for working lads. A large number of members were present to greet the Princesses, and during their tour of the premises the visitors were shown the many activities which make up the Association's programme. Great interest was aroused by an exhibition of lantern-slides depicting scenes in the summer camp: while another slide gave the following statistics of the work done during 1927:—

Number of members	430
Total attendance at religious meetings	10,769
Total attendance at educational meetings	6,628

Tea was served in the Members' Lounge, after which the Princesses were photographed with the members. Before leaving, Princess Olga joined the Y.M.C.A., and signed the usual membership application form: she also graciously consented to become the President of the Ladies' Auxiliary Committee. She expressed pleasure at the plans of the proposed new building, which were exhibited in one of the rooms; it is hoped that the Municipality will grant a site for the erection of this building, which will include a hostel for University students.

Four of the six Persian War Office officials who were arrested on October 4 were last week found guilty by court-martial of conspiracy against the State. One of them has been condemned to death.

Book Review

HIS RULING PASSION.

"LETTERS ON RELIGION AND FOLKLORE." By F. W. Hasluck. (London: Luzac and Co. 12s. 6d.)

Some of our readers may remember a remarkable book by the late Mr. Hasluck, on the Monasteries of Mount Athos, which we had the privilege of reviewing in these columns some little time ago. The author was for nine years Librarian of the British Archæological School at Athens. His services were secured by the British Legation in that city during the War for Intelligence work, and his strenuous work there, acting on health already impaired, left him a prey to tuberculosis from which he never recovered. He lingered on, under treatment, in the Swiss mountains for some three years till death took from us a very fine scholar and, as this book makes plain, a very lovable and gallant man. It is to the devotion to his wife, herself a well-known scholar, that we owe this most interesting and touching book, which consists of Mr. Hasluck's letters to Professor Dawkins, his old chief, written during his long illness. All written cheerily and keenly, with the little touches of fun and familiar slang and queer contractions which one old friend naturally uses to another when engaged in a long, continuous correspondence. Not a word about illness or suffering in any of them. Only semi-comic complaints about the difficulty or impossibility of getting the books he required. Nothing but eager search for new facts about his pet studies and a brilliant mind doing what work it could with the burden of a very sick body and the absence of anything like a library. But he triumphs over both. Even from Baedeker and Bradshaw he can find material to help him.

But by dwelling on this aspect of the book we must not give a false impression as to what it was evidently Mrs. Hasluck's intention, in giving it to the world, to bring out. The letters are not only a mine of information about folklore and religious matters relating largely to Syria and Anatolia, full of suggestive matter which, one hopes, will lead others on to further investigation, but are, as it were, working models of the true methods of investigation. As such, every student of these sciences should ready and study them carefully. It is, of course, not possible to enter into detail here, but we cannot refrain from giving our readers one or two samples of the letters, dealing with general matters. ("Trufflers," we may say, was his playful name for seekers after truth.)

"I discovered . . . the use of out-of-date encyclopædias . . . . It is an inexpensive way of geting a bibliography of forgotten sources on revived subjects. You suppress the encyclopædia's name of course and only cite its sources as if you had read them all through when you were a boy. This must go into the Truffler's Guide eventually for (posthumous) publication."

"B. writes a book, encyclopædic by choice, based on A., a well-known and accepted authority, going one better than A., not in exactness, but in interpretation perhaps or combination of 'prophetic' texts, even in amusingness. For C., who compiles a similar work fifty years later, B.'s is fact, and so on, and he does not mark clearly what he has from B., far less what B. had from A., though, if he is *very* conscientious, he *may* refer to one or the other. Almost impossible, before printing not general, to check and sift, and the whole idea of possibility and probability was astray. Hence many joyous tangle for the likes of you and me to unravel."

"I believe most 'historical' folklore is not based on history direct but on *treated* history, e.g., that the Roland and Charlemagne associated with places are those of the Chansons de Geste, not of history."

"What is really curious in England is that Christ is invoked for anything people want for themselves, God (Jehovah) mainly for drastic action against people we don't approve of."

Only one more:—

"I write to you very easily and has lots of time of course. Really you get a sort of record of my reading and cogitations. I shall like to read them afterwards (it will be amusing to have it all dated)."

It was not to be so for him, but we owe much to Professor Dawkins for so piously keeping Hasluck's letters and to Mrs. Hasluck for giving them to the world, embellished with numerous helpful notes. Nor must we forget the illustrations, especially the reproductions of Hasluck's own sketches. C. S-W.

ISLAMIC LITERATURE.

ENGLISH TRANSLATION OF THE HOLY QURAN WITH NOTES. By Maulvi Muhammad Ali, M.A., LL.B., President, Ahmadiyya Anjuman Ishaat i-Islam, Lahore. Leather Bound, 50s.; Pluvinson, 40s.; Cloth Bound, 30s.

REVUE DES ETUDES ISLAMIQUES.

We have received the first two numbers of *La Revue des Etudes Islamiques,* which is to be published in Paris (Geuthner) four times a year (foreign subscription: 100 francs a year). It is under the direction of Professor Louis Massignon, author of the admirable *Annuaire du Monde Musulman;* its reliability and scholarship are, therefore, beyond reproach.

In these first two *cahiers,* the most notable feature is possibly the "Souvenirs" of the Ghazi of Turkey, which have been put into French from the original Turkish. But another extremely valuable and welcome feature is called *Abstracta Islamica,* a bibliographical record of all the most recent research into Islamic life, taken in its widest sense. Thus are briefly reviewed books in all languages upon Islamic culture, the history of scientific ideas, ethnology and folklore, literary and textual criticism, arts and crafts, dogma, philosophy and mysticism, moderism, colonisation and modern politics, and so on. This record will be of infinite use to all students of Islam, and should fill a want that has been felt for some time.

Other articles of particular interest are on "The University of Al Azhar," by Achille Sékaly, and "The Status of the Kabyle Woman," by Marcel Morand. The whole enterprise, however, is one that is warmly to be recommended, and we are quite certain that students of Islam will be profoundly grateful to Professor Massignon if (a point on which we have no doubt) he continues to compile *cahiers* of the same standard as his first two.

BOOKS RECEIVED.

NEWS IN BRIEF.

The first Yugoslav air-line for passengers has been opened between Belgrade and Zagreb. Five-seater Potez aeroplanes are employed.

The German General von Morgen, who in 1896 accompanied Lord Kitchener's expedition in Egypt, died on February 15 at the age of 70.

George Merzbach Bey, a member of the Belgian community in Egypt, and leader of the Mixed Tribunals Bar, died suddenly in Cairo on February 17.

M. Titulescu, Roumanian Foreign Minister, left Paris on February 15 for San Remo, to see Herr Stresemann before proceeding to London. He had seen M. Briand, French Foreign Minister, on the previous day.

Attended by his Prime Minister, Abdel Khalek Pasha Sarwat, the King of Egypt returned to Cairo on February 15 from his progress through Upper Egypt, where his Majesty had been enthusiastically received by the *fellahin*, particularly at Minia and Beni Suef.

It is announced that the Holy Synod of the Patriarchate of Alexandria, the Orthodox Church in Egypt, has decided to adopt the Gregorian, or New Style, Calendar as from October 1 (September 18, old style), 1928.

After the Roumanian Chamber had, on February 14, voted the exclusion of M. Vaida Voevod, a former Prime Minister, for 30 days, Dr. Maniu declared that all Transylvanian Deputies would remain away until his return.

The King of Afghanistan, who has fully recovered from his throat trouble, on February 17 visited Geneva, accompanied by a suite of fifteen persons. The following day His Majesty was received at Berne by the Swiss Federal Council.

The Polish Minister in Sofia has presented the King of Bulgaria with the insignia of the Grand Polish Order of the White Eagle, which had been conferred on his Majesty by the President of the Polish Republic.

A Treaty of Friendship between Afghanistan and Switzerland has been signed in Berne. The two countries agree to foster mutual commercial relations and to reecive diplomatic missions from the other party.

Lord and Lady Plumer returned to Jerusalem on February 18 from the Sudan after a month's vacation. They are still without a home, as the result of the July earthquake, and are occupying temporary quarters until a permanent Government House is built.

The current series of Egyptian stamps is about to be completed by the addition of the values 4 mils. dark green, 20 mils. brown, 100 mils. lilac, 200 mils. violet, 500 mils. maroon, and £E1 dark green and maroon.

Colonel Robert Hall Forman, who died in London on February 16, at the age of 74, served in the Russo-Turkish War as a surgeon in the Imperial Turkish Army. Much of his later service was spent in India and Burma in the R.A.M.C., which he joined in 1880, and from which he retired in 1911.

General Sir George Milne, Chief of the Imperial General Staff, will attend a re-union of all ranks of the Salonika Force, to be held at the Guildhall School of Music, on March 3 and 5. All particulars of the gathering can be had from Mr. S. F. Phillips, 33, Upper Grotto Road, Twickenham, Middlesex.

Dr. Fikret Bey, the Turkish Deputy, whose immunity was recently suspended by the Grand National Assembly, was, according to *The Times*, arrested in Angora on February 16. Fikret Bey was an associate of Ihsan Bey, who is now being tried with others implicated in the naval contracts scandal, but so far has escaped arrest, partly owing to illness.

The Middle East Command of the Royal Air Force gave a display at Heliopolis aerodrome on February 16. Lord Lloyd, British High Commissioner, and Lord Strickland were present. In spite of a strong *Khamsin* and heavy rain and hail the programme was maintained without mishap.

Mr. Rowland Sperling, the new British Minister to Bulgaria, who last week paid his first official call upon M. Bouroff, Minister of Foreign Affairs in Sofia, was received in audience by King Boris on February 18, when he presented his credentials and also the letters recalling his predecessor, Sir William Erskine.

The Greek Official Gazette on February 15 published the conditions under which the Greek Government invites foreign tenders for the work of draining the valley of the Struma, and the plains of Kavalla and Thessaly. It is estimated that the total cost will be approximately thirty million dollars (£6,000,000), which will have to be raised by loan, the flotation of which must be undertaken by the firm to whom the work is adjudicated.

"Arcos" having decided, for economic reasons, to withdraw its organisation from Turkey, trade with Russia will in future be carried on through the Soviet commercial representative in Constantinople.

Mrs. Adeline Babington Sheppard, of Regent's Park Road, N.W., founder of the Up-Country Nursing Association in India (which was later incorporated with Lady Minto's Indian Nursing Association), who died on December 8, aged 91, widow of G. F. Sheppard, and daughter of the Rev. B. Peile, of Hatfield, Herts, left estate of the gross value of £6,949, with net presonalty £6,655.

Mirza Mahomed Khan, representative of Afghanistan in Moscow, who is now in Riga, has concluded a treaty of friendship with the Latvian Government. The Minister has stated that the King and Queen of Afghanistan have decided to accept the invitation of the Latvian Government to visit Riga. They will arrive in the first week of May and will remain a few days.

As a result of the recent demonstration against Sir Alfred Mond in Baghdad, the Iraq Cabinet passed a special ordinance providing for the punishment by flogging of students under nineteen years of age who take part in an illegal assembly or attempt to disturb the public peace, subject to a maximum of 25 lashes.

As the result of the trial by court-martial at Bucharest of three persons charged with espionage on behalf of the Soviets, one of the accused, Maria Loebel, was sentenced to two years' imprisonment, another, a student named Paul Schor, to three years'. The third accused, Tzehinocski, was discharged, having turned informer.

The Greek Ministry of Finance announces that it is not the Swiss subscriptions to the Tripartite Loan which have been impounded by order of a Swiss Court, as was reported, but the bonds of the Salonika-Monastir railway, which were bought by the Greek Government and deposited in the Swiss Bankverein in Zurich when the railway was acquired.

The League of Nations Secretariat at Geneva last week received from two monastic communities of Russian nationality resident on Mount Athos a petition which purports to be a protest against the alleged action of the Greek Government in expropriating, under the new agrarian laws, and without compensation, the agricultural land belonging to the monasteries in question. The Secretariat has referred the petition to the Athens Government for the latter's comments.

After a two weeks' recess due to the recent Cabinet crisis, the Greek Parliament reassembled in Athens on February 16. The following are the principal points of the new Government's programme read by the Premier, M. Zaimis: continuation of fiscal and administration reforms; speedy solution of pending refugee, agrarian, and urban problems; execution of productive public works, such as roads, draining of the Macedonian and Thessalian marches, and irrigation of reclaimed lands; and voting of a law for the creation of a Senate.

Consequent upon appeals from the many Greeks resident in China who since the Revolution have been deprived of the French protection which they formerly enjoyed, the Greek Governmnt has instructed M. Politis, its Minister in Paris, to approach his Chinese *confrère* to arrange for a treaty of friendship and mutual protection of subjects, according to *The Times* Athens correspondent. It is believed that if such a treaty can be signed it will be possible for one of the Great Powers to take charge of Greek interests in China, where Greece is not represented diplomatically.

Rear-Admiral Wilfrid Nunn, C.B., C.S.I., C.M.G., D.S.O., who retired last week, has had over 40 years on the active list, having entered as a cadet in July, 1887. He specialised in navigating duties, and, says *The Times*, on the establishment of the staff system in the Navy in 1912 he was one of the first to be appointed to the staff, in consideration of his employment at the R.N. War College. In the War he commanded H.M.S. Espiégle at the bombardment of capture of the Turkish fort at Fao, Persian Gulf, in November, 1914, and in the operations which resulted in the capture of Qurnah. For his great coolness and skill in handling his ship under fire in unsurveyed waters he was appointed D.S.O. During 1915 and 1916 he commanded the naval forces on the Tigris, and was commended in dispatches for his services at Kut and elsewhere, and appointed C.M.G. From November, 1917, he had command of the cruiser Curlew. He was made C.B. in September, 1917, and C.S.I. in June, 1919. After commanding the battleship Ramillies he was promoted to rear-admiral on August 12, 1925.

THE PERSIA SOCIETY.

THE ASSEMBLY AND THE COMMISSION.

A resolution boycotting the Statutory Commission was carried in the Legislative Assembly on Saturday last by sixty-eight votes to sixty-two. Numerous resolutions and amendments on the subject of the Commission had been placed on the agenda paper. The President, however, reduced them to a resolution to be moved by Lala Lajpat Rai, and an amendment to be moved by Sir Zufilkar Ali Khan. The resolution declared against co-operation with the Commission at any stage or in any form, while the amendment asserted that the procedure which the Commission offered merited favourable consideration. After a long discussion, extending over two days, the resolution was adopted by the narrow majority indicated. But, as we anticipated last week, the advocates of the boycott did not by any means have matters all their own way in the debate. On the contrary it would appear from the telegraphic reports that the case for co-operation was strongly and effectively presented by several speakers. And the narrow majority is of itself evidence that the division of opinion among the various parties is acute, and that co-operation is largely supported. The mover of the resolution seems to have distinguished himself by the extreme violence of his language. He does not believe in the British. According to him all that they have done in India is to exploit, and to emasculate, the people; and he urged their speedy withdrawal from the country. Several other extremist leaders delivered equally fiery speeches denouncing the Government, the Commission and the British generally in unmeasured terms. But too much attention should not be paid to this eloquence. For it must always be remembered that in modern India the popular orator can only maintain his popularity with his followers by ceaseless and unrestrained abuse of the Government. For many centuries the government of the country has been an institution altogether separate from the people. And the Indian has not yet grasped the fact that under a scheme of representative institutions he will be himself a part of the government. He and his ancestors have been always governed by an organisation placed over them; and he naturally welcomes criticism of this organisation. This is one of the main difficulties in the way of the establishment of constitutional government. For if those who are now loudest in their abuse—and consequently the most popular—were to co-operate whole-heartedly with the British in endeavouring to frame and to work a Constitution their popularity would vanish.

Such being the position, it is not easy to see how it would be possible for the present Commission, or, indeed, for any other Commission, however constituted, to obtain the support of the various parties that are competing for popularity. But the proposals which Sir John Simon defined in his communication to the Viceroy, and which we set forth in these pages last week, ought certainly to satisfy any reasonable man who has the cause of *swaraj* genuinely at heart. We need not repeat the proposals here, but it may be well to recall that they contemplate an invitation to the two Houses of the Central Legislature to choose from their non-official members seven Indian representatives on the proposed Joint Free Conference. A similar invitation would be issued to each local legislature. Indian opinion could not, we are disposed to think, be more effectively consulted; and if the invitation is issued, the Assembly may even yet have an opportunity of correcting the blunder made on Saturday. Meanwhile the Commission will, of course, go on with its task notwithstanding the Assembly's adverse vote. Sir John Simon made this perfectly clear in his letter; and the Secretary of State made an explicit declaration to the same effect in his speech at Doncaster last week. No other course is indeed possible, seeing that the Commission is not merely a Government Committee, but is a body appointed by, and representative of, all parties in the British Parliament. Mr. Ramsay MacDonald's straightforward statement that the Labour Party would go on with the Commission if they were returned to power makes it more than ever certain that there can be no looking back. What purpose then can the extremist leaders hope to serve by persisting in the policy of non-co-operation? As Sir Basil Blackett pointed out in the Assembly debate, self-government in India cannot come except by evolution. Those who stand in the way of that evolution are merely obstructing India's progress. Moreover, their contention is that the existing bureaucratic administration is hopelessly bad. It has not, according to them, a single redeeming feature. But yet they steadfastly and persistently refuse to permit it to be modified. They would not co-operate when the first advance towards constitutional government was made; and they are now doing everything possible to prevent a further advance. It never seems to trouble them that in the meantime this hopelessly evil administration, of which they never weary of complaining, continues to function. They want *swaraj*, or they say that they want it, but when definite steps in its direction are proposed they at once reject them. Their attitude must tend to make the development of democratic institutions impossible in India. We do not anticipate that they will modify their position; for we fear, as we have already suggested, that they are prepared to sacrifice the good of the country in order to maintain their position as popular leaders and emancipators of the people.

The warning which Lord Birkenhead gave to the extremists in his Doncaster speech has, of course, aroused anger in India. But the conditions being as we have described them, it seems to us that some such warning was needed. For, as Sir Frank Nelson pointed out in this journal last week, if the Indian politicians will merely sulk, if they decline to meet the advances which are made to them, it is inevitable that the British Parliament will conclude that the country is not ready for a further extension of representative institutions. It is so easy for the Indians to prove by co-operation that such an extension may be safely made. They have within their grasp an opportunity of placing India definitely and

Digitized by Google

firmly on the road to self-government; and if they miss that opportunity they will be retarding the progress of the *swaraj* that they desire. It is, of course, futile to expect that the extremists will be influenced by these considerations. But surely it is not even yet too late to hope that the moderate elements in the political life of the country will realise that India is indeed at the cross-roads. And the fact that the Assembly was so evenly divided on Mr. Lajpat Rai's resolution justifies the hope that reason and common sense are at last beginning to prevail among the less extreme parties. The abandonment of the *hartals* which it was proposed to organise at Calcutta and Madras on the arrival of the Commission at those cities is also an indication in the same direction. In fact apart from the extremists it would appear that most of the communities are slowly coming round to the side of co-operation. Sir John Simon's attitude has, of course, greatly contributed to this improvement of the position; and we believe that the improvement will continue as the real aims and objects of the Commission become more widely understood and appreciated.

CURRENT TOPICS.

Broadcasting in India.

Broadcasting in India is now seven months old. It is still, therefore, only in its initial, though crucial, stage. The news, therefore, that unless private enterprise comes to the assistance of the Indian Broadcasting Company the prospects of its continuance are by no means rosy, is accordingly very disappointing. Happily, it appears that as a result presumably of the recent protracted correspondence with the Government of India the Company has definitely decided to continue its present services both in Bombay and Calcutta, but that the hours of broadcasting will be slightly reduced as from the beginning of March next. The difficulty is, of course, the financial one. The Company has no source of revenue other than its share of the licensing receipts. Latest figures of wireless licences issued in India give a total of not more than three thousand—in Calcutta alone there are only just over 1,000 licence-holders. A licence for a wireless receiving apparatus costs ten rupees, of which eight go to the Broadcasting Company. A moment's reflection, with a rapid calculation, is sufficient to bring the realisation that the returns hitherto have been ridiculously inadequate to the requirements of maintaining the elaborate plant and the necessary technical staff. Admittedly, the new General Manager found on his arrival that the original estimates of the capital required to see the Company through the initial stages of its career were inadequately framed, but at the present rate of progress it is clear that the trouble goes much further than that.

Technically the Company appears to have exceeded the most optimistic expectations. Not only, we understand, is the transmission clear, but its range is far greater than was originally anticipated. The greatest difficulties were obviously to provide interesting programmes. - Much diligence and resource have been applied to maintaining their standard and variety, and a just balance has been struck between the European and Indian elements. Two principal reasons appear to account for the present lack of financial support. One is that neither broadcasting nor wireless sets are yet sufficiently advertised in India, and the other is the wireless "pirate." There is certainly evidence to show that there are far more wireless sets in operation than are registered or licensed. That India would prove a wonderful field for the wireless "pirate," whose attempts to stifle the movement in this country were only frustrated by vigorous action on the part of the Post Office, was a matter of common knowledge. We can only hope that the Government of India will take equally effective measures to combat a menace which if allowed to continue unchecked must lose for India "one of the most attractive amenities provided by the genius of the modern inventor for the masses of the people."

India's Ports and Shipping.

Questions affecting the administration of the various ports in India have been under discussion recently, and are to some extent still pending. When the Reforms scheme came into operation rules, styled the Devolution Rules, were framed in accordance with the provisions of the revised Government of India Act of 1919. By these rules the various subjects of administration were classified as being either central or provincial. The central subjects are, as their names implies, those which were to be under the control and management of the Government of India; and the provincial subjects are those which according to the rules were to be under the control and management of the Local Governments. Among the central subjects as defined by the rules were shipping and navigation, lighthouses, port quarantine and marine hospitals, and ports declared to be major ports. By legislation passed prior to the Reforms scheme the statutory power for the administration of these subjects was vested in the local Governments. And although this was to be changed, according to the Devolution Rules, none of the legislation necessary for the purpose has been framed until recently. In the meantime the various subjects specified have continued to be administered as heretofore by the local Governments as agents for the Central Government. A scheme for centralising the administration was, however, framed by the Government of India some time ago, and was circulated to loval Governments for consideration.

This scheme was criticised by shipping and commercial interests in India, mainly on the ground that under it the central authority might interfere with the details of port administration. And the Associated Chambers of Commerce, at their annual meeting in December, 1924, passed a resolution accepting the principle of centralisation, but disapproving of any interference with the detailed work of the various port authorities. A year or so later the question of the lighthouse administration was taken up separately by the Government of India; and the Indian Lighthouses Act was passed recently by the Central Legislature. According to this statute lighthouses are classified as coast lights, or port lights. The former are under the control of the Central Government while the latter are managed by local lighthouse authorities. Still more recently the Government of India have determined to administer shipping and navigation direct, as well as lighthouses, and they have framed a scheme for this purpose. Their primary object is to provide for the administration of the Indian Merchant Shipping Acts by the Governor-General in Council instead of through the agency of the local Governments. They propose to divide the coasts of India into districts based on the major ports. Each district will be in the charge of a principal officer who will exercise general supervision over the whole of the district staff including surveyors, examiners of masters, mates and engineers, shipping masters, and the Bengal Pilot Service at Calcutta. The principal officers will also be superintendents of lighthouses under the Indian Lighthouses Act. They will be subordinate to the Commerce Department of the Government of India to which department there will be attached two advisory officers, a nautical adviser and a chief surveyor; and these officers will maintain contact between the department and the staffs at the ports. Legislation is necessary to bring about these changes, and a Bill has accordingly been framed by the Government of India and introduced during the current session. It appears to have been received with favour by shipping and commercial interests; and this was of course to be expected, as uniformity in mercantile marine administration is obviously desirable. Presumably the large and important question of the central administration of the major ports, and likewise the question of port quarantine, have been left over for further discussion.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 2, 1928.

Politics.

The only striking event of the week has been the gesture, one conceived in a depth of contempt for the Swarajist leaders and all their kind, of Lord Sinha in sending a message of welcome by radio to Sir John Simon and his colleagues three days before their arrival in Bombay. It was couched in these terms:—"Allow me to welcome you and your colleagues. Economic evils, incapable of rapid remedy, combine with a natural sensitiveness and avoidable misunderstandings to provoke hostile demonstrations from certain classes which, I feel certain, you will appraise at their proper value. Time and patience are necessary to dispel these passing clouds. In the meantime, rest assured of co-operation from all India in your inquiries which, God willing, will result in increased goodwill between our respective countries."

One does hope that Sir John Simon and his colleagues will be able to appraise the "certain classes" at their proper value. Equally one hopes they will be able to appraise Lord Sinha's thought at its proper value. For those who can read, there is a depth of understanding of the Eastern character to be drawn from a study of Lord Sinha's expressions, and the obvious manliness and fineness of feeling that dictated them. They spring, obviously, from a profound appreciation of the value of England's work in India in the past. To Lord Sinha it is unthinkable that India should ever be cut off from the Empire; should ever cease to be the brightest jewel in the Royal Crown, but it takes a great deal of clear thinking to see that in these days of confused manifestations of patriotism. It takes some courage in the man to turn upon his hot-headed, sensitive countrymen, and tell them that India may keep her freedom and also her place in the British Empire. Not one a step farther on than her hands have learned to control. It is the deeper patriotism that seeks rather a country's lasting good than any pride of place for her. That is Lord Sinha's patriotism. All credit to him. It is true that he has sat in the House of Lords, and there been listened to as to an equal; true that he has been the Governor of a great Province. He deserves the highest credit nonetheless.

Sir William Willcocks.

Sir William Willcocks, the designer of the Assouan Dam in Egypt, a man who was a little boy in India at the time of the Mutiny, and very nearly lost his life (indeed, he owed its preservation to the devotion of an Indian servant, as so many did) is on a private mission to Bengal. In an interview with a representative of the *Statesman* he expressed surprise that only one crop is raised in Bengal per year, instead of two or three as in Egypt. He expressed the view that fodder crops, such as certain clovers, vetches and beans, which would not only feed the cattle and ensure a plentiful milk supply for the peasants, but would also ensure the country (it sounds too good to be true) against malaria, could be grown as readily in the delta of the Ganges as in the delta of the Nile. A barrage would have to be erected on the Ganges to irrigate the delta, which to-day lies too high for flood irrigation, but is very favourably situated for perennial irrigation. "I came here," he said, "thinking to see Bengal an irrigated garden with malaria, and hoping to be able to suggest means for eradicating malaria, as Egypt has eradicated it; but instead of finding an irrigated garden with malaria I find what is at this time of the year practically a desert with malaria. Bengal is within the same zone as Egypt, and I find that instead of two crops being cultivated in Bengal during the twelve months, you have as a rule only got one crop, and this in spite of the fact that there is water enough in the rivers to ensure the land being under crops every day of the year." It is a wonderful prospect that is opened out. The best judges declare unhesitatingly that Sir William Willcocks is perfectly right.

Infant Mortality and Poverty.

Dr. Bentley, Director of Public Health, has been speaking on the connexion between the infant mortality and the general poverty of Bengal. More than 490,000 children under five died in the province in 1926, 191,000 of them dying before they were a month old. Each life thus lost, Dr. Bentley declared, meant a loss of potential earning and productive power. He pleaded for help in material welfare work, denying the suggestion that a lower infantile death-rate would lead to over-population. One supposes that Dr. Bentley is right in theory, but, while deploring such a waste of human life as the figures reveal, one has to ask how the productive power of several more millions in Bengal, where there is so little public leading, so backward a Government, would be turned to account.

Calcutta University.

What kind of leadership is shown you may judge by this. There being two private Bills before the Legislative Council, both affecting the constitution of the University, the Senate appointed a Committee to consider and report. It has declared that the remodelling of the Senate on the lines of the Sadler Commission Report is the one way to secure the best interests of the University. They do not, however, propose that the Report should be given effect to. Why not? There are difficulties of a financial nature that they despair of overcoming. It was the same with the Howrah Bridge, and with how many other matters has it not been the same? In a minute of dissent appended to the report the creation of two new constituencies, *viz.*, the District Boards and the Municipalities, each of which constituencies would return five senators is suggested. This proposal is obviously childish. It is like proposing to have a constituency, formed of Councillors of West Ham, Little Pedlington, etc., electing men to take part in the government of the Universities of Oxford and Cambridge. The explanation is that very few members of the Senate have any clear picture in their minds of what university education is. Some of them may never even have opened a book on the subject; and many of them have probably not even heard of such books as Newman's "Idea of a University." So the matter presents itself to them as a question of personal right—who should have a share in the fun of voting, or being voted for? What the voted-for are to do, whether they possess two grains of understanding of that, never comes into their mental picture.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, February 4.

The Arrival.

The Royal Commission has at last arrived in this country; hartals were held in all principal cities and at Calcutta and Madras there were serious outbreaks which however did not assume very dangerous proportions. At Madras a tramcar was smashed to splinters by the rioters who had decided that everybody should go on foot. Two European shops which refused to close their doors were set up and the doors and windows were smashed. In a prominent quarter of the city the Government Solicitor's car was burnt and the owner had a very narrow escape; it was here that the police were ordered to open fire on the mob and one man was killed and several others were seriously injured. At Calcutta no firing was resorted to although there was a serious clash between the students and the police which resulted in 60 persons being injured, including Sir Charles Tegart, the Commissioner, and

Digitized by Google

several other police officials. Up to an early hour this morning no news has been received in Bombay of any serious outbreak in any other part of the country and I think it can be safely surmised that the hartal has ended without any real trouble. There are, of course, the local hartals which will be observed when the Commission visits the provinces, when, I fear, some trouble may arise as the police will be very strict in enforcing the regulations.

No Trouble in Bombay.

For two reasons there was no trouble whatsoever in Bombay; first, the demonstration consisted chiefly of students and never went beyond what in England would be termed a "rag." There was no breach of discipline, nor was there any display of ill-feeling. Enormous crowds filled the streets and a remarkable aspect of the demonstrations was that if the police had made special arrangements they did not provoke the mob by parading the additional force in the streets. It is a great tradition which the police in this city have maintained for several years—never anticipate trouble; this was the second factor that maintained peace throughout a very trying day. The crowd was at all times good-humoured except on one occasion when before the *Times of India* office the procession called a halt and burnt several copies of the paper crying "shame, shame" all the time. In the evening a monster meeting was held on the Chowpatty sands which assumed menacing proportions—in fact it must have been the largest ever held in Bombay. Sir Chimanlal Setalvad, the leader of the Liberals in Bombay, addressed the meeting on the grave injustice done to Indians and declared that, unless a change in procedure was adopted, Indians would have nothing to do with it. The following resolution was then passed: "This public meeting declares that the Statutory Commission as announced is unacceptable to the country and calls upon the people of India to have nothing to do with it at any stage or in any form. This meeting further calls upon the representatives in the Central and Provincial Legislatures to vote against any proposals for the formation or election of any committee in connexion with the Commission."

Welcome to the Commission.

It would not be correct to surmise from this that Bombay was unanimous in declaring itself against the Simon Commission—there was a section, consisting of Muhammadans and the Depressed Classes, which was present at the Mole to welcome Sir John Simon and his colleagues. "Pardon these misguided people—they know not what they do!" said Dr. V. P. Chavan a non-Brahmin deputationist with joined hands and a look of supplication. Mr. S. K. Bole appealed on behalf of the labouring classes and the non-Brahmins. He complained that the capitalists were oppressing the former and the Brahmins were monopolising the services. "All Muslims are with the Simon Commission," said Moulvi Anis Ahmed, the Secretary of the Muslim Federation. The members of the Commission discussed freely with the deputationists the various problems affecting them and promised the most sympathetic consideration to their points of view. There is therefore every indication that when the Simon Commission visits Bombay next several persons will put forward their case before them.

The Members of the Commission.

Sir John Simon and his colleagues refused to discuss their future plans with any of the Press representatives who besieged them with questions on their arrival at the Mole. The demonstrators were kept out by the closing of all the docks to the public and the admission only of those who had passes. A brief statement had already been prepared by Sir John Simon which was distributed to the pressmen by his Secretary. The text of the message has no doubt already appeared in the home papers and need not be here reproduced. It does not, it is true, take us very far, but it is very clear that Sir John Simon intends to discuss the situation with Lord Irwin before he decides upon a definite line of action. So the procedure to be adopted will more or less conform to the Viceroy's attitude on the question.

The Viceroy's Statement.

On the eve of the arrival of the Simon Commission His Excellency Lord Irwin addressed a joint session of the Legislature at Delhi. The most important part of Lord Irwin's speech refers to the exclusion of Indians and the fatal results of the boycott.

This statement by the Viceroy, instead of helping to find a basis of agreement, has had the effect of further antagonising Indian opinion. It is regarded by some as an ultimatum, particularly the portion referring to the Commission arriving at a decision without the assistance of Indian opinion, should the boycott assume great proportions. In fact it is stated in influential political circles in Bombay that when the Viceroy has just made a statement of such an uncompromising nature, Sir John can have very little, or nothing, to say which is likely to conciliate Indian opinion.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

Probably on acount of the absence in India of the indefatigable Major D. Graham-Pole, questions relating to India on the Order Paper on Monday were far more scarce than usual. Incidentally, an Indian correspondent has sent me a cutting from a Bombay paper, from which I learn that the "body of outsiders" to which I referred in this connexion last session is the British Committee on Indian Affairs. I am also informed, through the same medium, that "far from being 'copied out of the proceedings of the Legislative Assembly,' the questions were inspired by Press acounts from the *Indian National Herald*." I leave the correction without comment except to observe that, without any disrespect to Mr. B. G. Horniman's latest journalistic venture, I should have thought that on the score of accuracy and reliability the original source was greatly to be preferred in such matters.

In case any of my readers share my woeful ignorance of the precise duties and functions of the British Committee, I may perhaps quote the following from the same authority—an article entitled "Indian Questions in Parliament," by Major D. Graham-Pole, in the *Indian Daily Mail* of December 20:—

"The British Committee, of course, keeps a sharp lookout in the matter of Indianisation, and loses no opportunity of pointing out occasions when this policy, accepted by the Government, has not been observed. . . . I find on counting up the pages in Hansard that there were no less than five and a half pages of Indian questions (the reference is apparently to Monday, November 21) answered orally, and five pages to which written answers were given. It is impossible to give an account of all of them. *They were part of our special attack on the India Office, and their value is chiefly in this country as propaganda.*"

But to return to question time on Monday. The most interesting point which emerged was Lord Winterton's statement, in reply to a supplementary question by Mr. Lansbury, that in all probability an announcement will be made by the Government of India, in the course of the present session of the Legislative Assembly, on the vexed question of the Indian Sandhurst Committee's report. As reported in a recent issue of THE NEAR EAST AND INDIA, the Committee's somewhat drastic proposals, I understand, have met with little support from the Committee of Imperial Defence, and the forthcoming debate will no doubt be used as another occasion for demonstrating the black record of "perfidious Albion" in the matter of Indianisation in general, and of the Army in particular.

The only other point worthy of permanent record, in my

Digitized by Google

judgment, was the Foreign Secretary's reply to Lieut.-Commander Kenworthy regarding the proposed air route between Baghdad and Karachi. Sir Austen Chamberlain said that the attention of the Persian Government has on several recent occasions been drawn to the desirability of concluding a friendly settlement of the questions outstanding between the two Governments, one of which was the establishment of a civil air service between Iraq and India. Hitherto the attitude of the Persian Government had not permitted such a service to be operated, but negotiations were still proceeding.

Someone in the House told me the Viceroy was coming home on short leave this spring, and I sincerely hope the report is true; I also hope he will spend a little time in the House of Commons in order that he may absorb at first hand the deplorable impression created in the minds of the majority of all members (irrespective of party) at the attempted boycott of the Simon Commission. I asked a colleague the other day (a man who thinks very differently from me in politics): "If India were to have full Dominion Self-Government conferred upon her, who—do you suppose—would be her first Prime Minister?"

He replied: "If the reception of the Simon Commission by certain sections of responsible (*sic*) Indian politicians is India's idea of Constitutional Statesmanship, I shall not need to think about the question of full Dominion Self-Government for India in *my* life-time."

Such is an instance of the atmosphere created by the attempted boycott and I trust that those responsible for it will in due course shoulder the blame that may well, one day, be theirs in the eyes of thinking people, for having put back the clock of Indian progress a generation or more.

COUNTERBLASTS TO "MOTHER INDIA."

It was inevitable that Miss Mayo's book should arouse much painful feeling in India and give cause for a series of bitter repudiations and retorts. Among these we have already noticed "Father India," by Mr. C. S. Ranga Iyer. The latest rejoinder comes from Mr. K. Natarajan, the Editor of the *Indian Social Reformer*. The declared object of both is to undo some of the harm which they believe to have been caused by Miss Mayo's book. It may well be conceded that the later gave many openings for a counter-offensive. Miss Mayo obviously committed the fault of over-generalisation. In particular the practical omission of the agricultural classes, at least over the most virile portion of India, from her purview, vitiated her argument against the soundness of the mass of the Indian body politic. It may, however, be doubted whether the best line of defence, or even of counter-attack, is that adopted by the authors of the books to which we have referred.

In such a controversy, reply by a *tu quoque* is perhaps inevitable. Mr. Ranga Iyer employs it by quoting the results of an inquiry by some American Judge into the morals of High School boys and girls in a single city in the United States. Mr. Natarajan retorts by a reference to American marriages. He even seeks to counter Miss Mayo's description of animal sacrifices in the Temple of Kalighat by a reference to similar sacrifices in the Jewish Temple at Jerusalem only nineteen hundred years ago. Such repartees, however, miss the mark. The *gravamen* of Miss Mayo's charges lay in the fact that the practices she attacked were based on customs which were tolerated, if not prescribed, by the Hindu system. The evil habits alleged to exist in America, on the other hand, would be repudiated by every decent person in that country. Nor can Mr. Natarajan hope to impress readers of any intelligence by describing the Abbé Dubois as an "atrabilious fanatic." It would have been more plausible to suggest that Hindu customs, however persistent, have been modified since the time of the Abbé. The change has been for the better, and, as Mr. Ranade had the courage to point out, has been largely due to the just and humane administration of the British connexion.

It is doubtless a coincidence, but one of some interest, that the authors of both the books to which we refer are Brahmans from the Madras Presidency. It is in this part of India, as was observed in the Statement of the Moral and Material Progress of India for 1925-26, that the attitude of the higher castes towards the depressed classes represents the extreme point of intolerance reached in India. We do not suggest that this attitude is consciously shared by either author. But it appears to us that a better line of action would be, in Mr. Gandhi's words, to repudiate the charge as framed by Miss Mayo, but not to repudiate the substance underlying her allegations. As Sir Rabindranath Tagore has stated, "Her (India's) weakness proceeds from within her own social system, and is not the outcome of any outward accident."

We are glad to observe that Mr. Natarajan does not repeat the suggestion which Mr. Ranga Iyer appears to hint at without venturing definitely to assert, that Miss Mayo received official subsidy or advice in the writing of her book. Its faults or merits, whatever they may be, are obviously the writer's own handiwork. Apart, however, from the over-generalisation to which we have already alluded, Miss Mayo, as appears to us, might well have given some credit to the bodies and individuals, largely drawn from the Hindus themselves, who have for many years been seeking to reform, if not to abolish, the customs to which she attaches so much opprobrium. Among these individuals Mr. Natarajan himself holds an honourable record, which deserves acknowledgment.

We may, at least, hope that some good will come from a controversy which, as these books show us, has reached a stage of extreme bitterness. The women both of the United Kingdom and of the United States are anxious to assist in the amelioration of certain conditions in India which are by common consent unsatisfactory. It is not, perhaps, too much to hope that their offer of assistance will not be spurned by Indians like Mr. Natarajan, who have the cause of social reform so closely at heart.

"Miss Mayo's 'Mother India'—A Rejoinder." By K. Natarajan. (G. A. Natesan and Co., Madras. 12 annas.)

INDIAN AFTER-DINNER STORIES.

The second volume of Mr. A. S. P. Ayyar's "Indian After-Dinner Stories" is not a great book, and one fancies that its humour and characterisation would chiefly appeal to those who know more than the superficial India. Perhaps the appeal would lie more in the direction of the Indian than in that of the European. But Mr. Ayyar offers us in this small volume enough material for us to gain some pleasure from the sly, unboisterous humour which—especially in one or two of the stories—is admirably effective. The portrayal of Indian character and life in the stories has been very cleverly done.

"Indian After-Dinner Stories." Volume II. By A. S. Panchapakesa Ayyar, M.A. (Oxon), I.C.S. (D. D. Taraporevala Sons and Co., Bombay.)

A BETTING TAX IN BURMA.

The Burma Betting Tax Bill—a new Bill, which will be introduced in the Burma Legislative Council—has been published in the *Burma Gazette*. The object of the Bill is to provide additional revenue for the province by authorising a levy of tax in certain forms of betting in Burma. The tax on totalisator receipts corresponds to a similar clause in the Bengal Amusement Tax Act of 1922, but it is not proposed in Burma to impose the five per cent. tax on bets made with bookmakers, which is included in the Bengal Act. For the present it is contemplated that the provisions of the Bill should be applied to racing in Rangoon only, taxing the totalisator and betting with bookmakers; but provision has been made for a licence fee to be paid by Stewards of upcountry race meetings, in accordance with the recommendations of the Capitation and Thathameda Taxes' Inquiry Committee.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

The B.I.F.

Elsewhere in these columns will be found a detailed survey of some of the principal exhibits at the Birmingham and White City sections of the British Industries Fair, which opened its doors on Monday in more propitious conditions than have obtained in any year since the Fair was established. Fairs and exhibitions since the War have taken on a very definite rôle in trade expansion in almost every country. Here before the War the tendency was rather to look askance at this medium of commercial development, while Germany, our very successful rival, exploited it to the full. However, we are now endeavouring to make up for lost time, and if we cannot compete with some countries in the number of annual fairs held, it is certain that no country now has an event comparable to the British Industries Fair. It has become what it was designed to be—a greater Leipzig—and the self-evident proof of its success is to be found in the increasing number of foreign buyers who visit it each year. It is not unreasonable to hope that its success this time will be of such an outstanding character as to make a notable contribution to the removal of the trade depression which still obtains in certain trades here. Incidentally our traders might follow the example of the Department of Overseas Trade in publishing their catalogues in a number of foreign languages for the greater convenience of their potential customers.

The Roumanian Budget.

Details of the Roumanian Budget for 1928 are given elsewhere in these columns. The estimated receipts total 38,350,000,000 lei, the expenditure being estimated at a similar figure, and adding the totals of the three separate Budgets—those of the Railways, Posts and Telegraphs, and Pensions—the real total is 53,979,000,000 lei, which represents a further advance in the Budget total, the figures for the two previous years being 51,153,000,000 lei for 1927 and 41,287,000,000 lei for 1926. In an explanatory statement M. Vintila Bratianu points out that with the present Budget the sixth period is closed in which expenses have kept within the margin permitted by the revenues. The increase year by year of the revenues, he explains, has been utilised to make more adequate provision for the public services, to provide for the gradual liquidation of the burdens left by the War, and to cover the needs arising through the formation of Greater Roumania. The constant growth of the Budget cannot be regarded without anxiety, for the outstanding need of the moment in Roumania, as in all other countries, is for economy in administration, and it is satisfactory, therefore, to note the statement of M. Bratianu that there is "need for the provision of at least a restraining influence on the growth of the State revenues and hence a need for the prevention of increase in budgetary expenditure." As is well known, Roumania's need for foreign assistance is pronounced, and M. Bratianu's suggestion that at a future date, more or less near, important credit operations may be possible is significant as indicating a change in Roumania's attitude to foreign loans. He further discussed the possibility of the stabilisation of the leu, which has now for many months moved within relatively narrow limits. Obviously the stabilisation of the currency would have to be a prelude to the floating of a loan.

Roumania's Trade Improvement.

A hopeful feature in the position of Roumania is the marked improvement in the trade figures. For 1925 there was an adverse trade balance of 716,000,000 lei, but there was a favourable balance for 1926 of 1,067,000,000 lei, while for the past year, when there was an indifferent harvest in Roumania as in other Balkan countries, the favourable trade balance is estimated at about four milliard lei. Here, then, we have very definite proof of the progress that has been accomplished in some directions in Roumania since the War. Unfortunately the trade development has not had the influence on the general situation that it ought to have had, owing to the deficiencies of the transport system which have acted as a brake on an economic advance. It has long been evident that Roumania's efforts to improve the railways have been ineffective, and it is evident that it is to foreign assistance in the shape of finance that Roumania must look for an improvement in this direction. Given a stabilised currency and adequate transport, it would not be long before Roumania's natural resources placed her in a position of enviable prosperity.

Sudan Trade Revival.

A marked improvement is shown in the figures for the trade of the Sudan for the first eleven months of last year. The value of the total trade was £E10,422,331 as compared with £E9,981,545 for the corresponding period of 1926, there being thus an increase of £E440,786. This increase, it is interesting to note, was almost wholly accounted for by the expansion of imports. The value of Government imports was £E1,989,434, an increase on the figures for the previous year of £E427,605, while that of the public imports was £E3,269,523, an increase of £E3,698. Exports at £E4,797,928 were up by £E46,916, but have been affected, of course, by the fall in cotton prices, which has somewhat neutralised the expansion of the cotton exports. The net result of the

Digitized by Google

changes in the trade figures has been to give the Sudan a small adverse trade balance. Turning to details of the trade, particulars of the Government imports point to the various works of development now in progress in the Sudan. Thus the chief increase in the list is in metals and metalware, including iron railway trucks, the value of which rose from £E329,558 to £E697,376. Other notable increases are in machinery—£E87,165—and timber and railway sleepers—£E31,647. In public imports the most notable feature is the importance played by dura, 26,102 tons of the value of £E227,440 being imported as compared with 20,385 tons of the value of £E200,655. In the current year this item will probably play a small part, for the period of bad dura harvests is over for the time being, and it would be possible, indeed, for the Sudan to export this commodity now, though it is unlikely that this will be allowed owing to the necessity for building up stocks to safeguard against the recurrence of a dura shortage. Despite the fall in cotton prices, Sakellaridis cotton made a much larger contribution to the exports, the figures being £E2,995,945 for 575,417 kantars as compared with £E2,604,090 for 429,115 kantars, but this was counterbalanced by declines in the value of the exports of other staple products of the Sudan, such as gum, sesame, skins, and ivory.

Manchester Ship Canal.

The figures of the Manchester Ship Canal for 1926, a record year, were affected by the large imports of coal, and the receipts for the past year, which were not subject to that influence, show, in consequence, some slight falling off. If, however, a comparison be taken with 1925, it will be seen that last year's results show that 478,000 more tons of goods were handled and that the dues increased by £82,963. Last year, it may be pointed out, was the thirty-fourth year of the existence of the Canal, and with the exception of six years fresh records as regards tonnage and dues have been established each year, and another year's figures, since we are now in a period of reviving trade, will no doubt see fresh records set up. Turning to the actual figures the receipts last year amounted to £1,576,237 as compared with £1,592,219, while the tonnage was 6,359,420 as compared with 6,830,879. The dividend is maintained at 5 per cent., while the carry forward is £29,043 as compared with £31,436.

The Rubber Situation.

The past week has left the rubber position much where it was. Questions in the House of Commons have been productive of no result as regards light on the future of the restriction scheme. The opinion is, however, growing, and very rightly so, that the announcement of the inquiry has had too much importance paid to it, for it is surely obvious that no Government in these times is going to do anything really prejudicial to an industry, least of all to one so important from the point of view of the Treasury as rubber is. Again yesterday the London stocks were down by over 1,000 tons, but it had no effect on the price of the commodity, which weakened a little, though the shares were rather firmer. Obviously there can be no change in the restriction scheme before May 1, and it will be interesting to see the effect of a steady decrease in stocks in the meantime.

COMMENTATOR.

THE LATE CAPTAIN W. M. ISDALE.

The death took place very suddenly on February 10, following an operation, of Captain W. M. Isdale, Nautical Adviser to the British India Steam Navigation Co., Ltd. Captain Isdale passed away at the comparatively early age of 61 after a very active career in the East and in Europe. He served his time as an apprentice under sail, and so the list of those old-time sailors who have served under sail, have commanded steamships, and have helped to design motor ships is reduced by yet another one. He joined the British India Steam Navigation Co. in March, 1886, as a junior officer and was appointed to command one of their vessels in June, 1897. In February, 1903, he was appointed Deputy Marine Superintendent in India and came home to England in November, 1912, to take up the appointment of Assistant Nautical Adviser to his Company. He proceeded to Italy in 1917 to supervise the repairs to the British India Company's ships there which had received the attentions of German and Austrian submarines, and to his credit be it said these ships were so efficiently repaired that several of them are still afloat none the worse for their War experience. In 1918 he received the British Government appointment of Director of Ship Repairs in Italy and he retained that appointment until the end of the War.

When he left Italy the King of Italy bestowed upon him the honour of making him a Cavalieri of the Order of the Crown of Italy. At the conclusion of the War Captain Isdale returned to his duties with the British India Company and in June, 1924, he was appointed their Nautical Adviser, a position which he held when he died.

To appreciate Captain Isdale's ability it must be remembered that the British India Company's fleet comprises approximately 130 ships, all of which have to be carefully constructed on particular lines for the particular trades in which they are to be employed. His vast knowledge of ship construction was always at the disposal of those who sought his assistance, he had a kindly word for all, and his genial personality will be greatly missed by all who knew him.

Captain Isdale was one of the first members of the Company of Master Mariners and a member of the Foundation Council of that Company, and he would have been proud of the high honour recently bestowed upon the Mercantile Marine by the King's recent appointment of the Prince of Wales as Master of the Merchant Navy and Fishing Fleets.

The Greek newspapers state that Mr. H. C. F. Finlayson, financial adviser at the British Embassy in Berlin, has been appointed adviser to the new Greek Bank of Issue, and will arrive in Athens in April.

The traffic receipts of the South Indian Railway Company for the week ended January 21 amounted to Rs.10,02,511, making the total from April 1 Rs.4,98,58,042.

The exports of gum from the Sudan in December via Port Sudan amounted to 26 tons of bleached of the value of £E1,564, 989 tons of hashab of the value of £E32,918, and 172 tons of talh of the value of £E3,582. For 1927 the exports of gum totalled 21,257 tons of the value of £E680,828, the corresponding figures for 1926 being 22,742 tons and £E844,129.

The British Industries Fair

THE BIRMINGHAM SECTION.

A Wonderful Display.

The Birmingham portion of the British Industries Fair, as before, is concerned with the heavy section of British manufactures. This year the exhibition covers an area of 10½ acres as compared with six acres last year, and there are 900 exhibitors in the place of the 600 showing in 1927, and the stalls occupy 180,000 square feet of space. All these are now grouped in what is virtually one mammoth hall, 1,620 feet long, with an average width of 250 feet. By passing systematically up and down the passages the whole length of the building, it is possible, therefore, to make sure of seeing all the exhibits, but the distance covered will be not less than three miles. The exhibits may be divided into nine categories:—Brass foundry, hardware and ironmongery, 228; engineering 210; power, lighting, heating, etc., 204; construction, building and decoration, 82; services, 63; agriculture, 52; metals, 42; motor, motor cycles, cycles and accessories, 13; guns, saddlery and harness, 6; in all 900.

The Fair is remarkable alike for its comprehensiveness and for the diversity of the products exhibited; it is, in fact, representative of many of the leading industries of the country. The quality standard in every department is exceptionally high. Of the adaptability of British industry there is evidence on all sides, as well as of a desire to get to close grips with foreign competition. Many of the goods shown are a direct challenge to foreign competition; many models and patterns have been specially designed to supplant articles of foreign make; and many others bear the characteristic features of special markets. There is unmistakable evidence, moreover, that British manufacturers are making serious efforts to cater closely for the requirements of Overseas' buyers, at competitive prices.

General Hardware.

As previously, the hardware and ironmongery section constitutes one of the chief features of the Fair; it is the largest ever seen in this country. There is a wide range of domestic goods, such as pots, pans and kettles; door-springs and doorlocks, screws, nuts and bolts; sad irons and even the old-fashioned roasting-jack. Vacuum cleaners and wringing machines too are prominent. Hollow-ware is an important department. All classes are represented: galvanised, enamelled, cast-iron, aluminium, tinned and japanned, etc.

The reputation of British-made hollow-ware for durability and finish never stood higher in the world's markets. The progress made arises from more scientific organisation and vastly increased productive capacity. The British aluminium gauge standard is high and ensures absolute reliability.

In brassfoundry the range of products is wide, but whether it is cast or stamped, the quality standard is excellent. There are many characteristic examples of steam and water fittings, in heavy size and gauge; together with a large array of stamped brasswares, the products of up-to-date and efficient machinery. In this, as in many other industrial departments, the growth of mass-production methods is apparent.

Mantelpieces and Decorative Tiles.

Mantelpieces, decorative tiles, fireplaces and hearth furniture represent a department of fascinating interest. The makers of decorative tiles cater admirably for the requirements of the manufacturers of mantelpieces and chimney pieces. Many of the fireplace tiles are of great beauty and harmonise perfectly with the woodwork. The application of rustless steel to firegrate construction is frequently to be noted; again in hearth furniture, which is thoroughly representative of this branch of British industry, rustless and stainless materials are being more largely used.

Electrical Industry.

The products of the electrical industry make a particularly striking and wonderful display. All the leading manufacturers have stands, and on these are to be seen, under working conditions, examples of the latest appliances for use in the modern factory, public building, shop and home. While the exhibits are noteworthy for the number of special features, evidence is not wanting of increased attention to the standardisation of output. Industrial equipment, too, is worthy of particular notice. There are, among many other things, a comprehensive range of electric-magnet furnaces; high speed steel electric furnaces; furnaces for carburising and annealing; rivet heating machines, a 14 k.w. electric bakery oven and two complete sub-stations, one, a rectifier arc sub-station as used to distribute current in the outlying suburbs of Birmingham, and the other, a transformer sub-station, as installed on the premises of large manufacturers taking bulk supplies of high voltage current from the public mains. This current is transformed down to the voltage required by the lighting and power requirements of the consumer. Big transformers and turbo-generator sets have an interest of their own. All that is best in electrical accessories and domestic appliances is represented on scores of stands.

Gas Equipment.

The display of gas equipment is for the first time representative of the national gas industry. In this section,

Digitized by Google

which is concentrated, are shown the latest products of the big commercial gas undertakings and important allied interests. Sixty different manufacturers are represented on stands which occupy a total space of 16,000 square feet. There is displayed a good deal of big apparatus required on modern gas works as well as the latest equipment, in which gas is used, for use in works and factories and in the home. The "all-enamel" cooker is one of the latest and most efficient products and is the result of years of experiment on the part of research chemists and scientists; while in the modern gas fires adequate warmth, with a proper amount of ventilation, is ensured.

Special interest also attaches to refrigerators for domestic use, by reason of the operation of the new Public Health (Preservatives in Food) Regulations. This means that in the absence of preservatives, food-stuffs must be kept at a very low temperature, and the gas industry, and others, are offering effective little appliances which ensures a regular freezing point temperature in hot weather.

General Engineering.

The Engineering Group is particularly well represented. Cold-starting heavy oil engines are prominent and there are interesting examples of modern gas engines, crude oil engines for power stations, and petrol engines of special interest to the automobile industry.

Everything that is best in drop forgings for all classes of general engineering is contained in the composite exhibit of the leading drop-forgers of the country. All interchangeable parts are made with perfect accuracy; and the forgings range in size from the heaviest crank shaft to the smallest nut. It is impossible to do more than briefly indicate the wide range of new mechanical exhibits. Prominent are rotary and hydraulic pumps; hydraulic type and hot plate presses; and presses for baling straw or waste material. For the production of seamless metal hollow-ware heavy presses have been installed. There are nibbling machines which will cut slices off heavy steel plate; testing, weighing and measuring machines of huge capacity; conveying machinery; magnetic separators; mammoth springs for industrial purposes; weighbridges; wood-working machinery; electric welders; and modern equipment for use in foundries. Some typical examples of wrought iron chains and cables are exhibited. Conveyors and truck and safety appliances in factories, coffee plantation machinery, house-lighting plants, and aerial wire ropeways add to the general interest.

Rubber.

An exhibit (2,000 square feet) by the Rubber Growers' Association will demonstrate the various processes in the manufacture of rubber, and the many new uses to which this product is applied.

Metal Trades.

Non-ferrous metals in great variety; and in many shapes and sizes are exhibited. Metallurgical scientific research has achieved far-reaching results, and has led to the production of many special alloys. The display of sheets and tubes, particularly of brass and copper is of all-round excellence. Noteworthy developments are revealed in the production of stainless steels, for which corrosion-resisting qualities are claimed. Electro-plating plants are of exceptional interest. A good display is made of non-cracking nickel silver, and of architectural metal work. The Welsh tin-plate manufacturers have a very comprehensive stand.

Individual Exhibits.

Before reference is made to individual exhibits it must be pointed out that a visit to the Fair last Friday, the day officially allotted to the Press view, found some of

the stands not yet completed and others zealously guarded by coverings. Even if this had not been the case, no attempt could be made here to exhaust the list of exhibits that call for special note. The general impression conveyed by the appearance of the vast Fair was that a high standard of artistic presentation had been reached, without in any way sacrificing business requirements, which demand comprehensiveness and accessibility.

One exhibit that immediately arrests attention is that of Messrs. W. and T. Avery, Ltd., manufacturers of weighing machines, who in two years will be celebrating the second centenary of the firm. The stand represents a temple on which the emblem of weighing, the Arm of Justice holding a pair of scales, is the prominent feature. Six tableaux are visible through plate glass windows, depicting: (1) Weighing in Ancient Egypt, about 2000 B.C. (2) King Arkesilas II of Cyrene (580-550 B.C.) superintending the weighing of a cargo of silphium—the assafœtida plant. (3) Weighing in Imperial Rome. (4) Weighing in England about 800 A.D. (5) Weighing in a French marketplace during the 15th Century. (6) Weighing gold and silver plate in a London goldsmith's shop about the end of the 17th Century.

In the larger of two halls, decorated in black and white, are shown enamples of the latest products of the Weighing Machine industry; an inner hall in a picture gallery devoted to photographic enlargements of Avery products in Weighing, Counting and Testing Machines.

The Port of Bristol Authority's exhibit comprises a large-scale model, 18½ feet by 12½ feet, showing docks, quays, ships, cranes and railways in miniature. The central feature of the model is the Royal Edward Dock, of which King George, as Prince of Wales, cut the first sod, and which was opened by King Edward. An extension of this Dock—the Eastern Arm Extension—is to be opened by the Prince of Wales in May.

Another notable stand is that of the Mint, Birmingham, which has secured a striking effect by a combination of brass, copper and cupro-nickel tubes and rods. This firm, it will be recalled, has been responsible for the minting of many coinages, and specimens of its handiwork are shown in several cases. Among recent orders that it has executed may be cited coins for the Hejaz, coins and medals for Egypt, as well as a Persian coinage. The leading Banks, as was to be expected, are represented at the Fair, each of the "Big Five" having its own pavilion.

Although visitors to the Fair are strictly on business bent, having eyes primarily, if not exclusively, for products that directly concern them, few will be insensible to the impression created by the first glance at a stand, which may be distinctive by reason of its general design as a whole, the striking character of the goods shown, or for mere artistic grouping. On this principle among the stands that will inevitably arrest attention—but the list, it must be repeated, makes no attempt at being exhaustive, or even nearly so—may be mentioned, as the result of a hurried tour through an unfinished Fair, the following: Metropolitan-Vickers (a comprehensive steel exhibit); Denham's Engineering Co., Ltd. (lathes); Blackstone and Co., Ltd. (engines, generator plants); Thomas Firth and Sons (Staybrite steel); Gent and Co. (electric clocks, etc.); W. W. Greener, Ltd. (guns and rifles); Guest, Keen and Nettlefolds, Ltd (screws, bolts); N. Hingley and Sons (wrought iron); Ruston and Hornsby, Ltd. (oil engines); Shaw's Glazed Brick Co., Ltd. (tiles, terra cotta and faience); Samuel Withers and Co., Ltd. (safes).

A Fair on the scale of the Birmingham Section has not been possible without organisation of a very high degree. The Birmingham Chamber of Commerce, which is responsible for it, deserves full credit for the success that has attended its efforts. These efforts, it may be added, do not stop at the collecting of exhibitors, but include the atracting to the Fair of buyers from all parts of the world, and in promoting the interest of important trade associations in the Fair.

WHITE CITY EXHIBITS.

A Nation's Industries.

We have become so accustomed to the over-free use of superlatives in advertising that the bald statement that this year's British Industries Fair is the greatest on record may possibly fail to carry conviction. It is, however, beyond dispute, as will at once be evident to all who pay a visit either to the White City, where more space has had to be utilised, or to Birmingham, where additional buildings have had to be erected. The sight of the seemingly endless series of stands at the White City covering practically the whole range of British products with the exception of what are known as heavy goods, the knowledge that more firms are exhibiting than ever before and that it has been found necessary to form a waiting list for the 1929 Fair, and finally that buyers are coming to this exhibition from some seventy countries are encouraging facts for those who have for so long been looking hopefully for some definite sign that trade is really on the up grade.

Inaugurated during the War period the Fair has not hitherto, if we except the short lived boom of 1922, been held under auspices that could really be described as promising. Trade has continued in a slough of depression, and there has always been some cloud on the home or foreign horizon to damp optimism. This time there seems ground for measured hope. Conditions abroad have steadily become more stable, and consequently the trade returns have gradually tended to improve, and the opinion is now held that provided there are no adverse developments at home and abroad commerce will continue on the up grade. Hence the cheerful atmosphere in which the Fair has opened, and hence the presence of so many foreign buyers, who, it must be remembered, are not catering for the immediate needs of their customers but for the demand which they anticipate in a few months time.

It is satisfactory to know that the Fair is now attracting much more attention in the Near East from which region there will be a number of visitors, and as stabilisation proceeds in the Balkans there is no doubt that in future years it will prove of exceeding value as a spearhead of British trade enterprise in those countries which, judged by the experience of the past, seem to present special difficulties for the British trader. As has often been emphasised in these columns this country cannot now afford to neglect markets, particularly outlets so

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

valuable as those which are to be found in the Balkans, and there is only one way to secure a sound foothold in them, and that is by persistent endeavour. Participation in the Fair is only one step on the road, and it is an essential to progress that business must be followed up by unceasing publicity. It is the only way.

First in interest among the exhibits at the White City is the display of Empire products organised by the Empire Marketing Board. Here there are sections devoted to Cyprus and India. Silk fills a prominent place among the Cyprus exhibits which give a very clear idea of the Island's many economic activities. It is to be regretted that there is not a section devoted to the Sudan which is becoming each year of greater importance to the Empire as a cotton growing region, while it has many other valuable products such as gum arabic. A Palestine exhibit, too, would have helped to make the section more complete than it is, and as it is the right season for the fruit it would have been possible to have a very pleasing display of the Jaffa orange which is likely to remain for a long time Palestine's chief product.

Chemicals and chemical plant, which constitute one of the most important sections of the Fair, are this time not far from the Empire Marketing Board exhibit, as owing to the growth of this section it was found necessary to alter its place. Here the outstanding exhibit is, needless to say, that of Imperial Chemical Industries. It also has the distinction of being one of the most attractively arranged displays at the White City. The exhibits, of course, cover the whole range of this company's products, and a feature of the stand is a cinematograph theatre in which films of the manufacture of chemicals and of the uses of explosives, etc., are shown. Another feature of the chemical section is the exhibit of road tar.

As usual the section devoted to pottery and glassware is one of the most imposing in the Fair. The exhibits as a whole, particularly the exquisite glassware, are a sheer delight to the eye, and looking at these it was difficult to believe that foreign competition could be serious in this typical branch of British industry. Two stands in particular deserve mention in this section, that of W. Moorcroft, Ltd., where are to be seen a rich display of vases in blues and reds, and that of Doulton and Co., Ltd., who show some wonderful table ware in gold and blue.

(To be concluded.)

An Order has been issued by the Yugoslav Minister of Finance by virtue of which authorised banks are obliged to offer to the National Bank for purchase (1) the whole amount of the money instruments received for sale from abroad, and (2) the whole amount of loans concluded abroad in foreign money instruments. The National Bank will reckon the value of the money instruments offered as follows:—One-third at the buying-up rate and two-thirds at the average exchange rate. This buying-up rate is understood to be calculated on the basis of the lowest rate quoted for foreign valuta on any given day on one of the principal foreign exchanges.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Pumping Equipment for Mex.—Tenders are invited by the Ministry of Public Works, Egyptian Government, for the supply and erection at Mex Pumping Station of pumping equipment. The contract includes two complete Diesel pumping units, the engines being of the vertical four stroke air injection type driving pumping of the horizontal, centrifugal, or turbine type and the supply of two 60 K.W. 110 volts Diesel electric generating auxiliary sets. April 14. (D.O.T.)

Brown Boots.—The Egyptian Postal Administration at Alexandria invites tenders for the supply of 2,400 pairs of brown leather lace-up boots. April 9. (D.O.T.)

Stationery.—The General Management, Egyptian State Railways, Telegraphs and Telephones, invites tenders for the supply of stationery articles for 1928-1929. Approximate cost £E4,000 to £E6,000. April 19.

Clothing, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of clothing required during the year 1928-1929 (March 29), and for the supply of bunting, ropes, canvas, hose, etc., required during the year 1928-1929. April 9.

Paper and Stationery.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery, etc., required by this Ministry during the year 1928-1929. April 12.

Bunting, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required during the year 1928-1929, as per list and conditions of tender obtainable from Stores Department, Arsenal. April 4.

Steel Bars, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for 5,730 kilos cast tool steel bars, round, square, flat, octagon and hexagon, of different dimensions, and for two double and two single legged sling chains for crane to drawing. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, March 6).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 7).

British India Line.—S.s. Mundra for Bombay and Karachi (London, March 3); s.s. Margha for Colombo, Madras, and Calcutta (London, March 10).

Cunard Line.—S.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool March 3, and Swansea March 6); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, March 24).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 25); s.s. Jessmore for Galatz and Braila only (Liverpool, March 10).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 2); s.s. Padua for Colombo, Madras, and Calcutta (London, March 3).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, February 25); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (Manchester, February 28).

Ellerman and Papayanni Lines.—S.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 25); s.s. Algerian for Gibraltar, Algiers, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 3, Swansea* March 3. * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 21.

Irregularity has been the keynote of the Stock Markets during the past week, and although there has been no pronounced set-back in prices, and indeed considerable activity in a few sections, the general tone was not so good as in preceding weeks. The collapse in the price of rubber and in the rubber share market, which followed the Prime Minister's announcement last week that the restriction scheme was to be examined by the Civil Research Committee, was a disturbing factor. Gilt-edged stocks responded a little to the easier monetary conditions and in the home railway market Great Westerns advanced on the declaration of a dividend of 7 per cent. for the year, which was up to the best market expectations. Some of the industrial favourites have suffered from profit-taking, but oil shares improved as the week progressed. Rubber shares continued to droop in the earlier part of the week, but later recovered a little on hopes of the co-operation of Dutch interests in restriction. The downward movement was unquestionably very much overdone and the market is showing signs of recovery from its attack of nerves. Rubber shareholders can justifiably ask that the inquiry should proceed with as little delay as possible and that its findings should be made known at the earliest possible moment. In the meantime there is no cause for alarm and holders of shares in the sound undertakings can await developments with confidence.

The Shilling Deferred Shares.

The popularity of the shilling deferred share shows no signs of diminishing. It is, however, meeting with an increasing volume of criticism and questions are to be asked in the House of Commons. In the main it is attacked from two angles. There can be no doubt that investors tend to lose a sense of proportion in dealing with shilling shares. This is clearly proved by the almost incredibly high premiums at which many of these securities are standing; it does not seem to be realised that a shilling share standing at a premium of 5s. is equivalent to a £1 share standing at a premium of £5. But the second and most important indictment is that it has been gravely abused by vendors and promotors. A vendor may retain the business he is selling by issuing, say, 1,000,000 ordinary or preference shares of £1 each and 1,000,000 deferred shares of 1s. each, and by giving each share one vote can keep control and secure the whole of the equity by allotting to himself the whole or the majority of the deferred shares, costing no more than £50,000. This is possible despite the fact that upwards of 90 per cent. of the business has been paid for by the investor. If the company does well the vendor secures the bulk of the profits, while if it falls upon evil days his loss is almost negligible. Clearly this is most unsatisfactory and every effort should be made to explore the possibilities of safeguarding the investor.

A Scheme for Stabilising Tin.

The course of tin prices has recently been distinctly disappointing. At the time of writing the cash price of tin is under £230 per ton, which is considerably below the highest price touched this year. Indeed, the price mounted as high as £320 at one time last year. These violent fluctuations in price are harmful to all concerned—the investor, the producer, and the consumer. Can they, therefore, be eliminated? In a thoughtful pamphlet, entitled "The Price of Tin: The Problem of Stabilisation" (published by the London General Press, price 2s.), Mr. E. H. Davenport attempts to answer this question. As a beginning he urges an amalgamation of a large producing group with some of the big smelting interests. "It is conceivable," he says, "that along these lines a powerful combine could be formed which would exercise a stabilising influence upon short term prices." He speaks of the more economical exploitation of old resources and prospecting for new fields that would follow, thus lessening the chances of a tin shortage. Mr. Davenport admits, however, that even an association of tin producers could perform a useful function. They could prepare accurate statistics of tin. "The publication of a regular comprehensive statement of the world stocks of tin, together with the available details of production and consumption, would itself exercise a steadying influence upon prices." We commend this pamphlet to all who have interests in tin."

Colonial Stocks for Investment.

Experience shows that there is always a steady demand for Colonial stocks and therefore investors may welcome a list of these securities. In recent months Colonial stocks have been influenced by the buoyancy which has characterised the gilt-edged market. This is pleasing to holders, and, if less satisfactory to would-be buyers, the merits of the stocks are so solid that the demand for them is not likely to be materially affected. New Zealand, whose finances are conducted on almost model lines, provides attractive securities for those desiring somewhat short-dated investments. Thus the 3 per cent. inscribed stock, finally redeemable 1940, gives a return of £5 per cent., while the 4 per cent. inscribed stock, finally redeemable 1943, also yields £5 per cent. The Australian list contains many long-dated investments. The recent efforts made by Australia to improve her finances are considered to be in the right direction and have created a favourable impression in financial circles in London. The Australian 5 per cent. registered stock, finally redeemable 1975, gives a return of £5 3s. per cent. A yield of £5 4s. per cent. is obtainable on the Western Australian 3½ per cent. inscribed stock, finally redeemable 1955. Turning from the beaten track, the Newfoundland 3½ per cent. sterling bonds, finally redeemable 1951, return £5 1s. per cent. A yield of £5 4s. per cent. can be obtained on the Ceylon 3½ per cent. inscribed stock, finally redeemable 1959.

THE ROUMANIAN BUDGET.

The Roumanian Budget for 1928 shows estimated receipts of 38,350,000,000 lei, and a similar figure for expenditure, to which must be added the Budget of the Railways, 13,600,000,000 lei; Posts and Telegraphs, 1,837,000,000 lei; and Pensions, 492,000,000 lei. The real Budget figure for 1928 is, therefore, 54,278,000,000 lei, less 300,000,000 lei paid by the State to the railway companies for travelling expenses of officials.

In comparing the previous total Budget figures, the following amounts are arrived at (in million lei): 1922, 10,498; 1923 (9 months), 15,406; 1924, 24,000; 1925, 31,750; 1926, 41,287; 1927, 51,153; 1928, 53,979.

Owing to the fluctuations in the exchange, the above figures would appear confusing. However, the following table will show the figures converted into U.S. dollars at the average exchange ruling in each year:—1914-15, 108,000,000 dollars; 1922-23, 69,000,000 dollars; 1923 (9 months), 75,000,000 dollars; 1924, 118,000,000 dollars; 1925, 156,000,000 dollars; 1926, 188,000,000 dollars; 1927, 301,000,000 dollars; 1928 (estimated), 317,000,000.

It is noteworthy that the policy of the Government is to increase gradually direct taxes and to reduce the indirect taxes, and the following statistics show the progressive receipts from the direct taxes (in million lei):—1922, 1,182; 1923, 2,236; 1924, 3,207; 1925, 4,224; 1926, 4,901; 1927, 7,529.

The service of the Public Debt, including all payments in respect of War Debts, but excluding subventions to Roumanian students abroad was as follows (in million lei):—1922, 827; 1,23, 2,540; 1924, 3,345; 1925, 3,654; 1926, 4,454; 1927, 5,756. For 1928 the service of the Public Debt amounts to 5,816,000,000 lei, say, at 800 lei to the £1, £7,270,000, which represents less than 11 per cent. of the total Budget figure for the year 1928.

This percentage is obviously very low, and the Debt charge is about 8s. per head of population, which is small compared with other countries.

TRADE BALANCE FOR 1913 AND 1919 TO 1926.

Year.	Deficit.	Surplus in million lei.
1913	—	81 (gold lei)
1919	3,658	—
1920	3,532	—
1921	3,882	—
1922	—	1,714
1923	—	5,078
1924	—	2,096
1925	716	—
1926	—	1,067

For 1927 the estimated surplus of exports over imports amount to about 4 milliard lei, say, £5,000,000, in spite of the comparatively poor harvest.

It is noteworthy that, in presenting the Budget, M. Vintila Bratianu, Prime Minister and Minister of Finance, for the first time discusses the advisability of a legal stabilisation of the lei, which, for the last eighteen months, has been practically stabilised at a rate slightly below 800 lei to the £.

He points out the necessity of appealing to the foreign markets in view of obtaining funds abroad by way of credits from the central banks, or by way of a stabilisation ioan.

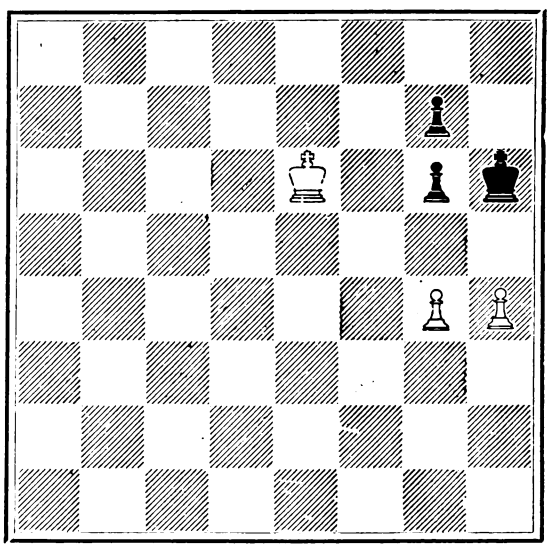
CHESS.

By "CARO-KANN."

I give this week an end game by way of a change from the games positions which I have given in recent weeks.

We are drawing near to the time when the University teams make their annual appearance in London. This year the University match will be played on March 23. Judging by the form of the teams in matches, Oxford



White to play. What result?

are entitled to be favourites, but while they will probably win, the element of luck which invariably plays such a large part in this match may upset calculations. I have noticed in past years that the side with the larger proportion of fourth and third year men has almost always an advantage. In 1910, for instance, when Oxford had avoided defeat for five years running, Cambridge had four fourth year men in their team, and they won the match by 4½ to 2½.

SPRING AND EASTER HOLIDAYS.

Now that the days are perceptibly lengthening, a very welcome publication is the illustrated book of tours and travel arrangements for spring holidays at home and abroad of Messrs. Thomas Cook and Son, Ltd. As usual it is most comprehensive in character and contains numerous intriguing suggestions, the fares quoted in every case being strictly inclusive. Of special interest are the arangements for spring tours to Egypt, the Holy Land, Iraq, Turkey, and Greece, while the tourist who desires to visit Switzerland, the Riviera, or North Africa will find his wishes fully anticipated. A section of the programme is devoted to special arrangements for Easter, which is the time of the year when most people like to go somewhere, even if only for a single day. A copy of this handy brochure can be had from any of Messrs. Thos. Cook and Son's offices.

It was last week decided definitely at a meeting of the Greek Cabinet to purchase two sections of the land held at present by the French company at the Port of Salonika for £80,000. It was decided further to complete the equipment of the port and to enlarge the Greek zone by purchasing, if necessary, the present French concession.

Motors and Motoring.

By G. B. B.

There has been a certain amount of outcry against the proposed increase in the rate of insurance for light cars, but it has arisen only from the owners of that type of vehicle. The opinion of the majority of other road users, more particularly of the owner-drivers of cars of medium power, is that the increase was inevitable; that it was bound to come as a result of the manner in which some car owners were beginning to drive. But without wishing to go any further into the matter of inconsiderate driving, I think the whole basis of motor insurance, as at present conducted, leaves room for very considerable improvement. There is protection in the average comprehensive policy against risks which thousands of motorists seldom or never incur, whilst there are other risks covered which, owing to special circumstances, are not by any means of universal importance. For example, as the *Light Car* points out, a man who runs an out-of-date car, worth, perhaps, only about £25, has no need to insure it against theft; a huge proportion of motorists gain nothing by their comprehensive policies protecting them against third-party claims whilst they are driving other people's cars, and few private owners need protection when their cars are being driven by others, for the very simple reason that they never allow anybody else to touch them! If insurance companies would clear up matters of that kind and study the insurance problem from the motorists' point of view instead of purely from their own, there would be a much better feeling between the insurance company and the private owner, and particularly the owner of a light car.

Those of my readers who have kept themselves more or less abreast of the developments which have taken place, with such rapidity, in the British motor cycling world, will be surprised to hear that, so far as present indications go, there will be no Motor Cycle Show next year. The event will be held this year as usual and then in alternate years. There are some manufacturers who do not support this view and it is probable that the retail trade may have something to say about it. It is not easy to see why the proposal was made, and I confess that I cannot see why any manufacturers support it. The British motor cycle has won its way to the front by sheer merit and a general recognition of that merit, and any slowing-down now, either in publicity or in the nature of resting upon one's laurels, seems to me to be a short-sighted policy.

That naturally gives rise to another line of thought, which is that since the British motor cycle and the British light car industry is doing so well, every encouragement should be given. It is common knowledge that during the last five years the amount yielded by motor taxation in this country has more than doubled. In 1923 the sum brought in was just over eleven and a half millions sterling, which was over two millions in excess of the estimated yield. Last year the amount increased to twenty-three and a half millions. From that total the Exchequer took approximately four millions as a luxury tax from private motor car and motor cycle owners, leaving £19,456,378 for the Road Fund. Our contemporary, *The Motor*, has gone closely into this matter and says that there can be no doubt whatever that these figures show that the motorist, as a private individual, is far too heavily taxed. Private people who own motor vehicles, comprising car and motor cycle owners, contributed no less than £11,769,612 of the 1927 total. Industry, represented by the motor trade, by commercial vehicle owners, and the passenger carrying interest are overburdened by this dead weight of direct taxation. It seems to be quite time to call a halt, both so far as the amount collected is concerned and also as regards the methods by which it is obtained. In America everything is done to encourage motoring in all its phases whilst here all possible seems to be done to discourage it. The average taxation in the United States is £2 13s. 8d. per vehicle; here it is the grossly excessive figure of £14 7s. 6d. for a private car taxed on horse power, £46 19s. for motor passenger carrying vehicles, and £28 11s. 6d. for commercial vehicles. These figures show a situation which at once emphasises the urgent need for relief, and that can only be brought about by reduction and an all-round reform of our taxation system. Our contemporary goes right to the root of the whole thing, and contends that the Government should be content with less than the vast sums now being taken from private motorists and other contributors. It considers, and in this I think all motorists will be in agreement, that £1 per horse power per annum is a monstrously high tax and that, whether the system can be changed or not, the amount extorted should be reduced.

ROUMANIAN TRADE IN RUBBER TYRES.

In the absence of a local industry, Roumania is dependent upon outside sources for the supply of automotive tyres (says the American Consul at Bucharest in a recent report), imports of which declined in 1924 to a value of approximately £64,314 from £92,219 in 1923, and increased in 1925 to £78,621. The official import statistics are available only for the first nine months of 1926, but

show a value of £130,048, or an increase of 65 per cent. as compared with the entire year 1925.

The present demand for rubber tyres and tubes reflects the increased registration of motor vehicles. Automotive vehicles, which numbered 11,725 at the beginning of 1926, advanced within 12 months to 15,895, an increase of 35 per cent. It is believed that the automotive registration at the first of 1928 is not short of 21,000.

Of the automobile vehicles registered in Roumania on January 1, 1927, 71 per cent. were touring cars and 19 per cent. lorries, the remainder being distributed among motor cycles, buses, tank lorries, and road tractors. Approximately 34 per cent. of all motor vehicles registered in Roumania, as well as 34 per cent. of the touring cars, were in Bucharest, the capital, financial, and commercial centre of the Kingdom.

The market for solid tyres in Roumania is believed to be decidedly limited because the demand for lorries is practically restricted to cheap, light vehicles equipped with pneumatic casings.

A small market exists for solid carriage tyres, although this market is diminishing with the rapid replacement of the horse by the taxicab. It is estimated that carriages equipped with solid rubber tyres do not now exceed 3,000.

The present annual consumption of tyres for automotive vehicles is estimated by the local trade at 100,000, although there is a difference of opinion among dealers as to the proportion of casings and tubes consumed. It is probable that the proportion is about 4 to 3.

France continues to be the most important source of supply for automotive tyres, now supplying about 53 per cent., as compared with about 52 per cent. in 1922, 67 per cent. in 1923, 72 per cent. in 1924, and 74 per cent. in 1925, the remainder being distributed among the Unitde States, the United Kingdom, Germany, and Italy, in the order named. The demand for automobile tyres is supplied almost entirely by Michelin, Dunlop, Continental, Pirelli, and three well-known American makes.

Prior to the world War, German and Austrian manufacturers and exporters maintained a practical monopoly of the Roumanian import trade through systematic and frequent calls made either by their own representatives or their local agents. As a further measure of co-operation, small lots were sent on consignment in order to make quick deliveries possible.

Since the war, as a result of the financial and credit difficulties which have arisen, close contact with the local trade has become indispensable. With interest rates for even well-secured loans amounting to as much as 18 to 24 per cent. annually, the possibility of cash sales is virtually precluded. Foreign manufacturers, consequently have been faced with the alternative either of establishing their own central agencies with warehouses or of appointing trustworthy distributors to whom stocks of goods might be sent on consignment or to whom adequately liberal credit terms might safely be granted.

The profits of the Banca Romaneasca for 1927 amounted to 116,135,420 lei, as compared with 113,842,651 lei for 1926.

The Yugoslav Government has given a contract to the Deutsche Werft, Hamburg, for the construction on reparations account of a floating dock with a capacity of 7,000 tons.

The amalgamation of the Croatian Discount Bank and the Croatian-Slavonian Land Mortgage Bank was unanimously approved by the shareholders at the general meetings of both institutions held at Zagreb on February 17.

SUDAN COTTON REPORT.

The current issue of the monthly report of the Central Economic Board of the Sudan Government contains the following particulars—

Red Sea Province.—The area under cotton cultivation is 45,000 feddans and the estimated crop is 50,793 kantars. About a third of the crop is nearly mature and there should be a fair amount of picking towards the middle of January. Rains started about December 23, and have been quite good and fairly well distributed over the watered area.

Bahr el Ghazal Province. Cotton in Rumbek District has been a complete failure. In the Central, Bor and Yirrol Districts it will be much below the estimate. In the Nuer area it is expected to reach the estimate though the plants are inclined to wilt away owing to lack of September and October rains. The experimental plot of Egyptian cotton at Yodni on the Bahr el Gazal River promised exceedingly well until October when lack of rain caused it to wilt badly. A plot at Adok, however, is doing well and interesting information should be obtained from this experiment.

Kassala Province.—The warm weather is having an excellent effect on the Gash Delta cotton. Rain cotton prospects are very poor and so far only 112 kantars have come into market. The Inspector of Agriculture considers that this is due chiefly to infection of old seed by thrips.

Blue Nile Province, Gezira Research Farm.—(1) On the continuous cotton plot (tenth season) cotton has ceased to grow on the unmanured portions and heavy pickings are now being taken. On the manured areas the cotton is still green and growing. (2) On the two course and three course rotation experimental plots, cotton following fallow and cotton following lubia are greatly superior to cotton following dura and the exhausting effect of the dura crop is very marked. (3) A trial is being conducted to show the results of cotton sown at different dates. Progress is as follows:—Cotton sown July 22, very heavy pickings; Cotton sown August 7, Heavy pickings and still flowering. Cotton sown August 22, no cotton yet open; Cotton sown September 13, heavy flowering; Cotton sown September 22, flowering.

Dongola Province, Pumping Station Reports.—Gureir: 45 kantars of pump cotton and 10 kantars of sagia cotton were brought into store in December. Nuri: Cotton is now yielding well and is very clean; 438 kantars were weighed into store to the end of the year compared with 270 kantars to the end of 1926. It is anticipated that the previous season's yield will be exceeded. The area is approximately 600 feddans.

Berber Province, Pumping Station Reports.—Kitiab: Cotton is looking well, is plentifully covered with bolls and should yield well during the next six weeks. The yield to date amounts to 1,236 kantars over the area of 903 feddans. Gendettu: 1,423 kantars of cotton were received into store to the end of December. The area is 1,038 feddans. Arrivals are still behind last year's, but are showing a tendency to improve. Yields from certain areas are unsatisfactory. Mikeilab: Cotton on the whole looks very well. Picking is now general and a yield of 4 kantars per feddan is expected. 712 kantars, or an average of 1.9 kantars per feddan, have been picked to date. The cotton is clean and of good quality.

Gezira Irrigation Scheme.

Blue Nile Province, December.—The cotton continues to look exceptionally good. Normally at this time of the year it receives a severe check, but this season, owing to favourable climatic conditions, it has continued to grow except on really poor land. Picking has begun, but generally the crop is about a fortnight later than it was last season. This is partly due to late rains which have produced a plant with more vegetative growth than usual. A crop of 4 kantars a feddan would now be a conservative estimate, and certain areas near Hag Abdulla are expected to produce much more than this.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 15:—

Egyptian Futures.—Sakel Contract.—This market has developed a much healthier undertone since we last wrote, the effects of the recent liquidation and short selling both combining to this end; in addition the reactionary tendency in opreation in the American departments has helped to create a greater degree of confidence in the outlook. Throughout the week values have gradually hardened, mainly on moderate speculative local and Continental buying orders, but to-day some of the cotton bought earlier has come out again, easing the list from yesterday's high level, at to-night's close values showing gains of 24 to 28 points for near and 24 to 27 points for distant positions. Trade support of moment continues to be slow in developing, although, broadly speaking, conditions in the fine section are satisfactory; spinners' purchases are invariably for cotton close at hand or for early shipment, and whilst probably there is no "actual short" interest in this quarter, mill stocks must be generally only sufficient to cover open commitments. It is becoming more evident that the Sudan crop is mainly responsible for the hand-to-mouth policy now in vogue; from all appearances this season's cotton will be rapidly placed, and this may react considerably on the situation of Egyptian Sakels during the later summer months. Latterly a hardening in the premiums of the intermediate grades in Alexandria has been in operation, and on this account the continued neglect of the local stock, which in many instances is considerably cheaper in basis, is the more difficult to understand. The current position, March, has hardened slightly in comparison with the later spring months during the week, otherwise differences show little change. Straddle and Continental buying of new crops principally of Novembers continues in evidence, and we still have a favourable opinion of purchases of these locally against sales in Alexandria. For the immediate future we do not anticipate much change in the level unless, of course, the American markets stiffen further; should prices ease through profit-taking or any other cause we consider that the opportunity might be taken to enter conservative commitments on the "long" side.

Upper Contract.—Value in this market have hardened materially during the past week, as, apart from "short" covering, fresh purchases mainly of the straddle character against sales in the American market have been continually in evidence. The improved tone has enlisted more trade support, spinners operating more freely than they have done for some little time past. Probably the present level discounts fully any favourable developments that have taken place; but should any material easing from the ruling level be experienced, we think that conservative purchases would be warranted.

Egyptian Spot.—Apathy has again characterised our spot market. Prices, however, have fluctuated within narrow limits, whilst the tendency has undoubtedly been an upward one. The daily inquiry has shown some improvement inasmuch as it has appeared to be of a more solid character, but, although some improvement in the Egyptian sales has occurred as compared with those of last week, the results on the whole have been disappointing.

Yesterday the U.S.A. consumption figures gave a temporary fillip to the futures market, but, as this publication was immediately followed by the news that the Masters' Federation in Lancashire had posted notices announcing wage reductions, the slightly "bullish" effect was nullified. It is satisfactory to note that the Egyptian spinners have declined to associate themselves with what is regarded here, in face of the delicacy of the situation, as a serious strategical blunder. Egyptian spinners are still doing fairly well by all accounts, and part of the present seeming stagnation is merely due to the fact that many of them are putting off fresh purchases until the arrival of the new crop Sudan Sakel. Sakel has been very difficult to move again, but two qualities have been asked for fairly frequently; we refer to cotton costing about 13½d. and 18¾d. respectively. The once so-called "bread-and-butter" quality of F.G.F. Sakel, at from 50 to 75 points on contracts, has been entirely neglected. Low cotton has not been quite so much in the foreground this past week. Uppers have again been in popular request at from 10 to 25 on March contracts. There has also been some improvement shown in the inquiry for the very top grades. This, if it continues, will prove a very welcome feature, as there must be a large stock of "Best" Upper both here and in Egypt. Pilion at about 13¾d. to 14d. has produced a limited inquiry with moderate results. Other growths neglected, and Sudan sales almost negligible.

A moderate c.i.f. business has been reported. Forwardings to spinners for the week ending the 10th inst. were returned at 7,641 bales Egyptian and 1,174 bales Sudan. Estimated sales, 1,600 bales Egyptian and 150 bales Sudan. Quotations of Sakel have been advanced 30 points, those of Upper and Pilion 20 points. F.G.F. Sakel, 17.40d. F.G.F. Sakel, 13.10d. F.G.F. Pilion, 13.40d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 9, state:—

Since our last report the futures market has been quiet but steady. The week's summary of price movements is as follows:—Sakellaridis: March, 33.48 dollars, 1.08 dollars up; May, 33.85 dollars, 1.10 dollars up; July, 34.15 dollars, 1.24 dollars up; November, 34.64 dollars, 1.39 dollars up. Ashmouni: February, 24.17 dollars, 0.92 dollars up; April, 24.52 dollars, 0.89 dollars up; June, 24.82 dollars, 0.87 dollars up; October, 25.13 dollars, 1.18 dollars up.

Sakel.—Encouraged by the rather better feeling in this market produced by the recovery in New York, speculators have, this week, made considerable efforts to lift prices again; they have been more or less successful but have encountered a good deal of hedge selling by holders of actual cotton. The demand from abroad has been rather better this week. The statistical position shows some slight improvement and, with up-country stocks considerably less than they were at this time last year, the position will continue to improve. Advices from the Sudan report that the shipment to England of the Gezira crop has commenced. The arrival of this cotton on the Liverpool market should tend to make holders of Sakel less pretentious, especially with present prices standing at the rather abnormal premium of about 100 per cent. over American.

Uppers.—In spite of the recovery in American and the firmness of the spot market, futures have been somewhat heavy and the straddle with Sakel has widened.

The week's receipts amount to 107,081 kantars against 158,424 kantars; the stock in Alexandria stands at 3,085,841 kantars.

Spot: During the week under review we have had another series of quiet markets, although the turnover has been slightly greater than last week. Demand from abroad continues very moderate and there are no signs of a revival as yet. Sales amount to about 15,950 bales, of which we estimate 6,350 bales Sakellaridis, 8,950 bales Ashmouni and Zagora, 500 bales Pilion, and 150 bales other varieties. There is no new technical feature of interest to report in the spot situation.

Sakellaridis: All grades have been dealt in and a mediocre turnover has resulted. Medium qualities are most in demand, but a small business has been done in the best grades, which have been neglected for some time past. Spot differences are firm and steady and show very little change from last week.

Ashmouni and Zagora: Continue in very fair demand and a good business has been done. As last week, the medium qualities have been most in favour with buyers, though there has been business in all grades. Spot differences are firm and unchanged from last week.

Pilion: Has been in fair demand for all qualities and a very fair turnover has resulted. Spot differences are steady and unchanged, with a tendency for the medium qualities to harden.

Other Varieties: A small business has been done in both White and Brown at about last week's differences. Some small lots of Maarad have changed hands. Nahda, after being in demand at extravagant prices, has become neglected and one small lot only has changed hands.

Up-country: Business in spot cotton is negligible, holders refusing to sell at present prices. New crop business is fairly brisk and regular in Upper Egypt, but transactions in Lower Egypt are few. Ploughing is progressing actively, but in the North Delta weather conditions have been less favourable this week and the work has been interrupted to some extent. In the southern districts of Upper Egypt sowing is fairly general whilst it has already started also in many districts of Middle Egypt.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that there was a movement on the part of a number of shippers to suspend sailings for 5 or 6 days owing to the heavy quantities afloat and low prices ruling in United Kingdom markets. No shipments were advised between February 2 and 8, but since the later date some 104,000 boxes have been shipped.

Total shipments to United Kingdom ports up to February 12 amounted to 1,009,000 boxes, as compared with 1,060,000 boxes at the corresponding date last year. Shipments to all destinations amount to 1,056,000 boxes, as compared with 1,068,000 boxes last year. As this year's figures do not include transhipments, the total quantity shipped probably exceeds 1,100,000 boxes, out of an estimated total for the season of 1,400,000 boxes.

NEW COMPANY.

Associated British Cars, Ltd., has been registered as a public company with a nominal capital of £12,000 in £1 shares. The objects are to carry on in Egypt, Palestine, the U.K. and elsewhere, the business of manufacturers of and dealers in motors, motor cars or cabs and carriages, motor lorries and cycles, bicycles, and plant, machinery, apparatus, tools, utensils, vessels and vehicles, mechanical and electrical engineers, etc. The first directors (to number not fewer than four nor more than nine) are: T. S. Richmond, Bulkeley, Ramleh, Alexandria, Egypt, cotton grower; N. T. Borton Pacha, C.M.G., Carlton, Alexandria, Egypt, gentleman; A. Alexandroff, 6 Rue Cerisy, Alexandria, Egypt, cotton broker; E. W. Flower, Rue el Wazir, Moharrem Bey, Alexandria, engineer; H. A. Barker, 38 Rue Sultan. Hussein, Alexandria, merchant. The registered office is at 121, Victoria Street, Westminster, S.W.1.

Notes of the Week.

M. Titulesco's Tour.

The Roumanian Foreign Minister's tour is serving a double purpose—that of enabling Roumania to take her bearings afresh on the ocean of international politics, with a view to correcting or confirming her previous readings, and that of providing the Government of M. Vintila Bratianu with a breathing space in home affairs. It is true that Opposition has come to the Cabinet's help in regard to the second matter by exposing itself to disciplinary measures in the Assembly; but, apart from these mistaken tactics, it was handicapped in its challenge to the Government by a general tendency in the country to mark time in politics until it should be seen what results were achieved abroad by the Minister of Foreign Affairs. Not the least striking part of M. Titulesco's tour is the amount of time that he has been able to devote to each country visited. In Italy his stay was extended beyond the limits of the original time-table; in Paris he had successive interviews with French Ministers, and now at San-Remo he has been in consultation with Herr Stresemann, as a preliminary to the official tour that he is to make to Berlin, after the meeting of the League of Nations' Council. Not unnaturally great hopes have been raised in Roumania in regard to this tour—hopes of which it may be difficult for M. Titulesco to provide the realisation. The Roumanians are concerned at the moment with three definite questions—the controversy with Hungary over the so-called optants of Transylvania, the arms incident on the Austrian-Hungarian frontier, and Germany's repayment of the treasury notes issued during the occupation of Bucharest. Unless the Foreign Minister succeeds in achieving definite results in regard to one or more of these matters, he will be exposed to trenchant criticism at the hands of the Opposition. In the more delicate sphere of re-establishing Roumania's position in Europe he may meet with complete success, but from the nature of the subject he may be tongue-tied and, therefore, unable to convince the Assembly that his prolonged tour was well worth while.

The Hungarian Frontier Incident.

There is profound truth in the statement that many things may be legitimate yet not expedient. The Powers of the Little Entente were entitled to draw the attention of the Council of the League of Nations to the smuggling of machine-gun parts into Hungary; but whether it will be expedient to pursue the matter to the bitter end is another question. The frontier incident between Austria and Hungary that drew attention to this particular act of smuggling occurred on January 1, the protests of the Little Entente States was delivered in Geneva on February 1 and the forty-ninth session of the Council begins on March 5. As might have been expected, something had to happen to the smuggled arms during these two months. The Hungarian Government, whose officials, after all, had detected or shown up the traffic, decided that the law of the country should take its course. The gun parts were confiscated and, having been rendered useless, were put up to auction. This action is now being denounced as an attempt on the part of Hungary to burke investigation by the League of Nations, but the suggestion has been met by the Budapest Government by requiring the purchasers at the auction to allow the goods to remain at St. Gothard until the inquiry by the League of Nations has taken place. With Hungary's innocence or complicity we are not here concerned. What seems to be of more importance is the gradual establishment of better relations between Hungary and her neighbours in the interests of all concerned, but any improvement in this respect will be effectually prevented by the existence of the Little Entente. Each member has to prove his loyalty to the combination by appearing not to lag behind the others, and accordingly whenever

Digitized by Google

the Little Entente acts it is to the further exasperation of Hungary and to the postponement of better relations. If the three States were free to act on their own, one or other might find occasion now and then not to take part in the rapping of Hungarian knuckles, to the advantage of both countries. The Budapest Government may be as black as it is painted, but Hungary is such a small unit as compared with Roumania and Yugoslavia, that the two together can afford to turn a blind eye to some of her peccadilloes, alleged or actual, in the hope of winning her to better ways for the benefit of the economic interests of all three countries.

The Anglo-Egyptian Conversation.

As the time draws near for a further stage to be reached in Anglo-Egyptian relations, resulting, it was hoped, from the development of the conversations between the Egyptian Prime Minister and the British Government into formal negotiations, it is inevitable that cries of "no-surrender" should be raised in some extremist quarters. It is a matter for regret, however, that, after the long spell of self-restraint to which the Egyptians have subjected themselves in connexion with these conversations, the silence should have been broken first on the English side. Last Friday night indiscretion seems to have claimed the editorial chair of a London daily for its own, and to have been responsible for a leading article as well as for a shorter effort. It was possible to overtake the latter betimes, and wiser thoughts were represented by a censor's mark in Saturday's issue—a solecism, surely, in English journalism in peace time, and suggestive more of death-bed than of die-hard tendencies. An equally discreet fate, unfortunately, did not overtake the leading article, which was allowed to stand, as poor a contribution to a serious subject as it was provocative to newspapers equally unbalanced in Egypt. Before harm can be done, however, by this letting loose of indiscriminate charges, the seriousness of the position in regard to the Anglo-Egyptian conversations will, we may hope, introduce a steadying influence on the Press of both countries.

On the Eve of a Decision.

After a long period devoted to an exchange of views between Sarwat Pasha and the British authorities, the time would now seem to have been reached when the Egyptian Prime Minister finds himself obliged to take the Egyptian people into his confidence on the subject of the conversations. It has constituted no small tribute to the respect in which Sarwat Pasha is held personally and to the loyalty of the Wafd and its leader that the Legislative Assembly has maintained such a decorous attitude towards the cloak of secrecy that has been held so rigidly over these conversations. The mere fact that the Wafd consented to be at first no party to the proceedings implied that at a certain stage the Prime Minister would have to render an account of his negotiations and await the verdict of the Party which commands a majority in the Assembly. That stage has now been reached. It is not to be expected that the Wafd will like the British Government's terms any more than Sarwat Pasha himself was inclined to like them in the first instance; but he had the good sense to explore the matter more carefully and we must suppose that he has satisfied himself that a point has been reached when nothing is to be gained by any attempt at further adjustment. Most probably the Wafd and its leaders will have to pass through the same process. They may at first sight find the "terms" wholly unpalatable; but it is to be hoped that they will show the same statesmanship as Sarwat Pasha and, before committing themselves to any hasty or irrevocable judgment, devote time and consideration to an intricate subject. There is certainly no occasion for either party to indulge in either abusive or alarmist insinuations.

The King of Afghanistan.

King Amanullah's tour in Europe, we may hope, will have shown him all the things that his Majesty wanted to see, without destroying his sense of humour. In India and Egypt his Majesty regarded himself as being sufficiently familiar with local conditions to be able to speak freely to the people and to give advice where he considered it necessary. In Europe he has had, so far, fewer occasions to speak himself, as his hosts have been more anxious to impress upon him their own devotion to Afghanistan and their sympathy with a people placed so uncomfortably near to a British Dominion. It has been left to the German Acting Chancellor to wax eloquent on Afghanistan's "continuous struggle for her security and the independence;" but these particular indiscretions may be left to the castigation which the Minister has already received at the hands of his own Press. The King was wise enough to stipulate at his next public function in Berlin that there should be no speeches, and there has been no further hitch in the lavish entertainment that the Germans have so shrewdly given to their royal guest. In England, it is to be hoped, King Amanullah will look for no *arrière-pensées* in the hospitality that will be accorded him spontaneously as an Allied Sovereign. The dignity of Afghanistan, no less than that of Great Britain, will render unnecessary, even if it could have been contemplated, any competition on Great Britain's part with those countries which are anxious to win the *beaux yeux* of the Afghans. It is fortunate that the King is paying a visit to England after he has been to the three leading Continental countries; having exhausted any wonderment that unaccustomed sights in the industrial and other spheres may have roused in him, his Majesty will be able to form a better opinion as to whether Great Britain's special position in the international sphere, which has brought her into close political relations with Afghanistan, is reflected in any measure of industrial pre-eminence.

Persian Recognition of Iraq.

Elsewhere in this issue will be found a letter from the Persian Legation in London which seeks to modify our recent comments upon the delay that is observable in the according by Persia of recognition to Iraq. There are, of course, many points at issue between the Persian and the Arab State, practically all of them being of an administrative nature. But the particular one which is here singled out as affording reasonable justification for Persia's withholding recognition from Iraq appears less convincing upon examination. It is, moreover, a little strange that Persia, which is at this moment seeking the abrogation or the abolition of all special privileges for foreigners in Persia, should simultaneously proclaim the right of all Persians residing in Iraq to "most favoured nation" treatment. This request is based upon the treaty obligations of Iraq to accord to all foreigners "special" justice; but the privilege was manifestly not intended for so numerous a community as are the Persians in Iraq. As things are, a British assessor tries cases for foreigners in Iraq, but if Persians, who, by the way, share the same rights in regard to the law as all the Turks, Syrians, Palestinians, and other ex-Ottoman subjects in Iraq, were to have "most favoured nation" treatment, the staff of British officials would probably have considerably to be augmented—a step which Iraq would rightly regard as a retrograde one. One is reminded, on reading of this particular request of the Persians—who, of course, raised the point some three years ago at the League of Nations—of the indignation recently caused in Egypt by the demand that Turkish nationals in Egypt should enjoy capitulatory privileges, indignation instigated by the thought that one Islamic State had not sufficient sympathy with the national aspirations of another.

Perso-Iraqi Co-operation.

It is well to remember, moreover, that Iraqi Courts have been trained by British Advisers; and a comparison between them and the newly established Courts in Persia, whose beneficent influence can hardly have yet extended outside Teheran, might not be wholly to the disadvantage of the Arab institutions. But there is certainly no reason for despair of the ultimate collaboration of Persia and Iraq—certainly we have never contemplated the "per-

Digitized by Google

manent refusal" of recognition to which the letter from the Persian Legation refers. On the contrarary, it is our profund hope that the difficulties now subsisting between Persia and Iraq will soon find a friendly solution. There is nothing, in our opinion, inherently unreasonable in the proposition which Iraq has adopted of obtaining recognition from Persia, and then, or at the same time, establishing means of assuaging Persian susceptibilities or anxieties in Iraq. With the hindrances imposed by questions of racial prejudice or of *amour propre* we have little sympathy, and if statesmanlike counsels prevail in both countries (whose interests are, after all, to a large extent identical), both the religious and the commercial and the social points of difference between the two countries should find adequate solution. But in the attainment of this consummation concessions will have to be made on either side.

The Problem of Palestine.

The visit of Sir Alfred Mond to Palestine, and the publicity given to it, have inevitably re-focussed attention upon the problems of the Zionists therein, on the possibility of their collaboration with the Arab population, and on the whole potential future of the Zionist ideal. It is easier, however, to examine the immediate aspect of the new immigrants in Palestine than to speculate upon their ultimate status and numbers. Quite obviously there is now little cause for the alarmist attitude which in some quarters was recently adopted as a result of the unemployment "crisis." Jewish unemployed in Palestine have fallen from about 8,000 to something like 3,000; and in but a week or so the "dole" system will be discontinued. Unquestionably the Zionist authorities learned much from their recent anxieties, and it is with pleasure that we note, in this connexion, a new impetus towards agricultural activities in Palestine. Only last week the High Commissioner and Sir Alfred Mond took part in the inaugural ceremony of the Balfour Forest, below Nazareth. On this site it is intended to grow 50,000 trees. Similarly we hear of additional interest being taken by Sir Alfred Mond in the fruit-growing industry, which must always, it would appear, be the basic industry of Palestine (excluding, naturally, the unknown possibilities of the Dead Sea minerals industry). Perhaps it is too early to assert that the storm breaking over the heads of the Zionists has actually passed, but it certainly is being weathered, and it can scarcely be doubted that the Zionist movement will emerge the stronger, not the weaker, for the experience which it has undergone. Whether, as a result of the experiences, and among the probable benefits to be derived from them, a stimulus in Arab-Jewish co-operation can be perceived, is just one of those things which can be seen by the visionary's eyes alone. And sometimes the visionary is right, and sometimes he is wrong.

A Rival Jewish "Home?"

But the Zionists, triumphant as they are in way of becoming over the difficulties arising from the over-immigration in 1925, the economic crisis in Poland, and the consequent set-back in 1926 and 1927, are not yet out of the wood. Much money needs yet to be collected for the consolidation of the Zionist position in Palestine, and, incidentally, Dr. Weizmann, head of the Zionist Organisation, is about to visit America to collect such funds. But apart from internal difficulties in the Zionist movement, there is to be noted a new and in some senses a rival movement, on the part of the Soviet Government in Russia, to set up a "Home" for the Jews in Eastern Siberia. To the first attempt of the Russians to solve the problem created by the so-called "surplus" Jewish middlemen in Russia—the American-subsidised scheme of settling the Jews in the Crimea and the Ukraine—THE NEAR EAST AND INDIA has more than one called notice. On the success of this first colonising scheme there is little definite information, but obviously the the hopes of it publicily expressed by M. Kalinin have not been realised in such a way as considerably to mitigate the Jewish problem in Russia. This other, Siberian scheme may or may not be a piece of propaganda, designed to discredit, among the world of Jewry, the "British Imperialism" which seeks to build up Palestine as a Jewish National Home! In any case, it is an experiment to be carefully watched. According to messages from Moscow, this land settlement in Siberia will enable a distinctively Jewish State to be constructed, with Home Rule, Jewish schools, law courts, land banks, places of amusement and of worship, and co-operative shops. Superficially, the offer of an area of ground almost as large as Belgium, possessing good arable land, forests, and minerals, and, as a port, Vladivostock, and, as a navigable river, the Amur, would seem to outweigh all the advantages possessed by Palestine, except the sentimental appeal. But that religious, idealistic appeal is precisely what has kept the Jewish people, though scattered, together; and it remains to be seen whether material comfort and mental freedom in Russia will prove more attractive than the right and possibility of religious or spritual exultation in Palestine. It is no rare phenomenon to find a man preferring his old home to a mere house, however superior the latter may be to the former in modern conveniences and modern conceptions. The call of the Jews across the centuries is really the only card which the Zionists officials have to play; but so far it has been sufficient to gather in some pretty useful tricks.

The "Haj."

If King Ibn Saoud of the Hijaz and Najd is genuinely aggrieved at the persistent provocation which Shaikh Faisal al Dawish, chief of the Mutair, has given to Iraq and to Kuwait, his resentment will be the keener in that the embarrassment comes at the time of the season of the Pilgrimage to the Holy Places. As our Jidda Correspondent has recorded, there are already indications in the Hijaz of another successful pilgrimage season, and it is certain that the Wahhabi King will allow no minor preoccupations to interfere with his capital aim of serving the interests of the whole world of Islam. It is possible, therefore, that there may be something in the report from Basrah that the "promised" campaign by the King's troops against the apparently uncompromising Faisal al Dawish has not matured, and is not to mature, precisely because it might upset the pilgrimage season; though one might have thought that the approaching end of the raiding season in Arabia were at least as obvious an excuse for inaction—if, indeed, excuse were wanted. In connexion with the pilgrimage season, too, we notice that

THE YUGOSLAV MINISTERIAL CRISIS.

After lasting for a fortnight, the ministerial crisis in Yugoslavia has come to an end with the formation by M. Voukitchevitch of his third Cabinet. The new Government represents a coalition of the Radicals with both sections of the Democrat Party, the Slovene Clericals and the Bosnian Muslims. It is thus on a slightly wider basis than the Government which the Democrats, at the instance of M. Davidovitch, wrecked at the beginning of the month by calling upon the Democrat Ministers, led by M. Marinkovitch, to resign. M. Davidovitch's section of the Party is represented in the Cabinet by the new Ministers of Education and Public Works, and to this extent the Government might be supposed to have more stability than if the official leader of the Democrats, as in the case of the last Ministry, had no nominees among the Ministers. So long as M. Davidovitch accepts no portfolio himself, however, the life of the Coalition can be regarded only as precarious. Of the eighteen Ministers nine belong to the Radical Party and five to the Democrats; the Slovene Clericals and the Bosnian Muslims are represented by their respective leaders, Dr. Koroshetz and Dr. Spaho, and the portfolios of War and Communications are held by two Generals who are identified with no political party. No small part of the difficulty experienced in forming a Government turned on the allocation of the Ministry of the Interior—always a coveted post in view of the influence it can exercise on elections—and the appointment of a substitute for the Minister of Foreign Affairs, M. Marinkovitch, whose health may compel him to take a long rest. In regard to the former difficulty a compromise has been effected by the appointment of Dr. Koroshetz as Minister of the Interior. The question of a substitute for M. Marinkovitch was a bone of contention between the two Democrat leaders, each of whom wished to have one of his own personal followers appointed. It has been settled by the selection of an adherent of M. Marinkovitch, but the latter's original nominee, to whom M. Davidovitch took exception, has not been included in the Cabinet.

Although M. Raditch's Croat Peasant Party has been left out of the Coalition, he would seem to have played no small part in bringing the ministerial crisis to an end. When each party leader in turn had failed to form a Government and M. Voukitchevitch had been no more successful with a second attempt, the deadlock was complete. It was at this stage that M. Raditch sought audience of King Alexander and urged upon his Majesty the advisability of entrusting a Concentration Government to the hands of a prominent military officer, who would be handicapped by no party considerations but would be able to count on general support in carrying through much-needed reforms. The King was not anxious to identify the Army in any way with politics, but recognised the possible advantage of finding someone outside the party ranks to carry through a definite programme, while the politicians were given time to come to an agreement among themselves. His Majesty, accordingly, undertook to give the matter his consideration. M. Raditch's suggestion, however, so alarmed the politicians, who were not at all anxious to make way for a Yugoslav Pangalos or Mussolini, that within two or three days their differences had been bridged over, and M. Voukitchevitch had secured the support of both sections of the Democrats, while giving the Ministry of the Interior to the Slovene Clerical Party, which is more closely allied to his own Radicals than to any other group. It is, perhaps, fortunate for the new Government that it has an important programme immediately before it—the passing of the Budget and the question of the foreign loan—the nececssity of which is accepted by the Skupshtina. In the few weeks that remain before the Budget has to become law there will be little time for other subjects to engage the attention of Parliament, or for differences of opinion to arise in the Cabinet itself.

In spite of the majority that the new Government should be able to command in the Skupshtina, there would seem to be no general expectation that it has a long lease of life ahead of it. The coalition between the Radicals and Democrats rests on expediency rather than on conviction; each would gladly dispense with the support of the other, if it could. The Democrats themselves are not an entirely harmonious group—although they have set a good example of party discipline in avoiding the split that at one time seemed inevitable between M. Marinkovitch and M. Davidovitch. Of the Opposition the leading personality is M. Raditch, who has materially improved his reputation during the recent crisis. While he held the King's mandate for forming a Ministry, he worked hard to bring the parties together without thought for his own aggrandisement, as he appears to have recognised that there could be no question of his holding the post of Prime Minister himself. His proposal for a Government under a leader outside the political parties, preferably a military officer, was disinterested, and undoubtedly, in putting it forward, he placed his finger on the weak spot of Yugoslav politics. He is a bitter opponent of Radical centralisation, and stands for the antagonism of Croatia against the alleged Serbian dominance of Yugoslav politics. In his recent utterances he has laid stress on the necessity of a thorough purge of the political system, and it was with this end in view that he was prepared to see a mild dictatorship formed. Party politics, he contends, are now carried to such extremes that the interests of the country are lost sight of in the treatment of the whole administrative system as a personal preserve; and he is the authority for the assertion that one Radical Minister complained to the King of the Radical Prime Minister, that he had dismissed a hundred of "his" (the Minister's) officials. If M. Raditch had not had such a lurid political "past," his sudden accession of political wisdom at a time of crisis might have carried him to the leadership of the State. As things are, if he can show that the new phase has come to stay and that he has abandoned the habit of wild unreflecting talk, he may before long find the Democrats anxious to terminate their working agreement with the Radicals and to inaugurate with the Croatian Peasant Party a new era in Yugoslav administration.

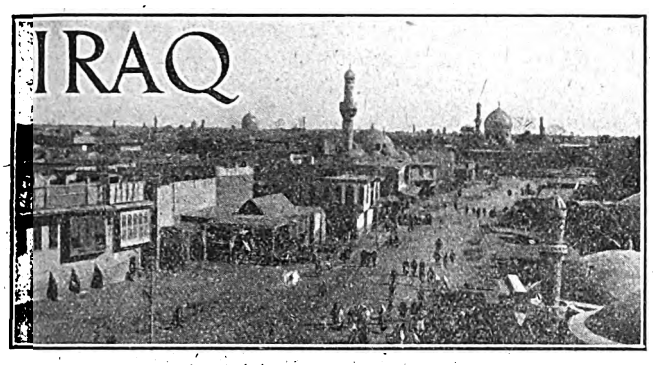
The Near and Middle East*

From Our Own Correspondents.



Baghdad, February 18.

The Murder of Colonel Leachman.

Shaikh Dhari al Mahmoud, the aged chief of the Zoba tribe, has been tried in the High Court in Baghdad for the murder of Colonel Leachman in August, 1920. At the time a reward of Rs. 10,000 was offered for the capture of the murderer, and it now appears that an Armenian motor-driver, having set his heart on obtaining this, had bided his time: not until the end of 1927 did he succeed in kidnapping the old shaikh and bringing him to justice. It may be remarked in parenthesis that no one now knows who offered the reward, nor by whom, if at all, it is to be paid.

The trial attracted great interest in Iraq, and was held in a crowded Court; one British and two Iraqi judges tried the case. The Court found that, though the evidence was not conclusive that Dhari had himself shot Leachman, it was clear that he had ordered his followers to do so; he must take responsibility for the act of his sons and followers. Shaikh Dhari was accordingly sentenced to death, but the sentence was commuted to one of penal servitude for life, in view of the prisoner's great age and of the facts that he had been in exile and in distress for several years, and was suffering from a serious disease.

Though happy for himself, it was politically unfortunate that Shaikh Dhari died in prison on the day after his trial, thus becoming a popular martyr. His funeral procession, which was attended by large crowds of sympathisers, caused some anxiety to the authorities; but beyond fiery articles in the vernacular Press (notably in the notorious *Istaqlal*, which went into deepest mourning) no disorder occurred, and the general excitement rapidly evaporated.

Sir Alfred Mond's Visit.

Sir Alfred Mond, with a party of eleven, has just visited Baghdad. His visit had no political significance, but it is generally understood that he is interested in Iraq's prospects of commercial development, and in particular in the possibility of a pipe-line to the Mediterranean being undertaken in the near future. In his party is Sir Frederick Keeble, one of the scientific advisers to Imperial Chemical Industries, Ltd., who is specially interested in Iraq's possibilities as a market for chemical fertilisers of the soil.

The arrival by Nairn overland convoy of Sir Alfred and his party was marred by an unfortunate demonstration of hostility on religious grounds on the part of a band of schoolboys and students. The demonstrators were dispersed by the police, and two ordinances have since been passed by the Council of Ministers authorising the caning (after medical inspection) of boy students who disturb the public peace, and the placing under police surveillance for two years of any who instigate such disturbance. Following an administrative inquiry, eleven students were dismissed by the Minister of Education from the Training College, and two from the Law School, while others were suspended for varying periods.

During his stay in Baghdad Sir Alfred Mond inspected the Jewish schools and the Khadoori Eye Hospital. He also accompanied King Faisal on an expedition to the large area recently brought under cultivation by the Irrigation Department through the completion of the Shaishubar Canal. Sir Alfred and Lady Mond and their daughter Lady Erleigh were among the guests of the High Commissioner and Lady Dobbs at a ball given at the Residency on February 10. The party left by air on February 15 for Rutbah, whence a Nairn Transport car was arranged to take them on to Palmyra.

General News.

Jaafar Pasha al Askari has been appointed by royal *iradah* Iraq's Diplomatic Representative in London, in succession to Muzahim Beg Pachachi.

On February 15 Professor H. Leonard Woolley lectured at Baghdad on the results of the past season's archæological work at Ur of the Chaldees. Discoveries in graves dating back to 3500 B.C., throwing a completely new light on the civilisation and culture of that time, were described and illustrated by lantern slides. The crowded audience showed the great interest taken by Iraqi as well as British residents in the remote past of this country which, as Mr. Woolley remarked, was highly civilised at a period when Egypt was still sunk in barbarism.

CYPRUS.

Nicosia, February 14.

Lord Inchcape's Visit.

Lord Inchcape arrived on February 9, with Lady Lloyd, and was met by the Governor. They proceeded at once to Nicosia. In the afternoon they visited Kyrenia and the beautiful ruined Abbey of Benapais. In the evening, at a dinner at Government House, the Chief Justice, Mr. Belcher, the Colonial Secretary, the Commissioner of Nicosia and many leading officials and residents were entertained. As a result of interviews with the Governor, it has been decided that the mail steamers of the Khedivial Line shall call weekly on Thursday morning and leave on Friday at 7 p.m. An additional sum of £3,000 is to be paid yearly. The arrangement is to hold good for one year, at the expiration of which, if the arrangement has been successful, there will be a further agreement. The change—so long called for—is to take place at once. Owing to heavy snowfalls on Mt. Troodos, Lord Inchcape was unable to visit the mines of the Asbestos Company at Amiandos, of which is Chairman and a large shareholder. He left the island on the following day.

The Jubilee.

It is now more than probable that the Greeks, at the bidding of their leaders, will not participate in the Jubilee celebrations. The large body of Cypriot Greeks in Egypt entirely disapprove of the attitude take up here, and

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

strongly condemn it. So too, in all probability, do many here, if the truth were known. No official notifications have yet been issued. The programme of sporting events, which should begin in March, in the plains, will include golf tournaments, open to all comers; hockey—Nicosia *v.* Egypt or Palestine; football—Nicosia *v.* Egypt; cricket—Nicosia *v.* The Rest of the Island, or Egypt; and horse races, three days. As the actual anniversary falls in the period of midsummer heat, some events, including tennis tournaments, will take place on Mt. Troodos.

Agricultural Prospects.

Conditions are satisfactory. The rainfall, though behind the average, has been sufficient for the present. Snowstorms on February 7 covered the great Troodos ranges and other peaks. Many roads were rendered impassable and cars had in some places to turn back. In the plains, however, the weather has continued to be very mild.

More Tourists.

A party of about 300 arrived on February 2 by the s.s. Lancastria, 200 of whom visited Nicosia and the principal places of interest, including the Museum, where purchases of duplicates were made. Sir Ronald Storrs was entertained on board ship, and Lady Storrs proceeded by the steamer, which sailed at 10 p.m., to Palestine, to visit her daughter. She returned to Cyprus on February 9.

General News.

The Governor continues to urge the importance of a home for the blind, and has held meetings for furtherance of the project.

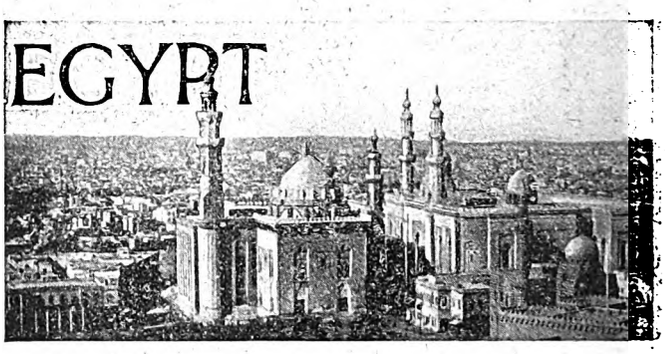
The Government *Gazette* of February publishes an Order prohibiting the importation into Cyprus of various Communistic books and pamphlets, including the "Alphabet of Communism," "Leninism," "Lenin the Philosopher," and so on.

The King's Police Medal has been awarded to several members of the Cyprus Police Force.

Mr. C. Noble, late Director of Agriculture, has been given a new post as "Director of Animal Husbandry," in view, it is said, of the increasing importance of stock-breeding in the Island; the salary being £600 to £750 per annum.

There is already a large demand for Cyprus Jubilee Stamps, which can be purchased up to January 31, 1929.

EGYPT



Cairo, February 18.

Nag Hamadi.

Most of those who stand for anything in the political or social affairs of Egypt spent the last week-end in Upper Egypt as the guests of the Egyptian Government on the occasion of the laying of the foundation stone of the Nag Hamadi Barrage by the King. Three special trains conveyed the guests to and from the scene and the arrangements went without a single hitch. The party left Cairo on the Thursday evening, and most of the guests were back in the capital the following night at about midnight,

those who availed themselves of the facility offered by the invitation to pay a visit to Luxor returning under special arrangement in the course of the following days. The Barrage, which Messrs. John Jackson are erecting, is the last of the string of works on the Nile from the first cataract to the sea which are an essential part of the irrigation system of the country. So greatly has the country developed and so much have the demands for water increased, that it will become necessary in the very near future to carry out certain important work on all the existing barrages to enable them to carry the extra head of water which is required for the proper irrigation of the larger areas that they are now called upon to serve. The scheme for the raising of the Aswan Dam, which is nearly ready, will shortly be laid before the International Commission, which will be called upon to decide on this very controversial problem, and advantage is being taken of the presence of Sir Murdoch Macdonald, who is now in this country in connexion with one of the schemes now before the Government which his firm has presented, to obtain the best possible advice with regard to the strengthening of the existing barrages. Their work will be carried out with greater celerity. It is understood that Sir Murdoch will also act as Consulting Engineer in regard to the work on these barrages and in connexion with the Upper (White) Nile projects.

An Administrative Sensation.

A sensation was caused during the past week by the decision of the Special Court of Discipline, acquitting the Secretary-General of the Ministry of Agriculture of charges brought against him by his Ministry. It was not that the public was surprised at the acquittal. It knew nothing more than the details of the charges and naturally an appreciation of the evidence had to be left to the Court. But the reason that the result caused sensation was that the charges had been made so specifically and so much publicity had been given to the offences that it was permissible to think that the heads of the Department in question would never have allowed them to be brought before such an important disciplinary body had they not been convinced that they were well founded and that there was ample evidence in support. The verdict was unanimous, and as the Court was composed of some of the leading legal officials in the service, in addition to very high administrative officials there would appear to have been something more than zeal for the integrity of the service behind the bringing of the charges. In many circles it was expected that the decision would be followed by the resignation of the responsible Minister, but this was not so, and there appear to be no signs of any such development as a direct consequence of this incident.

The Royal Mummies.

The cables will have reported to you the proposal laid before the Egyptian Parliament by Ismail Pasha Sidky that the royal mummies now on view in glass cases at the Museum and elsewhere should be returned and reburied in their sarcophagi in their tombs. Sidky Pasha's proposal seems to have aroused a certain amount of opposition in Egyptological circles, partly on the plea that either the original sarcophagi do not exist or that the tombs are unknown, and partly from the point of view of the requirements of Egyptological science. But the point which strikes one is that the principle of re-interring a royal mummy in its sarcophagus has already been accepted in the case of Tutankhamen, who lies below the inner casket of his coffin. If this departure from what has been hitherto followed was considered advisable in the case of a king who held really no place of any importance in Ancient Egyptian History, whose name had for all practical purposes been forgotten until fortuitous circumstances and the intrinsic value of the objects found in his tomb forced him on the attention of the world, surely at least the same respect should be shown to kings such as Amenhetep II, who lies within a stone's throw of the tomb of Tutankhamen, exposed to the vulgar gaze of the public. He was certainly a greater king than his neighbour. The fact that some of the sarcophagi no longer exist or that the sites of the tombs have been lost, cannot reasonably prevent the return of those whose sarcophagi and tombs can be traced, and one cannot but help feeling that the opposition is really due more to a disinclination to break with past habits than to any genuine objection from the scientific point of view.

King Fuad in Upper Egypt.

King Fuad returned this week to Cairo on the conclusion of his visit to Upper Egypt. His Majesty made the return journey from Nag Hamadi by water on his new river yacht Kassed Kheir, and took the opportunity of stopping at the capitals of the various provinces through which he passed. He visited Tel El Amarna. At Minia he inaugurated the new electric and water plant erected by the Municipality, and at Beni-Suef he opened a new river port and public garden and laid the foundation stone of a new hospital. Everywhere he was received with marked enthusiasm.

The Late Merzbach Bey.

There is widespread mourning over the death of George Merzbach Bey, which occurred suddenly on Thursday morning. He had been ailing for some time, but there seemed no reason for any real anxiety, and he had been at work almost up to the last. His death leaves a blank not merely in his own particular community, the Belgian, but in every direction. Merzbach Bey succeeded to the late Carton de Wiart, himself one of the ablest lawyers this country has known, and he proved himself a most capable successor. He was a brilliant pleader, nimble-brained and shrewd, an excellent administrator and counsellor, and above all the staunchest of friends. The number will be legion of those who will miss the influence and presence of this genial and generous-hearted man, for by his strong personality and his intelligence Merzbach Bey held sway in many circles not connected with the law, and his word and opinions counted everywhere. But mostly will he be missed by the younger grade of barristers whom he never tired of helping, for whom he was always watchful for means of furthering their knowledge and their activities. As leader of the Cairo Mixed Bar he did wonders to maintain its prestige. Merzbach Bey will be very difficult, if not impossible, to replace at the present juncture, when so much of importance to the foreign communities is under discussion, and in regard to which everyone looked upon him, while not adopting an unreasonable attitude towards the Egyptian point of view, as a tower of strength for the defence of their interests.

An Air Display.

The Middle East Air Force gave an air display this week in aid of the Royal Air Force Memorial Fund. It was held under the patronage of the High Commissioner, who together with Lady Lloyd and Lieut.-General Sir Peter and Lady Strickland was present. It was certainly the most attractive and the most successful event of its kind that we have seen in this country, and what made it all the more remarkable was that it was held in the teeth of a very severe *Khamsin* wind, accompanied by heavy hail. It was a wonder to everyone that no mishap occurred, and this exhibition of intrepidity and skill showed

to what high pitch the members of the Middle East Air Force have now attained. What certainly interested the spectators was the closing event, a realistic attack on a desert fort, and the manner in which infantry were brought up by air-carriers for the final attack.

Greyhound Racing.

Progress is being made with the arrangements for greyhound racing, which is to take place just outside Cairo. The organisers have had a certain amount of bad luck, in that some of the essential machinery was delayed owing to a break-down of the ship by which it was coming out from Home, and that the expert for the installation of the electric plant for the hare had to go in hospital a few days after his arrival. But in spite of this the work is well advanced, and it is hoped to hold the first meeting at Bairam which falls in the third week of March. Already two hundred dogs are on the spot, where very extensive provision has been made for their care and training. The High Commissioner, accompanied by Sir Ian Malcolm, who is a Director of the Egyptian Greyhound Association Ltd., paid a visit to the racing track this week, and a Press view of the site was also held a few days ago.

IN A PERSIAN COFFEE HOUSE.

BY MIRZA FIROOZ KHAN.

Tabriz, February 9.

[*In Persia, it seems, the Note which the British Government presented last November to the Persian Government is discussed more freely than in England, where the official tendency has apparently been to deprecate discussion of Anglo-Persian relations. The following dialogue contains exaggerations against which we scarcely need warn the discerning reader.*—ED.]

I strolled into a coffee house the other day to have a *finjan* of thick and bitter coffee. The room, a high-class one on the new Khiaban Pahlavi, was full. Some men were drinking coffee, some smoking *kalyan*, and some playing checkers. Two men, next to me, were whispering to each other, and I could not help hearing their conversation.

Said one of them to his companion:

"Have you heard the latest?"

"No. What is it?"

"The English have sent a Note to our Shah!"

"What do they say?"

"They demand the money which they have given to our former Shahs—Mohammad-Ali and Sultan Ahmad."

"What does Reza Pahlavi say about it?"

"His final answer has not been made up yet."

"How much do the English demand?"

"Can't say exactly—thirty, forty, fifty *kroors** !"

"H'm! Fifty kroors!"

"Yes, fifty kroors!"

"Has the Shah got so much money?"

"He has more! Ten times more! He is the richest Shah in the world!"

"How do you know all this?"

"Easily. The American *Moostashars*† pour into the Shah's treasury fifty kroors of tomans every day! That is why the England demand so much. They know where to get it. The English never talk of hundreds or by thousands. When they open their seldom-to-be-opened mouths, it is always by kroors that they talk!"

"What else do the English say?"

"They say our Shah must send an Ambassador to Baghdad, and write letters of friendship to the new Haroun-ar-Rashid!"

"Anything else?"

"Yes."

"What is it?"

"They say they must have liberty to travel through the air from Baghdad to Hindoostan and to Chin-u-Machin‡."

"What does our 'Pahlevan§' say about it?"

"Our Pahlevan says: 'Let them have all the liberty they want in the air, provided they do not land into our Iran.'"

"Good, common-sense answer."

"Exactly like himself."

"More than common-sense. His eagerness for work, his tireless activity, and the supreme excellence of his *uncommon sense* make some pumpkin-headed folk think him to be crazy."

"Well, in that I agree with them. They are right, I think, in a certain degree."

"How is that?"

"Well, you see, His Majesty sometimes does not keep himself 'heavy.' A King ought not to talk to everybody, ought not to rush everywhere. This man wants to see everybody himself, attend to every work in detail himself, and go everywhere. This is not Shah-like!"

"Do not you remember our never-to-be-forgotten Nasir-ed-Din Shah? He was a Shah! He was a Shah-in-Shah! May his soul be in paradise! He would never condescend to talk to any person less than a Sadr-Aazam‖ or a Foreign Ambassador. Oh, those were happy days! I was head-porter then at the Great-Gate."

"Well, perhaps His Majesty attends to every detail himself in order that officers and officials may not be able to steal any money."

"They steal all the same. Only formerly the thieves used to steal in hundreds or thousands, but now the stealing goes on by bagfuls! Our Treasury Minister in the olden days never saw so much cash money in a year as does our present-day Treasury Minister in one single day."

"Anything more of this English Note?"

"They demand that Shaikh Khazal must be permitted to return to his home and country."

"Well by the beard of the Prophet, if the British *demand* it, it will be done! They are not fond of *sham* things and empty threats. They never make a *promise* if they cannot keep it, and never make a *demand* if they cannot back it up by force."

"What does Pahlavi say about it? Will he permit the Arab Shaikh to return to his country?"

"Pahlavi can do nothing but give permission to his return to his home. I told you that when the *demand* is made by the British it will have to be done. They will not drop it until it is done, and done as they wish it. This old Arab has become a *Khata-bala*¶ to our head . . . ."

* Kroor: 500,000. This is the Persian million. Persians never talk of a "million." It is always by kroor, 10, 20, 50, 100 kroors, etc.

† Moostashar: adviser, instructor (in finance).

‡ Pahlevan: a boxer, wrestler, a strong man. It is a nickname of Reza Pahlavi, on account of its resemblance to His Majesty's dynastic name.

§ Chin-u-Machin: China-Manchuria.

‖ Sadr-Aazam: Prime Minister.

¶ Khata-bala: A person who entices another person to evil. A nuisance.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

PERSIA AND IRAQ.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to one of your "Notes of the Week" in your issue of February 16, headed "Persia and Iraq," a few words from us on the true position would not appear to be out of place.

It is superfluous on our part to state that the Persian Government are keenly desirous of establishing the best possible relations with Iraq. Because the Persian Government have so far deferred recognising the new Arab State, it does not necessarily follow that they permanently refuse such recognition, or are intent on treating Iraq as though it were nothing more than "an ignorant and untutored Amirate." Your mention of the significant fact that the Persian Government have already appointed to be their acting Consul-General at Baghdad a former Cabinet Minister, Nasr al Mulk, whose mission it is to remove the outstanding differences between the two Governments, and thus pave the way to a state of harmonious relationship with Iraq, plainly indicates the great importance that the Persian Government attach to the establishment of absolutely cordial relations with Persia's neighbour.

A difficulty with the Iraq Government awaiting solution concerns the treatment of Persian nationals, and the Persian Government is justifiably entitled to claim that Persian nationals residing in Iraq shall enjoy the same rights and privileges, and receive the same impartial treatment, that is accorded to those of the "most favoured nation." If this is not conceded by the Iraq Government you must, we think, admit that the responsibility for the delay in recognising the new State of Iraq does not lie with the Persian Government.

We hope that THE NEAR EAST AND INDIA, which we know always has at heart the promotion and establishment of the most amicable relations between Eastern peoples, will see the position from our point of view, and allow space for these lines in an early issue.—I am, etc.,

M. K. NAHOUJ.
Counsellor of Legation.

Légation de Perse, February 21.

[We are very glad to publish this letter from the Persian Legation in London. Comment will be found upon it in our "Notes of the Week."—ED.]

THE COPTS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As an Egyptian I read with great interest the very fair comment of your Cairo Correspondent in your issue of February 9 on the question of the Copts. It is extremely difficult to believe that the specific allegations made by *Misr*, the Coptic organ, are true, because, if so, they will be a disgrace to Egyptian sense of justice and fair play, and be rightly considered a bad omen for the future of independent Egypt. But the fact remains, as your Correspondent fairly pointed out, that the allegations are specific, and if there were a similar case in any civilised country there would be only one of two alternatives for the Government to follow: either punish the high officials responsible, or issue a specific denial and not a vague one. There is a great deal in your correspondent's statement that "it would certainly appear to have been better policy either to have said nothing or to have ordered an inquiry and publish the results."

Better late than never, and it is sincerely hoped that Egyptian leaders like Nahaas, Adly, and Sarwat Pashas will take some steps to make all Egyptians feel that independence means justice and nothing else.—I am, etc.,

"A ZAGHLOULIST."

[The complaints referred to in *Misr* concerned the alleged mal-treatment of Coptic officials in the Egyptian Government service. On the rumour that an official inquiry was to be held on these complaints, the Minister of Finance denied the story of the inquiry, as, according to him, "the complaints made were without foundation."—ED.]

TURKEY'S FINANCIAL POLICY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is really regrettable but undeniable that whenever the question of Turkey's finances receives more than a passing mention in the European press, the comments are almost always blended with what could be called dismal prophecies. The volume of these comments has grown considerably in recent years, but it is always one-sided and not a single word is heard in defence of Turkey.

It is also displeasing to us Turks to note that references to Turkey in the foreign press are for the most part unfriendly and prejudiced in spite of our glorious war of independence, which ought rather to have evoked the admiration of Europe which is accustomed to appreciate heroic and grand achievements.

This propagandist campaign may be roughly divided into two main parts, political and economic, the former being the more prominent. To deal with the mass of political articles is quite outside my subject; in any case deeds and facts have already contradicted them.

I, therefore, want to concentrate on the economic and financial aspect, in regard to which enlightenment will make for the reciprocal interest of foreigners and Turks, one needing capital and the other markets for their exploitation.

As foreign exchange, and particularly the course of the pound sterling, is always quoted as a very sensitive barometer of the soundness of finance, it may be worth while to stress that subject first.

From the following figures one has to admit that the Turkish lira since the close of the War has constantly declined, but in later years less rapidly. The average rate to the £ in each of the last six years has been as follows:—1922, 700; 1923, 800; 1924, 850; 1925, 900; 1926, 920; 1927, 950.

But if we take into consideration the constructive policy adopted by the Government and the variety of raw and manufactured materials that Turkey has had to import in order to build up destroyed Anatolia, where consecutive wars have left nothing standing, and to feed her starved population, and if it is remembered that in the

post-War distress Turkey has never borrowed abroad, while constructing thousands of miles of roads and railways, and if we compare the pitiable position to which French and German currency fell, we shall find that, although a decline is inevitable, to maintain such a high level is a miracle in the history of economics.

It would not be incorrect to state that this decline, however, small and negligible, is partly caused by foreign banks in Constantinople, who have done what they can to enhance the value of foreign money with the baseless idea that such a decline would give a command to the exchange in their hands.

But the conservative policy of Turkey, in adding not a single note to those in circulation and so exterminating every possibility of inflation, has put an end to their rosy dreams.

In short, from whatever standpoint the trade and finance of Turkey are considered, we shall find every branch thoroughly stabilised and properly planted in the whole structure. To those who know Turkey personally it is beyond question that in every branch of trade a sound expansion is dawning.

Why, then, in spite of Germany, who is gaining more and more markets and so every day increasing her business in Turkey, are the exports of Great Britain, whose politics are now very favourable for a better understanding in regard to credit and other commercial matters, going down, and why cannot the old traditional friendship and intimacy be revived in the sphere of economics, while all political questions are quite settled? It is because English industrialists consider their interests to be dependent on the foreign politics of their Government.

I want, therefore, to make publicly known that if British concerns desire not to lose Turkey they must take steps individually and must give it up to seek the ægis of their Government, which, having giving a political atmosphere, is much hated by Turks.—I am, etc.,

Angora, February 18. M. MUNIR.

HUNGARY, ROUMANIA, AND SLOVAKIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I venture to hope you will accord me the space for a reply to Mr. Andrews' interesting letter in your issue of February 16.

In the first place, may I point out that I am not aware of having passed any comment in my previous letter on any form of government, let alone that of Hungary? Possibly Mr. Andrews inferred my views from my other writings; for I am perfectly willing to admit that I regard with no particular sympathy democratic parliamentary forms of government even as constituted and working in Anglo-Saxon communities, where they are less liable to objection than elsewhere.

Secondly, may I make it clear that, although I commented unfavourably on the action of Roumania at the time of her invasion of Hungary, and although I hold certain reservations in connexion with the state of public morality among certain classes of Roumanians, I have the highest regard for the Roumanian nation taken as a whole, and believe that Roumania is destined to play an even more important part in the defence of traditional European culture, and to become, politically and economically, a very important factor in the life of Europe? I also strongly welcome this prospect.

Coming to the kernel of the question under discussion, I want to point out that the use by me of the term "dual-monarchy" was not meant in any particular sense. What I actually advocate is as follows, and I start from certain clear premises which I do not think even Mr. Andrews will gainsay.

1. The ethnographical and geographical tangle constituting the debatable territory between Hungary and old Roumania renders both the present and the former solution unsatisfactory, in that neither country will ever voluntarily acquiesce in one or the other.

2. It is highly desirable in the interests of European peace and culture that an intimate *rapprochement* should take place between Hungary and Roumania.

3. Apart from the unsatisfactory nature of the present solution, the difficulty in the way of a *rapprochement* is mainly psychological, due to rancour.

4. Time; the good offices of friendly, disinterested Powers; the complementary character of the economy of the two countries; and their natural geographical unity will, I believe, gradually dissipate this rancour, and a *rapprochement* in the following sense became a practical possibility:—(1) A customs union; (2) a perpetual treaty of friendship and arbitration; (3) a defensive military alliance; and (4)—this condition depends on the remainder, for otherwise Roumania would naturally be reluctant to agree to it—the restoration by Roumania to Hungary of the long strip of territory at the base of Transylvania, densely and exclusively populated by Hungarians; and the according of a special status to the Zeklers.

If this could be brought about, whatever the result might be called ("Dual-Monarchy" or otherwise), the two Powers would become practically one Power in the face of the world (and in this I see nothing but good), while at the same time a highly satisfactory solution would be provided to the present *impasse*.

With regard to the question of Slovakia, my conclusions are the result of deep reading on the subject and the testimony of disinterested travellers.

The following is an analysis of my conclusions:—

1. The Slovaks at no time deeply resented Hungarian rule, which always respected their language and local customs.

2. Such resentment as existed before the War was confined to certain aspects of the landlord system and to certain abuses of industrial Hungarian landlords.

3. If there exists a certain cultural affinity between the Slovaks and Czechs, owing to their speaking languages with similar roots, the religious cultural affinity between Slovaks and Hungarians constitutes the greater bond.

[N.B.—This is nearly invariably so, and Ireland affords an example.]

4. If Slovakia were restored to Hungary, without the reintroduction of the Hungarian landlord and his former estates, the Slovaks would in the vast majority be, from a sentimental point of view, utterly indifferent to the change. Many an educated and thoroughly conscious Catholic would welcome it. On the other hand, certain newly acquired vested interests would deprecate it. The general result would be indifference, tending towards favourableness according to the degree of local autonomy accorded.

5. After the lapse of very few years indifference would turn to hearty acquiescence—mainly because Slovakian economy would be favoured greatly by the change, owing to the indisputable fact that the natural course of trade (a matter settled by geography) runs to and from Slovakia and Hungary, and not to and from Slovakia and Bohemia-Moravia.

6. Since this solution would be acceptable to the Slovaks and actually benefit them, it becomes the right one (apart from the question how it is to be brought about), because it would enable the large Hungarian minority in Slovakia to be restored to Hungary and thus remedy a gross injustice without causing any counterbalancing injustice. For only a portion of the present Hungarian population of Slovakia could otherwise be restored to Hungary without rendering Slovakia a withered branch, cut off from all good communications with Bohemia-Moravia.—I am, etc.,

J. S. BARNES.

February 21.

HUNGARY AND ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I have read with interest the letter from Mr. Arthur Andrews, of the University of Vermont, U.S.A., on the subject of Hungary and Roumania in your issue of February 16, and whilst I agree with his conclusion that a union of Roumania and Hungary is undesirable,

Digitized by Google

I differ entirely from the reasons he gives in support of his conclusion. He complains of Hungarian propaganda, but surely there has been pan-Slavist propaganda, and he quotes the authority of Dr. Seton-Watson and other Slavophil writers in support of the existing settlement. Surely it is only fair to hear both sides. He compares liberal England with "reactionary" Hungary; but judged by Slavonic standards, the United States with their conviction that civilisation is dependent on a recognition of the rights of private property, is quite as much a reactionary country as is Hungary. So much depends on the point of view, and many people emigrate to the United States as they prefer the "reaction" of America to the "progress" of Slavonic States.

He complains that the union of Slovakia with Hungary would cause many Czecho-Slovak officials to lose their posts. This may be so: but I am not convinced that States exist that they may provide any special class with Government appointments.

He tells us that "business (of a kind) might well be better if Austria-Hungary had been continued," and few of those who have seen the empty warehouses of the Danubian towns, one of the greatest waterways of Europe, can doubt this. The Austro-Hungarian Empire kept the peace and secured freedom of trade, an honest and efficient administration and the reign of Law and Justice among nine different nationalities; and, although Mr. Andrews considers that the peoples have erected the high tariff walls for "their own good," the empty warehouses, the absence of all signs of wealth or property, and the poverty of the peoples tell a different story.

He asks what conditions in Hungary are so much bettered by the War as to be inviting to Slovaks and Ruthenians? I ask, however, in what country, with the exception of the United States of America, have conditions been bettered by the War? I know of none, and Hungary is not to be reproached for her sufferings.

But I agree that a union of Hungary and Roumania would not be desirable, and as the reasons that lead me to that conclusion differ fundamentally from those advanced by Mr. Andrews, I ask permission to state them.

I do not desire to go back to ancient history, to the origins of the Dacians, or to the number and composition of Trajan's legions, or to the proportion of Phanariot Greeks in Roumania. But the Eastern outposts of Western civilisation have for centuries been represented by Austria and Hungary. The geographic frontier of Western European civilisation has shifted with the fluctuating chances of War: but the conflict of two different civilisations has continued and still continues.

The Slavonic conception of the rights of property, as represented by the Russian *Mir*, the Serbian family community, or the Soviet system of State ownership, differs fundamentally from the Western notions of individual liberty and the rights of private property.

I am not now discussing which of these two theories represents Progress and which Reaction. I am myself an Individualist, but I acknowledge that there are many honest and sincere men who believe that the happinesss of mankind is to be secured by Communism or Socialism.

My present purpose is to point to two conflicting theories of civilisation, and I abstain from characterising the system to which I am opposed as reactionary or by any other adjective.

And as in social conceptions, so also in religion, and the temperament which gives to religion its moral expression. The Eastern and Western Churches have other and more important differences than that represented by the *Filioque* clause of the Creed. The differences of Rome and Byzantium were differences of temperament of character and of morals as well as of dogma.

So far as Eastern Europe was concerned, the Great War was a conflict between two civilisations—the civilisation of Western Europe as maintained by Teuton and Magyars and the civilisation of Asia as represented by the Slavs. In the result the Slav has won the Slav is now top-dog throughout Eastern Europe. The Austrian Eagle at one time had two heads and was held to symbolise the position of Austria as the outpost of Europe looking to both East and West. It now has only one head and the claws of the eagle hold the sickle and the hammer, the Soviet emblems. No fitter emblem could be found to indicate the change that has taken place in Austria, as the recent Communist disturbances and the destruction of the Palace of Justice at Vienna testify.

But Hungary experienced the rule of Bela Kuhn, and retains bitter memories of Oriental theories of social progress. She clings to the principle of personal freedom and private property. So far as economic conditions allow, land purchase is favoured, and 72 per cent. of the population are engaged in or are dependent on agriculture. Since 1907 health and accident insurance have been compulsory, and in the case of accident insurance the employer pays the whole of the insurance premium. The Hungarian workman had ninepence for fourpence before his English brother.

But the nation has been deprived of its most valuable territory. Bratislava was formerly Pozsony or Pressburg. When the Turks occupied Buda, Pressburg was the capital of the Hungarian Kings and contained the Coronation Church and the Statues of the Kings. It was a German and Magyar city with a small minority of Slovaks. It is now the capital of Slovakia; the name has been changed, the Church remains, but the statues of the Kings have been removed. The Slav official has replaced the Magyar and the Teuton.

It is no doubt true that many "Czecho-Slovaks are now high in Government service"; but is the gain worth the sacrifice? Or is there a gain? The Teuton was an honest, industrious, tolerant, careful and efficient official. The work he did for the Austrian Empire testifies in his favour, and in Roumania at all events the contrast is distressing.

Nevertheless, I entirely agree with Mr. Andrews in thinking that a union of Hungary and Roumania is undesirable. It might benefit Roumania, it would not benefit Hungary, and it would be a mixed marriage of the worst type. Hungary would become a Balkan State.

The true remedies for the misfortunes of Hungary are to be found in a rectification of frontiers where injustice has been done, a closer agreement with Italy conceding access to the Adriatic, a free zone at an Adriatic port, the juridical settlement of the Hungarian-Roumanian dispute, the extension and strengthening of the jurisdiction of the Mixed Arbitral Tribunals, and an appeal from them to the World Court at The Hague. So can we best reinstate Hungary as the outpost of civilisation as understood in Western Europe and America.

The peace of Europe and of the world depends on the reign of law and justice as distinct from the dictation of military force to a disarmed people. In denying those rights to the conquered nations we impair our own credit and our own stability. For it has been our character for justice and fair play to all that has given England her position of authority in the Councils of Europe. Let us guard that reputation as our proudest possession.—I am, etc.,

Studwell Lodge, Droxford, Hants. GRAHAM BOWER.
February 22.

NEWS IN BRIEF.

Prince Carol of Roumania arrived at Nice on February 22.

The Greek Chamber on February 25, by 108 votes to 63, authorised the Government to settle the question of road contracts.

Mirza Reza Faradjolla, a Persian merchant of Berlin, died last week while examining carpets at the P.L.A. warehouses, Cutler Street, Houndsditch.

Snowstorms are reported from Turkey, and so much snow has fallen in Thrace that the train service has been interrupted. Snow also fell in Jerusalem last week-end.

Signor Raimondo Rossi, a former Councillor of the Canton of Ticino, has refused the post of Financial Administrator in Persia offered him by the Persian Legation at Berne.

The Yugoslav Government has granted a credit of 150,000,000 dinars for the relief of districts in Bosnia and Dalmatia where the budgets of the local corporations show a deficit.

Mr. T. M. Healy, formerly Governor-General of the Irish Free State, arrived on February 22 in Cairo on a month's visit. He has arranged to visit Upper Egypt and Palestine.

On the occasion of the anniversary of the capture of Yanina the Greek Minister of War on February 22 unveiled a monument to the "Unknown Soldier" which has been erected in the town.

The death occurred at Cluj (Transylvania) last week of the aged Unitarian Bishop, Joseph Ferencz. Monsignor Ferencz enjoyed the distinction of being the only Unitarian Bishop in the world.

Yusuf Effendi Zeinal, Secretary of a club in Baghdad, who was accused of being the prime mover in the recent demonstration against Sir Alfred Mond, has been sentenced to a period of banishment, probably in the neighbourhood of Fao.

It is stated from Jerusalem that Sir Alfred Mond is negotiating with Jewish manufacturers in Palestine for the formation of a company to sell Palestine products abroad, and that he intends, among other things, to introduce Palestine tobacco on the British market through the agency of Mr. Bernhard Baron's firm, Messrs. Carreras.

According to a Constantinople message the heirs of the late Sultan, Abdul Hamid, who was deposed in 1909, are taking legal proceedings against the British Government through the Anglo-Turkish Mixed Arbitral Tribunal, with a view to obtaining restitution of the enormous properties which belonged to the Sultan in Baghdad and Cyprus, together with recognition of the rights of the heirs in the Mosul oil wells.

The Vice-Chancellor of Cambridge University announces that the managing committee of the British School at Athens offer the nomination of a studentship of the value of £100 for the session 1928-29. The student so nominated should be a duly qualified member of the University or a duly qualified student of Girton or Newnham, preference being given to the former, and certain conditions as to the course are specified in the letter. Applications should be made to the Vice-Chancellor by June 9.

Following a slight earth tremor in Jerusalem at three o'clock on the morning of February 22 there was a violent shock of 7.50 in the evening, equal in intensity to the shock experienced last July. No casualties are reported. The shock was felt generally throughout South Palestine. Six houses were damaged in Bethlehem and six in Jericho, and the ends of the Allenby Bridge were damaged; one house was cracked in the Armenian quarter in the Old City of Jerusalem. Two more earthquakes ocurred in Jerusalem on February 26, but with no material damage.

PERSONAL AND GENERAL

TO-DAY

March 1, 1928 (New Style).
February 17, 1928 (Old Style).
Ramadhan 9, 1346, A.H., of the Muslim Calendar.
Adar 9, 5688, of the Jewish Calendar.

Earl Fitzwilliam, Viscountess Wimborne, Viscount Valentia, and Lady Burghclere are among the recent visitors at Cairo.

Sir Murdoch Macdonald left Egypt for England on February 25, but expects to return there after a month to take up the duties of adviser on irrigation projects.

Princess Mary, Viscountess Lascelles, and Viscount Lascelles will be accompanied by Viscount and Viscountess Boyne when they sail from Marseilles on March 9 in the Ranchi for Port Said.

The High Commissioner for India, Sir Atul Chatterjee, on February 23 left London for Italy, where he has been joined by Lady Chatterjee, who had been staying at Mentone.

Major H. F. Heywood (upon his appointment as His Majesty's Military Attaché at Constantinople) had the honour of being received by the King at Buckingham Palace on February 24.

The King has conferred a Knighthood on Mr. Peter Grain, Judge of the Supreme Court for China since 1921. Mr. Grain, who was called to the Bar (Middle Temple) in 1897, has held judicial office in Zanzibar, Constantinople and Egypt.

The King, on the recommendation of the Secretary of State for War,, has approved the promotion to the rank of Field-Marshal of General Sir George Milne, G.C.B., G.C.M.G., D.S.O., LL.D., Chief of the Imperial General Staff.

Wing-Commander R. M. Hill, M.C., A.F.C., will lecture before the Royal Aeronautical Society to-day (Thursday) on "Experiences of the Cairo-Baghdad Air Mail" at the Royal Society of Arts at 6.30 p.m. Colonel the Master of Sempill will be Chairman.

The Albanian Minister to London and Madame Vrioni have returned to Paris after their brief visit to London. The new Albanian Chargé d'Affaires, Ekrem Bey Vlora, and Madame Vlora have taken up their residence in the Legation at 116, Inverness Terrace, W.

Viscount and Viscountess Sandon were in the Earl and Countess of Harrowby's family party that sailed on February 24 from Tilbury in the Peninsular and Oriental Moldavia for Algiers. The Hon. Kenneth and Mrs. Mackay were also passengers for Port Sudan.

Among the guests whom M. Boeresco entertained at luncheon at the Ritz Restaurant on February 24 were the French Ambassador, Mme de Fleuriau, and Mlle. de Fleuriau, Albertha Marchioness of Blandford, Lady Nora Spencer Churchill, M. Caclamanos, M. and Mme. Hiott, Mrs. D. Mocatta, Mrs. Rose, M. C. Laptew, Mr. H. Wickham Steed, Mr. R. Vansittart, and M. J. Miclesco.

Lord Illingworth is returning to 21, Wilton Crescent from Egypt on April 9.

The Marchioness of Milford Haven and Lady Louis Mountbatten arrived last week at Valetta (Malta) from Egypt.

Sir Edmund and Lady Wyldbore-Smith and Miss Jocelin and Miss Monica Wyldbore-Smith left London on February 23 for Egypt.

H.M. the King of Italy has conferred on Hussein Sabry Pasha, Governor of Alexandria, the Order of the Crown of Italy.

Sir Edward Lutyens, R.A., has returned to London from Delhi, and Lady Emily Lutyens has joined him at 13, Mansfield Street.

The Counsellor of the Bulgarian Legation and Mme. Lessinoff gave a dinner party on February 20 at Sidmouth Lodge, The Boltons.

Lady Maud Bowes-Lyon left London on February 23 to embark at Marseilles on the Peninsular and Oriental Ranpura for Port Said.

The King and Queen will be the guests of honour at the banquet to be given by the King and Queen of Afghanistan on March 16 at the Afghanistan Legation in Prince's Gate.

Lady Muir and Mme Stancioff were at home on February 21 to a few friends at the Ritz Hotel. Their guests included the Polish Minister, Baroness Palmstierna, the Hungarian Minister and Baroness Rubido-Zichy, the Bulgarian Minister, Lady (Ian) Hamilton, Lady Pretyman Newman, Prince Vladimir Galitzine, Princess Boris Galitzine, Mr. and Mrs. de Laszlo, Mrs. Ivan Stancioff, Captain and Mrs. England, Mrs. and Miss Addison, Lady Barker, Mrs. Cobham, Mr. and Mrs. Lessinoff, Mrs. Harold Knowling, and Miss Henderson.

THE EXCAVATIONS AT UR—1919 TO 1926.

A paper was read at the Royal Society of Arts on February 22 on "The Excavations at Ur—1919 to 1926" by Dr. H. R. Hall (Keeper of the Department of Egyptian and Assyrian Antiquities, British Museum). Lieut.-Colonel Sir Arnold T. Wilson was in the Chair.

The lecturer showed slides illustrating the work of excavation at Ur "of the Chaldees" from the year 1919 to the season of 1926-7. In 1919 he began systematic excavation at Ur, following a preliminary reconnaissance and a few trial pits dug there in 1918 by Mr. R. Campbell Thomson. This work was carried out for the British Museum only. Illustrations were then shown of the result of the work of 1919, the chief trophies of which were the lion-heads and other early Sumerian objects found at al-'Ubaid, a suburb of Ur, including the great copper relief, now in the British Museum, of a lion-headed eagle seizing two stags, one of the most important relics of early Babylonian art (*circa* 3100 B.C.). After 1919 work was suspended until 1922, when it was resumed in conjunction with the Museum of the University of Pennsylvania on a basis of parity in monetary contributions and under the leadership of Mr. C. L. Woolley. This work has gone on regularly ever since under Mr. Woolley's direction, with whom have been associated in the work Messrs. Sidney Smith and C. J. Gadd, of the British Museum, the late Mr. F. C. Newton, the distinguished architect, who was succeeded by Mr. Whitburn, the Rev. Léon Legrain, of Philadelphia, the Rev. C. R. Burrows, S.J., and others. Mr. Woolley's present chief assistant is Mr. Mallowan. The progress of the work from 1922 on was shown in a series of slides illustrating the gradual unveiling of the whole area of the temple of the Moon-god at Ur itself, the completion of the work already begun by the lecturer at al-'Ubaid, and the beginning of the startling and epoch-making discovery of the early cemetery at Ur, with its revelations of the splendid barbarism of the earliest Sumarian kings who lived before 3000 B.C.

The most extraordinary discoveries of all have been made during the past season of 1927-8, and these, said Dr. Hall, must be left to the discoverer himself to describe on his return this summer. The famous gold and lapis dagger discovered last year had already, he said, found others to rival it, and photographs of one of these and few others which came to light this year were shown in order to whet the appetite of the audience for the full description of his finds, which Mr. Woolley will give. Among these is the already famous golden headdress of the Prince Meskalamdug.

It is hoped that the remarkable finds of this year will be on view at the British Museum during the summer.

NOTES OF THE WEEK

(Continued from page 259.)

some attempt is again being made to embroil Egypto-Hijazi relations, over the already settled question of the *Mahmal*. Quite certainly the Wahhabi authorities will not permit a military escort to attend the Egyptian *hajjis*, who will in all probability nevertheless continue to perform their religious duties, knowing well the respective values of real security and of mere *amour propre*.

Ramadhan.

The introduction into the world of Islam of modern scientific instruments and ideas is bringing strange results, but in some instances old ideas are dying hard, and, in fact, may never wholly disapear. An example of this mixing of old and new is provided by the Fast of Ramadhan. It has been announced from Cairo that the opening of this great Muslim month of fasting, which began on February 22, was decided in Egypt, not on the evidence of the human eye, but on the calculation of the Physical Department of the first manifestation of the moon. The Supreme Shari Court, indeed, has declared itself not satisfied with the evidence of two persons stating before the Shari Judge that they have seen the Crescent, and the President proposed that the decisions of the Shari Courts on the beginning of Ramadhan should be referred to the Supreme Court before it was announced by the Ministry of the Interior. Last year in the Hijaz, it may be remembered, the crescent of the new moon was seen at Ula before Jidda and Mecca had noticed it, which two places received the news from Ula by wireless. Obviously some fixed arrangement should be made in all Islamic countries, which possess any considerable attributes of Western civilisation, in regard to the beginning of Ramadhan, if only on account of the desirability of ensuring lighting during the hours when the Faithful may partake of physical nourishment.

NEW YUGOSLAV CABINET.

The Yugoslav Cabinet crisis, which had lasted since February 8, was ended on February 23 by the formation of a new (the third) Voukitchevitch Cabinet, composed as follows:—

M. Velya Voukitchevitch (Radical).....	Prime Minister.
Dr. Marinkovitch (Democrat)	Foreign Affairs.
Father Anton Koroshetz (Slovene Clerical)	Interior.
M. Vlada Andritch (Radical)	Agrarian Reform.
M. Milorai Vuitchitch (Radical)	Justice.
Dr. Milan Groll (Democrat)	Education.
M. Vlayko Kostitch (Radical).....	Posts and Telegraphs.
M. Chedo Radovitch (Radical)	Social Reform.
M. Bogdan Markovitch (Radical)	Finance.
Dr. Mehmed Spaho (Bosniak)	Commerce.
M. Velimir Popovitch (Radical)	Public Health.
M. Svetozar Stankovitch (Radical).....	Agriculture.
M. Milan Simonovitch (Radical)	Public Worship.
M. Petar Markovitch (Democrat)	Public Works.
M. Atza Miyevitch (Democrat)	Mines and Forests.
M. Ilia Shumenkovitch (Democrat)	Unification of Laws.
General Milosavlyevitch (no party)	Communications.
General Hadjitch (no party)	War.

TOWARDS A LONDON MOSQUE.

The Nizam of Hyderabad has promised five lakhs of rupees (about £40,000) to the fund which is being raised for building a mosque in London. The gift was made as the result of an appeal by Lord Headley last December at Delhi, where he presided over the All-India Tahbligh Conference. Lord Headley was afterwards the guest of the Nizam in his capital.

It is estimated that there are about 600 Muslims resident in London, and throughout the country about 3,000, but there are always Mussulmans pasing through London. At present there are mosques at Woking and at Southfields.

The movement to build a central mosque for London was started in 1906, but the War stopped its progress. The total cost of the scheme, which includes a house for the Imam, a guest house, baths, and possibly a restaurant, is estimated at £100,000. A substantial sum remains to be raised, but the Nizam's gift will enable the committee to proceed with arrangements for construction as soon as a site has been obtained.

THE YUGOSLAV SOCIETY OF GREAT BRITAIN.

From the ashes of the Serbian Society of Great Britain, which was founded during the Great War, with the object of bringing home to British public opinion the importance of the Southern Slav question, and fell into abeyance in the winter of 1920, has now sprung the Yugoslav Society of Great Britain. The aims of the new organisation are as follows:—

1. To work for close and friendly relations between Yugoslavia and Great Britain.
2. To further in this country a knowledge of conditions in Yugoslavia—alike in the intellectual, political and economic fields.
3. To encourage, so far as lies in the Society's power, good relations between Yugoslavia and her neighbours.
4. To bring together those interested in Yugoslavia and thus to keep alive the friendship which grew up between the Serbian and British nations during the War.
5. To co-operate with all kindred societies within and without the British Commonwealth—especially those connected with other Slavonic States.

Among the conditioins that in the opinion of its promoters call for the formation of such a Society it is pointed out that there has been a steady improvement in the state of home politics in Yugoslavia, as well as in the economic and financial situation of the country, that the settlement of the dispute regarding the Serbian War Debt to Great Britain has removed the main obstacle to closer trade relations between the two countries, and that the steady growth of the Yugoslav mercantile marine has revealed Yugoslavia as an important factor in the Mediterranean situation. The main activities of the new Society will be in the form of periodical meetings, confined to members, for practical discussions, and of the publication of material relating to Yugoslavia.

The list of those who have accorded their support to the Society includes:—

The Countess of Cromer, Viscountess Cowdray, Dowager Lady Swaythling, Sir J. Beetham Whitehead, Sir Ralph Paget, Sir Charles Des Graz, Sir Alban Young, the Bishop of Gloucester, Lord Henry Cavendish-Bentinck, Sir Michael Sadler *(Vice-Presidents)*, Sir James and Lady Berry, Sir Valentine Chirol, Major David Davies, M.P., Sir Arthur Evans, the Bishop of Guildford, Sir Charles Oman, Sir Bernard Pares, Major H. W. V. Temperley, Hon. Montague Waldegrave, Mrs. Carrington Wilde, Dr. F. G. Clemow, Prof. Nevill Forbes, Rev. H. J. Fynes-Clinton, Rev. R. G. D. Laffan, Miss C. M. Marx, J. C. Van der Veer, and Miss Carrington Wilde. Prof. R. W. Seton-Watson is Hon. Secretary and Mr. Roland L. E. Bryce Hon. Treasurer.

An inaugural Dinner is to be held at the May Fair Hotel on March 15, at which Lord Hugh Cecil will preside.

BULGARIAN REFUGEES.

The sum of £186 7s. was realised by the sale in aid of women and children refugees in Bulgaria arranged under the auspices of the Near and Middle East Association by Mrs. L. Cobham, Joint Hon. Secretary of the Association, at 14, Hans Crescent, on February 14 and 15. The money will be sent to Madame Liaptcheff, wife of the Bulgarian Prime Minister, in support of her work among these refugees.

It was reported from Moscow last week that an avalanche in the mountains south of Ossuia, in the Trans-Caucasus region, has buried a village.

EGYPTIAN (ARABIC) SELF-TAUGHT.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

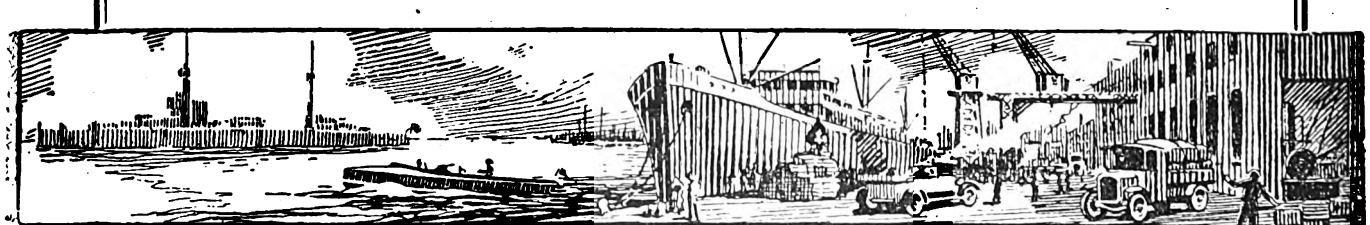
The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON
Royal Albert Docks and Purfleet
AVONMOUTH
BARROW
BELFAST
DUBLIN
GRANGEMOUTH
HULL
JARROW (Tyne)
LEITH
LIVERPOOL
MANCHESTER
SOUTHAMPTON
SUNDERLAND
SWANSEA

ABADAN
ADEN
ALGIERS
ANTWERP
BERGEN
BOMBAY
BORDEAUX
CALCUTTA
CAPE TOWN
COCHIN
COLOMBO
COPENHAGEN
DONGES(Loire)
DUNKIRK
DURBAN

FREMANTLE
HAMBURG
HAVRE
KARACHI
MADRAS
MARSEILLES
MELBOURNE
MOMBASA
ORAN
OSLO
PORT SAID
RANGOON
SYDNEY
TRIESTE

Other Stations are in course of erection



ANGLO-PERSIAN OIL Co., Ltd.

THE WEEK AT HOME

London, Tuesday Morning.

War Films.

The past week has provided an excellent study for the psychologists, in the discussion raging round the production of a British film called "Dawn," which portrayed the shooting of Nurse Cavell by the Germans. Opinions have been cleft sharply over the desirability or the undesirability of publishing the film, and over the right of the German Government to interfere.

The Foreign Secretary, and, later, the Secretary of State for India, have deprecated the exhibition of the film on the ground that it might embitter relations with Germany. Their moral basis is, apparently, that the embroilment of international relations by means of a film is inexcusable folly. They have been swiftly answered, and by men of their own political Party, who protest strongly against the proposal that, while German films showing German versions of the War are permitted to be shown, this story of Nurse Cavell should be censored. There is among such observers, and among many others, an uncomfortable suspicion that Germany is seeking to control the exhibition of films which show her conduct during the War in a disagreeable light.

Thus has been refanned into flame an issue that can never, however much politicians, pacifists, and business men desire it, be wholly extinguished. Every man in this matter must judge for himself. For myself, I am impatient with almost all war-films, which seem always to contain some crudities, some exaggerations, some impossibilities. But it is impossible not to ask oneself why have films which showed, for example, the French Army in a bad light and German prisoners-of-war in an excellent light, been permitted, and why this Nurse Cavell film, which may safely be presumed to err at least no further from the truth than do most war-films, is pilloried.

The Nurse Cavell episode was indicative of a mood which Germany without question did indulge: it is not an imaginary episode of the War such as is often depicted on the films and which generally nauseates all those who served in the War. To forget, amid all our Locarnos, that that mood did exist and may, when times are ripe, revive, would be a blunder of which Britons perhaps are more capable of making than other, more perspicacious nations. In short, the argument of the present opponents of the Cavell film would have looked more unanswerable if they had previously protested against every attempt on the film, direct or indirect, to minimise the crimes of Germany during the War.

A Trump Electioneering Card.

With all the new slogans, constructive ideas, and what not that are supposed to differentiate our post-War politicians from the pre-War breed, the Conservative Party, it seems, will have as incomparably its strongest card the old-fashioned cry and the rare achievement of "Economy." For the Civil Service Estimates for 1928-29, which has just been published, shows a reduction of over £6,000,000.

It is not thought possible that any reduction in income-tax will be declared this year, but it is understood that in 1929 Mr. Winston Churchill, who is expected not to have left the Chancellorship of the Exchequer by that time, will announce a substantial reduction. That done, the Government will, of course, go to the country.

And if the Conservative Chancellor's expectations are realised, and provided no unexpected big event happens in the meantime, it is as certain as anything can be now, that the party now dominant will receive, in the jargon of to-day, another mandate from the country. Nor is this estimate seriously disturbed by the occasional by-elections now taking place, which on the whole tend to prove nothing much else than that there are still many Liberals left in the country, however effete the official Liberal Party may be as a political force.

Road and Rail.

The debate to-day in Parliament upon the proposal to allow the Railway Companies to compete for transport upon the road is rousing very wide interest, for, indeed, almost every large municipality is interested in the question. These municipalities are practically committed to an attitude hostile to the Railway Companies, unless these Companies agree not to attempt to run services to the detriment of the local tram and 'bus authorities.

This whole question of transport is one very difficult for the ordinary man to judge. Obviously, he says, the municipalities should not be immune from fair competition, but whether the Railways' proposal would result in virtual monopoly, that is, in unfair competition, is precisely what he is unable to discover. Perhaps he will be wiser after to-day's debate.
